APPENDIX.

First Inaugural Address of Thomas Jefferson.

EXTENSION OF REMARKS

HON. WILLIAM GORDON. OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 6, 1915.

Mr. GORDON. Mr. Speaker, under the leave granted me to extend my remarks in the Record I include the first inaugural address of Thomas Jefferson, together with an editorial by the editor of "The World's Best Orations."

The first inaugural of Thomas Jefferson, together with the editorial, is as follows:

THOMAS JEFFERSON.

(1743-1826.)

In his first inaugural address, Thomas Jefferson made a deliberate and remarkably successful attempt to condense his theories of government into a few easily remembered sentences. The inaugural ranks with the Declaration of Independence as his greatest work. Whether it is considered as an oration or a State paper, it is equally remarkable, constituting, as it does, a class of its own, because of its comprehensive definitions of principles which, until he thus defined them, had been felt chiefly as impulses. Although Jefferson was not an orator, although public speaking was very distasteful to him, it may be said with truth that on succeeding John Adams in 1801, after the revolutionary defeat of the Federalists in 1800, he delivered an address of greater historical importance than that of Demosthenes on the Crown, or of Burke opening the bribery charges at the trial of Warren Hastings, though the one is celebrated as the greatest oration of ancient, and the other of modern times.

Wonderfully compact as the address is in its condensation of the details of "Jeffersonian Democracy," the whole of it is really an elaboration of the principle expressed in the single sentence: "Still one thing more, fellow citizens, a wise and frugal government which shall restrain men from injuring one another and leave them otherwise free.'

This is the sum of Jefferson's theory of government. He believed that in order to have the utmost possible progress through the increase of peace, order, and mutual helpfulness, it was only necessary to increase the liberty of every individual in society, trusting to the development of the good to overcome the evil. He believed in repression only when it is necessary to prevent oppression, and in force only when one man attempts by combining with others, or by his own superior craft or force, to deprive another of his equal right to exist, to do, and to grow. All this was a deduction from the principles of the common law as it had grown out of the race or clan customs of the Teutonic tribesincluding in that classification, of course, the Saxons, who over-ran England, and the Norsemen, whose literature in Iceland is a prophecy of the institutions which were inaugurated in America by the Declaration of Independence.

In Jefferson's own generation and since, Benjamin Franklin is the only American who can compare with him in greatness of At the present stage of development of the science of history, it is no more possible to understand how the eighteenth century should have produced two such men in America than it is to explain how the sixteenth produced Shakespeare and Bacon in England. Both Franklin and Jefferson, while they had the ideas of Anglo-Saxon development ingrained into them, were deeply influenced by the intellectual movement of France. Under it, Franklin became a great philosopher, using with equal effectiveness the methods of Bacon and of Aristotle. As a Baconian, Jefferson failed almost completely. His province was to deal with the minds of men rather than with the laws of nature. But it may be fairly said of him that in the mastery of political principle through logical analysis he surpassed Franklin as far as he was surpassed by Franklin in reaching truth through experiment and induction.

After being worsted in the formation of the body of the Federal Constitution, Jefferson's adherents rallied at once and, compelling the adoption of the first 10 amendments, so forced issues that when Jefferson was inaugurated in 1801, the country was ready for his action in reversing the theories which triumphed against him in the constitutional convention. Instead of "a strong central government," controlled by the people and ignoring the States as much as possible, he stood for "Jeffersonian an-archy"—the theory that "the government is best which governs least," and for the independent development of the States. united only for common defense. The most notable fact of his administration as President is that after inaugurating his political system successfully he defeated it by the Louisiana Purchase which forced issues over slavery.

W. V. B.

"JEFFERSONIAN DEMOCRACY" DEFINED. (First inaugural address, delivered Mar. 4, 1801.)

Friends and fellow citizens, called upon to undertake the duties of the first executive office of our country, I avail myself of the presence of that portion of my fellow citizens which is here assembled to express my grateful thanks for the favor with which they have been presented as the country. with which they have been pleased to look toward me, to de-clare a sincere consciousness that the task is above my talents, and that I approach it with those anxious and awful presentiments which the greatness of the charge and the weakness of my powers so justly inspire. A rising Nation spread over a wide and fruitful land, traversing all the seas with the rich productions of their industry, engaged in commerce with nations who feel power and forget right, advancing rapidly to destinies beyond the reach of mortal eye; when I contemplate these transcendent objects and see the honor, the happiness, and the hopes of this beloved country committed to the issue and the auspices of this day, I shrink from the contemplation, and humble myself before the magnitude of the undertaking. Utterly, indeed, should I despair, did not the presence of many whom I here see remind me that in the other high authorities provided by our Constitution I shall find resources of wisdom, of virtue, and of zeal on which to rely under all difficulties. To you, then, gentlemen, who are charged with the sovereign functions of legislation, and to those associated with you, I look with encouragement for that guidance and support which may enable us to steer with safety the vessel in which we are all embarked, amidst the conflicting elements of a troubled world.

During the contest of opinion through which we have passed, the animation of discussions and of exertions has sometimes worn an aspect which might impose on strangers unused to think freely and to speak and to write what they think; but this being now decided by the voice of the Nation, announced according to the rules of the Constitution, all will, of course, arrange themselves under the will of the law, and unite in common efforts for the common good. All, too, will bear in mind this sacred principle, that though the will of the majority is in all cases to prevail, that will, to be rightful, must be reasonable; that the minority possess their equal rights, which equal law must protect, and to violate would be oppression. Let us, then, fellow citizens, unite with one heart and one mind; let us restore to social intercourse that harmony and affection without which liberty, and even life itself, are but dreary things. And let us reflect, that, having banished from our land that religious intolerance under which mankind so long bled and suffered, we have yet gained little, if we countenance a political intolerance as despotic, as wicked, and capable of as bitter and bloody persecutions. During the throes and convulsions of the ancient world, during the agonizing spasms of infuriated man, seeking through blood and slaughter his long-lost liberty, it was not wonderful that the agitation of the billows should reach even this distant and peaceful shore; that this should be more felt and feared by some and less by others; and should divide opinions as to measures of safety; but every difference of opinion is not a difference of principle. We have called by different

names brethren of the same principle. We are all Republicans—we are all Federalists. If there be any among us who would wish to dissolve this Union, or to change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated, where reason is left free to combat it. I know, indeed, that some honest men fear that a republican government can not be strong; that this Government is not strong enough. But would the honest patriot, in the full tide of successful experiment, abandon a government which has so far kept us free and firm, on the theoretic and visionary fear that this Government, the world's best hope, may, by possibility, want energy to preserve itself? I trust not. I believe this, on the contrary, the strongest Government on earth. I believe it the only one where every man, at the call of the law, would fly to the standard of the law, and would meet invasions of the public order as his own personal concern. Sometimes it is said that man can not be trusted with the government of himself. Can he, then, be trusted with the government of others? Or have we found angels in the form of kings to govern him? Let history answer this question.

Let us, then, with courage and confidence, pursue our own federal and republican principles; our attachment to union and representative government. Kindly separated by nature and a wide ocean from the exterminating havoc of one quarter of the globe; too high-minded to endure the degradations of the others; possessing a chosen country, with room enough for our descendants to the hundredth and thousandth generation; entertaining a due sense of our equal right to the use of our own faculties, to the acquisitions of our own industry, to honor and confidence from our fellow citizens, resulting not from birth but from our actions and their sense of them; enlightened by a benign religion, professed, indeed, and practiced in various forms, yet all of them inculcating honesty, truth, temperance, gratitude, and the love of man, acknowledging and adoring an overruling Providence, which, by all its dispensations, proves that it delights in the happiness of man here and his greater happiness hereafter; with all these blessings, what more is necessary to make us a happy and a prosperous people? Still one thing more, fellow citizens—a wise and frugal government, which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned. This is the sum of good government; and this is necessary to close the circle of our felicities

About to enter, fellow citizens, on the exercise of duties which comprehend everything dear and valuable to you, it is proper you should understand what I deem the essential principles of our Government, and consequently those which ought to shape its I will compress them within the narrowest administration. compass they will bear, stating the general principle, but not all its limitations. Equal and exact justice to all men, of whatever state or persuasion, religious or political; peace, commerce, and honest friendship with all nations, entangling al-liances with none: the support of the State governments in all their rights, as the most competent administrations for our domestic concerns, and the surest bulwarks against antirepublican tendencies; the preservation of the General Government in its whole constitutional vigor, as the sheet anchor of our peace at home and safety abroad; a jealous care of the right of election by the people; a mild and safe corrective of abuses which are lopped by the sword of revolution, where peaceable remedies are unprovided; absolute acquiescence in the decisions of the majority, the vital principle of republics, from which is no appeal but to force, the vital principle and immediate parent of despotism; a well-disciplined militia, our best reliance in peace and for the first moments of war, till regulars may relieve them; the supremacy of the civil over the military authority—economy in the public expense, that labor may be lightly burdened; the honest payment of our debts, and sacred preservation of the public faith; encouragement of agriculture, and of commerce as its handmaid; the diffusion of information and arraignment of all abuses at the bar of the public reason; freedom of religion, freedom of the press, and freedom of person, under the protec-tion of the habeas corpus; and trial by juries impartially selected. These principles form the bright constellation which has gone before us, and guided our steps through an age of revolution and reformation. The wisdom of our sages and blood of our heroes have been devoted to their attainment; they should be the creed of our political faith; the text of civic instruction; the touchstone by which to try the services of those we trust; and should we wander from them in moments of error or of alarm, let us hasten to retrace our steps and to regain the road which alone leads to peace, liberty, and safety.

I repair, then, fellow citizens, to the post you have assigned With experience enough in subordinate offices to have seen the difficulties of this, the greatest of all, I have learned to expect that it will rarely fall to the lot of imperfect man to retire from this station with the reputation and the favor which bring him into it. Without pretensions to that high confidence you reposed in our first and greatest Revolutionary character. whose preeminent services had entitled him to the first place in his country's love, and destined for him the fairest page in the volume of faithful history, I ask so much confidence only as may give firmness and effect to the legal administration of your affairs. I shall often go wrong through defect of judgment. When right, I shall often be thought wrong by those whose positions will not command a view of the whole ground. I ask your indulgence for my own errors, which will never be intentional; and your support against the errors of others, who may condemn what they would not, if seen in all its parts. The approbation implied by your suffrage is a great consolation to me for the past; and my future solicitude will be to retain the good opinion of those who have bestowed it in advance, to conciliate that of others by doing them all the good in my power, and to be instrumental to the happiness and freedom

Relying, then, on the patronage of your good will, I advance with obedience to the work, ready to retire from it whenever you become sensible how much better choices it is in your power to make. And may that Infinite Power which rules the destinies of the universe lead our councils to what is best, and give them a favorable issue for your peace and prosperity.

Discrimination Against Jews at West Point.

EXTENSION OF REMARKS

HON. WALTER M. CHANDLER. OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 6, 1915.

Mr. CHANDLER of New York. Mr. Speaker, under the leave granted to me to print remarks in the RECORD I include certain correspondence consisting of two letters between the War Department and myself relating to alleged discrimination against the Jews at West Point.

The correspondence is as follows:

HOUSE OF REPRESENTATIVES, UNITED STATES, Washington, D. C., November 26, 1915.

Hon. Lindley M. Garrison, Secretary of War, Washington, D. C.

My Dear Sir: At least 40 per cent of the people of my district are Jews. It is needless to say that they are entitled to the free exercise and full enjoyment of all their rights and privileges as American citizens, and that it is my duty as a Representative in Congress to use my influence at all times to see that these rights and privileges are not denied them.

During my term of office as Congressman I have held several preliminary competitive examinations, after due notice to all the people of my district, to fill vacancies at West Point and Annapolis. Very few Jews have taken part in these examinations. In this connection it has been repeatedly brought to my attention by correspondence and by personal interview that there is a belief prevalent among the people of this race that it is diffi-cult for a Jew to gain admission to West Point or Annapolis; that if he does succeed in entering he is met by race discrimination and social ostracism more or less severe, and that, furthermore, if he succeeds in graduating the same race discrimination and social ostracism follow him into active service.

I am writing to ask if there is any real foundation for this belief. Will you kindly inform me whether there are at present any Jewish cadets at West Point, and if so, how many? Will you also kindly let me know whether there have been any wellauthenticated cases of race discrimination against the Jews at West Point?

History records that in every age the Jews have furnished able officers and brave soldiers to all the armies of the world, and it is a matter of personal and official interest to me to learn whether our great and free Republic is being denied the benefit of their military services on account of a race discrimination that violates at once the letter of our laws and the spirit of our best and noblest traditions.

An early answer to this letter will greatly oblige

Yours faithfully,

WALTER M. CHANDLER.

WAR DEPARTMENT, Washington, December 3, 1915.

Hon. WALTER M. CHANDLER, House of Representatives.

MY DEAR SIR: The department is in receipt of your letter of the 26th ultimo, in which you state that there is a general belief prevalent among the people of the Jewish race in your district that it is a difficult matter for a Jew to gain admission to West Point or Annapolis; that if he does succeed in entering he is met by race discrimination and social ostracism; and that, furthermore, if he succeeds in graduating, the same race discrimination and social ostracism follow him into active service. With regard to the general subject, and in response to the particular inquiries you make as to whether there are at the present time any Jewish cadets at West Point, and whether there have been any well authenticated cases of race discrimination against the Jews at that place, I have the honor to advise you

The preliminary step taken by a person who desires to obtain admission to the United States Military Academy at West Point is to secure a nomination by a Representative in Congress as a candidate for a cadetship in that institution or to secure one of the few nominations of cadetships at large which are at the disposal of the President. With this preliminary selection of such candidates the military authorities have nothing whatever

to do.

The candidates so selected first come under the jurisdiction of the military authorities at the time of their admission to the academy, after having passed successfully the regular entrance examinations, and as the superintendent of that institution is cognizant of conditions there he was called upon to furnish a report with regard to the matter to which you refer. pliance he states, under date of the 1st instant, as follows:

No consideration of any kind is given at West Point regarding religious faith or belief of any candidate for the academy, nor is any such consideration given in acting on the case of any cadet at the academy. In my more than 10 years' personal connection with the academy I have never observed or heard of a case of social ostracism at West Point because a cadet was a Jew or of any other religious faith. No record of any kind is made at these headquarters as to the religious faith of any cadet, and I can not say whether or not there is one Jew or many Jews in the Corps of Cadets.

"In the social relation between cadets I do not believe that the question of religious faith ever enters in the slightest degree. It is purely a question of personal character and the elements of agreeable fellowship that social relations are inti-

mate, cordial, or unfriendly.

I am satisfied that the report of the superintendent quoted above may be accepted as representing fair!, the conditions as they now exist in the Military Academy at West Point. I am not advised concerning the conditions with respect to matters as they exist in the Naval Academy at Annapolis, which institution is under the jurisdiction of the Secretary of the Nav

In the summer of the year 1899 articles appeared in the public press alleging persecution, hazing, and ostracism of cadets of the Jewish faith at West Point. The matter was promptly brought to the attention of the acting superintendent of that institution, who reported, under date of August 15, 1899, as

"All statements which have appeared in the press alleging persecution, hazing, or ostracism of any cadet at the Military Academy on account of religious faith, whether Jew or Christian, are absolutely false, and have no foundation in fact. There are at present two cadets of the Jewish faith at the Military Academy, whose relations with their classmates and upper classmen are of a friendly character and absolutely uninfluenced by reason of their faith; and I have yet to learn of any prejudice against a cadet or officer in the Army on account of his being of the Jewish faith."

Accompanying the foregoing report was a statement by a cadet at the academy, of which the following is a pertinent extract:
"I am of the Jewish faith, and my relations with my class-

mates and the members of other classes indicate that this fact has nothing whatever to do with a cadet's standing in the eyes

In the year 1901 a select committee of the House of Representatives investigated the matter of hazing at the West Point

Military Academy. The report of the committee was published as House Report No. 2768, Fifty-sixth Congress, second session, and on pages 13 and 14 thereof the following appears:

"It has been charged that " " " was persec cause of his religion, and it was also charged by Mr. was persecuted bethat he was driven out of the academy because he was a Hebrew. Fully realizing that there should be no room in the academy for racial or religious ostracism your committee made some special inquiry on the subject, and finds that on the whole a man's religious opinions are highly respected there. committee feels convinced that Hebrews are usually treated with respect, and this conviction is strengthened from the fact that there are two Hebrews now at the academy, both of whom testify that they have never been subjected to any maltreatment whatever on account of their race or religion.

"Your committee is pleased to report that the cadets, as a class, have not been guilty of assailing men because of their

race or religion."

The Jewish race has undoubtedly furnished many able officers and many brave soldiers to all the armies of the world, and I am satisfied that many such are now in our Army. In justice to them and to the military service of our country generally it will be a matter of gratification to me if you will take some means to dispel and discourage the erroneous impression to which you refer, for I assure you that so far as I am aware no such discrimination or ostracism now exists in the Army and that while I am the Secretary of War no such discrimination or ostracism will be permitted.

Yours faithfully,

LINDLEY M. GARRISON, Secretary of War.

Uses and Benefits of Hydroelectricity on the Farm and on Education and Industry.

EXTENSION OF REMARKS

HON. THETUS W. SIMS.

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 7, 1915.

Mr. SIMS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address delivered by Hon. WILLIAM C. ADAMSON, of Georgia, at the Southern Conference for Education and Industry, held at Chattanooga, Tenn., on April 28, 1915, on the subject of the uses and benefits of hydroelectricity on the farm.

The address is as follows:

THE USES AND BENEFITS OF HYDROELECTRICITY ON THE FARM AND HOW TO SECURE THEM.

Agriculture is the mainstay of civilization, "For the farmer, he's the man that feeds them all, feeds them all." Commerce is the handmaiden of agriculture, distributing her products and bestowing in return reciprocal benefits, contributing to greater and better production. Education promotes both agriculture and commerce. When agriculture flourishes in fertile fields well tilled by toilers trained to produce economically and secure profitable return for their product, and when commerce hon-estly and fairly transacted is carried by all modes of transportation on land and wafted by every sail and steamer on the seas, when our workshops transform the products of the farm to be distributed by commerce for the use of those who have them not in exchange for those which we have not, then will the South not only realize the truth uttered by Lord Bacon that "Fertile fields, busy workshops, and easy means of transportation make a nation great," but the South will become the happiest and wisest people who have graced the earth, because under the ministrations of practical and applied education this garden spot of God's earthly footstool will have been utilized for the reduction and application of all the matchless and manifold resources of the soil, mine, sky, climate, and water to their highest uses for the highest development of man.

Primitive man lived by the chase and by depredations on his fellow man. As men grew gentler and wiser they began to till the earth. The two great poets who sang of the bounty with which nature rewards those who tickle the soil, themselves deriving their greatest pleasure and poetic inspiration from the farm where they could look up through nature to nature's God, contributed to the glorification of agriculture. The leading nations at that time regarded agriculture as offering the only field

for honorable labor, except arms. It derogated from the compliment to agriculture to associate with it arms as a companion piece, but while Virgil sang "arms and men" he gave as much attention to agriculture as he did to arms. Arms are honorable when used in defense of self, family, home, or country to repel invasion from abroad or dethrone usurpers and tyrants at home—

For if there be on this earthly sphere One boon or offering Heaven holds dear, "Tis the last libation liberty draws From the heart that bleeds and breaks in her cause.

But when arms are used not for protection, but for invasion, robbery, and enslavement of other people they become dishonorable and deserve the execration of men and angels.

Since all life and all business which make up the fabric of society and commerce depend upon agriculture, it behooves us all to encourage and promote the prosperity of the millions engaged therein. Therefore every device for saving unneceslabor, making more successful and profitable the labor which becomes necessary, every art which presents easier, more economical, and pleasanter methods for accomplishing farm work, everything which would lighten the labors, sweeten the lives, curtail the expense, and multiply the profits ought to be studied, cultivated, and applied. The larders and granaries of the world ought not to become exhausted nor so costly as to dwarf enterprise or starve and throttle business in all occupations. If we draw from the farm forever without restoring any of the elements of production, the soil would soon grow thin and fail and mankind would perish. The pipe clay, glades, chalk hills, and slopes of England, lying barren under a sky constantly beclouded by fog, were originally capable of little production. Eight centuries ago 6 bushels of wheat to the acre was the yield. By judicious stimulation of agriculture 40 bushels to the acre is now the average in England. Elaboration on that point is unnecessary.

Some time after Franklin had tamed the lightning and subjected it to the service of man, Lord Bulwer, with prophetic vision, foretold advancement of the future in the beautiful The Coming Race." He described an agency, which he called "vrill," adapted to all uses with instantaneous miraculous effect. It could perform every service, local or general; it could do all the work on the farm, operate every machine, and serve every useful purpose; the fields could be tilled, crops could be gathered, herds and flocks could be managed; the fleece, milk, and butter could be economically and rapidly handled-not only that, but every commercial purpose could also be promptly served, as well as all enemies destroyed by the proper use of the omnipotent element. Modern wizards, by the development of hydroelectricity, have practically demonstrated the verity of every suggestion in Bulwer's prophetic The cities are already using electricity to light houses and streets and propel trolley cars, as well as to operate mills, factories, and elevators in the skyscrapers and many other useful thing; but the simplest and most valuable application of hydroelectricity can be made for the farmer. It can meet every purpose in the execution of which either power, light, or heat may be needed anywhere in connection with operations on the farm or the transformation of its products into articles of commerce. Its value as a light is well established.

The forests and coal rapidly diminishing before the demands of civilization leave us with unlimited possibilities of hydro-electricity, which is the best, cleanest, and cheapest agency for cooking and for warming our houses. It is cheaper than using wood, if the wood were gratis and you were required to cut and handle it; it is cheaper than using coal, if you were given the coal and required to pay the freight and handle it. It is much more regular and reliable than either. The question arises, How can the farmers supply themselves with hydroelectricity and the necessary equipment? The answer is that any farmer who owns land on a small stream with a shoal or rapid can develop power sufficient for his purposes by raising an inexpensive dam. A few hundred dollars will supply the motor, wiring, and connections for his individual use. If the stream is capable c2 greater development than required by his single farm, it would require little more expense to develop its full capacity and share with his neighbor or neighbors who have no such site for a dam, thereby recouping to some extent his outlay, if not making a constant profit thereon. But some streams present no shoals or rapids. There are wide extensive stretches of country where there are no streams. Therefore if this simple method, though so valuable locally, were the only reliance the benefits could not become general. It is true, however, that man does not live to himself alone. Cooperation is one great mainspring of success in human life. Where there is a greater stream presenting favorable conditions for water power, cor-

porations or partnerships are formed and development is made for the use of entire communities, and lines of wire extend for many miles, and the current can be furnished at moderate prices to all who wish it for farming purposes or for any other purposes. That alone, however, could not supply all farmers nor meet all the necessities of society. There are larger considerations which concern the farmer which can not be secured by the development of power on anall streams either for individual or collective benefit.

It does not require very much hydroelectricity to meet every necessity on a farm, nor even to operate a cotton factory, nor to light a large city, nor to operate trolley trains; but there are many commodities, the purchase of which makes a tremendous drain on the annual profits of the farmer. We pay Chile \$22,000,000 a year for nitrate, a leading element in the fertilizons which most farmer. lizers, which most Southern States have to use. We pay many millions of dollars to Germany every year for potash which we are compelled to have for farming purposes. We secure phosphoric acid for agricultural purposes through the expensive method of reduction by sulphuric acid. One of the most popular and beneficial inventions or discoveries is the production of aluminum, which the farmers need. All this can be produced more cheaply by hydroelectricity than in any other way, and we have water powers enough in our own country to produce an abundance of all of them—not only supplying our farmers, thereby saving that outflow of millions of dollars a year, but also securing a supply for commercial and governmental poses. Hydroelectricity, through the Solvay process, decomposes common salt and secures a supply of all forms of soda and bleaching powders. Through the electric furnace we extract from the air nitrates and not only supply the farmer, but supply the Government with millions of dollars worth for making gunpowder and all sorts of explosives. It is very difficult at present for the Government to keep itself supplied. In the unfortunate event of war with any foreign country or an embargo on nitrate our Government might find itself seriously embarrassed and might suffer such disaster as would humiliate us for generations to come. The electric furnace makes steel better and at less cost than the old method could ever do, with the result that the old crucible method has been discarded and supplanted by the electric furnace. The electric furnace also produces from feldspar an adequate substitute for German potash. All these products—steel, lime, nitrate, phosphoric acid, and aluminum, as well as soda and bleaching powders—are indispensable and very expensive when imported. So it behooves us as farmers, and all of us having in hand and heart the destinies of this country, to take a broader view of the subject than considering only the benefits that will accrue from local and individual ac-There are two ways by which hydroelectricity may be sccured at home-in one way partially, in the other completely. The nonnavigable streams of the country afford water-power sites, many of which could be profitably utilized. The Little Tennessee and the Yadkin and others have been selected for the manufacture of aluminum. Operations there are more expensive, the water power insufficient, but the investors avoid the restriction and complication of Federal regulation and find it preferable to going abroad, the only alternative to locating at home, where they can find the material and save the freight on shipping their raw material abroad and shipping their finished product back to this country where it is to be used. Not only do the nonnavigable streams fail to offer sufficient water power to induce capital to attempt the manufacture of such commodities through the electric furnace, but when developed we could never expect from them anything but the privilege of buying the current for light and power or their output if they manufactured commodities.

There is a much wiser and better plan if we could agree upon it. The navigable rivers of the country, three-fourths of which are in the Southern States, afford the very best water-power sites and enough of them, sufficient in strength, to provide for all the factories which will be erected in the next thousand years in the Southern States, to manufacture such articles as are needed at home and supply such demands as might come from abroad. If, instead of making slow and dribbling development by means of the nonnavigable streams which will save nothing to the Government, we would encourage private capital and persuade the Government to permit private capital to improve the navigable streams, the Government could save the outlay carried in river and harbor bills. Private capital stands ready and willing to build and operate every lock and dam necessary to make navigable every considerable stream in this country. Private capital asks nothing but the consent of Congress and the guaranty of protection in the use of the surplus water in order to perfect without one cent of cost to the Government or people all the navigable streams in this country. There are

three rivers of vital interest to us, any one of which, by the promotion of its navigability to the neighborhood of its headvaters, would prove more valuable commercially to the United States than the Panama Canal will ever prove—the Chatta-hoochee, the Tennessee, and the Coosa present together about 2,000 miles of possible navigation through the best land in the world, inhabited by the best people the world ever saw, with mineral resources, agricultural products, timber, and coal, and everything that the genius of man can suggest or the fertility of the soil or the wealth of the mine produce. The navigability of all would have long ago been completed without a cent of cost to the Government but for unfortunate obstruction. It lies not in my mind or heart to fathom or criticize the motives of man-I speak only of results. Pitted against the interests of our people, the interests of the Public Treasury, the promotion of our transportation, which the railroads, no matter how liberal, are incapable of furnishing, so large is our traffic and so rapidly it grows, there comes up a sound of protest from somebody that if you let private capital build these dams the Government is throwing away something, and yet not one of them has been able to define intelligently what that indefinite awful something may be. If expending \$9,000,000 on a lock and dam, as done at Hales Bar, to promote the navigation of your river, which created a slack-water pond 25 miles long, without one cent of cost to the Government, is not giving the Government something for the consent to use or sell the hydroelectricity from the surplus water power, I do not understand what "quid pro quo" means. Of course, before the railroads showed their inability to handle the commerce, and before they drove the boats from most of the rivers by putting their own boats on to drive off competi-tion, sometimes the railroads inspired opposition to consenting to such development. But I do not believe they are doing it now. Of course, those who own the coal lands and forests may be interested in inspiring opposition to such cheap light and fuel as would compete with them, for it is certain that the generation of hydroelectricity does compete in transportation and in fuel for light and heating, and in the Mississippi Valley it is said that the Keokuk Dam has already brought coal down to a dollar a ton. At any rate, while it competes with coal, coal also has to compete with it, and the result is they both grow cheaper.

The idea which has largely prevented development has been

the contention of some people, no matter how inspired, that there ought to be a charge imposed by the Government for every consent of Congress for such development. Those people who support that contention refuse to acknowledge that requiring an investment of nine or ten millions of dollars for the public in the construction of a lock and dam constitutes any compensation. They refuse to see that a tax on one dam, not levied on all similar constructions, would be unconstitutional, for all excise taxes must be uniform, whether on old or new projects. They practically admit that by contending that as we have the power to consent or refuse, the Government can impose a tax as a condition of the consent. The Constitution is sacred and the Supreme Court hates subterfuge. Waiving the constitutional question, we should leave some sources of revenue to support the State governments. The obstructionists also pretend that it is necessary for them to suspend all development through fear that the rates and practices will unfairly oppress the people in distributing electric current. The fact is that the friends of development offer provisions for adequate protection and regulation for both interstate and intrastate operations. The objectors also apprehend disaster from "perpetual grants." There never has been nor ever will be an irrevocable grant of consent. If such were expressed, it would be void and the consent would still be subject to modification or repeal by Congress; but, of course, rights which may be duly ripened by compliance with contracts and stipulated requirements would necessarily be protected. No honest man would object to that. The trouble with the honest men among the obstructionists who object in good faith is that they do not understand and will not learn the conditions confronting us in the South. They have confused our efforts with the waters, forests, and mines on the public domain, and errone-ously imagine and insist, notwithstanding our disclaimer, that we are seeking to infringe on the interest of the Government. We have no such proposition; we seek to deal with private property by inducing private capital, without expense to the Treasury or the people, to promote the navigation of the rivers and at the same time fill up this country with factories and railroads, light and heat our houses, and supply power for every purpose, individual and general. As to the period through which the consent will run, we can only secure such agreements as the owners of the money will make. We have no power to compel them to do our bidding. We are willing to make the very best trades we can secure, and we ought to authorize the Secretary of War to do the same thing in leasing the surplus water at many of the

dams erected at Government expense. That would return to the Government some part of cost of construction and prove of incalculable benefit to the farmer and commerce in the neighborhood of those dams through the use of hydroelectricity generated from water now wasted. What we are seeking is a way to improve the rivers for the benefit of navigation and for the benefit of the farmers and not a pretext for obstruction.

If our friends, the opposition, would work as hard to find a way to make progress as they have been working to secure a pretext on which to defeat us, this country would blossom like a rose and flourish like a trust. Now, these constructions like the Hales Bar Dam and the dam at Lock No. 12 on the Coosa River could, in addition to other purposes, supply current to every farmer within a hundred miles who wanted to use it for domestic or farming purposes more cheaply than that farmer could construct a sufficient plant himself on his own premises. Even if this suggestion is not adopted, some of the farmers may secure and enjoy hydroelectricity at home through local and cooperative methods, but our navigable rivers would go unimproved, because it is becoming each year more difficult to secure river and harbor appropriations, and it would be so much better both for the Treasury and our people, as well as for the investors themseives, if the investors were encouraged to invest their money in the larger and more attractive possibilities on the navigable streams than to fritter away their capital on the small nonnavigable streams. The only alternative private capital has left is to go to other countries

Millions upon millions of dollars in the last few years, after having in vain knocked at our doors for encouragement to invest in our midst, have gone to Canada and Norway. Those countries encourage such development; they are anxious that their water powers should produce profit for themselves and increase their commerce with other countries.

Phosphoric rock is carried from Tennessee, Alabama, and Florida to Canada and Norway. Phosphoric acid is manufactured and sent back to us to use along the Chattahoochee, the Coosa, and Tennessee Rivers, the development of which we have so unwisely neglected, while they afford opportunities which would have saved the freight both ways, enabled owners of the rock quarries to realize much more for their material, enabled the users of phosphoric acid to secure it at a much lower price, supplied all local and general demands for hydroelectricity, and afforded uninterrupted navigation to transport products from the mountains to the sea on both rivers. Union Carbide Co. has just engaged 76,000 horsepower in Norway to manufacture articles for use in the United States to be made out of material from North Carolina and Georgia. foolish in our people to throttle our own development and exile capital which is anxious to promote our wealth and prosperity!

Two men, each with \$10,000,000 in his control, have talked to me for a year about locating manufacturing plants on southern rivers. In vain I tried to secure sites for them, but the obstruction of those who falsely cry monopoly at the wrong time has produced a most dangerous monopoly which amounts to an embargo on all progress and development. While they have prevented the consent of Congress from permitting these investments, men of limited means who owned those riparian lands on the navigable streams, finding themselves unable to hold unproductive property, have parted with it to those who were able and willing to buy, who knew the value of waterpower sites, either to develop when necessary or hold undeveloped to prevent competition with existing plants. They have rapidly bought them up until now it is almost impossible for an independent company which desires to develop power to purchase an undeveloped site. Those who have cried conservation and denounced monopoly have destroyed opportunities, retarded development, and built up the meanest monopoly the world ever saw, so that the task of our people will be doubled. In order to secure development, we must not only secure the consent of Congress that private capital may promote navigation in the streams in consideration of the use of the surplus water power, but we must also provide by State and Federal laws for the condemnation of undeveloped and unused waterpower sites in favor of any capitalist who produces evidence of ability and intention to proceed at once with the development. Of course, that would be resisted by those who would claim vested rights, but there are no vested rights in behalf of the greed against the development of the country and the promotion of general good, care being taken to see that private property is not taken without just compensation. From this hour the development of hydroelectricity may encounter opposition from existing power and light companies which seem determined to prevent competition or hold desirable sites at a high price.

There is a very common source of opposition which perhaps carries no malice with it, but it is urged by ambitious politicians and their friendly newspapers who are seeking some ground of objection to a sitting Member of Congress if that Member of Congress has been attempting to improve the waterways of the country either by private capital or public expense, and it is usually urged in communities remote from navigable rivers for the reason that the argument is supposed to have more effect in such communities, and people who wish to oppose sitting Members are not particular about what arguments or objections they seize upon so they are supposed to be effective. That objection is the one that the Government ought to spend the money and the Congressman ought to employ his efforts to build good roads instead of improving rivers. The fact is, this is an old hackneyed railroad argument, invented and promulgated by the railroads at the time when they feared the competition of water transportation, and it may be to some extent urged by them now. The truth is, there is no conflict between improving the rivers and improving the roads.

The best and most effective advocates of improving the rivers and generating hydroelectricity are the most enthusiastic goodroads men. While I have worked for 20 years to promote the prosperity of this country through the generation of hydroelectricity and the promotion of inland navigation, I have also worked hard and introduced many bills for good roads, and I know the same to be true of other advocates of this cause. The cause of good roads will never suffer from river improvement. There are legitimate ways in which the Federal Government could help good roads, and it ought to be done. Two bills for that purpose passed the House, but failed in the Senate. Good roads ought to run across the country, out from every railroad station, and run from the inland communities to every riverboat landing. The promotion of navigation and the generation of hydroelectricity will contribute to that desirable end rather

In conclusion, I call upon every friend and promoter of education to place this subject under the scrutiny of the severest investigation, have the fiercest light of truth to beat upon it, and from that investigation they will resolve to open up the storehouse of our wealth, develop the resources of our country, let the farmer thrive, let the people generally prosper physically and financially, while with minds constantly broadening and expanding and hearts overflowing with love for God, their country, and their fellow man, they will march upward and onward to a

more perfect day.

It is auspicious, yea, it is a benediction that this Southern Conference for Education and Industry should give its attention to these momentous interests inviting the South to utilize them to their fullest extent. Education can render its best and sublimest service by promoting agriculture, enlightening commerce, and teaching legislators and politicians on a great many subjects. It is wise to institute a propaganda of wisdom and honesty to counteract the heresies and dispel the ignorance of those who honestly do wrong, thinking that patriotically they are serving their country. We must puncture the fallacies and egotism of the demagogue, who generally underestimates the intelligence of the people he is trying to deceive. frustrate the machinations of private interests, which always clearly understand their own motives and purposes, though generally adopting an entirely different and misleading battle cry and gonfalon when they go forth to combat, and we must nullify and remove all other objections and obstructions which have prevented the development and utilization of our boundless resources, temptingly proffering us their rich treasures and en-treating us to use them in promoting our prosperity and happi-

On the Efficiency of the National Guard.

EXTENSION OF REMARKS

HON. WILLIAM J. BROWNING,

In the House of Representatives, Friday, December 10, 1915.

Mr. BROWNING. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include an address by Wilbur F. Sadler, jr., adjutant general of the State of New Jersey, on the efficiency of the National Guard.

The address is as follows:

EFFICIENCY IN THE NATIONAL GUARD.

IBy Adjt. Gen. Wilbur F. Sadler, jr., National Guard of New Jersey.]
The Organized Militia, commonly known as the National Guard, is now regarded as a part of the first line of defense of our country, and the problem of how to make it more efficient is

therefore of primary importance to those interested in adequate national defense. It especially concerns the adjutants general of the various States, who, in addition to being responsible for the administration, equipment, and efficiency of the militia, are the military advisers of the governors, and represent the States in their relations with the War Department.

In 1792, four years after the adoption of the Constitution, Congress passed the first militia law, which was entitled "An act to more effectually provide for the national defense by establishing a uniform militia throughout the United States." The requirements of this law included compulsory enlistment and performance of military duty on the part of every able-bodied male citizen between the ages of 18 and 45. It required that each person enrolled should, at his own expense, be constantly provided with arms, ammunition, uniform, and equipment, and that mounted officers and enlisted cavalrymen should furnish horses at least 14½ hands high. No uniformity as to bore of rifles, kind of equipment, color, or fashion of uniform was prescribed. Few armed themselves as was intended, and on training days, if the testimony of witnesses can be relied upon, more reported shouldering cornstalks than rifles, and such a ludicrous appearance was presented that the entire system soon became a farce. Because the law carried no appropriation for proper arms and equipment, the training days became more and more useless, and the various States, realizing the inadequacy of the militia thus organized, gradually assumed the power of legislating for it, finally dealing with it as a State force, which is really the organization it is considered to be to-day.

Commencing in 1808, and for more than a quarter of a century thereafter, \$200,000 was annually appropriated by Congress to be divided among the States for the purpose of procuring arms and equipments. Notwithstanding the inefficiency shown by the militia during the War of 1812–1815, Congress did not pass any further legislation until 1820, when a law was enacted providing "that the system of field exercises and discipline, which is, and shall be, ordered to be observed in the Regular Army of the United States, in the different corps of Infantry, Artillery, and riflemen, shall be observed in the militia, in the exercise and discipline of said corps, respectively, throughout the United States."

Despite the passage of this act, there was little or no supervision or direction by Federal authority, and it is not surprising that, because of the many disadvantages under which the militia operated, it was inefficient for over a century of its history and utterly failed when put to the test of actual service during the wars in which we were engaged from 1812 to 1898. In 1903, 111 years after the first militia law was enacted, Congress passed "an act to promote the efficiency of the militia, and for other purposes." This law is known as the "Dick Act," and under its provisions and later supplements a great change has taken place in the militia, increasing its efficiency more than in all of its previous history.

In a discussion of the ways and means for devising an effective reserve for the Regular Army, the public should bear in mind that the National Guard is no longer a social institution upon whose dandified uniforms, which were anything but practical, money was lavished, and which devoted its time to acquiring proficiency in fancy drills and evolutions that made a pretty display at times of public ceremony, but had little connection with the stern duties of a real soldier. At the present time proficiency in marksmanship is encouraged, practical lessons pertaining to the duties of the soldier in the field are taught at camps of instruction under the direct supervision of Army officers, as well as the thousand and one things that make military science a science indeed.

The War Department is now guiding the military policy, prescribing the organization, armament, equipment, discipline, and instruction of the militia, and has detailed instructors who are officers of the Army to assist and advise in regard to the military policy of each State, with the idea of having the militia work in harmony with the Regular Army and become an asset in carrying out plans for national defense,

The great change that has taken place in the militia during the last six years is strikingly illustrated by what has been accomplished in New Jersey during that period. Up to 1908 the activities of the National Guard were limited to close-order drills in armories during the drill season, rifle practice, and the encampment of each upit for one week during the summer. The armory work vesulted in little more than proficiency in such drills, and the most serious work attempted at the encampments was close and extended order drills, the evening parade, guard mount, and weekly reviews given to the governor. No maneuvers were attempted; rifle practice was undertaken without instruction in the theory of shooting or the nomenclature of the rifle; rations were prepared by civilian cooks hired by

the quartermaster general's department, the net result of which

was of little practical value.

In 1909 the character of the encampment was changed, and each organization attending was required to make use of enlisted men as cooks, draw their rations as they would in the field, and prepare and serve them as in active service. Practice marches were undertaken, men were instructed in making and breaking camp, and small maneuver problems were solved. All this produced good results in eliminating a great deal of the entertaining that had theretofore been a prominent feature of camp life, and displaced many useless ceremonies which had consumed

In the latter part of 1909 the War Department detailed noncommissioned officers to assist in drill and instruction, and in 1911 there was sent to New Jersey a commissioned officer as inspector-instructor. Almost immediately after his arrival a system of service schools, the first of its kind to be adopted by any State, was established for officers and noncommissioned officers of all arms of the service. The course of instruction prescribed covers a period of four years, is progressive in character, and requires that all commissioned officers shall attend the schools at stated periods and solve and submit problems prepared by the inspector-instructors. Any officer who fails to attend regularly or pass the prescribed examinations is ineligible for promotion, and those who fail are requested to make place for others who are more diligent and proficient.

After the service schools were inaugurated the National Guard was reorganized to conform to the Regular Army. This resulted in 39 officers of high rank being placed on the unassigned list, including a major general and his staff of colonels and majors, one brigadier general and his staff, certain officers of the adjutant general's department, the quartermaster general's department, the judge-advocate general's department, the inspector general's department, the ordnance department, the medical de-

partment, and the corps of engineers

A school of musketry was established in 1913, which has been conducted during the winter in the various armories of the State and in the summer on the rifle range. It has for its object practical and theoretical training in the knowledge and use of the rifle, its firing effect, and the principles of fire control and fire discipline. The interest created in this school (which was the first to be established in any State) has exceeded all expectations.

The indoor drill season begins on the 1st day of September and lasts until the 1st day of May. During that period the officers attend service schools, lectures, and drills, which require their presence in the armories on an average of three nights a week. and the enlisted men attend weekly drills and the school of musketry. At the close of the drill season this year a camp of instruction was held for officers of the infantry and quartermaster corps under the supervision of 10 Regular Army officers, at which camp practical work was accomplished and theoretical problems were solved. Succeeding this a school of musketry was held at the rifle range for a period of three days, attended by those who had, in the judgment of the officers in charge of the musketry schools, proven themselves proficient. As an incentive and reward for the work done, the State team for the national matches, which now must consist of an equal number of officers below the rank of major and enlisted men, is selected from the students who make the best record at the final tryout at the school of musketry.

Because sufficient funds were not provided the infantry organizations were unable to go into camp this year, but the noncommissioned officers of our five infantry regiments were encamped at Seagirt for a period of one week in order to attend a school of instruction. This encampment proved to be one of the most instructive ever held in our State. The work began at daylight and ended at dusk and was most practical in nature. Camp duties, including the preparation of rations, camp sanitation, digging of trenches, the control of fire, and all measures which during the winter had been systematically covered in theory, were demonstrated.

Field artillery officers went to Fort Sill, Okla., to attend the school of fire, and later with their noncommissioned officers to Tobyhanna, Pa., where the Government conducts one of its artillery camps. Subsequently the two batteries of field artillery were also sent to the latter place. Cavalry officers and noncommissioned officers were sent to Fort Myer, Va., and the squadron to Mount Gretna, Pa. Officers and noncommissioned officers of the signal corps company were sent to Fort Leavenworth, Kans., and upon their return their company participated in a week's practice march. The officers and noncommissioned officers of the medical corps were sent to Tobyhanna, and later the field hospital and ambulance company were there for 10 days. The practical phases of the subjects covered in the

armory schools during the winter were taken up at these camps and were worked out in the surrounding country under actual service conditions, under the guidance of Regular Army officers detailed for that purpose. This work was facilitated by the presence of Regulars, who were commended during the maneuvers by the militia officers.

What has been accomplished in New Jersey is more or less true of each State. It must not be forgotten that the Organized Militia is composed almost entirely of men engaged in professions, trades, and other lines of activity upon which they depend for a livelihood. Leading militia authorities are of the opinion that before it can progress beyond its present standard of efficiency it will be necessary for the Federal Government to increase its appropriation for maintenance and provide some measure of pay for the officers and enlisted men in recognition of the great amount of time devoted to the performance of the duties required by the War Department. Through its representatives the Organized Militia, after an effort of more than four years in conference with the Army officers designated by the War Department, have agreed upon the terms of a pay bill. This so-called pay bill was introduced by Senator Chamberlain during the recent session of Congress, and provides pay for offi-cers below the rank of lieutenant colonel and for the enlisted man in an amount equal to one-fourth of that paid to the same grade in the Army. The pay is contingent upon and proportionate to the amount of actual duty performed. The bill, if enacted into law, will give the militia, in addition to its State duties, the status of the Federal soldier, consolidate the 48 State units, with their varying interests, under a central authority, and will subject the National Guard to call by the President for duty within or without the borders of the country, which service can not be compelled under the existing law. It will give the officers enough to reimburse them for the outlays they must necessarily make and provide remuneration for the enlisted man for his service, be the means of maintaining discipline, increase efficiency, and give to the United States a body of citizen soldiery that can be depended upon at proportionately less cost than is now required to maintain officers and enlisted men of the Regular Army.

The greatest difficulty that the National Guard of the various States has to overcome is the matter of enlistments, and it is regretted that there are employers in every section of the United States who show active hostility to the militia by discouraging their employees from performing military duties, fearing they may, at inconvenient times, be called from their occupations. They do not seem to realize it is to their advantage to encourage the National Guard, to make sacrifices for it, and take more than perfunctory interest in their local military organization. A unit of the militia in any city or town is a protection against any catastrophe that may occur, and the discipline of the men and the training they receive, in attention to duty, promptness, carefulness, neatness, good health, and moral character, all tend to increase their efficiency. In the event of war the young militiaman goes to the front as the representative of the business men, and all employers who love their country should be willing to do their part in upholding the hands of those who may be called upon to defend them.

Another powerful but subtle influence that works against the upbuilding of the Organized Militia is found in the agitator class of organized labor. Their argument is that the militia is maintained for the purpose of breaking strikes, and the young men who can be so influenced are, as a rule, those best fitted for service in the militia. To lessen this influence the preparation and publication of articles in magazines which would give an intelligent description of what the militia is, the part it should take in national defense, and showing that unless we have a militia we must, of necessity, have a large

standing army would be of immense service.

The National Guard should only be used when absolutely necessary to protect life and property after all other means have failed, and labor leaders, having the best interest of their followers at heart, should be interested in doing everything practicable to break down the mistaken idea that the militin is a creature of the vicious employer. The very thought of is a creature of the vicious employer. strike duty repels young men who have direct union affiliations, and this feeling extends to those who dislike to enter an organization which may be employed against their fellow citizens in times of labor difficulties where order should be maintained by a State police force.

School children should be taught not only respect for the flag of their country but for the uniform, whose wearers exhibit in times of peace the highest degree of patriotism by voluntarily enlisting in the National Guard and showing a willingness to risk their lives, if need be, for the maintenance of national security and honor.

Camps of instruction for civilians are being held in various sections of the country at which business men are given a few weeks' training in the art of war, with little or no permanent result except to call attention to our state of unpreparedness. If the same zeal that has been evidenced in those camps were manifested in securing enlistments for the National Guard, if the youth of the land were taught respect for the uniform, if the security leagues and peace societies would devote their endeavors to the upbuilding of the Organized Militia, if employers and labor leaders would encourage militia service, and Congress pass the pay bill, we would soon have a body of 250,000 efficient men enlisted for a definite period for duty within or without the United States which could be quickly raised to war strength.

The War in Europe and Its "Lessons" for Us.

EXTENSION OF REMARKS

HON. DAN V. STEPHENS.

OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 10, 1915.

Mr. STEPHENS of Nebraska. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include an address by ex-Secretary of State Bryan.

The address is as follows:

THE WAR IN EUROPE AND ITS LESSONS FOR US.

Address delivered by William Jennings Bryan, at Johnstown, Pa., Nov. 1, 1915. This address presents the line of argument which he has during the past four months followed in urging peace and opposing preparedness.

Mr. Chairman, I appreciate the opportunity which this occasion affords to present to the people of Johnstown a subject which is in their minds and on my heart. I am grateful, too, for the gracious words which have been employed in presenting me to you. If you feel, as I do, that the chairman has been more than generous, please remember that one in public life must be overpraised by his friends in order to make up for the unjust criticism which he receives from his enemies.

While I have found receptive audiences all over the country, there is no community in which I would expect a more sympathetic hearing than in this, because the distinguished gentleman who represents you in Congress views the subject from the same standpoint that I do. Whenever a new question arises upon which the people have not expressed themselves, it is important that each individual should make known his views in order that public opinion may represent the voters generally and not a portion of the people only. The country would be fortunate if all of our public men were as candid and as courageous in taking a position as Congressman Bailey, who honors you as he is honored by you.

In order that you may follow me the more easily I shall outline in advance the address which I am to deliver to you. It naturally divides itself into three parts-first, the war as it is and its injury to neutrals; second, the false philosophy out of which the war has grown and the natural results of that false philosophy; and, third, the way out, or the road to permanent peace. The subject is presented with a view to emphasizing the lessons which this country can draw from the

conflict beyond the ocean.

No matter by what standard you measure this war, it is without precedent or parallel. I will not call it the greatest war in history, for the word "great" implies something more than bigness. When we speak of a great institution or a great movement, we have in mind something more than mere size. There have been, I think, greater wars than this, but none that approached it in bigness. It is the biggest war ever known, if we measure it by the population of the nations at war-never before have so many people lived in belligerent nations. It is also the biggest war of which history tells if we measure it by the number of enlisted men who face each other upon its many battle fields. The estimates run from twenty-one to thirty-one millions. Rather than risk exaggeration, let us take the lowest estimate; it is sufficient to make the war impressive. In fact, the number is so great that the mind can scarcely comprehend it. Let me translate it into everyday language by comparing it with our voting population. We have never cast as many as 21,000,000 votes at an election. That means that if all in every State who have on a single day exercised the right of suffrage could be gathered together in one

place, the concourse, vast as it would be, would fall several millions short of the number now actually engaged in fighting.

More than two million have been wounded thus far. part of the globe 100,000 persons were swept to death by pestilence, or flood, or famine, the world would stand appalled; and yet in a little more than a year more than twenty times 100,000 have been summoned to meet their God, and everyone owes his death to the deliberate intent and act of a fellow man. More than five million have been wounded-this will give you some idea of the awful toll that this awful war is exacting in life and suffering.

If we measure the war by the destructiveness of the implements employed, nothing so horrible has ever been known before. They used to be content to use the earth's surface for the maneuvers of war, but now they have taken possession of the air, and thunderbolts more deadly than the thunderbolts of Jove fall as if from the clouds on unsuspecting people. And they have taken possession of the ocean's depths as well, and death-dealing torpedoes rise from out the darkness to multiply the perils of the sea. They have substituted a long-range rifle for a short-range rifle, a big-mouthed gun for a little-mouthed gun, a dreadnaught for a battleship, and a superdreadnaught for a dreadnaught, to which they have added the submarine. And they now pour liquid fire on battle lines and suffocate soldiers in the trenches with poisonous gases. Inventive genius has been exhausted to find new ways by which man can kill his fellow man.

And the nations which are at war are not barbarous nationsthey are among the most civilized of the earth; neither are they heathen nations-they are among the Christian nations of the globe. They all worship the same God, and most of them approach that God through the same Mediator. They offer their supplications to a common Heavenly Father and then rise up to take each other's lives.

It would be bad enough if the penalties of this war fell only upon the guilty; but a vast majority of the men who die and of the women who weep have had neither part nor voice in determining whether there should be peace or war. It would be bad enough if the burdens of this war fell only upon the nations participating in it, but like a mighty flood this war has inundated the world, and neutral nations as well as bel-

ligerent nations are suffering.

The Latin-speaking Republics are kept busy night and day trying to preserve neutrality; they maintain an extensive patrol over the 3-mile strip along their coasts to keep big nations from violating their neutrality by fighting within their territorial limits; and all the neutral nations are bearing burdens of taxation which would not be necessary but for the war; they are compelled to resort to new and unusual methods for the collecting of revenue because the war has put their fiscal systems

The trade of the world is deranged and our Nation, the greatest of the neutral nations and the one with the largest foreign commerce, is suffering more than any of the others. the war began we were using the ships of other nations largely for the carrying of our merchandise, when, all at once, the very nations whose ships we employed became involved in war, and then one side drove the ships of the other side into our harbors and compelled them to intern there, and, according to international law, there these ships must remain during the war, idle and useless, while we suffer for lack of ships; and the nations that drove these merchantmen from the seas are not under any obligation, according to international law, to supply vessels to take the place of the ones of which they have deprived us. On the contrary, they are at liberty to withdraw their own vessels for use in the transport service, and to some extent they have done so, still further crippling the carrying trade of the ocean. Because of lack of ships and because of the increased risks of the sea, it has sometimes cost seven times as much to send a bale of cotton across the ocean as it cost in normal times. When on the Pacific Coast a few weeks ago I learned that it then cost nearly three times as much to transport a bushel of wheat to Europe as it cost in time of peace. These are some of the burdens which neutral nations are bearing; and, in addition to these, all of them are in danger of being drawn into this war, although none of them desire to take part in it.

When you understand international law as now interpreted and applied you will feel as I do, that international law seems to have been written for the benefit of nations at war rather than for the benefit of nations at peace. I am hoping that when this war is over we shall be able to secure such changes as may be necessary to write international law upon the theory that peace, and not war, is the normal relation between nations—amendments which will make the rule read, not as it seems to now, namely, that nations at peace may attend to their own business so long as they do not interfere with the fight, but will provide that nations that do fight must not disturb the peace, the commerce, or the prosperity of the nations that prefer to substitute reason for force in the settlement of their international differences.

I have called attention to the outstanding features of this war that you might comprehend its magnitude, and I have mentioned some of the injuries suffered by neutrals that you might understand how earnestly the neutral nations long for the return of peace, but I can not conclude this part of my address without impressing upon your minds two facts which it is necessary for us to keep in mind. If all the newspapers had obeyed the President and observed neutrality, his tasks would not have been so delicate and the people would have been better informed. But while most of the newspapers have tried to be neutral, we have had two unneutral groups-the pro-ally group and the pro-German group. The pro-ally group has emphasized our disputes with Germany, and the pro-German group has emphasized our disputes with Great Britain. We have had disputes with both; we have protested to Germany against the use she has made of submarines and to Great Britain against interference with our trade with neutrals. If you will read the notes which our Government has sent, you will find that our rights, as we understand those rights, have been violated, not by one side only, but by both sides, and that injuries have come to us from both sides.

This is the first fact which we must keep in mind, and the second is related to it, namely, that while both sides have injured us, neither side has desired to do so. The injuries which we have suffered have not been intended against us, but have been incidental to the injury which each has intended against the other. They are like two men shooting at each other in the street, who are too much interested in killing each other to pay any attention to the bystanders, who get the stray bullets from both sides. In order to deal patiently with the problems presented by this war it is necessary that we should understand both of these facts-I repeat the statement of themnamely, that both sides have injured us, but that neither side desired to do so. It would be unfortunate enough for us to go to war with a nation that hated us and wanted war with God forbid that we shall ever compel a nation to go to war with us if it is not an enemy and does not want war with the United States.

And now allow me to ask you to consider the false philosophy out of which this war has grown and the natural results of that false philosophy. Before speaking of the real cause, it is worth while to note that some of the causes which have produced war in the past are not responsible for this war. There have been race wars in history—wars that have been the outgrowth of race prejudices which have sometimes extended through centuries. But this is not a race war; the races are all mixed up in this war. Saxon and Slav are allies; Latin and Frank are allies; Teuton and Turk are allies; and now, since Bulgaria has entered the war, Slav is fighting Slav, and it is not yet known whether the Greek, if he enters the war, will side with Turk or Roman. The races are inexplicably mixed.

And it is not a religious war. There have been religious wars, although we can not understand how a war could arise over a religious difference. We have learned to believe that the right to worship God according to the dictates of one's conscience is an inalienable right, and it would never occur to us that a man would kill another in order to prove that his religion is better than the other man's religion. According to our theory, if a man desires to prove the superiority of his religion, he lives it, for we do not count a religion as worthy of the name if it does not manifest itself in the life. There have, however, been religious wars, but this is not one of them. On the Bosphorus the crescent and the cross float above the same legions; a Protestant Emperor of Germany is the ally of a Catholic Emperor of Austria; and you will find fighting in the same army corps representatives of three great branches of the Christian church, Catholics, members of the Church of England, and members of the Greek Church. The religions are as badly mixed in this war as the races.

And it is not a family war. There have been family wars—wars that have had their origin in family feuds or in family greed, but in this war the families are mixed. The Emperor of Germany, the King of England, and the Czar of Russia are cousins, members of one royal family, although you would never suspect from the way they treat each other that they are closely related by ties of blood.

And there was no cause of war apparent on the surface. Within a month of the beginning of the war the rulers who are now fighting each other were visiting each other; they

were being hospitably received and royally entertained. When one of them had a birthday, the others all joined in wishing him many happy returns of the day. It would be a libel upon the rulers now at war to say that they knew that a cause existed adequate to produce such a war. For had they known of the existence of such a cause, it would have been their duty to their subjects to lay aside social festivities and the exchange of compliments that they might join together and remove the cause of war. But without a race cause, a religious cause, a family cause, or any cause visible to the public, this war began, and such a war as history has never known! There must be a cause and it must be a human cause, for no one who loves God would ever blame Him for this inhuman war. It behooves us to find the cause, that, knowing the cause, we may, by avoiding it, avoid the consequences.

I have tried to find the cause of this war, and, if my analysis of the situation is correct, the cause is to be found in a false philosophy—in the doctrine that "might makes right." This doctrine was formerly proclaimed quite publicly; now it is no longer openly proclaimed, but it is sometimes practiced when the temptation is sufficient. Before you become excited, while you can yet reason, I appeal to you to set the seal of your condemnation against this brutal, barbarous doctrine that "might makes right." And that you may see more clearly the importance of reaching a conclusion and proclaiming it, I call your attention to the fact that there is but one code of morals known among men, and that is the code that regulates individual life. If this code of morals is not to be applied to nations, then there is no moral code which can be invoked for the

regulation of international affairs.

If I were an artist, I would carry with me a canvas and reproduce upon it one of McCutcheon's recent cartoons. He represents war and anarchy by two brutal looking human figures. Across the breast of war he has written "might is right," and across the breast of anarchy the words "dynamite is right." I challenge you to draw a line between the two doctrines. The nation that takes the position that it is at liberty to seize whatever it has the power to seize, and to hold whatever it has the strength to hold; the nation that plants itself upon the doctrine that might makes right, has no system of logic with which to address itself to citizen or subject who, as against his neighbor or as against his government, invokes the kindred doctrine that dynamite is right.

If you will take your Bibles and turn back to the story of Naboth's vineyard, you will find that Ahab violated three commandments in order to secure a little piece of land. The commandments read, "Thou shalt not covet"; "Thou shalt not steal"; and "Thou shalt not kill," and these commandments are not only without limitation, but they are not subject to limitation.

Take for instance the commandment against covetousness. After specifying certain things that must not be coveted, the commandment concludes with the clause "or anything that is thy neighbor's." If this has any meaning, it covers everything. There is no process of reasoning by which we can retain that commandment and make it binding upon the conscience of the individual if we hold sinless the nation that covets the territory of another nation. And yet the coveting of territory has been the fruitful cause of war.

And so with the commandment against stealing. It does not read "thou shalt not steal on a small scale"; it simply says "thou shalt not steal." And yet I am not telling you anything new when I tell you that as a rule—not always, but as a rule—it is safer even in this country for a man to steal a large sum than a small sum. If he steals a small sum he is just a common, vulgar thief and nobody has any respect for him; if he has any friends they are careful not to allow the fact to be known. If, however, he steals a large sum, he has two advantages over the petty thief. In the first place, if he steals enough, he can employ the ablest lawyers, and his lawyers can usually-not always, but usually-keep him out on bail until he dies a natural death while they discuss technicalities in all the courts of the land. And he has a second advantage; if he steals a large sum, he can always find enough people to furnish him social companionship who will be so amazed at his genius that they will never mention his rascality in his presence. If we find it so difficult to visit the same indignation upon grand larceny that we do upon petty larceny we must not be surprised if, when one nation steals a large amount from another nation, there are some who regard it as an act of patriotism.

And the commandment against killing does not read that you must not kill unless a large number join with you. On the contrary, the Bible plainly declares that "though hand join in hand, they shall not be unpunished." And it does not say that

if you do kill you should be gentle about it and use the most approved methods. On the contrary, there is no intimation anywhere that the moral character of the act can be changed by the method employed in putting an end to a human life. It is just a plain, blunt "thou shalt not kill," and yet as we read history we are compelled to admit that it has been easier for Governments to hang one man for killing one man than to punish killing by wholesale. And many poets have felt impelled to express themselves much in the language employed by the author of Gray's Elegy who speaks of those who "wade through slaughter to a throne and shut the gates of mercy on mankind."

I have called attention to these commandments for the purpose of emphasizing the fact that if we adopt the doctrine that might makes right" we must be prepared to repudiate all of the moral code upon which we rely for the protection of in-

dividual life and the guaranty of private property.

The nations that adopt the doctrine that "might makes right" are quite sure to act upon the maxim "like cures like," the foundation upon which the law of retaliation is built. The logic of the law of retaliation is like this: If your enemy is cruel, cure him of his cruelty by being more cruel than he; if your enemy is inhuman, instead of attempting to lift him out of his inhumanity by the power of a good example, be more inhuman than he. Nations that enter a war on the theory that "might makes right" are soon in a neck and neck race for the bottomless pit, each Nation justifying its own cruelty and in-humanity by the cruelty and inhumanity of its enemy.

I have purposely applied this false philosophy to those far

away before applying it at home, because I have learned by experience that it is easier to persuade people to indorse a proposition when applied to others than when applied to themselves. But if I may assume that you have followed me and that we are now in agreement, I am now prepared to apply this false philosophy to a matter with which we are compelled to deal whether we desire to do so or not. The issue is upon us

and can not be avoided.

There was a time when some believed that war was a moral tonic-when some actually thought that unless people were kept up to fighting pitch they would degenerate. That seems absurd to us, for we know that if war were necessary to man's moral development it would not be left to accident or chance. If war were a necessary thing we would plan for it as we plan for other things which we consider necessary. We know that food is necessary for the body and therefore we provide that the body shall receive food at stated intervals, the intervals being adjusted to the body's needs. And so, because we believe the mind in need of education we provide for terms of school. If we believed war to be necessary we would call in experts and ascertain just how long a man could go without killing some one and yet maintain a high standard of civilization, and then we would provide for wars at such regular intervals as, in our opinion, would insure man's progress, and the time between wars would then be like the time between school terms-a time when we could rest and relax and get ready for another This we would do if we regarded war as necessary. But, however war may have been considered by some in the past, the world now believes war to be not only unnecessary and undesirable but a calamity.

If there are any who doubt this I am prepared to furnish recently secured testimony. When this war began the President offered mediation and the rulers of the Nations then involved immediately answered, and their answers were so much alike that one answer might have served for all. What did they say? Each ruler said in substance: "I am not guilty; I did not desire this war; I am not to blame for this war; some one else began it." They all with one accord denied respon-The world is to be congratulated that we have reached a time when no ruler in a civilized land dares to admit that he caused this war or even desired it-this is a long step in It is not necessary, therefore, to waste any time in an effort to prove that war is a curse. That may now be taken for granted, and we are at liberty to devote all of our energies

to the prevention of war.

But just when it has become possible to unite in an effort to prevent war we find a radical difference of opinion as to how war can be prevented. A propaganda is being actively carried on which has for its object the establishment of the doctrine that the only way to preserve peace is to get ready for war. The exponents of this theory admit that war is a horrible thing and that it should be avoided, but they contend that the only way to prevent war is to organize, arm, and drill, and then stand, rifle in hand and finger on hair triggerand preserve the peace. I never expected to hear this theory advanced after the present war began. At each session of Congress during the past 15 or 20 years we have heard some ad-

vocating this doctrine and insisting on more battleships and a larger army, but their interest could generally be traced to their business connections-they were anxious to furnish the preparedness themselves and therefore advocates of the theory. But when this war broke out I thought that at least one good would come out of it, namely, that no one would hereafter stand before an intelligent audience and argue that preparedness would prevent war. If war could be prevented by pre-paredness, there would be no war in Europe to-day, for they have spent a generation getting ready for this war. They had the kindling all ready; all they needed was a match. When the war broke out those best prepared went in first and others followed as they could prepare, and I believe that if we had been as well prepared as some now ask us to be we would be in the war to-day shouting for blood as lustily as any of them.

This is so serious a matter and it is so vitally important that we should follow the course best calculated to prevent war that I beg you to listen while I present the reasons which lead me to believe that the preparedness which they now propose would not only not prevent war but would actually provoke war-that with the things that necessarily accompany it preparedness would inevitably lead us into the wars against which they ask us to prepare. In the first place, we can not have a period of preparedness without submitting ourselves to the leadership of those who believe in the doctrine that peace rests upon fear; that we can only preserve the peace by making people afraid of us. This is the folly of the ages-the very theory that has led Europe into this present conflict. And more, if we are to be driven to preparedness by the scares that are now being worked up, we must follow the leadership, not of those who advocate moderate preparedness, but of those who insist upon extreme preparedness. If we must prepare a little because we are told that one nation may attack us, we must prepare more if another group of iingoes warns us against an attack joined in by several nations, and we must go to the very limit if a third group pictures an attack in which the world will combine against us. There is no limit to the amount of preparation that we shall need if we are to provide against every imaginary danger and every possible

The real question which we have to decide is, What shall be our standard of honor? Shall it be the European stand--which is the duelist's standard-or shall it be a standard in keeping with our aspirations and achievements? advocates of extreme preparedness are attempting to fasten upon this country the duelist's standard of honor and we know what that standard is because we had it in this country a hundred years ago. When that standard was supported by public sentiment men were compelled to fight duels even when they did not believe in the practice; they were branded as cowards if they The case of Alexander Hamilton is an illustration in While I prefer the ideas of Jefferson to the ideas of Hamilton, I recognize, as all must, that Hamilton was one of the heroic figures of the Revolutionary days. He fought a duel and fell, and the last thing he did before he left home for the fatal field was to prepare a statement, which he left to posterity, saying that he did not believe in the practice, but that he felt it necessary to conform to the custom in order to be useful in crises which he thought he saw approaching. The duelist standard of honor was this: If a man had a wife and she needed him, he had no right to think of his wife; if he had children and they needed him, he had no right to think of his children; if his country needed him, he had no right to think of his country. The only thing he could think of was that he must kill somebody or be killed by somebody. According to the duelist's standard of honor it was more honorable for a man to throw his wife and children upon the care of a community than to allow what he called an insult to go unchallenged. It required moral courage on the part of many to effect the change which has been wrought on this subject, but the change has come and we not only have a law against dueling in every State in the Union, but we now call the man a coward who sends the challenge, not the man who declines it.

About 50 years ago a prominent statesman of Georgia received a challenge from another statesman of that State. Had the challenge been received a century ago instead of a half century the one who received it would hardly have dared to decline. But a change was taking place and the challenge was declined in an answer that has become a part of history. The challenged party said: "No. I have a family to take care of and a soul to save and as you have neither we would not fight on equal Therefore I will not fight." No nation is challenging us; no nation is trying to draw us into war with itself. But if in a moment of excitement one of the madmen of Europe were to challenge us I think we would be justified in answering in the spirit of the answer of that Georgia statesman: "No. We have

the welfare of a hundred millions of people to guard and priceless ideals to preserve, and we will not get down and wallow with you in the mire of human blood just to conform to a false standard of honor."

Do not allow yourselves to be deceived or misled as to the real issue. The question is not whether this Nation would defend itself if attacked. We have a potential power of defense such as no other nation has to-day—such as no other nation has ever had, and other nations know it. There is no danger that an attack would not be resisted, and we would not depend upon the jingoes. They would be too busy making Army contracts and loaning money at high rates of interest to reach the front. If we ever have a war, we will depend, as in the past, upon those who work when the country needs workers and fight only when the country needs fighters.

The question, I repeat, is not whether we would be willing or able to defend ourselves if attacked. The real question is whether we shall adopt the European standard of honor and build our hope of safety upon preparations which can not be made without substituting for the peaceful spirit of our people the spirit of the militarist and the swagger of the bully. The spirit that leads nations to put their faith in physical force is the spirit that leads people into war. It is the spirit that expresses itself in threats and revels in the ultimatum.

If you would know what the dangers of preparedness will be if preparedness becomes a national policy and is administered by those who are leading in this crusade, just imagine what the situation would be to-day, with so many opportunities to get into trouble, if we had in the White House a Jingo with the duelist's standard of honor and anxious for a fight. We have reason to be grateful that we have as President a man who loves peace and is trying to find a peaceful solution of all the problems that confront us.

I ask you next to remember that it is an expensive thing to prepare for wars that ought never to come. It cost us \$15,000,000 to build the last battleship launched, and that was only one-tenth of the amount spent on the Navy that year. You might think, from the manner in which the jingoes belittle our Army and Navy, that we are at present spending nothing on preparedness. But we are, as a matter of fact, spending now \$250,000,000 annually, getting ready for war. We are spending more than one hundred and forty-seven millions on the Navy and over one hundred millions on the Army; and how much are we spending on agriculture? The Department of Agriculture, which looks after the interests of the largest single group in this, the largest agricultural country in the world—the Department of Agriculture, which plants experimental stations throughout our land and sends representatives throughout the world to gather information for the farmer's benefit—this department receives an appropriation of twenty-three millions a year. We are, in other words, spending more than ten times as much getting ready for war as we are spending on the Department of Agriculture. And yet the jingoes are not satisfied. They say that we must now turn over a new leaf; that we must get ready in earnest.

we must get ready in earnest.

There are two organizations in this country which, together claiming a monopoly of the patriotism of the Nation, have taken upon themselves the task of getting the country ready for war. The Security League thinks that we should spend three hundred millions a year on the Navy and one hundred and fifty millions a year on the Army—two hundred millions more than we are now spending, or nearly double the present appropriations. The Navy League is older, had more ciphers at its disposal and had the advantage of making its bid after the other bid had been made. It insists that we ought to appropriate five hundred millions for the Navy and have an Army of a million men. Its program could not be carried out for seven hundred and fifty millions a year—three times the present appropriation, or an increase of five hundred millions a year.

To show you what a burden this would cast upon our tax-payers let us assume that the appropriations for the Army and Navy will be kept at what they are now—about two hundred and fifty millions a year—and inquire what we could do with this proposed increase of five hundred millions a year—five billions in 10 years—if we spent it for things beneficial. I was in California last summer and learned from a commissioner of highways of the work they are doing in the building of hard roads. They are spending \$18,000,000 and their plans contemplate two highways running from the Oregon line to the Mexican line—one down the Pacific coast and the other down the great central valleys of the State. These two highways are to be connected at the county seats; a splendid system. The commissioner told me that it had been found by experiment that a farmer can haul four times as much with the same team

on a hard road as he can haul on a dirt road, and he can haul it any day in the year and any hour in the day, and he does not have to consult the Weather Bureau when he hitches up his team. They are also building hard roads in Oregon. The road between Ashland and Medford has already reduced the cost of carrying freight between the two points 50 per cent. The railroads charge 16 cents per 100; the auto trucks haul for 8 cents and in addition have eliminated drayage charges at both ends of the line.

They are building hard roads in the State of Washington; the road between Seattle and Tacoma is near enough to completion to enable auto buses to compete successfully with the steam railways and the electric lines.

I have made a calculation to see how much hard road could be built for five billions-the five hundred million increase would aggregate that sum in 10 years. From information furnished by the Department of Agriculture I find that the average cost of a macadam road 16 feet wide and 6 inches thick is a little over \$6,000 a mile. That there may be no doubt about the estimate being sufficient let us arbitrarily raise it to \$8,333.33} per mile, which will enable us to make the computation in round numbers. If we count the distance from ocean to ocean at 3,000 miles and the distance from north to south at 1,200 miles, we can with \$5,000,000,000 build enough macadam road, 3 miles for \$25,000, to make 100 highways from the Atlantic to the Pacific, putting them 12 miles apart, and high-ways north and south 12 miles apart, so that when the five billions were spent the country would be gridironed with macadam roads 12 miles apart east and west, north and south, and no American citizen would then live more than 6 miles from a hard road that would take him anywhere in the United States.

If the jingoes insist that we are in danger of attack, let us propose that we get ready by building roads; it will greatly increase our defensive power if we are able to quickly mobilize our Army and rapidly transport it to the point threatened. And there is an advantage about this kind of preparedness; if, after we have prepared ourselves, the war does not come, we shall be able to make good use of the preparation in the work of production. If, however, we divert the money from useful channels and spend it all on battleships and arms and ammunition, we shall have wasted our money if the war does not come; and if it does come, the chances are that before it comes changes in methods of warfare will very much reduce the value of the preparation in which we have invested.

But as some may be more interested in having the volume of loanable money increased than in having good roads, I present another calculation. The total capital and surplus of all the banks of the United States—national, State, and private—aggregate a little less than \$4,000,000,000; with \$5,000,000,000 we could duplicate every bank, double the loanable bank capital and surplus of the Nation, and have a billion dollars left with which to celebrate prosperity.

The taxpayers of the country will not be willing to bear the burdens necessary for the proposed preparation, unless they are convinced that some nation is about to attack us. The jingoes understand this, and they are therefore bearing false witness against other nations. They tell us to beware of Japan on the west, and if that does not frighten us they pick out some nation in Europe and accuse it of having designs against us; and if that does not frighten us they say: "Beware of the fate of Belgium!" How any normal mind can think of Belgium and the United States at the same time passes understanding. Belgium has 7,500,000 of people, while we have 100,000.000. Would not an ordinary mind, working smoothly and without excitement, be able to see the difference between seven and a half and a hundred? And there is a still greater difference. Belgium is separated from the countries round about by an imaginary boundary line, while we have the Pacific Ocean on one side and the Atlantic Ocean on the other. If anyone is unable to see the difference between an imaginary line and an ocean, let him learn what difficulty the nations have had in moving armies across narrow channels, and then he will understand the protection of the Atlantic Ocean.

We can not single out a nation and begin to prepare against it without cultivating unfriendliness toward that nation, and we can not make hatred a national policy for a generation without having our people anxious to fight as soon as they are ready to fight. If the nations at war had spent in the cultivation of friendship but a small percentage of the amount they have spent in stirring up hatred, there would be no war in Europe to-day. We should not transplant upon American soil this tree of hatred unless we are prepared to eat of the fruits of the tree, for it has been bearing its bloody fruit throughout the years.

The third reason which I ask you to consider is this: The preparedness which we are now asked to make is against na-

tions which are not preparing to fight us. But suppose we get ready to fight them; will they not prepare against us? If they can scare us when they are not prepared, will we not scare them when we do prepare? And, then, will not their preparation compel us to prepare more, and will we not scare them again and they us again, and we them again, until bankruptcy overtakes us all? This is no new thing. The people who profit by furnishing preparedness have been playing the nations of Europe against each other for a generation. Every battleship that is built in one country is made the excuse for building more battleships in other countries. Let me illustrate the plan of the battleship builder: Suppose three farmers lived around a little lake and a battleship builder wanted to increase his business how would he go at it? He would go to the first farmer and You are helpless. If your two neighbors were to combine against you, they could overcome you; your lack of preparedness is an invitation to them. Let me build you a battleship and anchor it here by your land. Then they will see that you are prepared, and they will be afraid of you and peace will be He would then go to the second farmer and say: "Do you see that battleship over there? Do you know what that is for? That is for you. Are you willing to invite attack by being defenseless? Let me build you two battleships, and then he will see that you are prepared and will be afraid of you and peace will be preserved." He would then go to the third farmer and say: "Either one of your neighbors is more than a match for you alone; together they can annihilate you. Your only safety lies in the building of three battleships. Then when they see you are ready they will be afraid of you and the peace of the lake will be preserved." By this time he would be able to go back to the first man and say: "Your little battleship is out of date. It is a provocation instead of a protection. you are willing to build more ships you had better sink that one. It shows that you want to fight and everybody knows you can not fight. You must have four battleships of the latest pattern in order to prevent war by being prepared for it." And so on This is what they have been doing in Europe. Is it possible that they can entice us into this mad rivalry?

If we are urged to depart from the traditions of the past and to enter upon a new policy, there are two answers which can be made, either of them sufficient. First, if we ever intend to change our policy, the change must not be made while this war lasts. If we change now, it will be a confession that we have been wron; and that Europe has been right, and if we make this confession we shall not only be powerless to assist the belligerent countries by a good example, but we shall, by imitation, encourage them in the course which has drawn them into this unprecedented conflict. If we are ever to change our policy,

now of all times is not the time.

We must consider also our influence on Latin America. If we adopt this new policy and turn our energies from the arts of peace to preparation for war, will not our neighboring republics be urged to follow our example? Can we afford to take the responsibility of retarding their progress by encouraging them to divert their money from needed improvements to expenditures which are not only unnecessary, but a menace to the friendly relations which now exist between them? There is no excuse for the present outburst of war spirit—it is not only without excuse, but contains infinite possibilities for harm.

Second, there never has been a time in 50 years when we were in less danger than now. No nation has any thought of waging war against us and our preparedness is increasing relatively more rapidly than ever before. If the warring nations keep on killing each other as they are killing each other now, burning up property as they are burning it up now, and mortgaging the future as they are mortgaging it now, they will not have left enough able-bodied men, enough money, or enough credit to threaten a nation like this. No; there is no excuse for the attempt which is now being made to lash the country into a fright over possible wars. Let us do what we can to stop the war in Europe; humanity, as well as our own security, demands it. But if we can not stop the war there—if the dogs of war must fight—we should at least keep hydrophobia out of this country while the war lasts.

And now let us consider the way out or the road to permanent peace. And before taking up the real way out let us for a moment look at some of the ways that do not lead out. Some talk of annihilation and argue that the war must go on until one side completely effaces the other. Annihilation is a big word and the annihilation of a nation a very difficult task. Long before they are in sight of annihilation they will be so sick of bloodshed that they will stop. There are already signs of sickness now. They have been striking in the coal mines on one side and in the gun factories on the other. On one side they have been protesting against threatened conscription and on the other

against the doctrine of conquest. No; they will not carry the war to the point of annihilation, and if they did it would be a crime against civilization. If they do not know each other, we know them all, for their children have come among us and have helped to make this country what it is. We know that these belligerent nations have reached their present positions through struggles that have lasted for centuries and that each one has a priceless contribution to make to the future of the world. God might have made all the flowers of one color and with a single fragrance, but the world would not have been as attractive had He done so. And so God might have made all the nations with one history and a single language, but I believe that the world is better for their rivalries and their competitions; they together constitute one resplendent political bouquet.

Some think that if the war does not go on until annihilation takes place it must at least go on until one side is so completely triumphant that it can dictate the terms of peace, compel the acceptance of those terms, and thereafter maintain the peace of Europe by the sword. But when we consider the immense masses of men on either side this thought is almost as idle as the thought of annihilation, and it will not brighten the future if as result of this war one nation or group of nations emerges

from the conflict master on land or sea.

If there is one lesson which history teaches more clearly than any other it is that nations which aspire to mere physical supremacy have no hope of immortality; the fact that they put their faith in force is proof that they have in them the seeds of death. The pathway of human progress is lined with the wrecks of empires which, when at the zenith of their power, thought themselves invincible.

What the world needs is not a despot to fix the terms upon which the rest shall live; its great need is that these nations shall be brought together in a spirit of friendship and fellowship that they may cooperate in working out the destiny of Europe. If this Nation has any influence, that influence must be exerted to bring the warring nations together and not to encourage them in the false hope that a permanent peace can be built on

force or fear.

All of the rulers of the nations at war tell us that they did not want the war and did not cause it, but none of them tell us how it can be brought to an end. Have not these neutral nations, all of whom bear burdens though they are not to blame, a right to know what it is that, being done, peace may be restored? For what are the nations fighting—not in general terms but specifically? Is it territory that they want, then how much and where is it located? Is it blood that they demand, then how much more blood must be shed to avenge the blood already shed? If they will not answer the neutral nations, will they not make answer to their own people? The day will come when this accumulated sorrow will overflow, when this pent-up angnish will find a voice, and then, if not before, the rulers must answer that stern question which shakes thrones and fixes the farthermost limits of arbitrary power: "Why do we die?"

Europe has had machinery for war, but not for peace. The nations of Europe could go to war in a minute, but they were not sufficiently supplied with machinery for the adjustment of difficulties that defied diplomatic settlement. And we can not be harsh in our criticism because, until recently, this Nation was almost as poorly supplied as the European nations with the machinery for the preservation of peace. Until within three years our best treaties were those known as the "arbitration treaties," and they had two serious defects. First, they only ran five years and then died. And when one of these treaties died it had to be renewed by the same formalities required for its negotiation. It had to be ratified by two-thirds of the Senate, which meant that though the President might desire to continue it and though a majority of the Senate might desire to continue it, the extension of its life could be prevented if a minority of the Senate, more than one-third, objected. But a still more serious defect was found in the fact that these treaties did not cover all questions—they excepted questions of honor, questions of independence, vital interests, and interests of third parties, the very questions out of which wars are apt to grow. When a man is angry every question is a question of honor, every interest a vital interest. Man angry is a very different animal from man calm; when a man is angry, he swaggers about and talks about what he can do, and he generally overestimates it. When he is calm, he thinks about what he ought to do and listens to the voice of conscience.

We now have 30 treaties with nations representing threefourths of the world, and these treaties cure the defects of which I have spoken. In the first place, instead of dying at the end of five years they never die. They run on and on and on until 12 months after one side or the other has asked that they be discontinued. I believe that neither side will ever ask that these treaties be discontinued. I have such faith in these treaties that I believe that a thousand years from now the name of Woodrow Wilson and my name will be linked together in the capitals of the world and that these treaties will preserve the peace of our Nation by furnishing machinery by which peace can be preserved with honor.

But, what is more important than length of life, these treaties contain no exceptions; they cover all disputes of every kind and character. Each one of these 30 treaties provides that every dispute that defies diplomatic settlement, if not by some other treaty submitted for final settlement, must be submitted to an international commission for investigation and report. Each one of these 30 treaties also provides that the period of investigation may last a year, and each one of these treaties further provides that during the period of investigation neither side shall declare war or begin hostilities. Here are three provisions, new to treaty making, which reduce war between us and

the contracting parties to a remote possibility.

We do not contend that war is made impossible; I only wish it were possible to make war impossible. But in order to secure the investigation of all questions it was necessary to reserve to each nation the right of independent action at the conclusion of the investigation. If anyone believes that war may sometimes be necessary, let him find consolation in the fact that every one of these treaties specifically reserves the right of our Nation to go to war. If any desire war, all they have to do is to stir the people up to fever heat and keep them there for a year; then if no other way out is found the Nation is at liberty to fight its way out. And I so much believe in the right of the people to have what they want that I admit the right of people to go to war if they really want it; but I feel as a North Carolina Congressman expressed himself, that if we are to have war it would be better for the people to vote it upon themselves than to have others vote it on them. If there is any question upon which there should be a referendum vote, it is the question of peace or war, which may mean life or death to so many people; and if we have a referendum vote on war, it will only be fair that the women shall vote as well as the men, for women bear the larger portion of the burden in time of war. I believe that the women should vote on all questions; but if they vote on only one, it ought to be at an election which decides the issue between peace and war.

And I agree with the North Carolina Congressman in another matter. He suggests that it would insure deliberation on the part of the voters if the vote was taken with the understanding that those who voted for war would enlist first, and that those who voted against war would constitute a great reserve army, which would not be called into service until after all those who voted for war had had a chance to show what they could do. I like the idea, and I venture to add another suggestion. I am a journalist, among other things; whenever anyone asks me what I am, my answer is, a journalist. I am proud of the profession, though not of all the members of it. If we have war, I shall insist in the name of the journalists of the country that the first battle line shall be made up of jingo editors, that they may have the glory of dying before anyone else is hurt.

These 30 treaties will, in my judgment, go far toward preserving peace, and I believe that the principle ought to be applied to all nations. If the plan is good enough to offer to all nations—and the offer has never been withdrawn; if the plan is good enough to be entered into with nations representing 1,300,000,000 people; if the plan is good enough to be indorsed in principle by Germany, Austria, and Belgium—countries with which treaties of this kind have not yet been negotiated—it is good enough to be used with any country before we go to war

with that country.

But I will go a step further; even if we use the treaty plan, and it fails to secure a settlement, or if we fail to use it and reach a point where we must decide, either to go into this war or to postpone final settlement of the dispute until this war is over; if we must choose between these two alternatives, I believe it would be the part of wisdom to postpone final settlement until the war is over. First, because postponement would make war unnecessary, and that would be a sufficient reason for postponing it. We would have no difficulty in settling any dispute which we now have or which may arise during the war, but for the fear of the effect of the settlement upon the war itself.

But even if a postponement did not prevent war it would be better to have our war after this war is over than during this war, because it would then be our own war with the country with which we had our dispute, and we could not only go into the war at pleasure, but come out at will. But this war is not our war—it is everybody's war—and if we go into it, we can not come out without consulting others, and others would determine

also what we would fight for while we were in—and God forbid that we shall ever tie ourselves to the quarrels, rivalries, and ambitions of the nations of Europe.

And now bear with me for a moment while I present three reasons why it is imperatively necessary that we shall not enter this war. I shall not present these reasons in the order of their importance, rather in inverse order: First, no one can tell what it would cost us in dollars to enter this war. It is not like any other war, and therefore estimates based upon the past would be of little value. Let those who glibly talk of war give us a guess as to what it would cost to take part in this war, and then give a guaranty that their guess is high enough. Many predictions have been made in regard to this war, but so far none have been verified. Would it cost one billion? One of the jingo papers insisted a few weeks ago that Congress should be called together immediately to vote a credit of \$1,000,000,000 in anticipation of a possible war. It would be more likely to cost us five billions or ten, but even if it cost ten billions that would not be the greatest objection to war. There are two other objections that are more important.

The second objection is based upon the possible loss of life. How many men would it cost us to take part in this war? A hundred thousand? They have already killed over 2,000,000; 100,000 would hardly be enough for our quota in such a war. If we go into this war we can not go in in a stingy way or as a miserly nation. If it is manly to go in, it will be manly to play

a man's part and be prodigal in blood and money.

The danger of war with Germany now seems to be passed and the country is relieved to have the American position in the submarine controversy accepted. But while there was a possibility of war-while the question was acute-some of our American papers were insisting that we ought to go to war with Germany at any cost. I do not believe that our people would be willing to send 100,000 brave Americans to death because a little more than a hundred took ships that they ought not to have taken into danger zones about which they fully understood. It is not that our people did not have a right to take those ships. Under international law they did have a right to sail on those ships, but great international questions can not be settled on naked legal rights. There are duties as well as rights. Let me Illustrate. Every young man, when he becomes of age, has a legal right to leave his home and make a career for himself. He is not compelled to consider either the wishes or the needs of his parents. But, fortunately, most of our young men put their duty to their parents above their legal rights, and inquire about the welfare of the old folks before they leave home.

And so every American citizen has duties as well as rights. Do you say that it is the duty of this Government to take its Army and follow an American citizen around the world and protect his rights? That is only one side of the proposition. The obligations of citizenship are reciprocal. It is the duty of the citizen to consider his country's safety and the welfare of his fellow men. In time of war the Government can take the son from his widowed mother and compel him to give his life to help his country out of war. If, in time of war, the Government can compel its citizens to die in order to bring the war to an end, the Government can in time of peace say to its citizens that they shall not, by taking unnecessary risks, drag their country into war and compel this sacrifice of their countrymen.

In time of riot a mayor has authority to keep the people of his town off of the streets until order is restored. Has not the Government of a nation like ours as much authority as the mayor of a city? When the world is in riot our Government has, I believe, a right to say to its citizens: "You shall not embarrass the Government in dealing with this question. You shall not add to your Nation's perils. You must keep out of the danger zone until your Government restores order and compels respect for the rights of American citizens." But suppose it cost us not 100,000 men but a half million or a million. That is not the greatest objection to the war.

Great as is the first objection, based on the possible cost in money, and greater still as is the second objection, based upon the possible cost in blood, there is a still greater objection, viz, that we can not become a belligerent and at the same time

remain neutral

We stand at the head of the neutral nations; the world looks to us to act as mediator when the time for mediation comes. If, for any reason, no matter what that reason may be, we enter this war, we must step down from our high position and turn over to some other nation an opportunity such as never came to any nation before and may never come again.

Then, too, we are the next of kin to all the nations now at war; they are blood of our blood and bone of our bone. Not a soldier boy falls on any battle field over yonder but the wail of sorrow in his home finds an echo at some American fireside, and these nations have a right to expect that we will remain the friend of all, and be in position to play the part of a friend when a friend can aid.

Some nation must lift the world out of the black night of war into the light of that day when an enduring peace can be built on love and brotherhood, and I crave that honor for this Nation. More glorious than any page of history that has yet been written will be the page that records our claim to the promise made to

the peacemakers.

This is the day for which the ages have been waiting. For 1,900 years the gospel of the Prince of Peace has been making its majestic march around the world, and during these centres of the Source on the Mount has been making its majestic march around the World. turies the philosophy of the Sermon on the Mount has be-come more and more the rule of daily life. It only remains to lift that code of morals from the level of the individual and make it real in the law of nations, and ours is the Nation best prepared to set the example. We are less hampered by precedent than other nations, and therefore more free to act. I appreciate the value of precedent—what higher tribute can I pay it than to say that it is as universal as the law of gravitation and as necessary to stability? And yet the law of gravitation controls only inanimate nature—everything that lives is in constant combat with the law of gravitation. The tiniest insect that creeps upon the ground wins a victory over it every time it moves; even the slender blade of grass sings a song of triumph over this universal law as it lifts itself up toward the sun. So every step in human Precedent lives in the progress breaks the law of precedent. past—it relies on memory; because a thing never was, precedent declares that it can never be. Progress walks by faith and dares to try the things that ought to be.

This, too, is the leading Christian Nation. We give more money every year to carry the gospel to those who live under other flags than any other nation now living or that has lived. The two reasons combine to fix the eyes of the world upon us as the one Nation which is at liberty to lead the way from the blood-stained methods of the past out into the larger and better

We must not disappoint the hopes which our ideals and achievements have excited. If I know the heart of the American people, they are not willing that this supreme opportunity shall pass by unimproved. No; the metropolitan press is not the voice of the Nation; you can no more measure the sentiment of the peace-loving masses by the froth of the jingo press than you can measure the ocean's silent depths by the foam upon its

Waterways and Preparedness.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE. OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 10, 1915.

Mr. MOORE of Pennsylvania. Mr. Speaker, an unusually large number of delegates from the Atlantic coastal States attended a convention of the Atlantic Deeper Waterways Association, at Savannah, Ga., November 9-12 last. were representative men and women, interested in the opening up of the intracoastal chain of waterways from New England to Florida, as recommended by the United States Army engineers and in part undertaken by Congress. The agitation of "preparedness" in the United States added to the interest of the convention, the primary object of which was to encourage and promote the extension and improvement of our inland waterways, in order that the Atlantic seaboard, with its vast industrial, commercial, and agricultural enterprises, might have the advantage of water transportation in conjunction with the limited railroad and coastwise steamship facilities now afforded.

The coastal States represent more than one-third the entire population of the country and more than one-half of the manufactured product of all the States. They do business on less than one-quarter of the railroad mileage of the country, in conjunction with such antiquated canals as have been permitted to exist, without substantial improvement, for more than threequarters of a century. The convention was addressed, amongst others, by the Hon. William C. Redfield, Secretary of the Department of Commerce, who heartily approved the work of the association and who emphasized the value of improved rivers

and harbors for commercial reasons. What the Secretary of Commerce had to say will be printed in the proceedings of the association, which in due course, I trust, will be carefully read and considered by Members of Congress. Suffice it at this time, however, to observe that what the War Department recom-Suffice it at this time, mended in the way of improvement along the intracoastal chain was indorsed by the Secretary of Commerce as of great importance to the business welfare of the Nation. He declared it to be directly in line with the great work intrusted to the department over which he presides.

NAVAL VALUE OF PROJECT.

Because of the peculiar significance of inland waterways to the problems of the Navy it had been expected that Secretary Daniels, of the Navy Department, would also address the con-A personal misfortune detained the Secretary, although he met many of the northern delegates and addressed them as they passed through his home town of Raleigh, N. C. The Secretary was impressed with the work of the association. and at a previous convention held along the upper Hudson, from New York City to Troy and Albany, in 1914, witnessed a practical demonstration of the inefficiency of some of our coastal waterways, when one of the smallest of our torpedo boats was unable, because of insufficient depth of channel, to reach the entrance to the New York State Barge Canal and the Great Lakes. In a letter to the Savannah convention, however, the Secretary of the Navy so clearly stated not only his own views, but those of the best known of our naval experts, as to the value of the inside passage connecting the rivers and lakes and sounds along the Atlantic coast, that it is deemed advisable to here present it to the attention of Members of Congress. It is doubtful whether the Atlantic coastal project uniting 1,800 miles of coast inland by the removal of only approximately 131 miles of shoals and barriers has been better or more succinctly stated by any of the original advocates of the enterprise.

What Secretary Daniels has said in his letter is respectfully commended to the Congress of the United States, and particularly to those Members who have not thus far understood the desirability of providing an inside passageway to save life and property now forced to round the shoals and capes in the open

SECRETARY DANIELS'S LETTER.

The letter of Secretary Daniels is as follows:

THE SECRETARY OF THE NAVY, Washington, November 10, 1915.

MY DEAR MR. MOORE: It is a matter of profound regret that I am not able to give myself the pleasure which I had anticipated of being present with you on the occasion of the meeting of your association in Savannah, but the destruction by fire of the Raleigh News and Observer plant in Raleigh has compelled me, much against my desire, to alter my plans. I am glad, however, that I had the opportunity of meeting with the leaders of this great enterprise in Raleigh as they passed through on

their way to the convention. The Atlantic inland deeper waterway is to our country what the Panama Canal is to the world. We have put \$400,000,000 into that vast enterprise, which is the realization of an agelong dream. It was evidently in the mind of Columbus that nature must have supplied a water connection between oceans in the vicinity of the Panama Canal, for he cruised up and down the coast there looking for such an outlet from the Atlantic to the waters beyond. Pizarro, Cortez, and Balboa and the leaders of the Conquistadores foresaw that a canal must some day be built across the Isthmus. Sir William Patterson, the founder of the Bank of England, planted a colony there with the idea of eventually digging a canal; the great explorer Humboldt surveyed the route, and the great poet Goethe, with remarkable prescience, declared that destiny had it in store for the young Republic of the New World to build the canal; and De Lesseps, the engineering genius of France, failed not because he was not a great engineer, but because Gorgas had not then been born, who should eventually prepare the way by making it safe in the matter of health for Goethals to mobilize his army of workmen.

OUR POSSIBILITIES; GERMANY'S REALITIES.

We have been doing great things in America, and I am one of those who believe that our country is on so firm and sound a bottom that not even the disasters of war, which have temporarily deranged some of our affairs, can long delay our inevitable success. Now that the Pacific and the Atlantic have been happily married, our country is left free to turn its engineering genius and financial resources into other enterprises of like magnitude and like character. The vision of Moore and Small and the other men who have thrown their energy into

this great project is surely to have a large realization in the future, and I expect to live to see the day when ships loaded in Albany shall carry their freight through to Buffalo and over the Lakes and down the Mississippi and through the Panama Canal to San Francisco. Germany has one of the greatest canal systems in the world. Her rivers are navigable by nature for fully 6,000 miles; but they have been further canalized a distance of nearly 1,400 miles, and, in addition, their radius has been extended by a system of canals some 1,500 miles in all, which have joined the rivers into a continuous watercourse. For instance, the Ludwigs Canal in Bavaria unites the Danube with the Main and makes a continuous waterway from the Black Sea to the North Sea. The Bromberg Canal joins the Vistula to the Oder. A canal joins the Oder to the Elbe, and the Plauen Canal the Elbe to the Havel. The Eider Canal connects the Eider with the Kiel, and the Kiel, or Kaiser Wilhelm, Canal, with locks greater than those of the Panama Canal, joins the Baltic with the North Sea. In Alsace and Lorraine are the Rhine-Rhone and the Rhine-Marne Canals, which have proven of inestimable value to Germany in the transport of supplies. Berlin itself, by way of the Spree and its canals, is connected directly with Hamburg. In fact, these canals have great military as well as commercial value, and have played a great part in the war now going on in Europe.

When one looks at the coast line from Boston to New Orleans and notes this long inside-of-the-coast waterway, needing only to be properly dredged, widened, and connected up by proper canal links in the chain, it seems as if Providence had enriched us with a most remarkable natural defense, provided we make use of what nature has thus endowed us with. It seems as if Providence had lifted up a sand barrier between the hinterland and the sea and bade us go in and make it deep enough to carry our commercial and naval flotillas. Since it has been put within our reach, would it not be national suicide for us to fail to follow the lead?

"AN INCALCULABLE ASSET" TO THE NATION.

There are no ships in the Navy so delicate as our submarines and destroyers, and when we send them on long cruises it costs thousands of dollars to repair them after they have had to go on the high seas. If we had this canal these ships of light draft could go from one end of the Atlantic coast to the other, and the saving of the navy-yard cost to-day in repairs would pay the interest on the investment; and this in times of peace, when we have not many of these craft, when we have not so many as we must have if we learn the lesson of the last month in Europe. For years the discussion among experts in naval affairs has been over the question as to whether most of the money should go into dreadnaughts or into destroyers and submarines, and our country has put the money chiefly into dreadnaughts, believing that they make the best defense. We are learning from the war in Europe something about naval affairs. So far there has been little learned on land and there have been no great engagements on sea, but there have been some engagements which would seem to indicate that the submarine, though it has not superseded the dreadnaught in impartance, has proved to be a wonderful weapon of sea fighting, and in our five-year program this year we are recommending to Congress that it build 100 of them during the next five years—15 fleet submarines and 85 coast-defense submarines. These, with the 73 we have now, will give us 173 in 1922. Now, this intracoastal canal is of vital importance to our submarines, for, as I have said, they are as delicately built as a clock and stand in great need of repair after a long voyage, as a result of being rolled about in heavy seas. You will recall that during the early part of the war an English submarine was seen off the island of Helgoland. A German ship, seeing this ship in distress and another English ship apparently going to its aid, rushed out and followed, until other English ships came to destroy the German ship. Again we saw a German submarine destroy three large English cruisers without warning. Time and again the submarine has been effectively used, so that we are learning that it is to this small craft, that can deliver its blow unseen, that we must look for material aid in naval warfare. Now, if we should be engaged in war—which God forbid—if we should be engaged in war, what a blessing, what an incalculable asset, it would be for the Navy if we had this inland waterway. I need but illustrate what the Kiel Canal is worth to Germany for you to see the incalculable importance of this canal to the Navy. The English Navy is larger than the German Navy, and the German Navy there is protected by this Kiel Canal. Its officers, its men, quietly go about their daily duties on their ships, while on every English ship in the channel the officers and men must constantly be on the alert, hardly having time to sleep.

If we should be so unfortunate as to be attacked, it would be of vital importance to us to be able to send through every possible channel these death-dealing submarines into the ocean and prevent a foreign navy landing on our coast; so that when you are advocating this inland waterway, when you have the vision to see its importance to commerce—and I put that as the reason why the money should be forthcoming to construct this canal—still you see that in any emergency it would be vitally important to the national life that our ships, when the occasion called, should be in harbor, protected, ready when the occasion called to save our cities and our people.

VALUE OF WATERWAYS IN TIME OF PEACE.

Even in times of peace the canal is a very important factor to the Navy, and lends itself to preparation for national security. Large quantities of heavy materials are constantly required by the Government for its navy yards, such as guns, armor, fuel, ammunition, machinery, structural steel, cement, and the like, and on these the transportation charges by the waterway would be more than cut in half. This cheaper transportation would stimulate our commercial establishments to larger and keener competition in the supply of war materials. There would be a further value in that the waterways enable our smaller craft to escape the dangers of storms at sea by plying from one port to another.

Aside from the commercial value of cheap transportation and safety from storms and deep-sea navigation, there are the following military and naval advantages in case of war: It will enable us with a more limited number of mine-laying ships, mine sweepers, submarines, and the torpedo boats to transfer these mobile harbor and coast-defense weapons from one point to another on our coast, thus multiplying their efficiency, increasing the radius of action, and lessening the danger of their being intercepted by an enemy until an attack is launched. It would increase our coast defenses by transporting heavy mortars and traction engines on canal boats and barges to points up and down the coast when an enemy may attempt to make a landing or seize a base. The Germans use their canals and rivers to thus transport heavy artillery.

I wish to express my thanks to the gentlemen who have organized this association for the work they have done. No enterprise—particularly an enterprise that calls for the united action of the people—ever comes to realization until it has been dreamed about, talked about, and presented on its merits to legislatures and to the people year in and year out. "Line upon line, precept upon precept," and finally the public will get the full vision of the need and act. This plan means so much to all New England, to the East, to the Middle States, and to the South that I have no doubt that this work will go on until we convince all of Congress and the country of its importance.

With best wishes for a successful session, believe me,

Sincerely, yours,

JOSEPHUS DANIELS.

Hon. J. Hampton Moore,

President Atlantic Deeper

Waterways Association, Savannah, Ga. RESOLUTIONS OF THE SAVANNAH CONVENTION.

Mr. Speaker, under further leave to extend, as granted by the House, I submit herewith the resolutions adopted by the Savannah convention, which epitomize the beneficent and timely public work which is sponsored by the Atlantic Deeper Waterways Association:

RESOLUTIONS ADOPTED AT THE EIGHTH ANNUAL CONVENTION OF THE ATLANTIC DEEPER WATERWAYS ASSOCIATION, HELD AT SAVANNAH, GA., NOVEMBER 9 TO 12, 1915.

We, the delegates and members of the Atlantic Deeper Waterways Association, in eighth annual convention assembled in the city of Savannah, Ga., and representing every Atlantic seaboard State from Maine to Florida, hereby reaffirm our assertion of the great value and importance of a continuous inside water route along the Atlantic seaboard, which shall connect the existing bays and sounds and link together the ports and navigable rivers into one great transportation system. Our statement of the economic soundness of this project, formulated at the organizing conference in 1907 and again at each succeeding convention, has been abundantly justified and confirmed by the Engineer Corps of the United States Army, which has jurisdiction over such improvements. Such portions of the system as have been completed are producing a large and increasing traffic. The high strategic value of the intracoastal waterway to the national defense in the event of war, which has been clearly stated at the preceding conventions of this association, has now been recognized by both our Army and Navy, and must be generally admitted by the American people as the present unhappy

state of war abroad compels them to ponder more seriously their

own position in the world's affairs.

We therefore confidently reassert that the Atlantic intracoastal waterway system, as advocated by this association and recommended by the Army Engineers, is a project which is economically sound, commercially necessary, and strategically invaluable; and we earnestly urge upon the Congress of the United States at its next session the definite adoption of the project and the appropriation of sufficient funds to enable the engineers to proceed rapidly with the work of construction.

Resolved, That we request of Congress the immediate acquisition, by purchase or condemnation, of the existing Chesapeake & Delaware Canal, and the improvement thereof to a sea-level

waterway, as recommended by the Chief of Engineers.

Resolved, That we request of Congress the immediate adoption of the project for a modern waterway across the State of New Jersey, connecting the Delaware River with Raritan Bay, and the enactment of such provisions as will insure the early acquisition of the right of way from the State, as recommended by the Chief of Engineers and pledged by the State statute.

by the Chief of Engineers and pledged by the State statute.

Resolved, That we request of Congress the early completion of the waterway between Norfolk, Va., and Beaufort Inlet, N. C., as recommended by the Chief of Engineers and heretofore adopted by Congress and contemplated in the acquisition already made by Congress of the Chesapeake & Albemarle Canal.

Resolved, That we favor the adoption of the project for a waterway connecting Beaufort, N. C., with the Cape Fear River, N. C., as recommended by the Chief of Engineers. This constitutes the link immediately south of that between Norfolk, Va., and Beaufort, N. C., which has already been adopted by Congress, and there are strong reasons why the construction of this link should receive early and favorable consideration.

Resolved, That we also favor the adoption of a project for a waterway connecting the Cape Fear River, N. C., with Winyah

Bay, S. C., as recommended by the Chief of Engineers.

Resolved, That we request of Congress the early completion of the waterways between Winyah Bay, S. C., and the St. Johns River, Fla., as recommended by the Chief of Engineers

and already in part constructed.

Resolved, That the unusual commercial importance of the East River, the Harlem River, and the Harlem or Bronx Kills, and their continued improvement to meet the insistent demands of the commerce of the metropolis differentiate these in large degree from all other projects, and this association reaffirms its action at its last meeting and urges the further improvement of the regions traversed by the Old Cumberland Road was Bronx Kills, in accordance with the favorable report heretofore submitted by the Chief of Engineers.

Resolved, That we reaffirm our belief that the approaching completion of the New York Barge Canal will make of the upper Hudson a freight-transfer point of very great commercial importance, and that we, therefore, favor the fullest Federal improvement of the Hudson River as far as Troy Dam as may be required for the facilitation of the commerce by barge, coastwise, and ocean tonnage that will there be brought in

close connection.

Resolved, That we favor the early improvement of the narrows of Lake Champlain, as recommended by the Chief of Engineers, in order to provide adequate connection through the New York Barge Canal with Lake Champlain and Canada.

Resolved, That we favor the extension of the intraconstal waterway from St. Johns River, in the State of Florida, and express the hope that such extension along some approved route may receive the favorable consideration of the engineers.

Resolved, That we favor congressional enactment authorizing a further examination and survey for the extension of the intracoastal waterway in the New England States.

SAVANNAH RIVER.

This association has read with interest in the local press regarding the formation of an organization seeking the improvement of the Savannah River between the cities of Savannah and Angusto

Resolved, That we commend this action as an example to the citizens of other seaboard States, to the end that all our rivers may be adequately improved, that lines of barges and freight steamers be established thereon, and each river shall become a feeder to the trunk-line waterway, and thereby contribute to the freer distribution of our products and the common prosperity of the country.

ANNUAL RIVER AND HARBOR BILLS.

Resolved, That the growth of the commerce of the country and increasing necessity for additional facilities of transportation demand that Congress shall enact annual river and harbor appropriation bills providing adequate appropriations for the

completion and maintenance of projects already adopted and for such new projects as by their merit and importance demand favorable consideration and adoption. Therefore, Resolved, That in the opinion of this association Congress

Resolved, That in the opinion of this association Congress should resume the enactment of annual river and harbor appropriations carrying the necessary funds for existing projects and the adoption of such new projects from time to time as are required to facilitate the transportation and distribution of the products of the country.

STATISTICS OF WATER-BORNE COMMERCE.

Resolved, That in order to determine the relative importance of harbors and interior waterways and their interrelation with the waterway system of the country it is necessary that data be officially collected and published regarding our water-borne commerce, both coastwise and foreign. There is at present no satisfactory method for ascertaining this information; and, with the exception of a portion of our foreign commerce, all data regarding our water-borne commerce in the coastwise trade is secured only from voluntary sources and is incomplete and unreliable.

Resolved, That this association earnestly urge upon Congress the necessity for legislation providing for the official compilation of all of our water-borne commerce, properly divided as to classes and as to the harbors and interior waterways upon which the same may be carried.

PILOT CHARGES ON BARGES IN TOW.

This association is committed not only to the construction of the intracoastal waterway, but to the promotion of coastwise trade between different ports and rivers. It is conceded that much of this traffic will be carried in barges towed by tugs. Until every link of the proposed waterway shall be completed such fleets of barges under tow will use the inside route in part and the ocean in part, particularly between northern and southern ports. Under section 4444, Revised Statutes of the United States, such tugs or steam vessels having barges in tow are exempt from pilot charges imposed by any State in cases where the pilot of such steam vessel has a license under the laws of the United States. We favor the enactment by Congress of legislation exempting barges from all pilot charges imposed under the authority of any State.

The Utilization of Our Western Rivers for Navigation.

EXTENSION OF REMARKS

HON. BENJAMIN G. HUMPHREYS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 10, 1915.

Mr. HUMPHREYS of Mississippi. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a very interesting address, which gives Col. Townsend's ideas as to why the commerce on the rivers has declined and what steps it would be advisable to take in order to encourage a revival of that commerce.

The address is as follows:

THE UTILIZATION OF OUR WESTERN RIVERS FOR NAVIGATION.

Mr. President and gentlemen, it was said of old, "Unto everyone that hath, shall be given and he shall have abundance, but from him that hath not shall be taken away, even that which he bath"

The opening of the Panama Canal brings home with startling directness to the people of the Mississippi Valley the parable of The Lord of the servants cometh and recometh with them: To the one whom he gave five talents-those who have developed their water-transportation facilities as in the vicinity of New York and on the Great Lakes-he says, "Well done, thou good and faithful servant, thou hast been faithful over a few things, I will make thee ruler over many things." But unto him who was afraid, and hid his talent in the earth, "Take, therefore, the talent from him and give it he says. unto him which hath ten talents, and cast him into outer dark-Nor does it avail to bemoan because of insufficient appropriations, nor charge the railroads with reaping where they have not sown and gathering when they have not strewed. In the Mississippi Valley there is wailing and gnashing of teeth on account of opportunities neglected. The manufacturer of the Middle West can no longer compete with his eastern rival, not only in foreign trade but also that of the Pacific coast. But I have been invited to attend this meeting, not for lamentations but to suggest a cure for existing evils. The wise physician, however, before prescribing his remedies makes a careful diagnosis of the disease, and I therefore propose briefly to invite attention to the extent of the decline of commerce on our western rivers, and the causes thereof, before indicating the measures necessary to produce a revival.

St. Louis for the past 50 years has been the principal origin or terminus of the traffic on our western rivers, and its records summarize their tendencies. Its river commerce attained its maximum of 2,120,000 tons in 1880 and has since steadily declined to 153,000 tons in 1914. In contrast, it may be stated that the commerce at Sault Ste. Marie, the outlet to Lake Superior, in 1880 was 1,300,000 tons, and attained a maximum of 79,000,000 tons in 1913. The commerce of New York Harbor

exceeds 125,000,000 tons.

But not only has the amount of freight carried steadily diminished on the rivers, but the class of boat transporting it has radically changed. As an example, in 1900 the average-sized boat navigating the Arkansas River was one of 193 registered tons; in 1913 it was but 46 tons; and while formerly large amounts of through freight were transported by river, at the present time the boat is generally used to carry the products of a river farm to the nearest railway station for further transportation by rail, the principal exceptions being coal transported on the Ohio River and the limited amount of freight carried by the barge line between Kansas City and St. Louis. On the Great Lakes the railroads are collecting freight for railroads. Such traffic has no influence on through rail freight rates and can be economically conducted with motor boats and light-draft barges, which are rapidly driving the packet from the rivers when used for such purposes.

What are the causes which have led to such a pitiful showing on our western rivers while the rivers of Europe have exhibited a remarkable commercial development as well as the Great Lakes and our Atlantic coast line? The usual answer that it is due to railroads will but partially account for the decline. Railways parallel the rivers of Europe; they are more numerous and more efficient in the regions of the Great Lakes than

in our western territory, and every water terminal near New York has efficient rail connection with that city.

The railway per se does not afford as economical a method of moving freight as a waterway. The friction to be overcome in moving a mass on a track is greater than that through water, as shown by the weight a team of horses can haul in a car on a tramway and in a canal boat. Steam can be utilized more effectively in the compound condensing engine of the boat than in the simple engine of the locomotive. In fact, on the Great Lakes and the Atlantic seaboard freight is transported by water at rates with which it is impossible for the railroad to compete. The same is also true of the only through freight the Mississippi River has been able to retain; that is, coal transported from Pittsburgh to Mississippi River towns.

Nor is it an answer to the question to charge unfair competition by railroad magnates in granting rebates, carrying freight at less than cost price until the boat line has been bankrupted, making contracts at uniform rates to their patrons during the entire year, and charging excessive rates to those who utilize the boat during periods of navigation. Whatever may have occurred in early days, such methods have practically ceased since the establishment of the Interstate Commerce Commission; but the decline in river commerce has been more rapid, since the railroads have been compelled by law to give the shipper equal rates, than when there was no restraint on the practices of

which they are accused.

Nor can the decline of commerce be attributed solely to the shallowness of our rivers, nor the failure of Congress to make adequate appropriations for them. For the past 10 years there has been maintained in the Mississippi River at all stages a channel of 9 feet from Cairo to New Orleans, and one of 8 feet from Cairo to St. Louis—a channel which far exceeds in navigability that of the far-famed Rhine with its 50,000,000 tons of freight annually. Yet it has produced no visible effect on the decline of commerce.

From the mouth of the Missouri to St. Paul there has been practically maintained for a number of years a channel of 4½ feet. But if, in 1913, from the statistics of this section of the river as published are excluded such items as sand and gravel removed from the river, material employed in constructing revetments and works of contraction, and automobiles and horses and wagons ferried across the stream, which are not included in the statistics of the lower river, the upper Mississippi makes a poorer commercial showing than the section below St. Louis. Moreover, the depths maintained exceed those which

exist on the Elbe, Wesser, and Oder Rivers in Germany above tidal flow and nearly equal those on the Vistula and Memel. In 1905 the Elbe transported 3,750,000 tons of freight between Germany and Austria and 5,900,000 to and from Hamburg, and its commerce was rapidly increasing. In Germany, while the ton mileage on inland waterways is about one-third that by rail, at St. Louis in 1914 the receipts and shipments by rail

were 52,000,000 tons to 153,000 tons by water.

While rivers in their natural state are generally obstructed by sand bars, which interfere with navigation and require removal, the great depths which are necessary at the entrances to ocean harbors or on the Great Lakes are not a requisite for economical transportation by river. To give the necessary strength to resist wave action from storms on large water areas, there must be a certain relation of length, width, and depth to a vessel navigating them. On sheltered rivers the same carrying capacity can be obtained, provided a sufficient width is given the river channel, by increasing the width and diminishing the depth of the vessel or by assembling a number of shallow draft barges in a tow. Thus in a 4-foot channel logs and lumber have been towed on the upper Mississippi River at a cost of 0.6 mills per ton-mile, the material being collected in rafts 100 feet in width by 1 000 feet in length

in rafts 100 feet in width by 1,000 feet in length.

In the opinion of the writer the failure to utilize our rivers for transportation arises primarily from much more powerful causes than those above mentioned and which it will be far more difficult to correct. The United States differs from European countries, in that the latter were developed before the age of steam and were forced to rely on water transportation for the movement of freight. Their growth was, therefore, along their rivers, and factories, warehouses, and other terminal facilities were established to accommodate river navigation. The railroad was a later auxiliary method of moving commodities, and has not been permitted to interfere with the older established system. The manufacturer is located on the river bank, and can load as readily into a barge as into a car, and his freight is received at a warehouse, which has also similar rail and water facilities. He therefore saves when shipping by water not only the extra cost of rail friction over water friction, but the charges of belt-line railroads which connect his factory and warehouse to the rail terminals.

The United States, on the contrary, owes its development to railroads. Its growth has been from the East to the West, while its rivers generally flow in a southerly direction, so that its development, instead of being along the lines of its rivers, has been across them. Moreover, the eastern markets have heretofore been more profitable than the southern, and a shipper has preferred a line of transportation running east and west to one north and south. Such a line was afforded by railroads, so that the river, which was in early days the only outlet, was gradually ignored, and the factory and warehouse were naturally located on the outskirts of a town, where land was cheap, but also in close proximity to a railroad, with which connection could read-

ily be made by means of sidings.

With the neglect of the river by the shipper the value of property along the river front of most western towns has greatly depreciated, and the city father has added to the complexity of the problem by moving the railroad yards into this abandoned area, with the result that those sections of our towns which in German cities would be the centers of manufacturing establishments are now filled with empty freight cars, awaiting the convenience of a manufacturer who has built his factory several miles from water transportation. The existing location of factories and warehouses at long distances from the river bank is one of the most serious factors to be considered in discussing the revival of river commerce. The great advantage the railroad possesses is its terminal connections with them, an advantage that usually more than compensates for the cheaper cost of transportation by water after the material is delivered to the boat.

The railway siding brings the car into the manufacturer's yard. If he attempts to obtain coal by water transportation he has to load the coal from a boat into a wagon, haul the loaded wagon to his coal pile, and then unload it. When he is receiving coal by rail the car is run up an incline and the coal pile repleuished by merely opening the shutter in its side or bottom. If he ships freight he has also to employ as much labor to place it in a truck as in the car, and, in addition, animal traction to convey it to the river, and again manual labor to transfer it from truck to boat. Neither pork and potatoes nor oats are economical materials for generating heat, nor is the stomach and muscles of a man or horse as economical a machine for converting heat into power as the steam engine. It costs practically as much to move a ton of freight 60 feet in a wheelbarrow as it does a mile by horse and wagon, a hundred

miles by rail, or a thousand miles by water. On the Great Lakes there is a less charge for transporting a ton of coal from Cleveland to Duluth, leading and unloading it, than for hauling it a mile in the city of Cleveland from the coal yard to a consumer, and coal is moved from Pittsburgh to Memphis by river cheaper than it is transferred from a barge to a packet landing at the coal fleet.

In those portions of the United States where water transportation is successful it will be found that the terminal charges by water are less than by rail. The main business portion of New York City is on a narrow island whose area is nearer a water front than a railroad.

On the Great Lakes there is also the most intimate connection between the boat and shipper, and there has been evolved the most economical methods of handling freight between boat and wharf which exist in the world. The 79,000,000 tons of freight which passed through the Sault Ste. Marie Canal in 1913 would never have materialized if at both ends of the boat line it had been necessary to haul by wagon as is the case in our western cities.

Under the conditions existing on our western rivers the shipper clings to rail transportation. He has perfected his rail connections at considerable expense for labor-saving devices, and has made no arrangements for handling freight by water. He is anxious to have river navigation established, not with the intention of using it himself, but in the expectation that it will reduce his rail freight rates, and this fact creates a second obstacle to the revival of river commerce.

No matter what depths the General Government gives the channels, nor what facilities the municipality affords for loading, it is folly to expect the ordinary American to invest his money in stear boats with the certainty that when the shipper can make satisfactory arrangements with railroads, he loses his investment. Until there is eradicated from the public mind the idea that our rivers are merely to be used as clubs to reduce rail freight rates, there is little chance for the revival of commerce on our western rivers.

Its effect can also be traced in the type of boat that now plies the river. With capital hesitating to make investments in river craft, there has been no incentive to develop the type of vessel best adapted to modern river traffic. The river packet was a most excellent type of vessel for developing a wilderness. With its light draft and numerous deck hands it is well adapted to carry freight on our undeveloped rivers. But as a means of transporting freight cheaply between large centers of population it is a failure. For the amount of freight it carries it expends more fuel than the ordinary locomotive, and the labor cost per ton-mile of freight handled also exceeds that of the railroads

The ordinary packet expends from fifty to one hundred times as much fuel and labor in transporting a ton of freight 1 mile as the modern freighter of the Great Lakes or the Sprague on the lower Mississippi with its large coal fleets. Its insurance rates are almost prohibitive, and the time it wastes in port is a serious tax on commerce. The lake vessel will unload 10,000 tons while the river packet is handling 100. This suggests a reason why the river commerce of St. Louis has declined from 2,000,000 tons to 153,000, while that of the Sault Ste. Marie has increased from 1,300,000 tons to 79,000,000. The fuel bill and pay roll of the river boat must be reduced to insure a revival of commerce on our western rivers.

Another factor on our western rivers which merits consideration is what is termed "the density of traffic." Here again is applicable the principle "that unto everyone who hath shall be given." Where large quantities of freight are to be moved, it is possible to utilize appliances for economically handling it, while the overhead charges would be prohibitive where the quantities are small.

Thus on the main trunk lines of railroads grades have been reduced and curves eliminated, which enable a single engine with a small crew to handle a train carrying 3,000 tons of freight. On a branch line the same force would move less than 1,000 tons. The density of traffic on the main line justifies the expenditure necessary to produce such a result.

The immense traffic on the Great Lakes also justifies a large expenditure for unloading devices, with a resultant cheapening of the cost of unloading with which a small dealer can not compete. The river boat must also have a certain volume of traffic to be a commercial success; but unless the railroads collect traffic for the boat an agricultural country tributary to a river does not produce sufficient material requiring transportation to create a dense traffic. One boat running weekly can carry all the products of the farms adjacent to 100 miles of river and supply the farmer with all the necessities he can purchase in exchange for his products. At the various landings there is also

such a small volume of traffic that modern loading and unloading appliances are not justifiable.

This is characteristic of most of the tributaries of the Mississippi River. Great economies can not be produced in this class of traffic, and no great revival of commerce can occur on them from the efforts of those residing on their banks. They can merely act as feeders to the main stream, but will experience the same indirect benefits from a revival of river commerce on the Mississippi that the branch lines of a railroad do from the improvement of the trunk line.

Between large centers of population, where there are large amounts of manufactured products to be moved, or in a country where there are large mineral resources, such as coal or iron ore, and the material can be delivered in barge-load lots of from 500 to 1,000 tons each, by assembling the barges in fleets of 5 or 10, under the control of one towboat, it is possible to approximate in river navigation even with a moderate depth of channel, the economies obtained on the Great Lakes or Atlantic Ocean by the deep-draft freighter.

It is thus seen that a revival of commerce on our western rivers can only result from a revolution in our methods of doing business. A southern market must be substituted for the eastern, and this can only occur from a radical reduction of freight charges in a north and south direction. Such a reduction can be produced by water transportation, but to be a success requires cooperation by four agencies—first, the General Government, which must provide a proper depth of channel in the river bed; second, the municipality, which must create suitable terminal facilities, or at least prevent the obstruction of those which nature has provided; third, the boat owner, who must substitute for the obsolete packet at present in use, an economical freight carrier; and fourth, the most important member of the combination, the shipper, who must be in a position to utilize the opportunities the other agencies afford him.

In making appropriations for rivers and harbors, it should be borne in mind that it is just as difficult to-day to please everybody as when Æsop wrote his fables. A large amount of money has been expended in the Mississippi Valley, but it has been scattered over the main stream and 60 tributaries, with the result that but few improvements have been completed, and the few completed portions are disconnected.

A railway system which consisted of 69 disconnected sections, a few miles in length, scattered over 18 States, would not be a commercial success.

For this condition of affairs the American people are responsible rather than Congress. The average voter is provincial. A local improvement appeals to him more strongly than a welldigested plan which will be of benefit to the entire country. theoretically is a believer in a reform in the methods of making appropriations for rivers and harbors, but with the proviso that the particular stream in which he is interested be included in the general plan. He even talks glibly of the "pork barrel river and harbor steal without the remotest idea that his pet measure may be classed in such a category, and if a Congressman should support a bill which did not provide for such local interests he would run great danger of failure at the next election. In their efforts to relieve themselves from this tyranny of their constituents, Members of Congress have delegated to the Corps of Engineers a power to review all works of improvement before taking action thereon.

It is impossible with the present state of public opinion to ignore geographical subdivisions, but I believe an enlightened public opinion can be created which would enlarge the subdivisions. Instead of thinking by congressional districts or States the people could be readily taught to seek the welfare of groups of States. While Congress must recognize the East and West, the North and South, the Great Lakes, and the Mississippi Valley, and make an equitable distribution of funds between those sections, the inherent patriotism of the people can be aroused so that the appropriations thus made can be expended in such a manner as to produce the greatest good. By considering the Mississippi Valley as a whole, and treating the problem of transportation by water just as a railroad handles transportation by land, i. e., first completing a trunk line connecting those localities where there is a large commerce awaiting transportation, and then successively completing the most important branches, much better results would be obtained.

Specifically the writer would not abandon any navigable stream in the Mississippi Valley that has been partially improved, but would leave 58 of them in their statu quo, confining operations to snagging and the maintenance of existing works, and would concentrate appropriations on opening up a channel of the capacity of that existing on the lower and middle Mississippi to Chicago and Pittsburgh. Chicago is accustomed to water transportation. The topography around Pittsburgh

has forced the shipper to build his factory on the river bank. These centers of trade, therefore, afford the best opportunity of determining whether the shipper wants river transportation. They, with New Orleans, are the keys to the problem. If the facilities thus afforded by the Government are utilized, the upper Mississippi and the Missouri Rivers should then receive attention. When they are facts accomplished, the other streams should be improved in the order of their importance. But it must frankly be admitted that such a program will be impossible of accomplishment without a change of sentiment in the average American voter. While it is impossible to indite a people, they can be educated.

The question of providing terminal facilities is at present being earnestly discussed in river towns, but, in the opinion of the writer, the city authorities are not working on proper lines. The first idea of the average official of the proper method to improve a city's water front is to convert it into a park; his second to construct a municipal railroad along the bank, from which one can load into a barge at any point. A park is a very attractive feature in any city, but it costs money to haul freight through parks, and they should not be located where they will interefere with commerce. A municipal railway is a step in the right direction. To the factory distant from the river bank, but connected to existing rail lines, it will reduce the cost of moving freight to and from the river, but for this purpose it is not necessary to occupy the entire water front with a rail-The river front of a few city blocks would be ample for the river commerce that would utilize such facilities in a city the size of St. Louis, and it is a question for serious consideration in many localities whether the auto truck may not afford to the general public a cheaper means of moving across town the heavy freight which seeks water transportation than the municipal railroad. It is certainly more expeditious,

In certain cities which are natural railway terminals provision should also be made for connection between the railway systems of the country and the steamboat for the benefit of interior towns and the farming element of the community, but such terminals also require comparatively little wharf space.

If a river commerce is ever to be developed which will justify the large expenditures it will be necessary for the Government to make to create proper river channels, the great desideratum at every river town is sufficient space along the river bank where factories and warehouses can be erected and to load directly into barges, and thus avoid all terminal charges. The municipal railway which is generally urged, occupying the entire river front of a city, precludes any such development and forces every shipper to load into a car as the cheapest method of getting his products to a boat.

By Federal law and city ordinance channels can be improved and terminal facilities created, but neither the boat owner nor shipper are amenable to law or ordinance, yet unless they utilize the opportunities afforded them the expenditures of the General Government and cities on river navigation are wasted.

It can be assumed that if there is a sufficient amount of freight seeking shipment by river American enterprise will create the proper boat, just as it has on the Great Lakes.

The serious factor in reviving the commerce of our western rivers is going to be to persuade the shipper that it is to his financial advantage to use them. The ordinary business man is conservative. He does not like to change his ways, particularly when that change necessitates a considerable financial outlay. The merchants of St. Louis afford an apt illustration of this conservatism. According to the oratory expended at river conventions, St. Louis has advantages for development possessed by no other city in the Middle West. It is better located than Chicago with reference to the coal deposits of Illinois and the grain fields of the West, and has a shorter and cheaper connection with New Orleans by the Mississippi River than Chicago has by the Great Lakes and Erie Canal with New York, when the necessity to break bulk and change from lake freighter to the canal boat or car at Buffalo is taken into consideration. Yet St. Louis takes no advantage of its opportunities by river, while Chicago and Calumet retain a lake commerce of over 13,000,000 tons.

How can this conservatism be overcome? In the opinion of the writer, only by a direct attack on the pocketbook of the St. Louis shipper. So long as the freight rate from other towns is not relatively changed he will continue to cling to his idol, rall freight rates; but if a waterway is extended past his door to Chicago, and the Chicago shipper, who is accustomed to water transportation, begins to obtain cheap water rates down the Missi sippi River, competition will cause an enormous amount of river traffic to originate at St. Louis.

Before abandoning river transportation because St. Louis fails to utilize the advantages afforded it, it is believed to be advisable to try the experiment of creating an adequate waterway to Chicago and Pittsburgh. There is a possibility that the St. Louis merchant is too conservative; that he is too strongly influenced by the Missouri shibboleth, "You must show me," and that if he is shown by the shippers of some other city the advantages of water transportation he, too, will utilize them.

With Chicago, Pittsburgh, and St. Louis making use of river navigation as a means of cheapening freight rates, no city in the Middle West can thrive unless it also utilizes water transporta-

tion.

In conclusion, the writer quotes from a report of a committee of the city of St. Louis, submitted in 1865, in reference to rail traffic and which he considers applicable to river commerce at the present time:

Other cities see its vast results and are active in the strife for its possession. Our past indifference, continued yet a little while longer, may give it to another, and then we may find, when it is too late, that our geographical position is not alone sufficient to give us control of the commerce and manufactures of the Mississippi Valley, but that art, stimulated by enlightened and liberal forethought, must ever be an indispensable auxiliary to bounteous nature.

Constructing and Maintaining Rural Post Roads.

EXTENSION OF REMARKS

OF

HON. THETUS W. SIMS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 14, 1915.

Mr. SIMS. Mr. Speaker, one of the first evidences of a coming civilization was the public highway. Primitive peoples without civil government had no public or community owned roads. Public or government ownership of highways was one of the first and greatest blessings of civilization. Uncivilized men, like the wild beasts, roamed through pathless forests or wandered over trackless plains. As the centuries rolled by and men became more civilized, by common consent these paths or trails, leading from one habitation to another, or from one group of the huts of men to another group, came to be recognized as the property of all the people, and charged with a community or public interest, and in their use, as it were, they ceased to be the property of anybody in particular and became the property of everybody in general. These highways were free to all users, but in some instances a better highway from one place to another was needed than were these "kings' highways," and for this purpose the king or government granted a permit called a charter, either to an individual or corporation, authorizing the construction and maintenance of such a highway at his or its expense and was permitted to make a reasonable charge for the use of this privately owned highway. was the origin of the toll road. The toll road was not in all respects a public highway, as it was neither owned nor maintained by the government and no one had any right to use it without paying the prescribed toll.

These toll roads, while performing a public service by permission of the king or government, and as such were subject to government regulation, were, notwithstanding, private property, with many if not all the elements incident to private

It has been the experience of all past ages that no government duty or function can be as well or as efficiently performed by or through private ownership or agency as it can be done by the government itself. On account of the operation of this fundamental law, nearly if not all "toll roads" have been taken over by governments of one kind or another and converted into free public highways. No better or stronger proof of the failure of private ownership and operation of public utilities can be offered than the passing of these privately owned toll-charging turnpike roads formerly so common in many States of this Union.

When I use the words "government ownership" I mean to include National, State, county, and city governments and do not intend to refer alone to the Federal Government.

Public utilities must be supplied by governments and paid for and operated at public expense and must be free for the use of all the people. Nothing can ever be provided that will take the place of governments in the construction, operation, and maintenance of all the public highways needed by the people. Therefore, from sheer necessity, we must look to and rely on governments for this purpose. We have cities, towns, counties, and civil subdivisions of same, such as wards and districts. These are all forms of government with prescribed and limited powers, which are derived from their respective State governments, over which the several States are absolutely sovereign. Many State constitutions contain limitations on their respective legislatures regarding the creation and powers of these minor civil governments which results in a lack of authority in these minor civil governments to do many things in the interests of the public which might be best done by them if clothed with authority. In all such cases an amendment to the State constitution must be had or the beneficial and necessary functions of these minor governments can not be performed.

In some States the legislatures of same can not even so much as authorize a State bond issue for highway purposes by reason of constitutional limitations on the powers of their respective

legislatures.

The chief question that I desire to discuss before you to-day is, "Has the Congress of the United States the power under the Constitution to levy and collect taxes and to appropriate the money arising therefrom to the construction and maintenance of public highways leading from one State into another or lying wholly within a State, but which is or may be needed by the United States Government in the discharge of a Federal function authorized and directed in the Constitution to be per-

formed by the Government?"

No question is made as to the power and duty of the Federal Government to regulate commerce between the several States. The Federal Government is not limited in the use of means and methods deemed necessary by Congress in the exercise of this power. Should Congress deem it wise as a means for the regulation of commerce between the States, it has the power to authorize and direct the building of interstate highways, just as it has, both directly and indirectly, aided private corporations in the building of steam railroads in numerous instances.

The question of national or Federal aid in the improvement of our public roads is not new. As long ago as 1802 Congress, in the act providing for the admission of the State of Ohio, included the provision that 5 per cent of the net proceeds of the sale of public lands in the State should be applied to the laying out and construction of public roads connecting the Ohio River with navigable waters emptying into the Atlantic. The following year Congress further specified that three-fifths of this revenue should be expended on roads within the State and two-fifths on roads leading to the State.

This provision made so early by the National Government thus provided both for the construction of interstate and intrastate roads from Federal funds. Furthermore, this was not an isolated action, but was a definite and settled policy of Congress for a quarter of a century. Thus similar provisions were written in the acts admitting Indiana, April 19, 1816; Illinois, April 18, 1818; and Missonri, March 6, 1820. We find further that from 1806 to 1844 Congress made a total of 34 appropriations, aggregating \$6,824,919.33, for the Old Cumberland Road, which was in every sense an interstate national road.

But having thus embarked on what seemed a settled policy of Federal aid in road construction, why was it discontinued? Were the results disappointing? By no means. The development of the regions traversed by the Old Cumberland Road was almost phenomenal. From the standpoint of adding to the national prosperity and wealth no expenditure our Government has ever made, except those providing for the enlargement of our territory, has ever given an equal rate of dividends in

return.

The abandonment of Federal participation in road construction was for entirely different reasons. The invention of the steam locomotive fired the public imagination with the belief that the importance of the wagon road had passed; that this was henceforth to be the sole method of transportation. That this view was also shared by Congress can be seen from numerous acts. When the appropriation was made for the continuation of the work on the old Cumberland Road beyond Indianapolis, Congress specified that no part of the funds should be used for surfacing, but that the roadway should be so graded as to permit the placing of a railroad track on the embankment should it become desirable.

Public attention and interest centered on the railroad for a long period. Congress made repeated grants to further their construction, and the example was followed by the States, counties, towns, and other municipalities, who often vied with each other in their liberality. The public road, with the passing of the long-distance freight wagon and the stage coach, lost those picturesque attributes which appeal so strongly to

the popular imagination, and was at once relegated to the background as a purely local affair. To the popular mind the public road had lost all claims to national or even State consideration. And we may well ask, "Was not the evidence conclusive?" To those who had been accustomed to measuring the degree of importance of a road by the direct functions which it performed, certainly the rapid transfer of all long-distance freight and passenger traffic from the roads to the railroads was sufficient and conclusive evidence that all legitimate claims which the public road had had for national recognition had been usurped by the railroad.

For about 50 years this belief held almost undisputed sway. The opposition were but as a small voice crying in the wilder-There appears to have always been a few brave spirits who clung to the belief that the railroads did not destroy the wider importance of the public roads, but rather enhanced it; that the transportation system of the Nation logically comprised both the railroads and the public roads, and any plan which would favor the one at the expense of the other would be inefficient and vicious. But popular prejudice was so strong that it was not until about a quarter of a century ago that the friends of the public road became strong enough to secure State-wide recognition. In 1891 New Jersey went on record as the first convert to the principle that the importance of the public road is State wide and demands that the State bear its fair share of the burden. At the present time no less than 44 States have recognized this principle and made more or less sincere and comprehensive efforts to meet the obligation which it involves.

In recent years this movement has been greatly accelerated by new traffic developments. The automobile and motor truck have obliterated the imaginary boundaries of State, county, and township or district in regard to road matters. From the viewpoint of actual use, the public roads have again taken on the same interstate and national characteristics which they possessed prior to the coming of the railroads. Over 2,000,000 automobiles now daily pass over our roads and streets, and last year they paid a revenue in registrations alone of about \$12,000,000, which was largely devoted to road improvements and road maintenance. The automobile has annihilated distance wherever a good road exists just as truly as has the railroad.

From an economic standpoint, the problem of good roads is not surpassed in importance by any other subject now before the American people. Better, cheaper, and additional transportation facilities in the United States must benefit every inhabitant and result in more development and greater productiveness of our natural resources, meaning more and cheaper

food and more and cheaper necessities of life.

The suggestion as to the use of rural roads by commercial autotrucks and busses is not merely a product of imagination. In many places gasoline-propelled busses are now successfully operating regular routes, sometimes extending far into the country, and, where the haul is but a few miles, transportation of freight by autotruck is sometimes found cheaper and more satisfactory than transportation by rail. In the case of the short haul, the saving in handling and in time more than counterbalances the lower rail rate. Instead of loading the commodities on a truck, unloading at the local railway station, where they must be loaded upon the cars, hauled to the near-by city. and then unloaded and again loaded upon a truck and hauled to the consignee, the user of an autotruck, who has a hard surface road available, loads his products once, hauls to the door of the consignee and unloads, saving not only the handling, but the time, the inconvenience of issuance of waybills and receipts, and avoids damage to goods or deterioration while in transit. I believe that permanent highways will result in very considerable adoption of autotruck hauling in preference to rail transportation where the distance is within a half day's run.

There are about 2,275,000 miles of public roads in the United States. United States mails are regularly carried either by rural delivery or star routes over 1,200,000 miles of this distance. During 1914 there was expended on our public reads a total of \$250,000,000, of which \$50,188,643 was State funds and expended under the supervision of the various State highway departments. This gives us an idea of the magnitude of the road problem which is now before us. But the problem becomes even more formidable when we pause to consider the rate at which these expenditures are increasing. Ten years previous, or, in 1904, our total cash road and bridge expenditures were approximately \$60,000,000, to which should be added the value of the statute labor, which is estimated at slightly less than \$20,000,000. Our cash road and bridge expenditures have, therefore, increased over 300 per cent in 10 years. The States lave

assumed a part of this burden, but at a rate considerably below that at which the total is increasing. Thus in 1904 the States contributed toward road improvement and maintenance the sum of \$2,607,323, and in 1914 this had grown to \$50,188.643, or an increase of somewhat over 180 per cent, as against a total increase of over 300 per cent. And yet less than 11 per cent of the total road mileage of the United States is improved with any kind of surfacing. Does it not appear, Mr. Speaker, as though this were a good place for the strong arm of the Federal Government to step in and lift a little of the ever-increasing burden from the shoulders of the overburdened local taxpayers?

Statistics compiled by the Department of Agriculture show that transportation of freight over the wagon roads costs approximately 21 cents per ton-mile. Transportation of similar commodities over the railroads costs on an average about 0.75

cent per ton-mile.

It would appear that cost of railroad transportation has nearly reached its minimum and that the great problem in effecting economy of transportation of produce lies in reducing

the cost of transportation over the public roads.

Although some material economy in railroad management and operation may still be effected, the reduction will be but an inconsiderable percentage of the total cost of operation and would mean but little to the shipper of produce. The saving that can be made by the construction and maintenance of permanent roads is unquestionably great, for careful investigation has shown that whereas the average cost of transportation on the roads of the United States is approximately 21 cents per tonmile the cost of transportation on the hard-surface roads of France is seldom over 12 cents per ton-mile. This would indicate that hard-surface roads in the United States similar to those in France would effect a saving of 9 cents per ton-mile, or

nearly one-half of the present cost.

Travel over country roads is by no means composed chiefly of heavy hauling. While there is heavy freighting for a short period after harvest, the large majority of trips the farmer makes over the highways are with light load or no load at all. While the maintenance of rural delivery and the establishment of the parcel post have greatly diminished the number of trips the agricultural producer must make between his farm and market town, yet the greater portion of his travel is with a light load, when speed of travel is of chief consequence, in order that time may not be wasted. Those people of ancient times who expressed distance in units of a "day's journey" had a more accurate conception of the value of time than do those who have been accustomed to measure distance only in miles. the rural resident the distance from town or school or neighbors is no more important than the condition of the road and the time required in travel. Prospective buyers of farm property recognize this and willingly pay higher prices for land situated on improved roads. The improved highway, suitable for travel at all seasons of the year, is, therefore, very important to the farmer when used for light traffic as well as when used for transporting the heavier products.

But it is not from the business viewpoint alone that the good-roads problem should be considered. Though the attainment of good roads is desirable for the improvement of conditions for hauling freight, we believe far greater and ultimately much more important benefits will be realized in other respects.

Bad roads make rural life unpleasant, limit opportunities for social intercourse, and interfere with maintenance of good rural schools. The establishment of good roads will do more than any other one thing to aid the "back-to-the-farm" movement.

With city population increasing three times as fast as rural population, and production of foodstuffs not nearly keeping pace with increase in population, there is surely need to make farm life more pleasant and farm operation more profitable. The problem is one of national importance, for congestion of population in cities is a national evil. Upon country life we depend chiefly for the strength and vigor of body, mind, and moral character that make a nation great.

In the effort to halt the drift of men and women toward the city no public undertaking will aid more than improvement of highways, for good roads destroy the isolation of country life, improve market opportunities, and decrease the cost of hauling

farm products to town.

Systematic efforts and cooperation of Nation, States, and counties will make American highways the best in the world, bring remote agricultural lands within practicable hauling distance from railroads, materially raise the value of farm property, enhance the margin of profit on farm products, vastly increase the average daily attendance at rural schools, raise the standard of rural education, make the motor truck an economical vehicle for American farmers, lighten the labors of American

horses, save wear and tear on harness and wagons, and add to the comfort and happiness of all rural residents.

This is surely sufficient to demonstrate that our public roads are of Nation-wide importance. Why, then, should not the National Government assume its just share of the road burden the same as the States have recently assumed their share? Within the States county and district lines no longer mark the limits of the new traffic. Practically every State in the Union has officially recognized this fact and made provisions for assisting the local communities in bearing the burden which originates beyond their borders. But why stop at State lines? This traffic takes no more cognizance of State lines or boundaries than it does of county or other local limits. The automobiles from the State of New York, for example, help to wear out the roads of Tennessee and California. If the States have found it necessary and wise to equalize the burden thus thrown upon the local communities, would it be anything but fair for the Federal Government to assist in equalizing the burdens of the various States?

But how is this going to benefit the farmer? The farmer is naturally interested most directly in the local roads which lead from the farm to the nearest town. State aid is expended largely on main roads leading from county to county. If Federal aid is obtained, is it not reasonable to suppose that this will be devoted largely to main interstate roads? But as it is now the State and local communities are forced to bear the whole burden alone. With Federal aid, at least a portion of this burden would be borne by the National Government and the State and local communities would have just that much

more to apply to the other roads.

Extensive investigations have shown that in general onefourth of our roads carry at least three-fourths of the traffic. These are the roads which require the most expensive improvement and the heaviest outlay for maintenance. Until recently the entire cost of all roads has been on the local community, county, or district. Whatever portion of these heaviest-trafficked roads is taken over or aid given on, just that much more funds will be available for improving and maintaining the local roads. Thus the farmer will directly share in the benefits, no matter whether he lives on a main or local road.

In addition to the power of Congress over all interstate highways under the commerce clause of the Constitution, the Federal Government has constitutional power to establish post offices and post roads. There is no doubt that Congress has the power under the post-roads clause of the Constitution to build and maintain any and all such roads or highways as may, in the judgment of Congress, be necessary for the due and proper transportation of the United States mails and to do so without regard to State aid, fully as much so as it has the power to erect a building in a town or city in which a post office is to be

operated.

Under this clause of the Constitution I have never had any doubt as to the power of Congress to construct and maintain all roads over which rural carriers must perform their services in connection with the collection and delivery of the mails. Rural letter carriers are really and in fact postmasters, in so far as the patrons of their respective routes are concerned. They are traveling postmasters, and the Federal Government has full and complete power to provide all necessary traveling facilities for these traveling postmasters, fully as much so as it has to construct and own suitable buildings in which stationary postmasters perform their official duties. But while this is true as to the power of Congress under the Constitution, the improvement of such roads only as those over which rural carriers perform their official duties would not be of the highest economic value to the general public.

Rural mail routes are la! out with a view to the accommo-

Rural mail routes are la? out with a view to the accommodation of the greatest number of patrons, the object being to serve the greatest number of people rather than to establish routes where they can be best and most cheaply constructed and most economically maintained. As an engineering and economic proposition, rural mail routes do not present the most attractive scheme for national improvement and maintenance of public highways. On this account I think it wiser and better that the National Government be not limited in its provision for the improvement of public roads to those roads only over which the Rural Mail Service is now performed. Believing, as I do, that Congress has the power, under the commerce clause of the Constitution, to build and maintain any and all public roads used wholly or in part in the movement of interstate commerce, I see no reason why the National Government should be limited to the improvement and maintenance only of such roads or parts of roads as ar or may be used in performing the service of rural mail collection and delivery. In fact, the United States Government has now be-

come a public carrier in both intrastate and interstate commerce in the operation of the Parcel Post Service. The United States now carries merchandise in packages from any point in a State to any other point in the same State or from any point in a State to any other point in another State. In addition to carrying both intrastate and interstate commerce through the domestic Parcel Post Service, the Government does a foreign shipping business of goods, wares, and merchandise through the operation of the foreign Parcel Post Service. Therefore it must necessarily follow that whatever the Government has the right and power to do, in order to do it it has the right and power to own and operate at public expense any and all instrumentalities and facilities needed by the Government to enable it to perform such service.

So far as constitutional warrant and power is concerned, if the Government can carry 50 pounds of merchandise in one package, it can carry 100 pounds or a ton. At this time their is no limit to the number of tons of merchandise that may be carried in the Parcel Post Service in both intrastate, inter-state, and foreign commerce if shipped in packages conforming to the law and regulations applicable to such service.

In order to properly discharge the functions of the Postal Service, the Government may and does own public buildings, running in value into hundreds of millions of dollars. It may and does own millions of dollars' worth of mail pouches, mail cars, wagons, horses, automobiles, and other forms of equipment used in the necessary performance of the functions of government pertaining to the Postal Service. If the Government can own a wagon, or a horse, or a mail car, or automobile, paid for with public funds, in all reason can it not as well own the highway upon which and by which these facilities can and must be utilized? If the Government can own one mail car, it can own a thousand if needed. If it can own one car in a train of cars, it can own all the cars in a train if required for Government purposes. If it can own all the cars in a mail train, it can certainly own the engine by which the motive power is furnished to move such train. If it can own the cars in the train and the motive power, it can also own the railroad over which the train moves and all the terminal and other facilities used in the transportation of the mails, including the merchandise freight carried in such mail cars. If the Government, under the Constitution, has power to acquire and own all the railroads and equipment and terminals incident to the grant of power authorizing the establishment of post offices and post roads, it must conclusively follow that under the same power the Government can acquire and operate for the same purpose any and all highways used by it in the transportation of the mails regardless of whether the transportation is intrastate, interstate, or foreign in character. Congress under the same clause of the Constitution has full power to declare all highways over which the mails are or may be carried post roads, and have all such roads maintained at the expense of the Government, regardless of State and county cooperation or participation in such cost of construction and maintenance, just as it does now in constructing and maintaining a post-office building, a Federal court building, a river or harbor improvement, a fort or a battleship. in my judgment, there is no doubt of the power of the Federal Government to construct, maintain, own, and operate any and all public roads for postal or military purposes, without the cooperation and aid of the States, counties, cities, and other municipalities through which such roads are constructed; but, by and with the consent of Congress, States, counties, cities. and other municipalities may join the Federal Government in constructing and maintaining such roads for the benefit of all the people, and in this way reduce the burden of the Federal Government without in any degree impairing the Federal service to be performed by the use of such highways.

In this way the cost of construction and maintenance, being divided, makes it lighter on both governments and in no way impairs the usefulness of these highways for both Federal and

State purposes

While such cooperation and joint use is wise and desirable, I do not think that the Federal Government should make such aid and cooperation by the States and municipalities an absolute condition, upon the compliance with which the improve-ment of postal highways by it must depend. If such a condition attaches, improved Federal post roads will never be constructed in the poorer counties for the reason that such counties are not able to bear the burden of paying for one-half or any substantial part of the cost of such post-road improvements. Such a system will result in having the improvement of public roads used for postal purposes made only in the richer and more well-to-do counties, where good roads may be built and maintained without the aid of the Federal Government in any amount. In

other words, counties and communities able to do without Federal aid will get it and counties not able, within their own resources, to help build and maintain such roads will not get it, and all such counties, on account of their financial inability, will necessarily have to go without improved highways. Such a system would result in having improved highways only in spots and could never result in a uniform system of good roads throughout all the States unless the States shoulder the burden and provide the means of such aid and cooperation with the Federal Government, regardless of the ability of each county in the State to furnish its share of the money necessary to secure improved post roads within its boundaries.

The post-road mileage in poor counties is usually as great as in the richer counties and requires as great an outlay per mile of road for improvement as in the wealthier counties. If such poor counties have to raise by taxation a sum of money equal to that raised by the richer counties in order to secure Govern-ment aid in the construction and maintenance of post roads, they will simply have to go without Government aid, and, being unable to build good roads without such aid, none will be built. Such a system, so applied, will never result in having general good roads throughout an entire State, and to that extent will,

as a whole, prove to be a failure.

My own plan, or rather the plan which I think will be the most feasible, is that when and wherever practicable to do so the Federal Government shall on its own account and at its own expense build, own, maintain, and operate a system of post roads connecting each county seat with the county seat of each adjoining county, even when State lines are to be crossed in order to do so. That they should be good, substantial roads, with hard surface finish, and in all cases suitable for carrying the mails, regardless of the amount and weight of parcel-post packages, and suitable also for the movement of troops, munitions, and equipment for war, in case these roads should ever be needed for military purposes. But it should also be provided that all such roads may be increased in width and standard of quality over the standard width and quality provided for such post and military roads through any State, county, district, or municipality, upon the payment of such a sum as may be necessary to cover the additional expense due to such increase of width and standard, in such manner as may be authorized by act of Congress. By this plan good, substantial post roads can be constructed by the Federal Government between all the county seats in the United States where it is feasible and practicable to do so, and regardless of the financial ability of any State or county to pay any portion of the expense incurred in the construction and maintenance of such roads.

By this plan a system of good roads of aniform width and quality would be provided for every State in the Union. With such a system the burden upon the States, counties, and municipalities in building and maintaining all other needed roads will not be so great as to become prohibitive on any. These Government roads can be and ought to be surveyed by Government Army engineers who have no interest in any property that may be enhanced in value by having one of these roads so surveyed as to run by or through such property.

Army engineers can be used in making these surveys without additional cost to the Federal Government or to the States, and they are quite competent to do the work, and can and will make the surveys with regard only to permanency and economy of

construction.

The building of the Panama Canal, the greatest engineering accomplishment in the world's history, was done by Regular

It will require many years to build these roads and many millions of dollars, but as they are intended to remain for all future time, it is exceedingly important that the construction of them should be scientifically done, and that the maintenance of such a Federal system of highways, so important to the future improvement of the whole country, should not be made to depend upon the financial ability and willingness of States, counties, and municipalities to aid and cooperate in their construction and maintenance.

In this way only, and by this plan only, in my judgment, can certainty and uniformity of construction be secured and permanent maintenance guaranteed.

As these roads are as much or indeed more for the benefit of the generations to follow us than for ourselves, I think at least a part of the burden of their construction should be passed on to those who will use and enjoy them for hundreds of years after the people of this day and generation have passed away. Therefore, I think, we will be justified in issuing the bonds of the Government in sufficient volume to cover the total cost of construction of these post and military roads.

Mr. Speaker, as a first step in the direction of securing the construction of such a system of public highways as I have outlined, I have introduced the following bill:

A bill (H. R. 3600) to provide that the United States shall construct rural post roads between the county seats of the several States.

Be it enacted, etc., That in order to construct and maintain rural post roads the Postmaster General is authorized to designate all highways connecting county seats in each of the several States as rural

ways connecting county seats in each of the several States as rural post roads.

SEC. 2. That the Postmaster General, after making deductions hereinafter provided for, shall apportion the appropriations made under the provisions of this act for each fiscal year among the several States in the following manner:

One-third in the ratio which the area of each State bears to the total area of all the States; one-third in the ratio which the population of each State bears to the total population of all the States, as shown by the latest available Federal census; one-third in the ratio which the mileage of rural post roads of each State bears to the total mileage of rural post roads in all the States.

SEC. 3. That for the purpose of carrying out the provisions of this act there is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, for the fiscal year ending June 30, 1917, the sum of \$25,000.000. So much of the appropriation apportioned to any State for any discal year as remains unexpended at the close thereof shall be available for expenditure until the close of the succeeding fiscal year.

State for any fiscal year as remains unexpended at the close thereof shall be available for expenditure until the close of the succeeding fiscal year.

SEC. 4. That so much of the appropriation made under the provisions of this act as the Postmaster General may estimate to be necessary, not to exceed 5 per cent, shall be deducted by him at the beginning of each fiscal year for administering the provisions of this act, and any portion of such amount unexpended at the close of any fiscal year shall be made a part of the appropriation for the succeeding fiscal year and reapportioned according to this act. Within 60 days after the final passage of this act, and thereafter on or before January 20 next preceding the commencement of the fiscal year, the Postmaster General shall certify to the Secretary of the Treasury the amount which he has apportioned to each State for such fiscal year. All payments under this act shall be made by the Secretary of the Treasury on warrants drawn by the Postmaster General.

SEC. 5. The term "rural post road" as used in this act shall be deemed to include all public roads over which the United States mails are or may be transported that connect the county seats of contiguous or adjoining counties. The Postmaster General shall cause to be made such surveys, plans, specifications, and estimates as he may require, and shall advertise for bids for all of the work or do the work as may otherwise be provided for by the laws of the United States.

SEC. 6. All road work in the several States done under the provisions of this act shall be under the direct supervision of the Postmaster General. The final cost of the work shall include a reasonable expense for engineering, inspection, and unforeseen contingencies not to exceed 10 per cent of the total cost of the work.

SEC. 7. That out of the appropriation provided by this act the Postmaster General is authorized to employ such assistants, clerks, and other persons, in the city of Washington and elsewhere, to purchase such supplies, material, eq

The Obstacles to Waterway and Port Development and Their Vital Interest to American Manufacturers and Wage Earners and Our Need of an American Merchant Marine.

EXTENSION OF REMARKS

HON. WILLIAM S. GREENE.

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 14, 1915.

Mr. GREENE of Massachusetts. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I include an address by Edward F. McSweeney, chairman directors of the port of Boston, before the Twelfth Annual Convention of the National Rivers and Harbors Congress, December 8, 1915, Washington, D. C., on the obstacles to waterway and port development and their vital interest to American manufacturers and wage earners and our need of an American merchant marine.

The address is as follows:

THE OBSTACLES TO WATERWAY AND PORT DEVELOPMENT AND THEIR VITAL INTEREST TO AMERICAN MANUFACTURERS AND WAGE EARNERS AND OUR NEED OF AN "AMERICAN MERCHANT MARINE."

[By Edward F. McSweeney, chairman directors of the port of Boston, before the Twelfth Annual Convention of the National Rivers and Harbors Congress, Dec. 8, 1915, Washington, D. C.]

This organization advocates policies, not projects, and I am grateful for the privilege of expressing a few thoughts connected

with the policy which comprehends the improvement of our rivers and harbors, the establishment of an American merchant marine, and freedom of the seas. Without minimizing the importance of other interests and issues now before the people, these, it is no exaggeration to say, are not dwarfed by comparison with any other subject now before the American people.

The history of the United States shows that when it waked up to the fact that its prosperity depended on a merchant

marine it secured one adequate for its purposes.

Between the close of the Revolution and the War of 1812 we developed an efficient merchant marine, having in 1810 substantially as many tons of shipping as we had when the present European war started in 1914. In the early forties, when the British Government began to pay subsidies to British ships, the answer of the United States was to give similar encouragement to American shipping. Under this impetus the tonnage of United States ships engaged in the foreign trade increased 300 per cent in a few years. In 1855 we had twice and a half as much tonnage in the foreign trade as we had July 1, 1914. In 1855 we carried 74 per cent of American exports in American bottoms; in 1914 we carried only 8 per cent.

In 1914 of the ship tonnage which left England for the United States 93 per cent fiew the English flag and 4 per cent flew the American flag. Of the ship tonnage leaving Germany for the United States 89 per cent flew the German flag and two-tenths of

1 per cent flew the American flag.

Of the ship tonnage leaving this country for Germany in 1914, 75 per cent flew the German flag, 22 per cent the English flag, and two-tenths of 1 per cent flew the American flag.

Of the ship tonnage leaving this country for England that year 93 per cent flew the English flag, 4 per cent the American

flag, and 1 per cent the German flag.

unopposed.

It is interesting, in view of the violent opposition to subsidies shown in recent partisan discussions in Congress on the question of reestablishing an American merchant marine, to realize that the policy of subsidies and mail subventions, which proved so successful in the forties, was originated by Democratic statesmen and was a distinctively Democratic doctrine. Constructive Democratic statesmanship before the Civil War gave us a subsidized, subvention-aided American merchant marine capable of coping with our competitors in all the markets of the world. which reduced the cost of ocean freights and prospered, as did the Nation. Sectional bitterness before the war wiped it out. Afterwards the bulk of our people, irrespective of political affiliations, unwisely thought we did not need a foreign trade to main-

Our United States coastwise, lake, and river shipping trade ever since the founding of the American Government has by law been reserved solely to American vessels. As a result, while our tonnage in the over-sea trade is substantially no larger than it was a hundred years ago, our coastwise tonnage in the past 130 years has multiplied a hundredfold and is to-day a highly developed and prosperous business, in which it is American competing against American, with an equal standing in wages and conditions. In our over-seas trade it is American against foreigner, with an overwhelming advantage of lower wages, living conditions, and certain very powerful forms of national assistance on the side of the alien, plus an alien ship trust beyond the reach of our laws. The evidence before the United States Senate committee during the last two years shows that every unfair measure to control the seas against American competition has been This Shipping Trust is powerful only because it is resorted to.

Twenty-five or more years ago Bismarck realized that unless he created a German merchant marine industrial and com-mercial Germany would be but a dream. With the resources of his Empire backing him, he declared and carried on such a commercial maritime war on the English system of rates and service that in order to avoid utter ruin Great Britain surrendered and allowed Germany to obtain its proportionate share of the earth's commerce. Until the present war broke out this Shipping Trust was a German and English confederation, each being resolved to keep this country in a position of commercial vassalage, and, although German shipping is to-day idle, we may be certain that when peace comes again a community of over-sea commercial interests will again bring together the German and English in the same trust in opposition to any attempt to create an American merchant marine. We do not desire England's downfall, and only ask the right freely to use the seas, which we are denied. What Bismarck did we can also do, and especially under the more favorable conditions due to the war.

The Shipping Trust has taken advantage of the control of water-front rights on the Atlantic coast by American railroads to extort free wharfage for their ships in operation in Boston, Philadelphia, Baltimore, and so forth, a practice which not only

adds needless burdens to the railroads, but discourages interest in port development and improvement. Only two or three ports in the United States are under absolute public control, half a dozen or so have partial public control, and over the remaining 40 or more ports the people have no control. The remedy is within the power of the Interstate Commerce Commission, which, by compelling the separation of ocean terminal accounting from railroad operation, would throw such a white light on the losses now being assessed on American railroads for the benefit of foreign shipowners, to be charged back on American shippers, that an immediate solution of this question would be forced. Imagine an American ship sailing into an English or German port and demanding free use of wharves and terminals on the threat that if Southampton or Hamburg did not grant this request Plymouth or Bremerhaven would. If any of these ports would be weak enough to consider it, the National Government would step in as a matter of national honor and selfinterest; yet this is exactly the way Boston, Philadelphia, and Baltimore are played against each other. In addition, our shipping laws, rate differentials, and other burdens, which are within our own power to remedy, are operating to make impossible the investment of private capital in over-sea marine property, thus leaving the control of the seas to our foreign rivals.

Situated as we are, between Europe and the Orient, and nextdoor neighbor to South America, this war, following the building of the Panama Canal and the passage of the Federal reserve act, gives the United States the opportunity to become the world's middleman. Supported by the National Government and all our ports utilized as assets of the Nation, we can build up in time a general over-seas trade which will, by providing a foreign market for our surplus products, expand our manufactures and our agricultural and mining enterprises. During the last 200 years England, and during the last generation Germany, through the trading system their export trade makes possible, have built up and given opportunity for cooperation to manufacturers and traders in both foreign buying and selling, resulting in economic production and distribution. Compared with London and Hamburg, New York is nothing but a harbor with huge facilities for sending out and receiving freight and passengers. It is not a trading port, and it never will be while

its business is carried in alien ships.

One example of the effect of the loss to the United States because we have no merchant marine is shown in the staple of cotton, of which we produce the bulk of all grown in the world. In 1912 England sold the United States \$25,000,000 worth of Egyptian cotton, and that same year sold to Continental European markets 325,000.000 pounds of cotton grown in this country, a large part of which, with an American merchant marine, should have been bought and sold directly by our American cotton growers. Further, a study of transportation and market costs shows that the British manufacturers of goods made from cotton grown in the United States ; re able to buy the cotton at a lower price than New England factories have to pay for it. We raise wool in this country, and since we built the Panama Canal the Australasian wool market is substantiall, as near to us as it is to England, yet because of our inability to ship our own goods we are obliged to allow London to dictate its price and exact a middleman's profit. We use in the United States more than two-thirds of the world's rubber crop, yet the price has been dictated by the London market, and the same is true in many of our own staples.

The belief that our foreign trade has improved since the war is unjustified. The great increase in the value of our exports is due wholly to the demand for supplies and materials used in warfare, and has upset the industrial balance of the United States. At the present time we are sending out of this country to the warring nations of Europe manitions and accessories of war at the rate of \$100,000,000 per month in excess of the normal export before the war. This means that we have about 800,000 wage earners employed for a full year, who at the close

of the war will be the innocent victims of the gigantic read-justment that must take place in industrial America.

Our prosperity to-day carries great dangers with it. There is no doubt that after the war there will be an extreme reaction. and the longer the war lasts the harsher and more severe this will be. The answer is to get our foreign business on a sub-stantial basis without delay. Whoever wins in the present war, there must be a world-wide industrial reorganization based on efficiency applied to industry and finance. The fact that in Great Britain and in France, as well as in Germany, practically the entire munition business and manufactures of many correlated industries have been socialized will bring about drastic changes after the war which will have a great effect upon democratic institutions everywhere.

Our trade balance for the year ending June 30, 1915, in normal legitimate merchandise was smaller than it has been since 1910, and almost \$200,000,000 less than that of the year before the war. For five years before the war our export trade in most articles was substantially at a standstill: in some cases actually going backward. The balance of trade against us with South America in the past 12 years has amounted to over \$1,000,000,000, which was spent in Europe for supplies, a large part of which this country should have furnished.

Whatever else may be muddled in Great Britain since the war began, she has never relaxed her care for the trade upon which her wealth and greatness rest. The bottling up of the German and Austrian merchant marine, the handicaps placed on neutral shipping, the seizure of our ships, the interruptions of, and inroads into, our trade by "Orders in Council," followed a well-defined plan and have been accompanied by a restoration of the British reexport and middleman business to substantially normal conditions. This has been supplemented by activities that point to a seizure, when the war ends, of the

world's markets on a larger scale than ever before,

A case in point is the manufacture of dyes, the control of which before the war was in Germany and which control England has been using every effort to secure. Our progress in dye manufacture since the war has been wonderful. Yesterday's papers report that the export of logwood from Jamaica to the United States has been prohibited by order of the British Government. Knowing that the purpose behind this act is to cripple our threatened primacy in this important industrial need, if we are content to cease to strive to be the leader by the only proper agency available to us—a merchant marine—we must not complain later, when the thousand and one industries that must use dyes must go abroad for them instead of buying them at home. While we are foolishly crippling our staple industries to gain the gambler's profits of war supplies, Great Britain is conserving her normal industries carefully and making the exigencies of the war a cloak to deprive neutral nations of their right to trade even with other neutral nations.

The point that can not be evaded is that whether we acquire an American merchant marine by the proposed ship-purchase bill, subsidies, preferential duties, discriminating tonnage dues, or by any other method, we must still work out in advance of any of these the settlement of such vexatious questions as the evils of free wharfage, railroad differentials, and the other handicaps of our own making, operating against the establishment and growth of an American overseas marine under pri-

vate ownership.

If, to-day, the ship-purchase bill were in operation, where would Government ships dock in New York? While New York docks are ostensibly under public control, the real value of that control has been dissipated by leases for a long series of years.

Where would the ship-purchase bill fleet dock in Boston, Philadelphia, and Baltimore? If they docked at the railroadowned waterfront, would the Government demand the free wharfage privileges now exacted by the International Shipping

Trust?

If the theory be sound that a merchant marine is as necessary and useful for the Middle West as it is for a seaport, and its economic benefits inure to the farmer, stockman, and miner of the trans-Mississippi region as equitably as they do to the manufacturer, merchant, and shipper of the coast Commonwealths, why should a rate differential, which makes it cheaper to export from Chicago by way of Philadelphia and Baltimore than by New York or Boston, be permitted to continue? Why should the Interstate Commerce Commission allow an equal rate to Gulf ports from the interior, while denying that right to the Atlantic ports?

Under a ship-purchase bill the Government could not permit such discriminations; it would not enter into secret compacts or make special contracts with railroads to divide the profits of such discriminatory policies. If, as is patent, such policies would not be permitted to continue under the operation of the ship-purchase bill, why are they permitted to exist to-day in the light of their palpable injustice to the ports and people of the Atlantic seaboard? The Government, through the Inter-state Commerce Commission, has it in its power to-day without additional law to clear away most of the handicaps which operate to benefit the foreign Shipping Trust and prohibit marine over-sea investment.

With the exception of Mexico, from the Arctic to the Antarctic, we are between ourselves a continent of peace, but while we expect to enjoy permanent peace, this does not carry with it any guarantee of freedom from competition in the effort to oust

us from our place in the markets of the world.

In the matter of encouragement of commerce we can take a good lesson from our northern neighbor, the Dominion of Canada, which, profiting perhaps by our mistakes, has placed this matter of governmental aid on the sound, economic basis

of national need and utility instead of sectionalism.

With an area one-fifth larger than ours, and a population one-twelfth as large, the Dominion Government has expended to date over a billion dollars in aiding Canadian projects of distinctly national character, including direct payment of \$240,000,000 to the Provinces to assist them in developing their resources; \$115,000,000 has been given for canals, which last year handled 27,500,000 tons of shipping and 37,000,000 tons of freight, a remarkable record, when we consider that these canals are feebound six months in the year. Seagoing vessels have already gone through the new Welland Canal (now building and expected to be finished in 1918) from the head of the Great Lakes to the Atlantic without breaking bulk, and then sailed for Europe. This means a revolution in export freight rates, ocean and rail, both American and Canadian, especially on grain and other bulk commodities, which will have its effect on our ports.

Government assistance to railways in Canada has always been of a distinctly national character, with the result that the Grand Trunk and the Canadian Northern, with the Canadian Pacific, give three Canadian transcontinental lines. This has so stimulated the growth of the Canadian steamship business that to-day it actually encircles the world with Canadian

services.

Steamship lines have not been neglected, the Dominion Government having expended in mail subsidies and steamship subventions more than \$33,000,000 for the purpose of maintaining over-sea and local services on the Atlantic and Pacific and on lakes and rivers.

As a result of this national assistance to national projects, based on national needs, manufacturing establishments in Canada have grown 30 per cent in 10 years, during which time capital invested in Canada shows a gain of 180 per cent, against a growth in the United States of 105 per cent; the value of raw material used in industry has increased 125 per cent, against 85 per cent for the United States. The value of the finished Canadian product is 142 per cent more than it was 10 years ago, as compared with our 80 per cent increase for the United States. Canadian field crops gained 200 per cent, against our 83 per cent, and foreign commerce 130 per cent, against our 75 per cent.

The progress of Canada and the manner in which she has taken hold on the basis of national efficiency, especially in the appropriations for transportation, whether canal, railway, river,

or harbor, is well worth our study and emulation.

To-day heroic efforts are being made by agents of foreign governments to route shipments of war materials and military supplies through ports that can handle promptly the business for Italy, Russia, and other European countries, and are meeting with failure. The refusal to expedite shipments which these nations are auxious to get, and the insistence on using congested ports, whose facilities are paralyzed, ought to be worth the attention of the Interstate Commerce Commission. Commercial fatuity of this sort is as strange as it is mysterious. I am informed that the American Woolen Co. has to-day 17,000 packages of its products waiting for shipment to Archangel, and while that port was yet ice free appealed to the Russian legation in Washington to permit shipments by way of Boston, but without success. Rails, engines, and other railroad material apparently greatly needed by Russia to make physical connection with its projected port west of Archangel and alleged to be free of ice all winter are delayed. Although railroads and manufacturers are anxious to ship from Boston goods from Lawrence, which is only 26 miles from Boston, these goods are held for ships which lie in New York unable, because of congestion, to get cargoes.

This bit of information, relating to a New England port, may be merely of local interest, yet it points to conditions that demand the attention of those who, loving their country, will never willingly consent to see it degenerate into a commercial province of Europe. If there exists in this country potent partners of the International Shipping Trust, with power to make and unnake ports, it is time the Nation knew it. It is not a simple thing to place the fate of any American community in the hands of some unfriendly power or organization.

A strong Federal shipping board to reach out from the land where the authority of the Interstate Commerce Commission stops, to take cognizance of commercial needs and, when necessary, of conspiracies and schemes against our commerce and penalize their activities, should be created. We can not spend moded for a vast minimum millions for rivers and harbors to make smooth the way for an improvements instead.

alien trust or domestic wreckers of commerce, and some such national agency to save us from both is urgently needed.

It is for us to decide whether the United States will be a power or a province, not free in theory and dependent in fact. The ship that comes to our port under an alien flag should take second place to the ship carrying our own flag. The few ships we have meet exactly this treatment in Europe and oriental harbors. They must pay harbor and wharfage dues. They get only that which they are obliged to receive. The American who secretly or openly seeks to make the interest and prosperity of America and American shipping or trade secondary to those of our rivals and competitors is and should be held to be a public enemy. That flabby doctrine which has led us to give the alien competitor the wheat and our American manufacturers and merchants the chaff spells commercial ruin. Give the world the best of hospitality under our roof, but not the title deeds of our home.

The United States has come to a parting of the ways. It is abhorrent but true that the modern world of competition, which by modern invention has narrowed oceans and destroyed distances, is, for all its fine phrases and speech of Christianity, brotherhood, humanity, justice, still a warring world. In the practical affairs of life and living, working and striving, we deal, however, with the world as it is and not the ideal world

we wish it were.

If we desire the United States to continue in progress and prosperity when we come to the doors that lead out into the world, we must present a united and solid front to all our competitors. We are producing in the United States to-day in all our departments of national industry much more than our home markets require. If we are to retain our prosperity, this surplus must be disposed of in foreign markets. To get the over-seas markets we need our own ships. To employ our own ships is to strengthen our country industrially, financially, and commercially, for while we employ allen carriers we are just so much poorer by the \$300,000,000 a year we pay in tolls under normal conditions and at their mercy in the days of stress, such as those through which we are now passing. If we discard the idea of foreign markets and keep our surplus products at home, we will soon learn that the price of the unmarketable, unsold product governs the price of the whole, and the result means idleness, distress, and hard times at home and national weakness and contempt abroad.

Let us differ as we will as to the ways and means in our domestic policies, but when we come to our waterways and harbors let us present a united front to an alien world. When questions of American honor, rights, and commerce are concerned we are all Americans, and Americans only. In all questions of policy and intercourse with other peoples partisan policies, misdirected friendship, misguided philanthropy, and other agencies of national weakness must be thrust sternly and remorselessly aside. We can perform no more patriotic service at this time than to provide ourselves with that adjunct of peace and of war-equally serviceable to both-an American merchant marine, the need of which should be a second religion with the American people. Unless the activities in securing for-eign markets by the South can enlist the cooperative sympathy of the North, the West, and the East, and vice versa; unless there is reciprocity of aim and effort for the common national good and a suppression of provincial jealousies and parochial distinctions which divide our people and sap our national strength we can not hope to succeed.

If with the war helping us we can not secure the freedom of the seas, as we did when it was attempted to be taken from us in the forties, and as Germany did after the Franco-Prussian War, we confess ourselves as a Nation inferior in courage and in patriotism to our forbears—a premise which, if placed properly before the American people, they will indignantly refuse

to accept.

National Defense.

EXTENSION OF REMARKS

HON. JAMES H. DAVIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 14, 1915.

Mr. DAVIS of Texas, Mr. Speaker, my system of preparedness is to spend most of the stupendous sum of money now demanded for a vast military and naval imperialism for internal improvements instead.

Less than a year ago we were signing peace treaties and programs with all the earth and justly boasting that we were taking the lead in a move for world peace. Aglow with a transcendent love of humanity, freedom, and justice inculcating the fatherhood of God and the brotherhood of man, we stood for "peace on

earth and good will among men.'

Eut behold a mysterious change! A reversal and repudiation of that policy is now headlined in all our press, and they that stand for the glory of God and the grandeur of men and refuse to bow in humble submission before the minions and myrmidons of a war god are maligned, mocked, and traduced as mollycoddles filled with mental aberrations and visions, while the clamor for armies and armaments, big guns, big ships, and big navies goes on and would take millions of our most stalwart and able-bodied men from the peaceful walks of life and put them under charge of cocked hats, braided belts, shoulder straps, and bucklers, to march up and down the country chafing for a murderous war dance, like a "roaring lion seeking whom he may devour," piling all this avalanche of expense upon the weaklings, the old, the infirm, and the honest business man, all to prepare for a war that few, except the mercenary, want and none but the reckless military bravado ever expects to come.

As for myself, being a new Member, circumscribed and bound by rules of seniority and precedence, I can do but little more than enter a most solemn protest against such profligate waste and to say that nothing but an immediate and most imminent danger, incurable by any other means, could induce me to entail such a burden on our country and enthrone such a gigantic en-

gine of oppression.

Are we to make hypocrisy of our "red cross good Samaritan conduct" and instead of healing wounds and ministering to suffering humanity in war make Moloch our god and Mammon our Christ by challenging the world to combat and running riot

in blood, butchery, and carnage?

If I could vacate my conviction of duty for party preferment, would console myself, for it certainly seems to me that all the great interests who would make millions out of this program and who have brought on all this pandemonium for preparedness will line up for Mr. Wilson and see to it that he is elected for

four years more to carry out his five-year program.

When the President took this position he put the Republican Party into a bed of quicksand, to go deeper in mire the more they worked. They will therefore be forced to go to the country alone on that old, hoary, effete fraud called a protective tariff, which will fall on deaf ears when all the great factories are running on double-shift time to carry out this stupendous program of so-called preparedness.

But I had rather stand on a five-year program of internal improvements-dig out the Hudson River up to the New York Canal and on to the Great Lakes, connecting with Duluth, 2,000 miles away; then from the Lakes to the Mississippi, with an intercoastal canal system in the Southern States; build a thorough system of public roads and a great merchant marine, and

prepare for business instead of butchery.

I think President Wilson one of the grandest men that ever occupied the Presidency, and I thank God that in these days of cruel cataclysms in war he has been a man of peace. I think he is surrounded by a set of most praiseworthy and patriotic coun-

selors in the Democratic household.

But as a Congressman I am unwilling to commit myself to any very large extension of our Army or Navy. I would like to double or treble our Army and Navy schools, preparing an adequate number of young men for expert service in time of need; enlarge our Rock Island Arsenal; manufacture and keep on hand an ample supply of first-class guns, munitions, and like equipments; plant several aeronautic stations on our shores, with submarine and mine equipments. Thus prepared and relying on a citizen soldiery, if we give the citizen freedom and fairplay at home we will be impervious to all attacks.

I fear a very large part of this clamor for preparedness is inspired by the Money Trust, Steel Trust, Powder Trust, Shipbuilding Trust, and so forth, which are growing fabulously richer and more powerful over the war contracts from Europe and want to have this country in a frenzy over a big Army and Navy, so when their big contracts with the allies in Europe close they can feast a few years more on our own Federal Treasury in big, fat

contracts at home.

What countries do we expect to attack us? If our program is only defensive, I see no danger. The clashing Governments of Europe are now bankrupting their Governments and murdering their men by the million. Unless Morgan or some of our predatory rich furnish them money, it would be impossible for them to invade and maintain a war with our country. Stupid must be the man who thinks that Japan or China, even both,

could mobilize an army, wade the oceans 10,000 miles, and invade our country. Germany seems to be the specter of dread that the jingoes refer to. Germany will have enemies enough in Europe to keep her busy for a generation, even if she comes

out of this dreadful war alive.

Bryan, Wilson's great partner in this wonderful peace and prosperity we now have, made solemn treaties with most nations of the earth to refer all questions to The Hague one year before a declaration of war or an overt act of violence. Shall we tell the world that we have no confidence in its treaties? Is Christianity dead and honor extinct and the world a prize ring in which bruté force alone is master? Kings, emperors, aristocrats, and great, greedy corporations will keep the world in a maelstrom of misery and war if democracy, freedom, and justice are not allowed to assert themselves.

I would have the Government make its own Army supplies, munitions, guns, gunboats, and aeroplanes. One who feels a pang of sorrow over the present cruel war grows horrified and heartsick as he sees the great gun and powder factories of the earth in partnership supplying the guns and munitions that pre-pare both sides for the slaughter. The Krupps in Germany and the Armstrongs in England, leagued in corporate partnership, have furnished deadly machines of murder that thunder on both sides of every battle. If war is "hell," as Sherman said, then let us keep out of "hell" by preparing for a glorious civilization at home, enlarge our ports and merchant marine, curb the rapacity of the malevolent rich who concentrate our natural and productive resources into a few greedy hands.

"Establish justice, insure domestic tranquillity," not make all our farmers tenants and our laboring millions serfs to soulless corporations and our merchants peons to a few trusts in order that a few bankers like Morgan and Rockefeller may be masters of all our gigantic enterprises, thus promoting debt,

discord, riot, strikes, and misery among the masses.

"Provide for the common defense" by making our people free, prosperous, and happy, and then the combined world could not invade and conquer us. A contented citizen soldiery is invincible. "Promote the general welfare and secure the blessings of liberty" to the masses and not to the big corporate classes.

The price of several warships would better be spent in impounding the vast snow melt along the base of the Rocky Mountains for irrigation over the fertile valleys below, which stand thirsting for that which, if interned, would bless millions of people and make their homes prosperous. The price of a few more warships and the price of a large standing army could well be spent in dredging and disinfecting sluggish and miasmatic swamps and streams, giving health and wealth to vast sections of country now infected with disease, stagnation, and death. The price of a few dreadnaughts would be far better spent in erect-

ing a system of continental military highways.

Some provision must be made in our defense program to prevent the great corporations from feasting on the ruin of our country in war, and money should be made to fight for its country the same as men. All goes down in war except gold, which stands triumphant over every battle field, cleans up the wreck, and makes millions out of its carnage. The more ferocious the war, the larger its margins. The moanings of millions of mangled soldiers and grief-stricken citizens, helpless in poverty by war, are songs of jubilation and joy to the world's gold syndicate, which stands in splendor over ruined and ravished humanity. The cadaverous faces of a million dead soldiers only emphasize the triumphant march of gold to more sumptuous splendor, when it can clip the coupons from Government bonds and command the tax collectors to pay tribute of millions of dollars taken from the honest enterprise and toll of the survivors of a cruel slaughter, which the lords of gold themselves, in league with great gun, powder, and munition factories, have often instigated.

Until these unscrupulous Molochs of misery and death can be muzzled and forbidden to feast in ghoulish glee on the dead and dying men in war, we may expect greed and gold to keep the

world in conflict.

The gold syndicate to-day holds the earth in the hollow of its At the close of the war it will be the royal receiver of the famished and bankrupt nations, with every customhouse its fiscal agent and every tax collector a subagent, in obedience to these masters of civilization, who from their castles and corridors will compel even emperors and kings to obey their orders,

Every page of history teaches us that national imperialism leads to military despotism. One of 'the last loving expressions of the father of Democracy—Jefferson—was to reaffirm his warning against a "standing army,"

After Napoleon had baptized a continent in blood and submerged it in sorrow and stood in melancholy solitude and retrospection on St. Helena, viewing the havoc and horrors wrought by his ruthless hand, he left to mankind the logic of this sentence:

The more I study the world, the more I am convinced of the inability of brute force to create anything durable.

The Duke of Wellington, who at Waterloo stopped the murderous stampede of Napoleon, said:

War is a most detestable thing. If you had seen but one day of it, you would pray God that you might never see another.

George Washington, first in the hearts of his countrymen, first in peace, and first in war, said:

My first wish is to see this plague of mankind banished from the earth.

Gen. Grant, the hero of Appomattox, by virtue of closing that cruel American fratricidal struggle of the sixties, said:

Though educated a soldier, and having passed through two wars, I have always been a man of peace, preferring to see questions of difference settled by arbitration. It has been my misfortune to have been engaged in more battles than any other American general, but there was never a time during my command when I would not have chosen some settlement by reason rather than by the sword.

Gen. Sherman, one of the leading war commanders of the sixties, nauseated with the blood of battle, said:

I confess without shame that I am tired and sick of war. Its glory is all moonshine. It is either those who have neither heard a shot nor the shricks and groans of the wounded who cry aloud for more blood, more vengeance, more desolation. War is hell!

Yet, here are we, a great missionary, Christian Nation, at peace with all the world, proposing to plunge our country in debt and excessive taxation to prepare for entrance into what Sherman says " is hell."

We may point with pride to the touring ramparts of a resounding army of drums, flying flags amid massive armament and mighty guns, as glorious emblems of our national strength; but in the citizen, standing at the threshold of a freeman's home, that sacred, sanctified spot on earth, hallowed in song and made free from the greedy hand of the usurer and exorbitant taxation is the surest foundation for our enduring greatness, and to such a citizen alone can we look when armies league in oppression and the drum tap becomes a terror or when barricades break forth in mutiny.

To him who defends such a home war has no terror and death no sting. With such citizenship we can live in peace and joy at home and stand triumphant against the world should it conspire to invade our country.

My approbation or objection to measures offered by the President amounts to but little, but in order that I may deal frankly with the people of Texas, my constituents, I suggest that, aside from his demand for an overwhelming Army and Navy, I think his message a grand document. Cherishing a high regard for our Chief Executive, I sorely regret the necessity I feel to thus differ with him, but the Constitution makes the lower House of Congress the sole taxing power of this Republic. The President has often said that this is not a partisan question; hence I most certainly give no cause for Democratic umbrage when, following the dictates of my conscience, I oppose the measure, especially since Mr. Taft, Mr. Cannon, and most all the leading Republicans are lined up for it.

Among the scores of letters and petitions I have received from Texas not one has solicited the indorsement of the propaganda, but, on the contrary, the following is a substantial evidence of sentiment in the homes of Texas:

HILLSBORO, TEX., November 27, 1915. Hon. J. H. Davis, M. C., Sulphur Springs, Tex.

Sulphur Springs, Tex.

Dear Sie: We, the undersigned petitioners of the rural communities of Hill County, Tex., do earnestly appeal to the President, the Senators, and Representatives in Congress to be moderate in taxing the people of the United States for preparedness for war.

We are willing to furnish our sons to defend our country and our daughters for nurses at any time when it is honorable and right to do so, but when it is wrong to create war, we would rather build ships like the Titanic, and placing all the jingoes in it sink them to the bottom of the Atlantic.

W. R. Kimmon, R. F. Clack, A. J. Harper, E. F. Hamilton, S. F. Hamilton, J. W. Eagleston, J. Z. Baird, J. H. Danell, C. J. Danell, J. K. Hair, Johnson Danell, J. T. Johnson, T. W. Southward, C. I. Rhea, W. F. Clack, W. B. Griffin, R. F. Wilsen, C. O. Pritchett, G. R. Priddy, J. J. Taylor, B. W. Harper, E. D. Smith, C. F. Blissit, J. D. Good, J. T. Hawbright, J. L. Hawbright, C. M. Wheeler, W. A. Landon, C. O. Southward, J. C. Lightsey, J. E. Wilson, W. H. Young, J. S. Terry, W. W. Vessels, H. W. Brooks, W. H. Morgan, B. S. Perry, T. C. Johnston, J. B. Walden, T. F. Johns, J. S. Morgan, J. H. Hester, Patrick Love, S. C. Lockett, J. A. Atkins, W. C. J. Light, N. E. Walden, W. H. Webo.

The Constitution gives Congress alone the power "to raise and support armies" and "to provide and maintain a navy." Standing within my constitutional rights, my appeal is in behalf of the common man who must bear the toil, endure the pain that such a proposed army and naval appropriation would entail.

We are already running behind in current expenses by the millions and every conceivable method of taxation is being resorted Shall Congress now strap an additional burden of a billion dollars on the people's back?

If we must have this imperial Army and Navy let us levy an inheritance tax on the swollen fortunes that have been piled up through special privilege and governmental favoritism; raise the graduated surtax on the overgrown incomes of the imperious rich, and make them who are now clamoring like military maniacs for these stupendous armaments bear the burden of its expense and maintenance.

Rural Motor Routes.

EXTENSION OF REMARKS

HON. FRANK PARK,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 14, 1915.

Mr. PARK. Mr. Speaker, notwithstanding the fact that the rural free-delivery carriers have for the past 14 years been in the civil service, the people generally are not informed accu-

rately of civil-service requirements and operations.

As a result of the order of the Postmaster General establishing motor vehicle rural free-delivery routes, the Civil Service Com-mission created a distinct class of rural free-delivery carriers, known as motor-route carriers, by which old carriers on horsedrawn vehicle routes have been summarily thrown out of employment after years of faithful service; a departmental injustice has been done which people can not harmonize with their sense of fair dealing.

The idea prevails that when one qualifies and receives appointment under the civil service he holds the position as long as he is faithful and efficient, and only his wrong conduct can displace him.

Men who entered the service when it was first established, with compensation that barely furnished support, have, by faithful effort, built up this service until it has become the pride of the Nation. These men, without fault or failure on their part, have been summarily dismissed from the service, having families on their hands, debts to pay, and no employment by which to earn a living.

No department of the Government can justify such conduct before the people.

Had these carriers been given 12 months' notice of the conditions which now confront them, they could have prepared to meet the conditions and the service could have been changed, where practicable, with little friction, and the old carriers could have qualified and performed the service on the motor-vehicle routes acceptably. In the event they could not prepare for qualification, they could at least have had an opportunity to seek other employment by which to earn a living.

Many patrons of the Rural Free Delivery Service are dis-satisfied with these changes. In many instances mail boxes have been moved from the front gate to a distance of one-fourth to a half mile away, and sometimes even farther. No longer can the small children of a family go for the mail; for no mother will trust her little children to go a quarter or half a mile through the woods to the mail box in a country where roving negroes do not respect infancy, childhood, or motherhood when they are caught alone and unprotected.

There will not be six motor-vehicle routes in the second district of Georgia, of the great number proposed, that can successfully carry the mails through the rainy season. The roads will not permit it. The county commissioners of roads and revenues know it, and are the best advised as to whether or not motor vehicles can travel to an advantage over the roads in a county.

Another defect in the proposed system that consolidates two horse-drawn-vehicle routes to be served by one carrier with a motor vehicle is that formerly the two-horse-route carriers left the post office simultaneously and made their rounds, distributing the mail at the same time, and by this method the farmer received his daily papers before the noon hour and had the noon hour in which to read them.

The motor-vehicle route serves one section in the morning and the other section in the afternoon and evening, and half of the people now get their daily papers in the afternoon, which makes it necessary for the farmer to do his reading at night

by kerosene lamp, thereby taking from his rest hours for that purpose.

There is great dissatisfaction because of this delayed delivery

of the mails.

Another cause of dissatisfaction among the people living on the rural routes results from inattention of the department to protests, petitions, and letters which they receive from all parts of the country. The department takes its agent and witnes -and gives his testimony more weight than it does the inspectorto that of all the people who live on the routes, including the county commissioners of a county.

The people pay for the service and feel that they should be heard and their petitions and protests considered before such

radical changes are instituted.

Of all the changes made under any administration in any department of the Government, this change in the rural-route service has created more discontent, dissatisfaction, and antagonism.

In the second district of Georgia the rural delivery service is unsatisfactory and the dissatisfaction is general. I know of no motor-vehicle route proposed in my district where the patrons

welcome the change and are not opposed to it.

I incorporate here a reply of the Fourth Assistant Postmaster General to a letter written him, in which I requested specific information relating to the establishment of motor-vehicle

POST OFFICE DEPARTMENT,
FOURTH ASSISTANT POSTMASTER GENERAL,
Washington, December 9, 1915.

Hon. Frank Park, House of Representatives.

My Dear Congressman: I beg leave to acknowledge the receipt of your letter of the 2d instant, requesting specific information relative to the establishment of motor routes and the readjustment of the rural delivery postal service in general and of that in the district represented by you in particular; also in regard to the method pursued by the department in connection with the employment of carriers in the motor rural service.

by you in particular; also in regard to the method pursued by the department in connection with the employment of carriers in the motor rural service.

In reply I respectfully submit that a review of the system of collection and delivery of mail on rural routes disclosed numerous extravagant and wasteful methods. These had long been recognized but apparently failed of correction for one cause or another.

Further, post-office inspectors and representatives of the Post Office Department in many post offices had repeatedly reported the useless and unnecessary duplication of service and the retracing of travel for the accommodation of a very limited number of patrons, and in some instances apparently for the extension of the mileage traveled on account of the effect it would have upon the compensation of the carrier. In addition, many rural routes were established without regard to the postal necessity involved and simply because some patron circulated a petition and secured the requisite number of names, thereby increasing the importance of the particular office at which he may have resided and obtaining a position for himself or a relative or friend as carrier.

This service has now been in operation for a period of nearly 20 years and during all that time no general readjustment of the uneconomical methods has been attempted. Every effort in that direction has been met with the declaration that curtailment of the service was threatened or that the inconvenience of the patrons was the object, when in reality the true reason for the failure to correct the evils was the possible interference with the vested (?) right of some individual in a place or the possible reduction of the compensation of some individual paid on a commission basis as a fourth-class postmaster.

For a period of five years inspectors had repeatedly recommended the readjustment of the service in Graves County, Ky., where it was shown that the southern portion of the county received more than adequate service, whereas 1,500 persons in the northe

the tour of duty of employees in the southern portion to be called upon to deliver and collect mail to and from those in the northern portion, etc.

Again, inspectors frequently reported that there was unusual duplication of service in Gratiot County, Mich., to wit, that from two to five carriers were traveling over the same highways in the collection and delivery of mail to a limited number of patrons living in the vicinity of these highways. In fact, \$9,000 per annum was being paid for this useless duplication of service, and thus 9 °0 heads of families, or about 4,500 patrons, were denied mail facilities in other sections of the country simply because in this county people were provided with more than adequate service.

In Chester County, Pa., attention had been repeatedly invited to the fact that carriers were collecting and delivering mail twice a day to certain favored rural patrons. This condition existed in only a limited number of places elsewhere in the country, and therefore the patrons on these rural routes possessed special privileges not enjoyed by all of the rural patrons throughout the country. The cost of this twice-daily service amounted to about \$7,000 per annum, and 700 heads of families, or in the neighborhood of 3,500 additional patrons, were denied mail facilities to which they were entitled in order that this unusual service might be rendered to rural patrons in one section of the country.

A systematic readjustment of the prevailing rural service in Craw-

were denied mail facilities to which they were entitled in order that this unusual service might be rendered to rural patrons in one section of the country.

A systematic readjustment of the prevailing rural service in Crawford County, Pa., reduced the cost of operation \$24,200, required 40 families to move their boxes less than one-half mile, and provided additional service for nearly 20,000 new patrons in the county and elsewhere throughout the country.

In a similar manner a readjustment of the service in Ellis County, Tex., reduced the cost of operation \$16,368, required 55 families to move their mail receptacles less than one-half mile, and provided service to 535 patrons within the county who had formerly been denied service and to 15,500 patrons elsewhere. In this instance it was possible to utilize the motor-vehicle service to provide this extension of service and improve existing conditions, and I have at hand a statement from the mayor of the city of Waxahachie, the president of the

board of trade, and of the chamber of commerce requesting further extensions of this character of service.

The department is therefore convinced that, regardless of the failure of administrative officials to give consideration to the question of efficiency in the operation of this great service in times past to which it was entitled, it is our duty to do so now, and it is further convinced that when reasonable rural mail facilities shall have been extended to every possible rural patron to be found anywhere that the present method will meet with the approval and receive the hearty cooperation of every citizen and of the representative of the people. The readjustment of the service up to this time has extended mail facilities to nearly 1,000,000 additional patrons at a great reduction in the cost of operation.

In connection with the establishment of motor routes certain territory was presumed to have improved highway facilities, and after making inquiry of postmasters in the territory where it was assumed such conditions existed as to the character of the roads and of the service performed thereon, and after proper reference to the files of the department, which also include many items of information gathered from time to time during he past 15 years, particularly relating to the train schedules, the number of hours of service performed by the employees, and the number of pieces and weight of mail carried and the vehicles used on the highways, a motor route would be authorized for establishment, sometimes by a combination of two existing routes and a slight extension thereof, and at other times, as, for instance, at Jacksonville, Fla., where four horse-drawn routes have been withdrawn and three motor-vehicle routes authorized, and where 3.150 new patrons were added to the service and no patron inconvenienced.

Altogether the establishment of motor routes depended in the first instance upon information submitted by the postmaster or representative of the department and every effort to send a representative or i

the patron who is entitled to mail service a trial of the motor vehicle should be made.

It was also desired to have such motor routes start or emanate from the more important postal centers, for a twofold reason: In many cases, when a rural route starts from a small post office, for instance, a fourth-class office, supervision of the employees on the rural routes is limited; in fact, the carrier on the route receives a higher compensation than the postmaster, and therefore sometimes feels himself a more important postal employee. At offices of the presidential class no such opinion is possible, and the supervision is consequently more efficient.

In addition to this, at the smaller offices the postmaster is usually engaged in commercial enterprises, and he can not spare the time to supervise carefully the work of his subordinates. He does not have the time to travel over the routes and make personal investigation of the character of service rendered, whereas at a presidential office the postmaster is compensated for giving his entire time and attention to the duties of the office, and he is expected to give close supervision to the performance of service by all of the personnel subordinate to himself.

Furthermore, the extension of the delivery zone from the more important postal centers, preferably the county seat in each county, to the uttermost limits of the county reduces the postage rate on parcel-post matter; in fact, cuts it in two. Consequently a patron who desires to ship a 50-pound parcel over a motor route to the important postal center from which these motor routes usually emanate can do so at one-half the rate that is charged a patron whose route starts from a small postal center, and wherever possible the patron is provided with service from two offices.

from two offices.

These features naturally do not appeal to the patron in the beginning of this type of service, but it has been the experience of the department since the inauguration of the first motor route on July 1 that it is a very valuable feature of the collection and delivery of mail on rural routes, and that it is appreciated by the patron, who has the advantage of using either the small office where he lives or the large office where his market is located in the transportation of his mail matter and the products of the farm.

As to the appointment of the personnel:

When it was decided to act upon the specific provision of the Con-

When it was decided to act upon the specific provision of the Congress which provided—

"That in the discretion of the Postmaster General the pay of carriers who furnish and maintain their own motor vehicles and who serve routes not less than 50 miles in length may be fixed at not exceeding \$1,800 per annum"—

the Circli Service Commission held that a motor parts in

routes not less than 50 miles in length may be fixed at not exceeding \$1,800 per annum"—
the Civil Service Commission held that a motor route is a new ruraldelivery route, and whenever a new rural-delivery route is authorized or
established an examination is held to secure eligibles, regardless of
whether an existing eligible register is available or not. Therefore, an
examination of all applicants for the position of motor-route carrier
was decided upon by the commission.

The compensation of a rural-carrier route requiring delivery by
motor vehicle ranges from \$1,500 to \$1,800 a year. This compensation
being materially greater than that of a route permitting delivery otherwise than by motor vehicle; it was held that it was necessary to hold
a separate examination and maintain a separate register of eligibles for
vacancies on motor routes, it not being permissible under the competitive requirement of the law to make certification from a register to a
position with a materially higher compensation than that for which
such register was established.

The commission also determined that applicants who have served in

such register was established.

The commission also determined that applicants who have served in the position of regular rural carrier should be given additional credit in this examination as follows: There will be added to the general average attained in the examination a credit of one-half of 1 per cent for each year's experience acquired in the position of regular rural carrier not exceeding a total of six years of such experience, or a maximum of 3 per cent additional credit.

When the Civil Service Commission has established an eligible register, and certified to the department the name of the person standing highest on the register who has his actual domicile in the territory supplied by the post office at which the vacancy exists, together with the names of the two eligibles standing highest on the register from the entire county (which has been their custom ever since the present rules of the commission were adopted), this department makes inquiry of the postmaster, the Representative in Congress from the district, and of any other persons who may have information regarding the character and residence of the applicants.

The law specifically limits the inquiry of this department to the character and residence of the applicants, and we may not make inquiry, nor accept or receive any other data or information regarding an applicant, and in accordance with the law we must return any statements, recommendations, or assertions, except as above described, to those who make them and can give no weight to the same. This applies to every individual—Senator, Representative, or other official—and is literally adhered to in this bureau.

It may be stated that should the relative standing of applicants for employment in the Rural Delivery Service be the same, as ascertained through the examination by the Civil Service Commission, the department would, of course, give preference to that eligible whom the Representative from the district believed would make the most efficient postal employee, naturally feeling that the Representative, as a resident of the territory where the appointment is to be made, would have the most reliable information to be had in connection with such eligibles. This, of course, applies only to the three whose names may have been certified to the department. Under no circumstances can any person not certified for the vacancy be appointed thereto, unless it shall be shown that the character of one or more of the three who have been certified.

I sincerely trust that this

which event the person standing next inguest on the register would be certified.

I sincerely trust that this information will be a guide to your constituents and illustrate to them that only three of those who may take an examination can be certified for any existing vacancy, and that of the three thus certified at least one resident on the route to be served, and who is a patron of the office from which it emanates, must be certified, regardless of his standing in percentage.

There is no method by which a former carrier can be assigned to a motor route unless he has passed an examination and been certified for appointment by the Civil Service Commission, nor, to my certain knowledge, can any Senator. Representative, official, or other individual secure preference for any applicant in the ratings or bring about any change in his standing on the register of eligibles.

Believe me to be,
Yours, very truly,

Jas. I. Blakslef,
Fourth Assistant Postmaster General.

Jas. I. Blakslee, Fourth Assistant Postmaster General.

I wish to say, in conclusion, that Members of Congress have been surprised by this sudden and radical change in the Rural Free Delivery Service brought about by the Postmaster General, which they have been unable to alter or prevent by protest, appeal, and evidence. It seems that no relief can be had to the patrons of the routes or the carriers except by legislation, which I hope to see speedily enacted.

Military and Naval Expansion.

EXTENSION OF REMARKS

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 10, 1915.

Mr. BAILEY. Mr. Speaker, in requesting the privilege of extending my remarks on the subject of military and naval expansion, the most important in the history of the Republic, I do so for the purpose of inviting especial attention to the statement recently issued by our gifted and courageous leader, the Hon, Claude Kitchin, of North Carolina, chairman of the great Ways and Means Committee of this House and one of the best informed men in the United States, or in the world, on naval affairs. I believe this statement, which shows what the preparedness program means, should have the widest possible circulation among the people who are asked to assume new burdens of taxation for the purpose of increasing the national defenses; and so I am asking the indulgence of the House for this purpose, feeling that all sides in this momentous issue of peace or war should be heard, and that the information embodied in the remarkable statement of the majority leader can not be too generally disseminated nor too carefully weighed by the American people to whom it was addressed through the press of his own State. It is also my desire, in the same connection and as shedding additional light on the propaganda of preparedness, to include in my remarks a letter written by the Hon, CLYDE H. TAVENNER, of Illinois, to Col. Robert M. Thompson, president of the Navy League of the United States, regarding the personnel of the officials of that patriotic organization and their relations with certain great industries and interests of the country.

CLAUDE KITCHIN'S STATEMENT ON THE NATION'S PREPAREDNESS-HE GIVES FAUTS.

Mr. EDITOR: The Seven Seas Magazine, the organ of the Navy League, the organization which has created by deception and

misrepresentation the apparently big sentiment for the militarism and navalism now proposed, and which seems to have stampeded many patriotic and usually level-headed people, declared in its October issue that I had the right "to vote for or against" the preparedness measure, but that I had "neither the right nor should be (I) be allowed even to discuss it in the House," etc. I trust, however, that the press of my State, though most of it differ widely with me, will not refuse the privilege which I ask, to express through it to the people some of the reasons for my position and give some of the facts with respect to the question which has been withheld from or certainly not given to the public. I ask this privilege, with confidence that it will be granted, especially in view of the fact that many of the State papers have severely criticized me, some going to the extent of bitterly denouncing me. I have no criticism to make of the press and the people in the State who differ with me. Having heard only one side, and owing to the tons of literature of deception and misrepresentation on the subject being poured out daily to the people by the metropolitan press and magazines—many, perhaps, innocently—and by the so-called "patriotic societies," of which the Navy League is the head, it is but natural that a large majority of the people should oppose my position. With your permission I shall now proceed to give some of the facts and reasons which impel me to oppose the big military and naval program which will be proposed to Congress.

(1) AS TO THE ACTUAL CONDITION OF OUR NAVY,

All the talk and writings by the press and the so-called "patriotic societies" about our "utter helplessness," our "dangerous unpreparedness," our "defenseless condition," our "growing weakness," our "having fallen to the third or fourth grade of inferiority in naval strength," etc., is pure tommyrot, based not on a single fact.

Let it be first understood that in the "preparedness" program the navy of Great Britain is eliminated. This was so testified by the Secretary of the Navy, Admiral Fletcher, and other naval experts, and even by Hobson, in the hearings before the Naval Committee at the last session of Congress, all declaring that we do not need or desire a navy as strong as hers. Notwithstanding the metropolitan press, magazine writers, and the "patriotic societies" and our Navy Yearbook—which was exposed in the last Congress and will be so exposed in the next, as unreliable and misleading-the fact is that we have, built and building, the strongest and most powerful navy in the world, except that of Great Britain, which is eliminated as above stated. Our Navy is stronger than that of Germany, far superior to that of France, more than twice as strong as that of Japan or of any of the other nations. Admiral Fletcher, the highest active officer in the Navy, commander of the Atlantic Fleet, the man who will have to do the fighting if any is to be done whose judgment on naval subjects the Secretary of the Navy, before the Naval Committee, declared he had sooner take than that of any man in the world—expressly declared at the naval hearings during the last session of Congress that we had a Navy "superior to that of Germany or any other na-tion except Great Britain." In answer to the question, "If in a war with Germany could our Navy successfully resist that of Germany?" he answered, "Yes." Capt Winterhalter, another naval expert, testified: "Judge Witherspoon has proved that our Navy is superior to that of Germany, and I agree with him." Admiral Badger, ex-commander of the Atlantic Fleet, a member of the General Board of the Navy, declared that no one had ever heard him say that "Germany had a superior Navy to ours."

The facts of record, the tests laid down by naval experts here and abroad, and the naval authorities of the world-all of which I have before me as I write-confirm the truth of this testimony.

The armored fleet of Germany, consisting of battleships, dreadnaughts and predreadnaughts, armored cruisers and battle cruisers (built and building), in number is 52 (to say nothing of the vessels lost since January 1, 1915). The fleet of the United States of the same vessels is in number 56, with over 40,000 more tonnage. (Number and tonnage, however, are not the criterion of superiority.) Of 20 of Germany's battleships listed by our Navy Yearbook, 16 are not able to go more than 1,000 miles from base to engage in naval warfare. Not one of the 16 carry coal or oil enough to go from Hamburg or Bremen to within 500 miles of New York and return (to say nothing about being employed in a naval engagement). some of our naval experts say is obsolete, and not listed by our Navy Yearbook (the Indiana and Massachusetts not listed also), in every characteristic of a fighting ship (bigger guns, heavier armor, stronger ship) is far superior to any one of the 20 German battleships listed by our yearbook. Four of the German ships listed by our yearbook as dreadnaughts are in reality

not dreadnaughts, and are shown by one of the highest naval authorities in the world (Jane's Fighting Ships) to be defective, unsuccessful ships, and so known to be by every student of naval affairs. The last five dreadnaughts authorized by Congress are superior to any six dreadnaughts Germany has, built or building. Our ships are better, larger, stronger, and more heavily armored. Our guns are larger, stronger, and more effective. Of the big guns of the ships, 12 inches and over, we effective. Of the big guns of the ships, 12 inches all have 284, while Germany has only 194 (built and building).

If the navy of Great Britain is to be eliminated in the paredness" program-which our naval experts say it should beand if we have a navy now superior to that of Germany or any other nation in the world, except Great Britain, for whom or against whom do we propose to prepare by the fabulous increase of our naval appropriations which the proposed program

We are prepared. Instead of "our Navy growing weaker," as the metropolitan press, the "patriotic societies," and the jingoes and war traffickers would have the people believe, it is growing bigger, stronger, more efficient, and better equipped every year. the two years of Wilson's administration the naval building program authorized is twice as large and costly as the last two years of Taft's administration, and larger and more costly by \$8,000,000 than the entire four years of Roosevelt's last term, and practically as large and costly as the entire four years of Taft's administration. There is to-day over 50 per cent more construction going on for our Navy than on the 4th day of March, 1913. We have nearly 100 per cent more torpedoes, mines, mine layers, powder, and other munitions than we had on the 4th day of March, 1913, and steadily increasing them. We have under Mr. Wilson's and Mr. Daniels's administration, for the first time in years, the full complement of enlisted men

authorized by law. We are preparing.

In view of the foregoing facts was not President Wilson right when he said in his message to Congress, December, 1914, in opposing the program of the Hobsons and Gardners: "Let there be no misconception. The country has been misinformed.

We have not been negligent of national defense.'

(2) AS TO THE ENORMITY OF THE PROPOSED PROGRAM-WHAT IT IS.

The heretofore large and growing expenditures for our Navy had aroused the people of the country into asking, "Where shall it end?" Secretary Daniels, in his report to the last session of Congress, December, 1914, said—and he was but substantially repeating what had been said in the British Parliament, the German Reichstag, the French Assembly, and by prominent statesmen the world over relative to the armament expenditures of their respective countries for the last several years—"The naval appropriations in our own country have doubled in a dozen years, and have gone up by leaps and bounds in other countries. If this mad rivalry in construction goes on, the burden will become too heavy for any nation to

In his report of December, 1913, he says:

"The growing cost of dreadnaughts, of powder, and of everything that makes an efficient Navy, gives reason to pause. The heavy expense commands national and international consideration. Ten years ago our largest battleships cost \$5,282,000. The next dreadnaught will cost \$14,044,000." (The dreadnaughts hereafter to be authorized will cost from \$18,000,000 to \$20,000,000 and in an interview, the Secretary says all ship. \$20,000,000, and in an interview the Secretary says all ship materials and munitions of war have gone up over 30 per cent.) He asks, "When is this accelerating expenditure to be reduced? * * If it is not hastened by appeals for the peaceful settlement of national differences, the day is not far distant when the growing burdens of taxation for excessive war and naval expenditures will call a halt.'

Now, in the face of the deplorable truth recited by the Secretary; in the face of the fact that we have a Navy superior to that of Germany or any other nation, except that of Great Britain; in the face of the fact that our Navy is growing larger, stronger, and better equipped than ever before; in face of the fact, as the President declared both in his message to Congress
December last and in his recent Manhattan Club speech, "We are
threatened from no quarter," the proposed "preparedness"
program at one bound—one year—increases our already immensely large naval appropriations more than our total increase for the last 14 years, more than the increase by Germany the whole 15 years preceding the European war, and more than the combined increase of all the nations in the world in any one year in their history (in times of peace).

The five-year program increases our naval appropriation over forty times more than the increase by Germany in 5 years preceding the European war, and \$200,000,000 more than the combined increase of all the nations in the world for the 5 years preceding the European war, and over \$50,000,000 more than the combined increase of all the nations in the world for the whole period of 10 years immediately preceding the European

Add to this the fact that prior to the beginning of the European war we were expending annually on our Navy from \$20,000,000 to \$30,000,000 more than Germany or any other nation (except Great Britain) was expending on its navy.

For the 10 years preceding the European war we had expended on our Navy over \$300,000,000 more than Germany or any other nation (except Great Britain) had expended on its navy. yet the metropolitan press, the magazine writers, the "patriotic societies," and the jingoes and war traffickers would frighten the country into the belief that we have a little, puny, eggshell of a Navy.

The five-year naval program calls for an increase of \$500,-000,000-\$100,000,000 increase a year-which, including the inevitable incidental expenses for expanding the whole naval establishment in order to accommodate the program, will reach \$600,000,000 or over by the time the five years expire. This is all extra, in addition to the large appropriations we have been annually making.

The Army four-year program demands \$450,000,000 increase, over \$100,000,000 a year extra, being an increase of more than 10 per cent over our annual Army appropriations. All extra appropriations, be it remembered. Extra taxes must be paid b, the people, be it remembered.

Before leaving the subject of the enormity of the proposed

program I desire to make a further observation.

At the expiration of the five-year period for the program this country will then be expending on its Navy and Army more than any nation in the world in times of peace ever expended on its army and navy; more than England, with her vast navalism; more than Russia or Germany, with their huge militarism. At the beginning of the European war Germany was expending for past wars and preparations for wars (on its army and navy) per cent of the total amount of revenues collected; Japan, 45 per cent; Great Britain, 37 per cent; France, 35 per cent; the United States, over 60 per cent. With the proposed military and naval program enacted into law the United States will be expending over 70 per cent of its total revenues; that is, out of every \$100 collected from the people over \$70 will go into militarism and navalism, including pensions, leaving less than \$30 for all other functions of our Government and for all other benefits of the people.

(3) AS TO THE CONDITION OF OUR TREASURY AND ITS REVENUES AND EXTRA TAXATION REQUIRED.

The condition of our Treasury and our revenue and the necessities of the Government are less able now to permit increased appropriations than ever before. The Treasury has felt most heavily the burden of the present war. Our general surplus fund of over \$150,000,000 is monthly disappearing; our deficits are annual and monthly; our revenues have diminished; we have strained the nerves of the Government to get sufficient revenue to meet its ordinary expenses; we have been forced to levy an emergency tax; our deficits still exist; our revenues still insufficient. After the expiration of the present emergency tax December 31, 1915, we will be faced with deficits for the next fiscal year of at least \$117,000,000. This is upon the assumption that not a dollar of increase appropriation will be made for any purpose over the last year's appropriation, yet I understand that there will be from \$30,000,000 to \$40,000,000 increase other than the Army and Navy increase. This \$117,000,000 deficit is upon the further assumption that Congress will repeal the sugar free list provision of the Underwood Act, which goes into effect May 1, 1916, which itself will impose \$100,000,000 burden upon the people. For this program of militarism and navalism—euphoniously called by its advocates "national defense" or "preparedness" program—\$200,000,000 annual increase of taxation is required. This, added to the deficit above mentioned, makes \$317,000,000 additional annual taxation, even with the free-sugar clause repealed, which must be raised, on the assumption, too, there will not be a dollar increase in any other appropriation over that of last year. This is three times larger annual increase than was ever required or raised—and practically all of it must be raised by direct or excise taxesthan at any time in the history of our Government, except during the Civil War. No man in the administration or in the Ways and Means Committee, although for months they have wearied their wits over it, has yet been able to solve even the beginning of the problem of raising this enormous increase of revenue. I have had hundreds of suggestions as to how to raise it. All the suggestions combined would not begin to raise the amount. Every suggestion has been, however, to raise the

tax on the other fellow and on the other fellow's business or product and not on his. When the Ways and Means Committee begins to attempt to frame measures for raising the revenue, and especially when the people begin to pay the taxes for this enormous increase, they will then, perhaps, realize what the program means. I have had experience enough with taxation to know that those who are howling most loudly now for the big Army and Navy program will protest and howl most wildly against any measure which may be attempted or proposed for increase of taxes.

(4) THE BIG, OVERREACHING OBJECTION TO THE PROGRAM.

The huge burden, heretofore unheard of or undreamed of, which this fabulous increase of appropriations for the Army and Navy will place upon the taxpayers can and will have to be borne in spite of their murmurs and protests which will surely come in the future. This of itself to me is a cruel wrong, especially under the conditions and situation of our country and

our Navy as I have above outlined.

But the big, overreaching objection to this stupendous program is that this sudden, radical, and revolutionary move for big war preparation on our part is going to shock the civilized world, and, whatever be the outcome of the present war, will alarm the world again into an armed camp. It will postpone for generations the day of universal peace for which all Christendom has been praying. It will deprive this Government, through its President, of the greatest opportunity to serve mankind that ever came to nation or to man, in the final negotiation of peace terms among the belligerents, to lay the basis

of perpetual international peace.

The militarists and war traffickers of every nation in the world will point to our conduct as an example and a cause why big war preparations and big armaments should be renewed on a larger scale than ever before, and its consummation will only be limited by the ability of the nations appealed to. If we take this step every nation will suspectin fact every nation will feel convinced, and no argument of our Government can dissipate such conviction—that our country in this tremendous step has other designs than mere self-defense. Every nation will absolutely know that no such step or measure is necessary. The world will be convinced, in spite of our protestations, that we are preparing, as the Seven Seas Magazine, the organ of the Navy League, advocated in its last issue, for wars of conquest. This organ of this so-called patriotic society in its same issue boldly broadcasts throughout our country the savage, barbarous sentiment which I quote: "There should be no doubt that even with all possible moral refinements it is the absolute right of a nation to live to its fullest intensity, to expand, to found colonies, to get richer and richer by any proper means, such as armed conquest. Such expansion as an aim is an inalienable right, and in the case of the United States it is a particular duty." This organ of the Navy League, the organization, as I said before, which has by organized effort created the sentiment of our people for a big militarism and navalism, is but giving the people of this country and of the world an earnest of what we are to expect when this program is enacted into law.

The world, even among the belligerents of the present war, is already looking with grave suspicion and alarm upon this colossal step. Since writing the above, in confirmation of it, the morning papers bring to us the speech of Lord Rosebery, made at the London University on the night of November the 16th, from which I quote: "I know nothing more disheartening than the announcement recently made that the United States—the one great country left in the world free from the hideous, bloody burden of war—is about to embark upon the building of a huge armada. It means that the burden will continue upon the other nations and be increased exactly in proportion to the fleet of the United States. I confess that it is a disheartening prospect that the United States, so remote from European conflict, should voluntarily in these days take up the burden which, after this war, will be found to have broken, or almost broken, our backs."

(5) AS TO THE FEARS OF OUR PEOPLE.

In the hope of allaying to some extent the alarmed state of mind and the fears of our people, provoked by the European war and aggravated and intensified by the organized efforts of the so-called "patriotic societies" and the war traffickers, I desire to make a few observations. With the experience of the present war, which we are daily observing, even if our fleet were not half as big as it is (and I have shown that it is superior to that of any other nation in the world except that of Great Britain), it would be impossible, notwithstanding the jingoes and the war traffickers and the press, for Germany or any other country to ever bombard or land a soldier on our coast, provided we were

equipped with mines and submarines. With these we are most rapidly equipping ourselves. England has a navy twice as strong as that of Germany. England and France have a fleet three times as strong as that of Germany. Take a map and you will see that the German seacoast on the North Sea is practically at the head of the English Channel, within less than 300 miles of London, and has several miles of seacoast along the Baltic. The bulk of the English and French fleet is now, and has been, within less than a day's run of the German coast. If England and France could bombard or land on the coast of Germany on the North Sea con the Baltic Sea the war would end in 60 days. Germany would have to withdraw from France to protect her own soil. Why does not the fleet of the allies, three times as strong, go in and destroy the fleet of Germany, bombard her seacoast at once, land an army, and so forth? Certainly not because of the German fleet already bottled up, one-third as large, but because of mines and submarines. Now, look at the map again and see how the Russian coast and the German coast compare and how they adjoin along the Baltic Sea. Germany has control of the Baltic even against the fleet of the allies. Germany has a fleet nearly four times as large as that of Russia. What keeps Germany away from the Russian coast? Why does not Germany, with a fleet four times as strong, destroy the Russian fleet, bombard her seaport towns, and land an army? If she could do this, the war would end in 60 days.

Russia would be forced to a separate peace in spite of her agreement with the allies. Certainly it is not the little onefourth size fleet she has, but because of mines and submarines. If Germany, with her fleet not one-third as strong as that of the allies, does not fear the bombardment of her coast or the landing of an army by the allies when within less than 200 miles, and if Russia, with her little fleet, one-fourth as large as that of Germany, is not afraid of Germany bombarding her coast and landing an army on her shores, why in the name of common sense should any man, woman, or child in the United States fear that Germany or any other nation can ever get within gun reach of our shores or land an army on our coast when they are over 3,000 miles away, provided we are equipped with mines and submarines? Add one thing further, that, in spite of the press, the "patriotic societies," and the jingoes and war traffickers, our coast defenses are superior to that of any nation in the world. President Taft, in his speech in Chicago, November 10, before the National Security League, said: "American coast defenses are as good as any in the world." At the hearings in the last session of Congress (this year) Gen. Erasmus M. Weaver, Chief of Coast Artillery, whose duty it is, he said, to "be advised as to the character and sufficiency of our seacoast armament," stated "My information is that our system of fortification is reasonably adequate for all defensive purposes which they are likely to be called upon to meet"; and further said "I have been a close student of the whole subject naturally for a number of years and I know of no fortifications in the world, as far as my reading, observation, and knowledge goes, that compare favorably in efficiency with ours." Gen. Crozier Chief of Ordnance, considered one of the greatest experts in the country on fortifications and guns, at the hearings, considering the alterations then asked for and now being made, said: "In my opinion these guns with the other advantages which our land-defense fortifications have will be adequate for maintaining a successful combat with vessels of war armed with any gun which is now under construction anywhere in the world to my knowledge."

(6) AS TO THE RELATIONS BETWEEN THE PRESIDENT AND MYSELF.

We thoroughly understand each other. I know that he is convinced deeply and sincerely that his program is right. knows that I am thoroughly convinced that it is wrong. knows, too, that my convictions on the subject are deep and sincere and that I have given the subject mature study and thought and have reasons for my position. I had a most cordial and pleasant interview with him for an hour and a half on On this question we simply agreed to disagree, both expressing regrets-and, I am sure, sincere regrets-that I could not support the program. My inability to agree with him and my opposition to his program do not interfere with the pleasant, cordial relations that exist between us. As he said in his Manhattan speech, and assured me as well as others. this question is not a party question but one for the thought and conviction of each individual. The President knows, too, that in all matters before my committee, and especially in raising sufficient revenue to finance all appropriations, and in every effort he shall make to redeem the pledges our party made to the people, he shall have my hearty and earnest cooperation.

I fear that neither the President nor the Secretary of the Navy, with their other manifold duties, have possibly had the time to give the detailed study and thought to the subject which many of us have. I recall that the President, in his letter of July 21 to the Secretary of the Navy—which, by the way, I had not seen until some time after my letter in September to the New York World—asked for advice of naval experts, saying:

I want their advice, a program by them formulated in the most defi-

nite terms.

I can not help believing that the military and naval experts have badly advised and misinformed both the President and the Secretary of the Navy. Naval officers or experts are not competent judges of the policy which this country should pursue. Their very training of thought and their ambition are to see only one function of the Government—that of the Navy. They know what will gratify their ambition. They know what they want. From the time a man enters Annapolis, as long as he lives his ambition is to command battleships, the magnificent floating sea palaces, and battleship fleets. This consumes his thought. It is natural, therefore, and inevitable that he should consider the needs of the country in accordance with his wants and ambition. The naval expert or officer knows how to build or superintend the building of ships and how to fight them when built. That is his thought, his profession, his ambition.

Since the General Navy Board was established in 1900 every President and every Secretary of the Navy, except one, has recognized these propensities and limitations of the naval officers or naval experts, and every President since 1903, since the Naval Board's first recommendations, and every Secretary, except one, until now, have rejected and declined to accept their recommendations, and no Congress has ever yet approved them. Mr. Roosevelt did not accept them. Only one of his Secretaries, Mr. Metcalf, did. Neither did Mr. Taft, nor his Secretary of the Navy, accept their recommendations at any time during his four years' term. Both Mr. Wilson and Mr. Secretary Daniels, in 1913, declined to accept their recom-They declined again to accept their expert opinmendations ions in 1914, five months after the European war had begun. They both opposed their recommendations and so did Admiral Fletcher, the highest active officer in the Navy, commander of the Atlantic Fleet. But now the papers denounce me as an "idlot," as a "traitor to my country, to my party, and to the administration" if I do not swallow at one gulp the recommendations of the naval experts, because the President and his Secretary of the Navy, for the first time, accept them.

(7) THE REGULAR, ORDERLY, NORMAL PROGRAM.

At the last session of Congress (this year) the President, the Secretary of the Navy, Admiral Fletcher, and other naval commanders, and the Democrats in Congress opposed the program of the Hobsons, Gardners, and other jingoes (much smaller than the present proposed program). The policy of the administration was summed up before the Naval Committee in the words of the Secretary of the Navy: "It would be most unwise for us to act to-day in any particular as we would not have acted if there was no war. My theory is that our country ought to be carrying on its regular, orderly, normal program as to the Navy. With our policies and our American ideas I think the policy recommended in my report and adopted by the last session of Congress (and recommended at this session) is the steady development that is needed. It meets the needs of the country." The Democrats supported that policy. It was enacted into law. This same policy, as I have heretofore shown, is making our Navy bigger, stronger, and more efficient than ever before—the strongest in the world, except that of Great Britain.

It is my undoubting conviction that it is most unwise and dangerous at this time, especially under the present circumstances, to abandon that policy and adopt the big, enormous, revolutionary program proposed.

(8) WHY MY OPPOSITION TO THE PROGRAM AS AN INDIVIDUAL AND NOT AS MAJCRITY LEADER.

It is not a party or partisan question. The President so declares. Everybody knows it is not. It is one for each individual Member to decide as to his vote for himself. The majority members of the Ways and Means Committee, in the first instance, make up the committee assignments of the House. I am chairman of the committee, which carries with it the position of majority leader. I shall not use such position in influencing in any way any Member on the question. Those who oppose my position and those who indorse it will be treated alike as to their assignments to committees and as to all other matters which I as such chairman and leader and the Members of the House, individually or collectively, are concerned.

(9) THE ATTACKS BY THE NEW YORK HERALD.

This paper, whose owner years ago, disdaining the fellowship of Americans, abandoned his native country to live anild the high life of Paris, and who by cable from Paris dictates its policy, has been fighting the Democratic Party nearly 20 years. This is the same paper which only a few months ago, to show its disgust of and contempt for President Wilson, while with consummate statesmanship he was steering the country safely through its greatest crisis, loudly exclaimed, "Oh, for a Roosevelt in the White House!"

The purported interview by its Washington correspondent with me, published in its issue of November 10, parts of which have been published in every issue since, is a pure fabrication, a deliberate falsehood, manufactured in the Herald's office in New York for the purpose of forming a basis for its succeeding attacks and sensational stories. No such interview ever occurred. I never saw or spoke to its correspondent before its publication. After reading it in the Herald I saw and asked its Washington correspondent if he sent such an interview to the Herald. He said he had not and knew nothing about it until he saw it published in the Herald. I never made a reference in the remotest way to anyone in Washington or elsewhere as to the "sentiment in my district" or as to "the folks back home." It knew, too, or could have known, as its Washington correspondent knew, that I did not "return to my district because of its exposures of the sentiment in my district." I returned the day I intended to return, when three days before I went to Washington.

In conclusion: To differ with the President, to differ with my friends, in and out of Congress, in the heat of the moment to be severely criticized, and sometimes denounced by them, gives me not only exceeding regret, but much pain and distress. However, after having given the subject much study and thought, being once on the Naval Affairs Committee, and interested for years in naval subjects, I can not support the program. In deciding on this course I knew full well that a part of the penalty which I would have to undergo would be the criticism, the ridicule, the denunciation, the misrepresentation, and the libeling of myself by the press from one end of the country to the other. Having the approval of my judgment and conscience, after mature study and thought, and impelled by a sense of duty, I take the step, mattering not the consequences, political or otherwise, to myself.

CLAUDE KITCHIN.

NOVEMBER 20, 1915.

Mr. BAILEY. Mr. Speaker, in this same connection I wish to add portions of a letter written by Majority Leader Kitchin to the New York World and printed in that paper September 12, 1915, as follows:

"But why should we be in such a hurry to make big appropriations for the Army and the Navy? Why should Congress make such a wild rush to tax the people more? Where is the necessity or the wisdom? If there ever was a time in the history of our Government when the administration, Congress, and the people could consider with deliberation and without excitement and without haste a military and naval construction policy, it is now. Just stop and give a moment's calm thought to the situation.

"First. Our Navy and Army is stronger, better equipped, with more ammunition, and in every respect more efficient to-day than ever before. We have now under construction and authorized for the Navy more vessels than ever before-50 per cent more in money and in numbers than ever before; more dreadnaughts under construction than ever before-nine in number. During the two years of the Wilson administration Congress authorized the building of dreadnaughts to cost over \$70,000,000; the last two years of Taft's administration dreadnaughts costing about \$26,000,000 were authorized. This ought to satisfy the dreadnaught jingo and trafficker, certainly until we construct other more useful and necessary craft. The dreadnaughts authorized in the last Congress will not be completed until three or four years, and the dreadnaughts, if authorized by the coming Congress, can not possibly be completed within four or five years and the war goblins could eat us up alive by that time. Relatively, considering the requirements and demands of the present war upon all other navies we have the strongest and most powerful Navy on earth—sufficient to defend our country and protect our rights on the seas or elsewhere against any nation or any possible combination of nations during the continuance of present European war. After the war terminates, what nation will have the design or the power to attack us?

"Second. We are in less danger from a foreign foe than ever before in the history of our country. Even if we were not, he has less power to harm or strike us than ever before. We are now absolutely in no danger of attack or invasion. In fact, the invasion by a foreign country from across the sea and the landing of an army upon the soil of another, equipped with mines and submarines, is a thing of the past and an impossibility, and no nation will ever attempt it. Every nation capable in the least of coping with us has its hands 'full to its elbows' of the European war. Even if any had designs upon us, or if we would declare war against any, not one could send a soldier or a ship against us. It could spare neither from the exactions of the present conflict. If, as so many of the jingoes and war traffickers demanded, we had unfortunately had an actual rupture with Germany, which most wisely and fortunately was avoided (thanks to the patient, resolute, level-headedness, and big comprehension of the President), she could have spared neither a soldier nor a ship to engage us. Great Britain or France, by declaring war against us, would whip herself and allies on land in less than six months without our arming a soldier or moving a vessel. Where is the danger now-where are the war goblins to catch our people to come from? Even the Japan goblin, specially fixed up for so many years by Hobson and the jingoes, at the time of each annual naval appropriation bill, is now being laughed at by the kindergarten children. Where is the danger in the future? After the conclusion of the present war every European nation will be so exhausted in men, money, credit, and material resources, and its people so burdened with billions of debt and taxation, and its land so filled with millions of maimed and crippled and many more millions of widows and orphans, that not one could even think or dream of war with the United States, the biggest, richest, strongest power on earth, with its 100,000,000 people and its billions of wealth and unlimited resources, fresh, untouched, unimpaired, unless our Government, yielding to the jingoes and war traffickers, would take it by the nape of the neck and pull it into a fight with us.

"Third. The condition of our Treasury and our revenues and the necessities of the Government are less able now to permit increased appropriations than ever before. The Treasury has felt most heavily the burdens of the present war. Our general surplus fund of over \$150,000,000 is approaching the vanishing point; our deficits are annual and monthly; our revenues have diminished; we have strained the nerves of the Government to get sufficient revenue to meet its ordinary expenses; we have been forced to levy an emergency tax, and still the surplus fund is diminishing; our deficits still exist; our revenues are still insufficient. I repeat, if there ever was a time in the history of our country when Congress and the people could look with complacency upon the safety of our situation and consider a military and naval construction policy with deliberation, without excitement and without haste, it is now. When I sit down, away from the noise and howlings of the jingoes and war traffickers and their yelping pack, and calmly contemplate our exact situation, a Navy and Army stronger, better equipped, more efficient than ever before, with more battleships, more dreadnaughts, more submarines, more destroyers, more auxiliaries being built than ever before, with less danger from a foreign foe, and, even if inclined, with less power to strike or harm us than ever before, in absolutely no danger from any, with decreasing revenues, vanishing surplus, growing deficits, an extra levy and then not enough money to meet the ordinary expenses of the Government, with those charged with the responsibility searching every avenue for a way to get sufficient revenue during the continuance of the present war to satisfy the absolute necessities of the Government, and then think of some of our usually level-headed, patriotic people catching the fright and fever which the jingoes and war traffickers have spread and chiming in with their senscless wailing over our "dangerous unpreparedness" and their yelp for a big Navy and a big Army, dreadnaughts, battleships, 500,000 Army, for millions and hundreds of millions of additional appropriations, for more burdens, more taxation, more deficits, and no surplus and no balances, I catch myself asking, What, in God's name, is the matter with our people? Have we lost our senses and gone mad? Will this naval and military malady spread to Congress and consume its reason and blind its eyes to our actual situation and our actual needs? I hope not. I fear so. If we must in the future enter a career of militarism and navalism, can't we wait a while? Will it not be wiser for us to await the termination of the present war? And then, having learned its full lesson, with calmness and comprehension take our proper bearings, determine the policy, and then proceed with the program? Is it not possible, as suggested by the Secretary of the Navy in his speech in New York in May last, that this war may revolutionize the naval

warfare for the future? Is it not possible that it will demonstrate, when ended and its full lesson has been learned, that dreadnaughts and battleships, costing each millions of dollars and requiring a thousand men and over to man, will be obsolete as a weapon of warfare? Is it not possible that the loss of life. the destruction of property, the untold billions of debt and taxation, the atrocities and cruelties of this war will be so frightful and appalling that, when ended, the humanity and wisdom of mankind-and none more willing and ready than the present belligerents-will find or make a way for a world-wide disarmament? Why put extra millions more in them now? It seems to me that all of us can afford to wait, except the jingoes and war traffickers, who must take advantage of the scare and excitement among our people provoked by the Europen war and aggravated and intensified by their organized efforts, to whoop it up for a big Army and a big Navy, for big contracts and big profits; otherwise their day and opportunity is lost. They must hurry, they must rush. Congress need not, and, I They must hurry, they must rush. trust, will not."

Mr. BAILEY. The letter of Mr. TAVENNER to Col. Thompson, of the Navy League of the United States is as follows:

House of Representatives, Washington, D. C., December 2, 1915.

Col. Robert M. Thompson, President Navy League, Washington, D. C.

My Dear Colonel: I assume from your letter of the 20th ultimo, and from your various utterances as president of the Navy League, that the impression you desire to create in the minds of the American people is that none of the men who founded or who have been or are now directors of or contributors to the Navy League have ever been or are now in any manner interested in any concern which would profit financially from the \$500,000,000 bond issue for battleships, etc., which you are advocating.

are advocating.

I understand your position to be that none of the money which the Navy League has used to banquet Members of Congress and Secretaries of the Navy or to carry on the propaganda for the vastly increased naval appropriations which you advocate has come from any gentlemen who stand to profit therefrom. I contend that the opposite is true.

In your letter you request that I give you some specific in-

I call your attention to the fact that Elbert H. Gary, who is described in the Directory of Directors for 1914 as "chairman of the board of directors and chairman of the finance committee of the United States Steel Corporation," contributed \$1,000 on June 10, 1915, and that on the same date representatives of the J. P. Morgan estate subscribed \$2,000.

I call your attention to the fact that J. P. Morgan, who is a director of the United States Steel Corporation, was formerly treasurer of the Navy League and is now a director of and a contributor to the Navy League, and that J. P. Morgan's brother-in-law, Herbert L. Satterlee, was one of the incorporators of the league and is at the present time the general counsel of the league. I also note that Edward T. Stotesbury, a member of the firm of J. P. Morgan & Co. and a director of the Baldwin Locomotive Works, Cambria Steel Co., Phoenix Iron Co., Riverside Metal Co., Temple Iron Co., Wm. Cramp & Sons Ship & Engine Building Co., and 54 other corporations, banks, and trust companies, is one of the honorary vice presidents of the Navy League.

I also call your attention to the fact that George F. Baker, jr., No. 2 Wall Street, New York, son of a director of United States Steel, contributed \$1,000 to the Navy League June 10,

I call your attention to the fact that Robert Bacon, formerly a member of the firm of J. P. Morgan & Co., and now first director of United States Steel, is a director of the Navy League.

I call your attention to the fact that Henry C. Frick, a director of United States Steel and 10 other corporations, banks, and trust companies, is one of the vice presidents of the Navy League. United States Steel controls the Carnegie Steel Co., which

has drawn down from the Navy contracts aggregating \$32,954.377 for armor plate alone, and if the Navy League's \$500,000,000 bond issue goes through Congress this firm will profit still further.

I call your attention to the fact that Allan A. Ryan, a director of the Bethlehem Steel Corporation, contributed \$100 to the Navy Lengue on June 10, 1915, and to the further fact that George R. Sheldon, a director of the Bethlehem Steel Corporation and the American Locomotive Co., both of which concerns have profited hugely from European war orders, is one of the vice presidents of the Navy League. Mr. Sheldon is also a director of 24 other corporations.

The Bethlehem Steel Corporation has obtained from the Navy Department armor contracts amounting to \$42.321,237, and if the Navy League's program goes through Bethlehem stands to receive increased orders.

From the foregoing it would appear that two of the three concerns composing the armor ring in this country have representation either among the contributors to the Navy League or among the officers or directors of the Navy League.

The Government has purchased from these two concerns. Bethlehem and Carnegie, \$75.275.614 worth of armor plate, paying an average price of approximately \$440 a ton therefor.

If this armor plate had been manufactured in a Government armor-plate factory, which the Navy League has cold-shouldered, at least \$25,000,000 could have been saved to the American tax-payers. There have been 10 estimates by Government officials as to the cost of armor in a Government plant, and the average of these estimates is \$238 a ton. By contrasting \$440, the price we have paid the private manufacturers, with \$238, the cost at which we might have manufactured this armor in a Government plant, it is possible to obtain an inkling as to the reason we do not now have more preparedness to show for the colossal appropriations made for that purpose.

I note there are 31 directors of the Navy League. The personal fortunes of these 31 men, by the most conservative estimate, aggregate \$100,000,000, or \$3,000,000 to each director. I contend that any board of directors whose individual fortunes average \$3,000,000 can hardly be considered as representative of the views, feelings, and heartbeats of the great mass of the

American people.

On November 19 I publicly stated that inasmuch as the Navy League insisted that its management and backers are entirely free from any atmosphere of war-trafficking influences, I would, as soon as Congress convened, introduce a resolution providing for an investigation of the league, specifically requiring J. P. Morgan and other directors of the league, past and present, to take the responsibility of testifying, under oath, whether they are interested, or ever have been, in war-trafficking firms or concerns which stand to profit from the proposed \$500,000,000 bond issue.

On November 21 I received a letter from you threatening a suit. I consider your letter nothing more nor less than an attempt to intimidate me into abandoning my plans to seek a congressional investigation of your organization. When I am right

the Navy League can not intimidate me.

I now desire in all good faith to take the responsibility of making a suggestion to the Navy League. I suggest that you call a meeting of the board of directors and go on record in favor of the Government manufacture of battleships, submarines, armament, munitions, etc., in order that the people may obtain the preparedness which you are advocating at cost. I recommend that you either do this or fold your tent and quietly take your departure from the National Capital.

Very respectfully,

CLYDE H. TAVENNER.

Good Reads.

EXTENSION OF REMARKS

HON. JAMES W. GOOD,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 15, 1915.

Mr. GOOD. Mr. Speaker, under the leave granted me to extend my remarks in the Record I include a speech made by D. W. Norris at Cedar Rapids, Iowa, in October, 1915.

The speech is as follows:

GOOD ROADS.

Financing a road, like building a house or buying a meal, should be the first step taken in any road project. My subject ought to have been the opening number on this program. You engineers would all be busy at something else, no matter how badly your people needed roads, if somebody had not financed your roads; and when you come to build your road you are governed more by the fellow who financed it than you are by the traffic conditions to be met. I want to thank your program committee for giving me the paramount issue in this convention.

I come from a State which has never financed a road as it ought to be financed; therefore our people in Iowa are paying out more tax money every year for their roads and bridges

than any other State in the Union, excepting only the two States of California and New York, and we have less to show for our money in miles of roads improved than 26 other States. Spending more per annum than either Ohio or Indiana we can show barely one-tenth as many miles of roads improved as can be shown in either State. If any of you road builders want to see what happens to a people's money when roads are not financed as all public improvements should be financed, just come to Iowa. We have more money per capita than the people of any other State save one. We spend more of it upon our roads and bridges than any other State save two. We have more banks and more newspapers than any State in the Union. This year we bought one-tenth of all the automobiles that were sold in the United States. Our rubber-tire tax is greater than our county-road tax, and yet 26 States in this Union have more miles of roads improved than we have in Iowa. You men have your problems of road finance in your own States, but out here we do not have any finance at all. We dig up more money than most any other State ever saw before, and we very promptly bury it in rich Iowa mud from whence it came. If anybody complains to the average Iowa farmer, he thanks God that he lives in the corn belt of Iowa and keep, on buying more automobiles and digging up his road money to the tune of twelve millions per annum.

Financing a road is a simple problem, gentlemen, if we will keep in mind that it is an investment which ought to be paid for by the people who receive its benefits and in accordance with the benefits which they receive from it. Somewhere in every State in the Union now, save in Iowa, and in 41 per cent of all the counties in the Union, but never in Iowa, roads are financed by bond issues, so as to distribute the first cost equitably over the successive generations of taxpayers who are going to use the road. If the road will last approximately 10 years, the bonds run for 10 years. More durable roads are bonded for 20, 30, and even 50 years, the averages being 30 for the best

type of roads.

EQUITY IN BONDS.

Out here in Iowa the man who began with nothing and now owns a \$30,000 farm believes in paying as he goes when building a road, but he will borrow money from an insurance company with which to buy more land, and he has not yet seen that when he builds a concrete bridge with one year's tax money he has made a Christmas present of that bridge to posterity for the next 100 years. He says that 30-year paved roads are impossible, because \$10,000 per mile is too much to pay out of one year's tax money, and it has not occurred to him that there will be taxpayers here when he is dead and gone who will be using that road and by rights should have to pay for some of it.

\$10,000 ROAD FEES.

Anticipating public revenues by means of bond issues is the only equitable method for prorating the cost of a long-lived improvement among the generations of taxpayers who are to enjoy its benefits, but it is also highly profitable to the individual taxpayer as well as equitable. Private money in Iowa is worth 6 per cent. It costs the average farmer 8 per cent at the bank, but it can be invested safely at 6 per cent. His county and school bonds have been selling for 41 per cent. When he borrows road money through his county at 4½ per cent so as to defer the cost of that road over a long period of years the individual is saved a profit of 1½ per cent for each year on all road money thus deferred besides easing his tax burden by passing some of the cost on to the taxpayers who are to follow in the future. This profit of 11 per cent compounded and invested by the individual at 6 per cent will pay off the debt in 28 years. Let us understand that clearly. The taxpayers who 28 years. Let us understand that clearly. The taxpayers who dig up cash this year for a \$10,000 road will have paid for the road and their \$10,000 will be gone forever. If they had kept their \$10,000 working at home upon their farms at 6 per cent and had borrowed the price of the road from some bondholder down East in the name of their county at 4½ per cent interest, the 6 per cent interest earned on the money kept at home in private investment would pay all of the bond interest and also the debt itself in full in 28 years and the taxpayer would have both his road and his original \$10,000 besides. Road bonds offer one of the very few opportunities in life to eat one's pie and keep it, too.

BOURNE'S FEDERAL-AID PLAN.

Senator Bourne once evolved a plan for selling United States road bonds at 3 per cent, loaning the money to the several States at 4 per cent, and compounding the profit of 1 per cent so as to pay off the debt in 47 years. I think that is the ideal form for Federal aid. The locality would get the road and never have anything but the interest and maintenance to pay. Our States which can sell their bonds for 4 per cent can well afford to loan

money to their own counties at 6 per cent, and their profit on the interest would pay for our roads in full long before they were worn out. All the taxpayers would ever have to pay for a \$10,000 road would be the interest and maintenance.

But how do we know that our road will outlive the debt? That is easy. We know that the bridges of stone built for the Appian Way 2,000 years ago are still doing business. We know that hills once cut to grade will stay cut forever. We know that the Cumberland Road in Maryland, built in President Jefferson's time at a cost of \$13,000 per mile, is now being restored for \$5,000 per mile after 100 years of neglect. To build macadam and fail to maintain is to pass a debt on to posterity while the improvement will have long since been dead, but to pave with brick and concrete and asphalt and to maintain will give us roads which will outlive any reasonable debt, since the grading and the foundations will last almost forever. On the other hand, to build for posterity out of this year's tax money will never bring us even the gratitude of the future generations as they pass by our graves. By paying on the installment plan instead of building on the installment plan we will get the roads sooner and enjoy them longer.

ASSESSING FOR SPECIAL BENEFITS.

So much for financing a road so as to tax the people evenly over the period of time in which it is to last. Now for a distribution of each year's tax equitably among the people near to the road and those farther away, according to the benefits they are to receive. This is the big problem in road finance, and I am not so presumptous as to attempt a perfect formula, but I do know that each man should pay for what he gets.

To begin with the man that lives on the road. He receives a special benefit and his land should pay a special tax for its special benefit. Minnesota and Ohio put it at one-fourth, Wisconsin a third. He ought to be satisfied with either, for it is his land which rises most in value and he obtains the most service from a pavement or graveled road from his courthouse to his front gate. Back of him the next neighbor stands next in benefit received, and so the variable of special benefit diminishes until it reaches a point midway between the main traveled road improved and the next main traveled road whereupon each resident then begins to receive his special benefit from the next main traveled road. That is the Utah system—to assess for special benefit all land which lies nearer to the main road improved than to any other main road, and I like it. This zone of special benefit is then graduated according to comparative proximity to the main road. In Indiana they go back I mile for special benefit. It is not so important how it is done as it is that it should be done in some way, for the many voters who live on neighborhood roads are not going to vote to build high-class roads past the few farms that lie on our main traveled roads if the tax burden is to fall on them with the same force that it falls upon the few who receive the larger benefits. Where bond issues are necessary, to equalize the cost as between the taxpayers of each succeeding year the special assessment is necessary to equalize as between the taxpayers of to-day who receive benefits more to one than to another. The special-assessment road-improvement district provides the plan for meeting this problem and should be adopted in every

COMMUNITY BENEFITS.

An improved road with a hard surface good for travel at all hours in all kinds of weather in this day of motor vehicles has become the interurban track of modern times. Our agricultural counties which have one automobile for every nine people today—the record for Buena Vista County—will have one for every family to-morrow. In a very few years there will be two on many a farm, so as to have one for the hired man.

Such a road, like an interurban, brings business to any market town. Cutting the costs of hauling has been estimated by the United States Bureau of Roads to be possible up to the full cost of the improvement on a long-time road. It costs more in Iowa to get to town with a wagonload of wheat on an average than to ship that wheat from New York to Liverpool. Reducing the cost of hauling and destroying the isolation of the farm, so that women will be content to stay on the farm, offers one of the most practicable possibilities for reducing the high cost of living in town. Hard roads benefit a town, therefore the town should help pay for roads which lead into it. Here, again, the special-assessment improvement district which will include a town enables us to tax those who get the benefit from road improvement

GENERAL PUBLIC BENEFITS.

The same automobile which has closed all the buggy factories in the land, changed livery stables into garages, slumped the price of steel rails, and made of driving horses an extinct

species, has made our people users of State-wide and Nation-wide roads. No longer are 5 miles the limit of a man's vision in this country. He travels across his own State in a day and negotiates the next State on the day following. High-class roads from henceforth are to benefit the people of all the State, regardless of the locality in which they are built, just as they benefit all the people of a county, though built in spots, and in financing our roads we should provide for the State at large to contribute and for the county at large to contribute. Aid from State funds in a dozen States has proved a powerful incentive to high-class construction. It is a wonderful promoter for better roads. It is sound and equitable in road finance.

And so is a vehicle tax, especially a motor-vehicle tax, for motor vehicles need hard roads more than any other vehicle on earth. We are killing many of our citizens every year in Iowa because the automobile on a wet clay hill becomes immediately an engine of destruction. Here in Iowa we pay more for our auto license than almost any other State, and yet the complaint of our auto owners is not that they pay too much, but that they get too little for what they pay. I can finance 50 miles of single-track paved road in every county in Iowa on the motor-vehicle tax of this State alone, and I am not sure but what I could obtain from the auto owners themselves a petition to double their license if I would only guarantee them 100 miles of paved roads in every county. It is equitable to tax the vehicle which needs a hard road most, and then the man who uses the road is paying for what he gets.

TAXATION NEED NOT BE BURDENSOME.

Financing a road then simplifies itself into a distribution of cost over the years during which the road is to serve and the subdivision of the annual fixed charge as between the public benefit to the State at large, the community benefit to town, county, or township unit, and the special benefit to the man who owns a farm near to the road as well as to the man who drives his auto upon the road. Financing which will cover these points will build hard roads of some kind in any man's State without burdensome taxation. In our own State it will do it without an increase in taxation. With 30-year county bonds in this State, I could replace every temporary bridge and culvert in the State during the next five years and pay off the debt with interest and maintenance without increasing the present county bridge levies. Population doubles every 30 years in the United States. Whether it doubles in Iowa or not it affects our land values, for we occupy the heart of the granary of the world. Our property subject to taxation has doubled in Iowa during the past 30 years, and it will double again during the next 30 years. New property, new values, and new people yet to come should help to pay for the roads which they will use. We bought and paid for in Iowa this year one-tenth of all the automobiles that were sold in the United States. Given a normal increase in property subject to taxation and an inevitable increase in automobiles licensed, we could pave one-third of our main traveled or county road system in Iowa and meet the fixed charge for bond retirement, interest, and maintenance out of our auto-license money. We could then gravel all the rest of our county-road system and meet its fixed charge out of our property tax without changing a single county-road levy. would be financing. Ohio and Indiana have each done twice as much as that in the number of miles surfaced, and the annual tax bill in neither State to-day is as large as it is in Iowa.

Gentlemen, do you get me? Financing a road means something more than taxing a people. It means science and sense in the distribution of the taxes that are already being levied.

Veterans of the Indian Wars.

EXTENSION OF REMARKS

HON. EDWARD KEATING,

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, December 15, 1915.

Mr. KEATING. Mr. Speaker, I had the honor to present to the last Congress a bill pensioning the survivors of the Indian wars of the West. I use the word "honor" advisedly, sir, because as a westerner I am familiar with the heroic service rendered by the volunteer and regular soldiers who conquered the West for American civilization,

The Committee on Pensions of this House made a favorable report on my bill, but unfortunately its consideration by the

House was prevented by the congestion of legislation which marked the closing days of the last session.

I have reintroduced this bill and trust the Committee on Pensions will give the Members of this House an opportunity to discuss it and vote on it. I am sure that when the western Members of this House, without regard to political affiliations, are afforded an opportunity to tell their colleagues the story of the courage and the tenderness, the sufferings and the triumphs of the men who followed Sheridan and Miles and Custer and scores of other gallant officers across the plains and through the mountains of the West there will not be a vote cast in opposition to the passage of this measure.

To-day, Mr. Speaker, I am asking permission to submit to I have reintroduced this bill and trust the Committee on Pen-

To-day, Mr. Speaker, I am asking permission to submit to the Members of the House a copy of my bill and an argument in support of the measure prepared by P. Towne, secretary of St. Louis Camp, National Indian War Veterans. Mr. Towne, who is an old Indian fighter, speaks for his comrades who are scattered throughout the 48 States of the Union.

The following is a copy of my bill:

tered throughout the 48 States of the Union.

The following is a copy of my bill:

A bill to pension the survivors of certain Indian wars from 1865 to January, 1891, inclusive, and for other purposes.

Be it cnacted, etc., That the provisions, limitations, and benefits of an act entitled "An act granting pension to survivors of the Indian wars of 1832 to 1842, inclusive, known as the Black Hawk War, Creek War, Cherokee disturbances, and the Seminole War," approved July 27, 1892, as amended on February 19, 1913, be, and the same are hereby, extended from the date of the passage of this act to surviving officers and enlisted men, including militial and volunteers of the military service of the United States, who have reached the age of 62 years, and who served for 90 days in the campaign in southern Oregon and Idaho and northern parts of California and Nevada from 1865 to 1868, inclusive; the campaign against the Cheyennes, Arapahoes, Kiowas, and Comanches in Kansas, Colorado, and Indian Territory from 1867 to 1869, inclusive; the Modoc War of 1872 and 1873; the campaign against the Apaches of Arlzona in 1873; the campaign against the Kiowas, Comanches, and Cheyennes in Kansas, Colorado, Texas, Indian Territory, and New Mexico in 1874 and 1875; the campaign against the Northern Cheyennes and Sloux in 1876 and 1877; the Nez Perce War of 1877; the Bannock War of 1878; the campaign against the Northern Cheyennes and Sloux in 1876 and 1877; the Nez Perce War of 1877; the Bannock War of 1878; the campaign against the Ute Indians in Colorado and Utah from September, 1879, to November, 1880, inclusive; the campaign against the Shoux Indians in Arizona in 1885 and 1886; and the campaign against the Sloux Indians in South Dakota from November, 1890, to January, 1891, inclusive; and also to include the surviving widows of said officers and enlisted men: Provided, That such widows have not remartled: Provided further, That all contracts heretofore made between the beneficiarles under this act, the record of pay by the Unite

The following is the argument prepared by Mr. Towne in support of the foregoing bill:

NATIONAL INDIAN WAR VETERANS, St. Louis Camp.

To the honorable Members of the United States Senate and House of Representatives, Washington, D. C.

Representatives, Washington, D. C.

Honorable Gentlement: I have the honor to submit for your favorable consideration the following appeal of the veterans of Indian wars:

We, as veterans of Indian wars, are an organization of ex-United States soldiers who in the prime of life entered the service of our country and were sent to the western frontier, which was known then as the "Indian country," to give protection to the settler which crossing the Plains to establish homes in the almost unknown regions of the West. This protection in the Indian country was given the surveyor as well, who in those early days laid the lines of the great highways which are now traversed by the steam locomotive on its journey from coast to coast.

as well, who in those early days laid the lines of the great highways which are now traversed by the steam locomotive on its journey from roast to coast.

In the years which have followed the opening of Indian country to settlement civilization has followed the flag, and to-day villages stand where once could be seen the tepees of the Indian, while prosperity and industry welcome all.

In the discharge of their duty the veterans of the Indian wavs have suffered untold hardships and privations such as no other body of soldiers ever had to undergo. After being compelled to go on forced marches to the relief of a settler or an emigrant train threatened with annihilation by savage Indians, often being cut off from the base of their supplies, marching at times by night and again in the face of severe blizzards which swept across the plains, sleeping in the snow for lack of tents while the temperature was many degrees below zero, and this to intercept troublesome Indians who had left their reservation to go on the warpath. These are but a few of the hardships endured by the veterans of Indian wars, yet their duty had to be performed, and to-day these surviving veterans are appealing to our Government for a little aid in the nature of a pension, and may I ask, are we not worthy of it?

The men who composed Fetterman's command and suffered massacre by the Red Cloud Indians at Fort Phil Kearney and the men who followed Custer and met death at the Little Big Horn on that fatal June day would be veterans of Indian wars were they alive to-day, and we, the surviving veterans of Indian wars who have followed the guidon and protected the settler, are we not worthy of recognition from our Government?

The veterans of Indian wars are mostly old men; the hardship and privations endured by them in their years of Army life have left them

unfit for hard, laborious pursuits; in fact, many of them are living only by being cared for by charitable institutions, and when they pass away will be laid to rest in the potter's field, unless buried by their less unfortunate comrades of Indian war days.

This should not be so. The veterans of Indian wars have given the best years of their lives to the service of their country. Many of them to-day carry wounds received in Indian battles. Many have incurred disease from those years of Army service, and yet they are not looked upon as are the ex-soldiers of other wars. Our Government has bestowed pensions upon the veterans of the Civil War, which they have honorably carned, and upon veterans of other wars, but the veterans of the Indian wars have been forgotten after their years of faithful and honorable service. Are they not worthy of recognition?

Is our appeal to be placed on an equal sphgre with veterans of other wars as worthy or is it to be considered as unjust?

Hon. Edward Keating, Member of Congress from Colorado, has now before Congress a bill to pension the few remaining veterans of Indian wars, and we most respectfully appeal to you to assist Mr. Keating in pushing forward his bill that favorable action may be taken during the present session of Congress. Would most respectfully invite your attention to the inclosed copy of General Order, which was published by Brig. Gen. George A. Crook and issued to the troops of his command at the close of the Big Horn and Yellowstone expedition in the year 1876 and relative to the Sioux Indian War of that period. This order can also be found in the Army and Navy Journal of January 9, 1915; it is a duplicate of the original order.

Trusting that this will meet with your favorable consideration, I have the honor to remain,

Very respectfully, yours,

P. Towne,

P. Towne, Secretary, Second and Arsenal Streets.

HEADQUARTERS, DEPARTMENT OF THE PLATTE, IN THE FIELD, Camp Robinson, Nev., October 24, 1876.

Headquarters, Department of the Platte, in the Field, Camp Robinson, Nev., October 23, 1876.

General Order No. 8.—The time having arrived when the troops composing the Big Horn and Yellowstone expedition are about to separate, the brigadier general commanding addresses himself to the officers and men of the command, to say:

In the campaign now closed he has been obliged to call upon you for much hard service and many sacrifices of personal comfort. At times you have been out of reach of your base of supplies; in most inclement weather you have marched without food and slept without shelter. In your engagements you have evinced a high order of discipline and courage, in your marches wonderful power of endurance, and in your deprivations and hardships patience and fortitude.

Indian warfare is of all warfare the most trying, the most dangerous, and the most thankless; not recognized by the high authority of the United States Congress as war, it still possesses for you the disadvantages of civilized warfare, with all the horrible accompaniments that barbarians can invent and savages can execute. In it you are required to serve without the incentive to promotion or recognition; in truth, without favor or hope of reward.

The people of our sparsely settled frontier, in whose defense this war is waged, have but little influence with the powerful communities in the East; their representatives have little voice in our national councils, while your savage foes are not only the wards of the Nation, supported in iddeness, but objects of sympathy with a large number of people otherwise well informed and discerning. You may, therefore, congratulate yourselves that in the performance of your military duity you have been on the side of the weak against the strong, and that the few people there are on the frontier will remember your efforts with gratitude.

If in the future it should transpire that the avenues for recognition for distinguished services and gallant conduct are opened, those rendered in this campaign will be r

War-Revenue Tax Act.

EXTENSION OF REMARKS

HON. JAMES J. BRITT.

OF NORTH CAROLINA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. BRITT. Mr. Speaker, I oppose the adoption of the pending resolution. This so-called war-revenue tax act should not be continued. In fact, it ought never to have been passed. Equal revenue could have been raised in ways more convenient, more just, and more uniform. But I do not oppose it because I am unwilling to help raise revenue for the support of the Gov-

ernment. To help to provide sufficient revenue and to vote it in proper quotas for rightful purposes is as much the duty of the minority as of the majority. It is not the end, but the means that I oppose. Of all the modes of levying public taxes yet devised by statesmen and economists, that of payment by small adhesive tax stamps on goods and wares, checks and drafts, and instruments and documents is the most unjust, the most inequitable, and the most vexatious. Every dollar thus paid is, in the end, thrice paid. It is paid once in money, once in worry and loss of temper, and once in delay and confusion.

That the House may see the blighting effect of Schedule B of this act on a fine little industry in my district, I insert in the Record a copy of letter from Mr. P. E. Page, of Asheville, N. C., general manager of the Talcum Puff Co., and also a copy of an argument by Mr. Louis M. Bourne, of Asheville, attorney for the company, before the Treasury Department, as

ASHEVILLE, N. C., November 2, 1915.

Hon. J. J. BRITT, Asheville, N. C.

DEAR SIR: Referring to the interview we had this morning, at which Mr. L. M. Bourne was present, in regard to the effect of the waremergency act upon the business of the Talcum Puff Co., it gives me pleasure to submit for your consideration some facts bearing upon the situation as I view it from the standpoint of manager of the Talcum Puff Co.

We realize of course, that the Government in imposing taxation could not in every case consider the profits of every different manufacturer unless there were unusual circumstances surrounding the proposition which might make it, on the lace of it, an unjust burden, and that the tax might be so exorbitant as to practically drive the concern out of business.

Our fiscal year closes September 30, and in order that you may get clear idea of the effect of the war-revenue tax upon the business of a Talcum Puff Co. we will give the net earnings for the last four

For the year ending September 30, 1912_______For the year ending September 20, 1913_______For the year ending September 30, 1914_______For the year ending September 30, 1915______ \$12, 121, 70 18, 796, 29 16, 332, 57

For the year ending September 30, 1914 16, 332.57
For the year ending September 30, 1915 5, 6645.84

From the above you will note that the average net earnings for three years previous to the enactment of the law in question were \$15,750.19, and that there is a decrease in the net earnings for the year ending September 30, 1915, as compared with the previous year, of \$10,686.73. We beg to state that the amount spent for revenue stamps for the 10 months beginning December 1 and ending September 30 was \$10,090.01; labor and affixing stamps, \$966.11; total, \$11,056.12. You will note that the decrease in the net earnings for the year ending September 30, 1915, as compared with the previous year, amounted to \$10,686.73, which is just about represented by the amount of \$11,056.12 paid for the revenue stamps. You will note that the average amount of stamps used per month was \$1,009. It will also be noted that we paid out for revenue stamps and labor at the rate of \$1,105.61 per month, which would amount to \$13,267.22 annually.

It will be noted that the war-revenue act was even more disastrous than predicted in the correspondence we had with Senators Overmann and Simmons last December. It will be seen that we had a profitable business up to the enactment of this law, and that if some relief is not had it will eventually drive the company out of business altogether.

As stated in former correspondence, it has been impossible to pass this tax on either to the merchant or consumer, inasmuch as the law makes it a manufacturer's tax, and the stamps have to be applied by the manufacturer before the goods are shipped.

Furthermore, we have spent thousands of dollars in advertising the Air Float brand as a 10-cent proposition, and on 10-cent articles there is a limitation to the price the merchant and jobber pay; but the main point is that the Government has made it a manufacturer's tax, inasmuch as the denomination of the stamps is one-fourth cent, and there is no coin of such denomination, and it is an absolute impossibilit

ment of the tax to show conclusively that we had a profitable business up to that time, and that its ruin has been entirely due to this emergency measure.

Our profits were entirely satisfactory up to the time this law was passed. We think if you will refer to the emergency measure you will find that it is a verbatim copy of the Spanish War revenue measure, and for your information we beg to state that at that time, in 1898, taleum powder had not come into general use and was sold in very small quantities, retailing at 25 cents per can, and the Gerhard Mennen Co., of Newark, as we recall it, were the only ones in the business at that time, and we doubt if the consumption of tale in 1898 reached 1.000,000 packages annually. It was not an article of general use at that time, and the war measure of 1898 placed no particular burden upon any manufacturer. Since 1898 conditions have changed; talcum powder has ceased to be a luxury, and is used extensively by the poor as well as those better off in this world's goods. It is sanitary and hygienic, and its greatest use is in the nursery of infants.

The Talcum Puff Co. markets between 3.000,000 and 4.000,000 cans annually and occupies the third position in the market in number of packages sold, and the very fact that the net profit on our gross sales averages about 10 per cent is conclusive evidence of the fact that there are no exorbitant profits in the business and that it is not in any sense a luxury. Our average selling is \$7 per gross, and inasmuch as this tax is 36 cents per gross, at the rate of one-fourth cent on a 10-cent article, you will note it averages 5 per cent on the selling price. In other words, for every \$100,000 worth of business we do we have to pay the Government \$5,000, and it has figured out to be more than half of our net profits. There is not a business in existence on which the profits are not exorbitant that can stand any such tax as this, and we have shown by a sworn statement of out bookkeepers that our profits only average 10 per cent of t

In addition to this, this industry to-day is subject to the following Federal taxes:

1. A 700 per cent tax on alcohol.

2. A 30 per cent taxiff on our raw materials.

3. An income tax.

4. A corporation tax.

And in addition we now have this war tax, with the results outlined above. This tax was intended to be a tax on luxuries, and certainly talcum powder, with the hygienic uses to which it is put, should be eliminated from this class, and it certainly seems to us that even if it is classed as a luxury, it is unfair to single out this business arbitrarily instead of taxing all luxuries in order that the burdens of this tax might be evenly distributed.

Mr. Bourne has sent me a copy of his letter of September 29 to Senator Overranx and Senator Simmons, and it seems to me that his suggestion in the way of relief that all uncolored talcum powder be exempt from the tax imposed is a good one, or if that suggestion is not adopted, we certainly hope you will use your efforts to reduce the amount of this tax on 10-cent articles to at least one-quarter of what it is now, which would then mean that we would pay into the Government \$3,316.80 per year, and we think this should be an entirely reasonable tax for an industry of this kind.

The simplest way we should think would be to exempt uncolored talcum power lansmuch as talcum powder was not mentioned in the paper in losed the general head of cosmetics, as fully explained in Washington before the Intronal Revenue office in Washington. If uncolored perfumed talcum powder, also about 500,000 cans of face powder and other cosmetics, such as toley were forced the Talcum Puff Co. would still pay a very reasonable tax inasmuch as we sell about 400,000 cans of tinted talcum powder, also about 500,000 cans of face powder and other cosmetics, such as tolet water, cold cream, rouge, etc., which tax according to the present output of the Talcum Puff Co. would still pay a very reasonable tax inasmuch as we sell about 400,000 cans of tinted talcum powder, also about 500,000 cans of

General Manager, Talcum Puff Co.

ARGUMENT OF THE TALCUM PUFF CO., PRESENTED BY L. M. BOURNE, ATTORNEY, IN WASHINGTON, NOVEMBER 23, TO THE COMMISSIONER OF INTERNAL REVENUE, ALSO TO THE ASSISTANT SECRETARY OF THE TREASURY.

It seems to have been the express intention of the framers of this bill to exempt taleum powder from the war tax. It is not named specifically or alluded to by inference in the bill, and it is certainly not to be inferred that an article so widely known and of such extensive use as talcum powder would have been included in generic terms.

Of all the articles specifically mentioned in the bill, such as extracts, tollet water, hair dressing, tooth wash, dentifrices, tooth paste, talcum powder is by far more extensively used and widely distributed. We should say that ten times as much talcum powder is consumed in the United States as tooth paste, and certainly if it was the intention of the framers of the bill to apply this war tax to talcum powder it would have been specifically enumerated, inasmuch as many other articles with a much more restricted use and distribution are specifically named in the bill.

have been specifically enumerated, inasmuch as many other articles with a much more restricted use and distribution are specifically named in the bill.

As stated, it seems to have been the clear purpose of the author of the bill to free talcum powder from this war tax.

If the tax is applied to taicum powder at all, it can only be done under the general head of "cosmetics," which is alluded to in the war tax.

Talcum powder is not a cosmetic in the ordinary meaning of the word, its predominant use being that of infant powder, bath powder, body powder, foot powder, and is largely used by men after shaving, and is also extensively used in hospitals and by the medical profession as a soothing, healing, and antiseptic dressing, and by the public in general for the purpose of relieving chafing, particularly among infants, and for other general medicinal purposes.

Talcum powder is composed of entirely different ingredients than face powder and is used for entirely different purposes. It is considered by the trade not as a cosmetic but as a medicinal tollet article, and is so known not only by the trade but by the public in general.

Tale, being an insoluble mineral in and of itself, has practically no effect upon the skin, and on this account some sort of an antiseptic is accordingly universally combined with tale, and boracic acid is the accepted ingredient. Now and then a manufacturer will add one or more other antiseptics to this powder, but this practice is rather exceptional. Simply as a means of catering to individual taste, talcum powder is commonly perfumed, and the perfume is also added for the purpose of increasing its antiseptic and deodorizing qualities. As tale is an insoluble mineral, it has no adhesive qualities, and this is the great difference between talcum powder and face powder.

The theatrical profession in their work use almost every kind of cosmetic known. The purpose, of course, is to either improve or change the aspect of the face. It is a well-known fact that no actor or actress

would ever think of using talcum powder in any form or for the purpose of "make-up."

would ever think of using talcum powder in any form or for the purpose of "make-up."

As tale is an inert material it can have no effect whatever upon the complexion, and is, therefore, not a cosmetic; and claims to the contrary is simply "trade talk." and the company does not and could not make any such claim on the labels of its packages; boric acid is added to tale to give it the medicinal and antiseptic properties.

Cosmetic defined (Century Dictionary): "Pertaining to beauty; beautifying; improving beauty, particularly the beauty of the complexion—any preparation that renders the skin soft, pure, and white or helps or professes to be able to beautify or improve the complexion.

"The art of annointing or decorating the human body, as with toilet preparations, etc."

When the proposed tax was first suggested at Washington we wrote Senator Simmons, Senator Overman, and Congressman Gudger that we were manufacturing moderate-priced toilet articles for the masses, and that the small profit would not stand the proposed tax. We had a reply from Senator Simmons stating our letter had been referred to the Senate Finance Committee, and we believe it was his express intention to exempt talcum powder as it is not enumerated in the bill, and we understand that he was the author of the law.

When we received a copy of the law and found that talc was not mentioned we assumed that the tax would not apply to talcum powder. From the attached statement of the operations of the Talcum Puff Co. it will be noted that the profits are a fraction under 10 per cent of the sales.

The number of packages sold, 3,404,304. Selling price per gross,

sales.

The number of packages sold, 3,404,304. Selling price per gross, \$6.91, a fraction less than 5 cents per package.

The net profit per gross, 68 cents. The proposed war tax is 36 cents per gross, which amounts to more than one-half of the net profits on

The net profit per gross, 68 cents. The proposed war tax is 36 cents per gross, which amounts to more than one-half of the net profits on each package.

The tax would amount annually to more than half of the net profits of the Talcum Puff Co. In other words, this tax would cost us, on the basis of last year's operations, \$8,600.76, based on the operation of last fiscal year, we estimate that there is in the hands of the jobbers and retailers throughout the country 10,000 gross of our brand of tale to which revenue stamps will have to be affised and which we will have to furnish retailers and jobbers and pay for same as this is a manufacturer's tax amounting to an additional \$3,600, which, added to \$8,600.76, makes \$12,200.76, which we will have to pay during the first year—which almost entirely eliminates our net profits, and we are basing our figures on the last fiscal year which closed September 30, 1914, and we are now facing disturbed and extraordinary conditions with depressed markets for the ensuing fiscal year.

Approximately 90 per cent of all talcum powder sold is sold to women. Of this amount 50 per cent is sold to women for use on children, and the fact that the amount of talcum powder sold through the three summer months probably equals about 50 per cent of the total yearly sales shows that it is neither used or considered a cosmetic by consumers. Women who buy talcum powder do not use it as a face powder. Talcum is distinctly a body powder, not a face powder. The chief reason for this, of course, is the fact that tale is of mineral rather than of vegetable composition.

The profits on the gross sales do not exceed 10 per cent, which is an extremely low figure for this class of business. 10 per cent being the usual profit in the most staple line. We can not raise the price, because this is a manufacturer's tax, and the stamps have to be applied by the manufacturer. Furthermore, the price of our brand to the trade has been established for years, and if the tax is levied we will have to stand it.

War-Revenue Tax Act.

EXTENSION OF REMARKS

HON. RICHARD W. AUSTIN. OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. AUSTIN. Mr. Speaker, in answer to the statement of the leader of the majority in this House, Mr. KITCHIN, that the Underwood tariff law has been a success as a revenue producer, and in that respect an improvement upon the Payne-Aldrich tariff law, I submit the following statement issued by the Hon. Jonathan Bourne, jr., as president of the Republican Publicity Association, of this city. Mr. Bourne was one of the Republican leaders in the United States Senate for many years, where he established a reputation for industry and accuracy in the investigation and consideration of public questions.

His statement, headed "Democratic revenue law a failure,"

is as follows:

WASHINGTON, November 14.

Washington, November 14.

The Underwood tariff law has never been an adequate revenue producer, assertions of Democratic leaders and Democratic newspapers to the contrary notwithstanding. A study of the law from the revenue standpoint develops the following facts:

The Underwood law went into effect October 4, 1913, so that the period July 1 to October 3, fiscal year 1914, was under Republican law, during which time, despite unsettled business conditions incident to the pending free-trade measure, a revenue of \$88,617.096 was realized, which Secretary McAdoo boldly credited to the Underwood law. Had the latter measure been in effect during this period, with its low average duty rates, it would have yielded not more than \$57,000,000 of revenue, so it is entirely fair to say that the Democratic law was benefited by its predecessor in the sum of over \$31,500,000.

The income-tax feature of the Underwood law being an experiment, the Democrats retained the Republican rates on wool up to December 1, 1913, on woolen goods to January 1 and on sugar to March 1, 1914. These three products helped the Underwood law out in the sum of \$24,287,864, or a total benefit from the Republican law, in round num-

bers, of \$51,750,000. Republican efficiency in the Post Office Department gave us a surplus of \$3.800,000, the first time in the history of the department that a surplus has been recorded. The existence of this surplus was promptly denied by the incoming Postmaster General, Mr. Burleson, who, in 1914, smusgled it into the Treasury under miscellaneous receipts. (See daily Treasury statement, June 29, 1914.) Thus the total aid to the revenues from Republican rates and laws was \$55.550,000.

The total ordinary receipts for the fiscal year 1914 reported by Mr. McAdoo were \$734.343,700. Hobbling alone Democratic laws would have produced \$678,793,700. The total disbursements reported were \$735,495.316, Panama Canal disbursements of \$34,800,000 included. To this should be added the general deficiency bill, which was fillustered over until the 1st of July—\$5.900,000—making total disbursements for the fiscal year 1914 of \$741,395,316. It is quite clear, therefore, that the Underwood tariff rates in the first nine months of their operation would have caused a deficit in the Treasury of over \$62,600,000, overcluding Panama Canal disbursements, \$27.800,000, except that it was carried out on the crutches furnished by the law which it superseded.

Month by month it was becoming evident that a larger and larger percentage of goods was taking advantage of the free-trade conditions of the Underwood law. Immediately upon the declaration of war in Europe the Democratis 'introduced and enacted the war-revenue measure to hidde the deficiencies of their tariff bill, giving as an excuse that the war would cut off imports, hence customs revenues would decrease. For a short time imports did fall off a trifle, but the currents of trade quickly shifted and readjusted themselves. Now the monthly imports have reached truly Democratic proportions. From August, 1912, to September, 1913, 14 months under a Democratic tariff, but with the war having a protective effect, we imported goods to the value of \$2,112,000,000, on which a revenue of \$37

Preparedness-Its Cost-Who Will Pay the Bills and Who Will Get the Money.

HON. WILLIAM J. CARY,

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. CARY. Mr. Speaker, the Sixty-fourth Congress is going to be a memorable one in the future history of this country. Stupendous problems are to be solved and great questions settled between now and adjournment, and it is regrettable indeed that the first important act of this Congress should be the enactment of a continuation of the "war tax."

When the bill was jammed through the House last year I desired to offer an amendment, but was prevented from doing so by a Democratic caucus rule, placing a tax on Coca-Cola and similar products, and to ask that the burden of taxation has more controlled the latest that the burden of taxation be more equitably distributed, and that beer, instead of paying a tax of 50 cents more on the barrel, be taxed 25 cents and some of the taxation placed on whisky, which would certainly have been more just, especially when we consider that a barrel of whisky is worth as much as 45 barrels of beer and costs a great deal less, both for labor and material, to produce and market.

The entire law is so full of inconsistencies and is so manifestly unjust in many of its provisions that as a piece of legislative work it would be a historical joke if it were not

such an economic tragedy to so many people.

A poor little bowling alley and billiard room doing a few hundred dollars' worth of business is taxed more than a great

bank whose business runs into the millions.

It is now proposed to tax gasoline. I do not know why gasoline should be taxed this year more than last year unless it may be that the auto statistics of the past year show that while automobiles used to be a luxury for the rich, who usually escape most of the burdens of taxation, cheap and useful small machines are now owned by millions of small farmers, tradesmen, and people of moderate means, and this is the class that as a rule has to bear the heavy burdens of taxation.

A tax on gasoline would not be so obnexious if it were possible to fix the price of gasoline and have it inspected and graded by the Government, but everybody knows that the great corporation that controls the gasoline market would at once put the entire tax on the consumer and probably raise the price besides and very possibly deliver an inferior quality.

We should also remember that gasoline is the poor man's

cooking fuel.

In parenthesis I might say if it is necessary to tax intoxicants and explosives it might be good to place a high tax on the inflammatory newspapers and magazines whose main purpose seems to be to keep the public mind in a state somewhere between hysteria and delirium tremens.

But it is a hopeless task to expect the tax to be laid with any show of right of justice. It is with the deepest regret that I am obliged to call attention to the feature of the tax which proclaims its utter geographical injustice, but facts are facts, and it is a fact that every industry taxed heavily in this bill is an industry carried on principally in the northern part of the country, and

that is certainly neither fair nor just.

Let us take, for example, the enormous portion of the tax burden which the wine and beer industries are compelled to assume. The very first paragraph of the bill placed a tax on wine and beer, and that means that all of the so-called "dry States" have not had to pay on this product at all. Now, everybody who knows anything about a dry State knows that the only thing that is dried up is the State treasury and the department of the United States internal-revenue office collecting the tax in that State, so that the tax is always shirked by the bootlegger, the moonshiner, and the stealthy and hypocritical flask toter of the dry State who wants to rule the country, spend its money, direct its policies, and let some other section pay the bills.

In this oppressive tax measure they tax the small dealer and consumer and let the big trusts go scot free. It looks as if the American Tobacco Co., otherwise known as the Tobacco Trust, has its friends placed on the committees of the House and Senate, so that it is impossible to reach them for taxing purposes. The tobacco schedule was jammed through the House without discussion in just three minutes, in a shape which permits the trust to rob the consumer of one-quarter of the tobacco which he formerly got for his money by the simple expedient of reducing the size of the packages, which were formerly fixed by law in multiples of 2 ounces each. Now they can make any size package they please in multiples of one-half ounce each. Formerly the workingman got 2 ounces for his nickel; now he gets 11/2 ounces-robbed of one-quarter of his tobacco without his consent. This robbery enables the trust to pocket \$55,000,000 extra annually and escape without an extra cent of taxation. During the Cuban war an extra tax of 8 cents per pound was levied on tobacco. The trust, through their friends in Congress, promptly got permission to reduce the size of their packages, and when the tax was taken off after the war they failed to restore the size of the package. They then reduced the poor man's 2-ounce package to 13 ounces. The Underwood tariff man's 2-ounce package to 1% ounces. The Underwood tariff schedule permits them to still further reduce the quantity of the workingman's package to 12 ounces without the addition of one penny of extra taxation. They place the tax on the small dealer. All other countries tax their tobaccos and derive a proper revenue therefrom except the United States, where the tax is merely nominal, and the trust pockets all the money.

We lose on account of this laxity much more than the entire amount which is to be raised by this emergency tax, and nobody is the gainer except the big trusts. The discussion of this question by the Senate of the United States (Congressional Record May 14, 1909, and June 24, 1909, pages 2022 to 2028 and 3724) shows a tobacco-tax loss of \$184,000,000 per annum. Why is this trust practically immune from taxation? Ask the committeemen in charge. Ask Thomas Fortune Ryan. He knows. Examine the Senate's hearings on campaign contributions and

you may get a definite idea of the underlying cause.

As a matter of fact, there never should have been any reason for the placing of this tax at all, and there would not have been had the Democratic Party kept its promises to curtail the expenses of the Government and stop the wastage of treasure and resources, which constitute by far the causes of the depletion of the Treasury.

We are not called upon to place any armies in the field; there is no sign of the mobilization of such troops as we have; our Democratic friends are claiming that the country is in every way prosperous, and yet we are compelled to submit to the imposition of a war tax as high as the tax on the people during the recent War with Spain, against which so many Democratic Members

at that time made vociferous protests.

Oh, the financiering of our Democratic friends has been re-markable for its consistency! We spent days of wrangling to save the people a few paltry pennies in mileage; we saved a few paltry dollars by lopping off the usual annual mileage of a number of poorly paid employees in the Capitol and Office Building. They reduced the number of police and elevator men in

the Office Building so that useful doors have to be locked and expensive elevators can not run; and then they piled up appropriation after appropriation, creating clerkships for investigating committees, hiring counsel at exorbitant fees, printing tons of hearings that nobody would ever have the patience to read, and if they did would not be one whit the wiser; and now, after all of these sham protestations of economy, after campaigns of re-buke to Republican extravagance, they saddle this oppressive tax on the people of the country and add to the still burdensome grievance of the high cost of living an onerous and, I repeat, a

totally unnecessary tax.

And the very worst feature of the matter is that all over the country men are asking continuously and persistently "Where does the money go?" If it were spent with scientific exactness and the country received full value for the money turned in, there would probably be much less opposition to this or any other tax. But unfortunately the people absolutely distrust the methods in which Government money is spent, and there is far too much evidence that they are right in their distrust.

Let us take, for example, the next big appropriation that this Congress will have to consider—the Navy and Army appro-Millions have been appropriated in the past and many more millions will be asked for in the future. Has the money been spent in the past in a way that can give the American people any assurance that it will be wisely spent in the future?

Every patriotic American believes to a certain extent in "preparedness." The people will undoubtedly be willing to spend a great deal of money to provide adequate defense, but, Mr. Speaker, I feel that I am entirely safe in asserting that they will rise in righteous wrath if the hard-earned money of the toilers of this country which they will be asked to place at the disposal of the National Government shall continue to be used to fatten the swollen fortunes of the Steel Trust, the Armor-plate Trust, or the Powder Trust, while the Army and Navy are neglected, mismanaged, or, what is worse, still controlled and ruled by bureaucrats who are either hidebound to old and obsolete methods or wedded to a very suspicious alliance with the moneyed corporations that control the supplies which the defensive forces of the country most need.

That this is neither idle rumor nor sensational accusation has been abundantly proved by the actions of the departments of

our Government in charge of defense.

That inventors have been rebuffed, discouraged, and disheartened by the bureaucrats is so well known that it is almost unnecessary to mention the specific cases, and that some of the most obnoxious trusts in this country have profited hugely by the complaisance of naval and military boards is beyond question.

During the Sixty-third Congress I introduced a bill and two resolutions, which I will insert here, and I can assure you that if the witnesses who would have testified could have been properly protected and given some reward as an incentive to testify there would be enough cash on hand to-day in the Treasury to make the imposition of this tax entirely unnecessarv:

A bill (H. R. 7601) authorizing the Navy Department to offer and pay rewards for the detection of violations of the antitrust act of July 2, 1890.

2, 1890.

Be it enacted, etc., That the Secretary of the Navy of the United States be, and he is hereby, authorized and directed to offer and pay rewards to the person or persons who shall first furnish to the Government of the United States information which shall lead to the detection of violations of the antitrust act of July 2, 1890, in cases where such violations shall injuriously affect the Navy Department or any business connected with the national defense, or in cases where the Government has been defrauded in the character, quality, or price of the material furnished, and where, as a result of information or evidence so furnished, the Government succeeds in recovering money or property as fines, forfeitures, or otherwise, the reward shall be 20 per cent of the amount so recovered.

House resolution 506.

Whereas certain chiefs of the Bureau of Ordnance have made misleading reports to their superiors and to Congress; and Whereas Chiefs of Ordnance have attempted to deceive Congress on the effect of high explosives; and Whereas our Navy and coast defenses are being constructed as recommended by officers who are disloyal to their official oath; and Whereas the Armor Trust is being favored by some misleading reports: Therefore be it

Therefore be it

Resolved, That the Speaker of the House of Representatives is hereby authorized and directed to appoint a committee of nine Members of the House, of which number five shall be of the majority and four of the minority. Said committee is hereby directed to make an investigation of the subject matter embraced, misleading Congress by false reports. Said committee is also directed to investigate if there has been a conspiracy between the United States officers and the armor manufacturers or other persons in defrauding the country or the Government.

manuacturers or other persons in derrauding the country of the Government.

Said committee is authorized to sit during sessions of Congress and recess of Congress, to compel the attendance of witnesses, to employ such clerical and other assistance as may be necessary, and to administer oaths to witnesses. The cost and expenses of said committee shall be paid from the contingent fund of the House of Representatives.

Said expenses shall be paid out on the audit and order of the chair-man or acting chairman of said committee.

House resolution 544.

Whereas the Hon. Josephus Daniels, Secretary of the Navy, has stated in testimony before the Committee on Naval Affairs of the House and in an official letter to the Senate that there exists a combination and conspiracy of armor manufacturers who are "holding up" the Government of the United States and forcing the Navy Department, by a monopoly combination, to pay extortionate prices which amount to a robbery of the Government of several million dollars each year:

Therefore be it

Resolved, That the Secretary of the Navy is hereby requested to inform this House what steps, if any, he has taken to have his colleague, the Attorney General, take action for the prosecution of this monopoly combine of armor manufacturers; and Resolved jurther, That the Attorney General is hereby requested to inform this House what steps he has taken to prosecute civilly and criminally this Armor Trust above mentioned.

On the 5th of May, 1914, the distinguished Member from Kansas, Mr. Murdock, asked the following questions-and my recollection is very strong that his remarks were applauded by Members of this House of all parties. He said:

Now, here is a question that I would like to ask in all seriousness: The Secretary of the Navy sits at the same counsel table with the Attorney General of the United States. Here is a straight-out violation of the law; here is a combination in restraint of trade; here is a monopoly; here is a witness of high integrity, of entire credibility, who testified that this is a monopoly; here is a great Government which is the victim of that monopoly. What is the matter with the Attorney General of the United States? [Applause.] Why does he sit silent and permit this Government to suffer this wrong? Why does he not get busy? I ask the question in a humble spirit of inquiry. I will get no answer from any source. [Applause.]

Why does the Secretary of the Navy submit to having the United States Government held up and robbed of millions of dollars by the Armor Trust every-year when he has it in his power to take steps to put a stop to it at once? Everyone knows—and no one knows better than the Secretary of the Navy himself-that if he were to write one short letter to Congress asking for the passage of the bill to protect witnesses and pay rewards for convicting evidence of the frauds and robberies perpetrated on the Government by the Armor Trust which I introduced on August 22, 1913, Congress would pass the bill at once, and the evidence would be produced and the robbery of the Government by the Armor Trust would be stopped for all future time, and millions of dollars of the money already stolen would be recovered from Carnegie and his Armor Trust crew and put back into the Public Treasury.

Neither the Secretary of the Navy nor the Attorney General of the United States have vouchsafed a reply to my House resolution No. 544. Why not? I will be able to answer the question if they give me the power asked for in my other resolution, No. 506, and if they pass my House bill 7601-all of which I have herein quoted-I will show by sworn testimony that a bureaucratic oligarchy corruptly controls these matters, and that if the Government collected the fines, penalties, and forfeitures from the Armor Plate and other criminal trusts they would not face the necessity of this tax, but would have millions to spare after paying the expenses of the Government.

I think I would also be able to show why our Navy is not in harmony with modern science; why we have no large-caliber guns which can throw high-explosive shells, such as are now being used in the European war; why we have no armored automobiles with automatic machine guns; why our inventors have been turned down by our Navy Department when they offered their inventions exclusively to our Government; why American inventors are obliged to sell their inventions to foreign countries, where they are received with honor and profits. England knighted our American citizen, Hiram Maxim, and made him rich for his invention of the automatic machine gun, while he received only snubs and ridicule from our bureaucracy. Germany is relying on the "Gathmann system" of high explosives and large-caliber guns to conquer the whole of Europe. Yet this Chicago inventor, after offering his various inventions exclusively to the United States Government, was rebuffed and ignored by the "ring" which controls and was forced to lay his lifework before Germany and Japan, which have adopted them, and his only hope now is that they will never be used against the Government which spurned him.

I will give only a partial list of American inventors who were first in every line of modern improvements, none of which improvements were adopted by our hypnotized Government officials, because some of them are on the pay rolls of the trusts, whom they serve, but, of course, in the nature of things, could not be rewarded by a poor inventor:

Lewis, 1004666. October 2, 1911; filed June 27, 1910.

The Armor Trust people know very well that the high explosives invented by Gathmann have proven over and over again that armor plate would be of no earthly use as a protection against an enemy using this explosive, and their agents have therefore done everything they could to belittle the experiments made with this explosive and have insisted on a projectile that would "pierca." Unfortunately for our self-complacent attitude in this as in other matters foreign Governments do not take the word of our so-called experts at face value, and they adopted the explosive system of Gathmann and used it very successfully during the present war; and if-which may God forbid-a foreign power should ever attack the United States, I think it would not occur to them to take either the word of the Armor Trust people or that of our bureaucratic "experts" as to the value of armor plate to protect or piercing projectile to pierce. but would use the explosive that is so effective now in Europe to batter the useless armor plate into scrap metal. As a matter of fact tissue paper would be as effective as armor plate as a protective agency against any of the high-explosive shells.

Why have we lagged behind in all modern developments of armament, ammunition, and everything that goes to make an efficient modern fighting force? We had the inventors; we had the money: we have the men.

The submarine was an American invention. While all of the nations of Europe have developed this form of fighting sea craft to a remarkable degree of efficiency we have neglected it outrageously.

The flying machine was an American invention, and what have we done with it? Our whole aviation system is an international joke. We have a ridiculously small number of machines, most of them obsolete; and worse yet, we have put officers in charge of aviation stations that know nothing of the science of aviation.

Last June I paid a visit to the aviation station at San Diego, and found about 10 or 12 machines, of which only 2 were workable, 1 aeroplane and 1 hydroplane. The rest were ready for the scrap heap, as no one would dare to go up in them.

For the two which were still usable there were no extra parts available in case of accident, and the men were even timid about going up in these two, not because the men were at all cowardly, but simply because the machines were defective and none of them at all alike.

Holland, the inventor of the submarine, died in poverty. Langley was laughed at for his experiments with the aeroplane, and his death was probably hastened by the ridicule that followed his brave efforts to make us understand that aerial flight was feasible.

Any inventor now is a joke with us. We look on him as a "bug," we mock his efforts and decry his dreams, and spend

our admiration on the millionaire who makes his money by the sweat of other men's brows, and read with avidity the fantastic rot in the papers about his wife's monkey dinners or his daughter's wedding to a dissolute foreign prince or duke.

When will we learn the lesson that Germany has learned so well and demonstrated so thoroughly that proper defense is a matter of brains and efficiency and not a matter of politics and "high finance"? It is saddening at times to hear the plans of the preparedness advocates when they advocate the expenditure of millions for ammunitions, for weapons, for supplies, for ships, for everything except brains and men. The big ammunition factories, the armor-plate and steel money kings are all in favor of preparedness. Why should they not be? It means increased dividends, it means more graft, more hoodwinking of the patient, tolerant mass of American people, and it does not mean that they will have to exert either ingenuity or ability to enrich themselves.

Does anyone for a moment believe that the plants which will benefit by big appropriations care a rap whether they turn out a good or a bad product? Whether they employ efficient and competent trained men or not? The headlines in all of the recent papers should be sufficient answer to this. Every day we hear of an explosion in some powder or ammunition plant, and that portion of the press which has never been neutral at once splutters about "foreign plotters," when every sane man knows that the explosions and disasters are the most natural sequence in the world to the hiring of incompetent labor and the placing of most delicate work in the hands of utterly unskilled and underpaid workmen.

Mr. Speaker, let us try to be a little reasonable. If this country ever goes to war again we will be confronted by an enemy or enemies who will have every resource that modern science can give them. They will have trained and efficient sailors and soldiers to handle the most modern weapons that human ingenuity can devise. We will have what? To start with, we will have the most magnificent soldiery in the world. An army of American volunteers will surpass in native, natural fighting disposi-tion and ability any army in the world. This is at once conceded and has been admitted by every military expert who ever came over here when we had a fighting job of any kind on. But will our brave boys have either training or experience, or will we have officers or trained men to lead and direct them? If our Army and Navy continue to be organized, officered, and controlled by the swivel-chair bureaucrats who now dominate them, I confess that to me the outlook is pessimistic. If our sordid and utterly selfish and unpatriotic corporate masters of all of the industries which will need trained men in a time of war continue to control these industries, we will have neither trained men nor patriotic Americans to man a warship, fight a battle, or even equip an Army and Navy. This may sound rather pessi-mistic, but just let us examine a little matter, just one matter that has direct bearing on this subject.

One of the most important features of the program of "preparedness," which is the cause of more perfervid oratory and big headlines than any other, is the need of a big navy. are going to be asked to vote for an appropriation that will provide for many ships. In addition to that we are going to be asked to help establish a big merchant marine. Where are we going to get the sailors to man these warships and merchant ships, which will, of course, be reckoned on to furnish competent sailors in time of war. The big steamship companies, along with the Powder Trust, the Steel Trust, the Armor Plate Trust, and so forth, are all in favor of "preparedness," and also all in favor of any old kind of a subsidy or merchant marine bill that will help them run steamship lines for patriotism—and profit.

Almost with tears in their eyes they deplore in the most eloquent terms the "passing of the American flag from the oceans of the world." They tell us we need a merchant marine of our own to protect American commerce and to furnish us with an auxiliary naval service of ships with trained sailors on them in case of war. In almost the same breath they protest against the seamen's bill, and if they possibly could would have its most important provisions repealed by this Congress. let us see why they object to this bill.

One of their chief wails has been the elimination of the American flag from the Pacific Ocean. The Pacific Mail, the Robert Dollar, and the Great Northern Steamship Companies all claim that the seamen's bill drove them from the Pacific Ocean steamship trade. This trade has passed into the control of Japan. They wished to keep it for what—to encourage American seamanship, to keep a race of trained American sailors in readiness for any emergency, or to develop a strictly American merchant marine?

The following excerpt and letter from a circular issued by the San Francisco Chamber of Commerce is illuminating:

CHINESE VERSUS WHITE CREWS.

As to the efficiency of Chinese crews as compared with white crews the following letter from the marine superintendent, steamship department, of the Canadian Pacific Railway Co. at Vancouver, is self-explanatory:

EFFICIENCY OF CHINESE CREWS.

VANCOUVER, BRITISH COLUMBIA, November 24, 1915.

SECRETARY FOREIGN TRADE DEPARTMENT.

San Francisco Chamber of Commerce.

Secretary Foreign Trade Department,

San Francisco Chamber of Commerce.

Dear Sir: Your letter of the 9th instant re above addressed to the manager was referred to this office. In the temporary absence of Capt. Beetham, the writer asked Mr. James McGown, superintendent engineer of the company, for his opinion, to which I have received the following reply:

"Referring to your turndown on letter from the San Francisco Chamber of Commerce re the employment of white or oriental crews on the trans-Pacific steamers. After considerable experience with both classes of labor I am fully satisfied that oriental labor is far preferable to any white labor procurable here. The oriental crews are obedient and obliging and are always on board when required, they do not indulge in intoxicants and give very little trouble when properly handled, and when it comes to a question of our personal or floating property being in danger with men in charge who have the confidence of the oriental crew there is no one who will work better.

"I have had several cases of this sort under my personal attention and have had no trouble in handling the oriental crew when it would have been absolutely impossible to keep a white crew in the stokehold. I am strongly in favor of oriental crews for trans-Pacific steamers when compared with the class of white labor procurable on this coast."

Trusting the above will enable you to reply to the above-mentioned letter of the San Francisco Chamber of Commerce.

As all our ships are away now I can not ask the opinion of any of our commanders, but the writer, who has sailed with all of them, knows that the above letter from Mr. McGown expresses the general idea of all deck and engine-room officers, while as cabin stewards Chinese are excellent.

Yours, truly,

Marine Superintendent B.

New Leybmit Mr. Speaker that the characterists

C. Beetham, Marine Superintendent B.

Now I submit, Mr. Speaker, that the above fairly represents the attitude of the corporate money kings on the whole question. Their one idea in this whole question is based on a desire for dividends. They abuse white American sailors, call them drunkards and every other foul name they can. They do not want competent help; they want obedient and cheap help; and they are interested not one whit in American defense, in American preparedness, or American patriotism unless it carries with it goodly number of American dollars for their pockets.

Mr. Speaker, this is the beginning of a new Congress, a Congress that will be written of in the history that unborn generations will read. Let us resolve that this will be a Congress where the dollar mark will not be uppermost. Let patriotism take rank above plutocracy; let the dollar for once be subservient to a high ideal; and let us give the people of our country a proof by our actions here that we place the welfare, the happiness, the progress, and the prosperity of all of our citizens above everything else in the program that this Congress will endeavor to carry out.

We have a magnificent destiny still to fulfill. The Western Hemisphere is still at peace with the world, and we hope and trust that it will continue to set an example of peace to a warracked world, and on the actions of this present Congress the future development of America as well as the future peace of the world may depend. We have a splendid opportunity, but we have also a grave responsibility. May the Great Power who rules the destinies of men and nations guide us aright.

National Defense.

EXTENSION OF REMARKS

HON. FRANK L. GREENE.

OF VERMONT.

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 17, 1915.

Mr. GREENE of Vermont. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech delivered by Hon. L. C. DYER, a Member of this House, at the laying of the corner stone of the William McKinley Memorial at Niles, Ohio, on the 20th of last month. The speech is upon the subject of national defense,

The speech is as follows:

NATIONAL DEFENSE.

William McKinley was Commander in Chief of the Army and the Navy during the War with Spain, the Philippine insurrection, and the troubles in China. From those of us who thus

saw service under our great and beloved Commander in Chief has grown the United Spanish War Veterans, which is in itself a most splendid and lasting monument to his memory. principles of our order-freedom, patriotism, and humanityare the same that persuaded McKinley to finally advise Congress to declare war upon the Kingdom of Spain. It has always been and it is our desire now to make of our beloved United Spanish War Veterans a worthy memorial to his great and good name, as well as to all of the splendid men who served our Nation in that war with Spain, the Philippines, and China. Not alone do we exist as an organization to honor the memory of our comrades, but we strive and endeavor to be a real live force in working for the glory and greatness of our country. We strive to teach patriotism, love of country, and to have the people mindful of their patriotic duties and obligations. Ever since the Spanish War those of us who served therein have been urging upon the people of America and the Government that no such conditions be allowed to exist again regarding our being so unprepared for war as it was then. It was from our Volunteers, hastily brought together, without training, that our greatest losses occurred. Those of our soldiers who died be-tween May 1, 1898, and June 30, 1899, were mostly Volunteers, and the deaths, it the main, were caused by disease.

The figures are:

	Officers.	Enlisted men.
Killed in action Died of wounds Died of disease. Died of other causes.	41 10 165 11	458 192 5,344 401
Total	227	6,395

Many thousands more have died since that time from disease contracted while serving in the United States, in Cuba, Porto Rico, the Philippines, China, and camp. Most of the deaths would not have occurred had we had trained and properly equipped men for service. When war with Spain began— April 20, 1898—the Army of the United States consisted of 2.143 officers and 26,040 enlisted men. All of the others enlisted for service in the Army were Volunteers, the greater portion of whom had never had any military training whatever. also true of the Volunteer Navy, and the sad and expensive lesson we learned in the Spanish War was that we must be prepared at all times with a trained and equipped Army and Navy to protect and defend our people, our possessions, to maintain the Monroe doctrine, and to uphold the principles of freedom, patriotism, and humanity in the Western Hemisphere. If this Government had not been negligent of its duty there would have been at the beginning of the Spanish War a proper sized and equipped Regular Army, and this would have made unnecessary the organizing practically overnight of the Volunteer Army, with its great consequent loss of life and ruination of the health of many of its men living to-day. You will recall that there were many criticisms of President McKinley for not acting with more haste in asking Congress to sever friendly relations with Spain over the conditions in Cuba. We all remember the great sympathy exhibited by the whole of America for Cuba in those

The miserable condition and distress of the Cubans had in fact excited the sympathy of the whole world. It was the plain duty of the United States to intervene and protect the remaining inhabitants of Cuba, 40 per cent of whom had already perished through persecution and starvation; yet when you look at the records of the War Department and see what a small Army we had at that time I think President McKinley was justified in using every possible means at his command to prevent war. If we had had a trained Army of sufficient size, I believe President McKinley would have acted more quickly. Therefore to-day, from the life of McKinley, in whose memory we meet here, we can point to the unpreparedness of the country in 1898 as a very great argument in favor of preparedness for to-day. The United Spanish War Veterans, probably better than anyone else, know the importance of being prepared, and we shall do everything we can to secure the enactment into law during the coming session of Congress of measures that have for their object and purpose the greatly increasing of the Regular Army in number and equipment and that the United States Navy be enlarged, so that none shall surpass it. We are also in favor of military training in our schools and colleges and of a reserve army, with the United Spanish War Veterans as a nucleus for its organization. In the law providing for the increasing of the Army, and so forth, we

favor a provision that will better enable the enlisted men of the Regular Army to become officers and also a graded retirement law for the men, more equitable than now exists.

Proper regard and consideration for men who have served and will serve in the armies and the navies of this country should be exhibited at all times, and I think it is the duty of the Government to give preference to men who have honorably served their country in the Army and the Navy when it comes to employment in the civil service, and so forth. Let there be more respect by law, if need be, for the uniform of our soldiers and sailors, and let none of them be denied admission to places of amusement, and so forth, because of same, as has often been the case. Let the Government and the American people show more consideration for the men who have served this country in giving them employment in civil life, and not compel them, as has happened, to go to county and city poorhouses, and seek rations from free soup houses, as was the case last winter in many cities. I think an honorable discharge given to a soldier or sailor should be considered by the Government and the people as a badge of honor and a recommendation of the highest order. Yet this is not so to-day, and very few of those who have served their country faithfully and honestly have been shown any preference in these matters whatever. In fact, we have a splendid lesson in the Philippines. A great many of our best young men volunteered and went to those far-away islands for service in the United States Army and Navy. A number of them remained there after the war, and becoming acclimated and learning the customs and language of those people were given civil employment by the Government. Yet we find the new Governor General of the Philippine Islands discharging man; of these men who have been occupying responsible positions in that government and giving the places to men who either did not serve in the Army or Navy of the United States at all, or who, in many instances, fought us and assailed the flag. Such actions as these on the part of our Government do not encourage the best young men of America to enlist in the Army

The Government of the United States must adopt a different policy if it expects to have an efficient Army. The Government of the United States must also recognize that when its citizens join the Army or the Navy to go to war and lose their health and life there are dependents left behind-widows and orphans-and it is the bounden duty of the Government to help these dependents in pensions and otherwise if they expect a feeling of genuine patriotism and love of country to permeate its people and to cause splendid young men to enlist for service. Men will not enlist in sufficient numbers unless they are fairly treated while in the service and after their discharge. At the present time Congress has authorized the maintenance of an Army, and all of the necessary employees thereof, amounting to 5,023 officers and 102,985 enlisted men. Yet, according to the latest reports from the War Department, the actual strength of the United States Army, exclusive of the Philippine Scouts, is 4,572 officers and 88,444 men. Therefore there is a shortage right now; and how does the administration expect to increase the Army to its proposed plans of 141,843 officers and men unless in the act of Congress creating this increase they provide fairer treatment for the men who have served their country and those they expect to enlist to increase the strength of the Army? I trust no one will misinterpret my statement in regard to this matter, because I am most heartily in favor of increasing the Army and Navy. I am also heartily in favor of a reserve army, as well as the enactment of laws that will give to the men of the States more reason for becoming members of the National Guard thereof.

The National Guard pay bill ought to be enacted into law, and other things that will encourage and promote efficiency in the National Guard. We must all admit the the National Guard is to-day in an unsatisfactory condition. While the total enlistment is in the neighborhood of 120,000, not over one-half of that number have had any rifle practice and not over 35 per cent have ever qualified as second-class marksmen or better. The report of the War Department shows that 23,000 of these National Guardsmen even failed to present themselves for the annual inspection, 31,000 absented themselves from the annual encampment, and 44.000 never appeared on the rifle range. Therefore it is plainly evident to all that the Congress of the United States, in its plan of increasing the Army and Navy, must give serious and wise consideration to the needs of the National Guard and the Naval Reserves. What is true regarding the Army-its being unprepared for service by reason of their shortage in number and equipment-is also true with reference to the Navy. A great navy is the greatest asset that any nation can have. Our Navy to-day is not in first-class condition. We have only 33 battleships less than 20 years old, 11 of which belong to the second-class line; 4 are building and authorized, making a total of 37; we have only 68 destroyers; our enlisted naval personnel is only 52,300, a shortage of 18,000 men needed to man the fleet; we are also short 4,000 required for the fighting ships; we have a total of 7,700 men in our Naval Militia and no naval reserve. We should have at least 200 submarines, whereas we have only 58, including all authorized to be built, with some obsolete. We have one mine layer and need at least five more. We have 336 mines, while Germany had 20,000 when the war started. We need fuel ships; we need scout ships. We have 3, Germany 14, and Great Britain 31.

It is my earnest wish and prayer that the people of this country shall awaken to the responsibility and duty that confront them, and that the Congress of the United States representing the people will see their duty clearly in the premises by immediately enacting into law measures that will make of our country one that we can be proud of. Let our Army and our Navy be equal to the wealth and power of our country and to We have 21,000 miles of seacoast to defend; we have the Philippines; we have the Hawaiian Islands; we have the Panama Canal, and so forth, to protect. Let us have the guns, fortifications, and the trained officers and men that we need, whatever the expense may be. It will be cheap in the end, whatever the cost is, because if we come to war with a first-class power, such as we will some of these days, the amount of money it would cost us to organize volunteer armies and navies, get the equipment, guns, and so forth, would far exceed all that we would spend in the gradual increasing and making efficient a splendid Army and a splendid Navy. The United States has been most neglectful in this respect. It was so prior to the Spanish War, and is so to-day, and because of this neglect our country is most open to invasion. A first-class country can land thousands of men in the United States within a very short period of time under the present conditions and before we could concentrate an Army division to repel invasion. Imagine the great destruction of property and life that would entail from such an invasion and before we would be able to drive them from our shore. Why subject our country to this possible calamity when we have the men and the money and the patriotism to make of ourselves a nation able to defend ourselves and those for whom we are responsible?

I trust that the spirit of true Americanism will find a solid resting place in the hearts of our nearly 100,000,000 people and that they will respond to it by urging upon the Congress and the Government at Washington the duty of passing the necessary legislation to enable us as a Nation to hold our heads up and say to the world that while we are for peace and want to teach liberty to all the world, yet we will fight if need be to maintain that peace and that liberty which came to us from the valorous deeds of the heroes of the Revolution and other wars in which our great and splendid men have taken part. Let there spread throughout the land a fervent desire for every American boy to serve his country by becoming educated upon the military side as well as the civil side, to the end that he will do everything possible to make himself ready to render efficient service as a soldier in time of war. Let the State and the Nation give to the American boys every opportunity to receive a military education, so that in case of war and they are called upon to defend the colors they will have had a training to be of service to their country and to protect their health, so that when the war is over they will not come out diseased and unfit for further service to themselves and to their country. We do not want ever to see the effects again that came from the Spanish War in that respect. You have but to recall the military camps established during the Spanish War, the food furnished by the Government, the untrained officers and doctors. and so forth, to see how ill prepared we were for that war. If we had had to fight a first-class nation then, we would have lost thousands of men. Let us prevent that condition from existing again in this country. Military training of our American boys will make them more valuable as citizens, and they will more fully appreciate their obligations when they become men. If every Member of the United States Congress and the public officials of our Government had received a military training or had seen service in some war, they would be better prepared for their duties as legislators for the people in this respect. They would be more patriotic, too, and they would not hesitate to do their duty to the men who have served honorably for their country, nor to the widows and orphans of those who have died

Preparedness for the National Defense.

EXTENSION OF REMARKS

HON. JAMES J. BRITT,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 17, 1915.

Mr. BRITT. Mr. Speaker, I do not favor raising and equipping and maintaining a national standing Army of 1,000,000 men, or of 500,000 men, or even of 250,000 men.

I do not favor raising and equipping and maintaining even one soldier, whether regular or volunteer, to be used for the purpose of foreign aggression, or for meddling in the affairs of other nations, or for adventure, or for acquiring a single additional square mile of territory.

But I do most heartily favor raising our standing Army to a force of 150,000 men and providing it with the best possible equipment, and keeping it at the height of efficiency, to form the nucleus of our national land defenses; and that it shall, as far as possible, be used as a military training school, which, under the provisions of wise and proper laws, young men from our citizen body may enter for military instruction, and after a year's study, drill, and practice be permitted to return to their private pursuits, keeping up drill and practice, there to await the Nation's call to the colors, thus forming that most necessary and indispensable part of every well regulated and effective national force, a competent reserve; and I furthermore favor keeping this nucleus of our Army at all times supplied with a full number of able and highly trained officers from which instructors may be detailed to instruct such companies and recruits as may voluntarily form and enroll in our schools, colleges, universities, and other civil bodies, including the National Security League, and offer to drill, train, and fight for the defense of our

Now, if you will, for a moment, follow me carefully and open-mindedly, I think I shall be able to justify this modest proposal for our national defense by a few facts and circumstances which are very plain and simple, and yet so powerfully true, that I believe they will appeal not only to your sense of security, but to your patriotic impulses as well, and be assured in the beginning that I am not making, and shall not make, any attack upon the present administration, or upon any political party, the deplorable condition of our national defenses being due. in my opinion, not so much to unwise party policies or to lack of administration as to that false sense of security which the American people have always felt on account of our democratic form of government, our isolation from the Old World, and the phenomenal success which has always attended our arms when we have gone to war. Our national defense is not a party question, and no patriotic citizen will make it such. The man who would divert it to his or to his party's exploitation is an unsafe counselor, and could not be trusted in time of national peril. Our national defenses are for protection against foreign invasion, and the man who loves his country will let party strife cease with the shore of the sea.

In considering the size, type, and equipment of an army of defense, we must be governed by three considerations: First, what is to be protected and defended; second, the foreign policies necessary to its protection and defense; and, third, the strength of the probable attack.

First and foremost, we have the continental United States of America, with its 3,027,000 square miles of rich and smiling lands, teeming with the best that God has permitted the earth to produce, a glorious heritage from our fathers, and sealed with their blood on a thousand battle fields; with its 100,000.000 of people, with their lives and liberties in our keeping; with its happy memories and its glorious traditions, reaching far back beyond the American Revolution; with its vast heap of \$150,000,000,000 of resplendent wealth; with its monuments of beauty and its galleries of art; with its churches and its religious institutions; with its schools and its colleges; with all its marvelous scientific inventions that have given such swift wings to thought and such powerful arms to industry.

Far to the south of us, and under tropical suns, we have the

Far to the south of us, and under tropical suns, we have the Isthmian Canal, a mighty enterprise of \$400,000,000, the crowning workmanship of the world, by which we have wedded the two great oceans separated from the beginning of time, and cut the world's distances in twain, which we constructed for the

welfare of mankind and for the defense and neutrality of which we have given pledges to all the nations of the earth.

Away to the northwest we have Alaska, that boundless tract of 501,000 square miles of undeveloped treasure land, rich in gold and silver and fuel and forest, those prime necessaries of mankind which we shall so much need in after years when our home land shall have been cut over and burrowed into and wasted away by the scrambling masses of coming generations.

Out a step from the Pacific shores we have Hawaii, a group of over 6,000 square miles of fertile islands, with vast natural wealth, an invaluable naval base, and the world's finest way station on the ocean highway to the Far East.

In the Caribbean Sea, toward the land of the sunrise, lies Porto Rico, rich, prosperous, and smiling in tropical verdure, inhabited by a million and a quarter souls, mainly of an alien race, who became our wards by the fortunes of war and by no act of their own, and whose only safety is in the protection of the American flag.

On the other side of the earth, out in the distant ocean, but under the folds of our flag, lie the Philippine Islands, 128,000 miles in area, inhabited by 8,000,000 strange and simple souls, who are just learning from us the primary lessons of selfgovernment and looking to us to protect them from the greed

and plunder of their threatening foes.

In addition to these, we have our great historic foreign policies, namely, the Monroe doctrine, by which we have, for nearly a hundred years, guaranteed and kept alive republican govern-ment in the 20 Central and South American Republics on the western continent; the maintenance and defense of the Panama Canal, and the guaranty of its neutrality to all the nations of the earth; the exclusion of undesirable Asiatic citizens in order that the integrity of the Anglo-Saxon race may be preserved and that our free institutions be not undermined; and, lastly, the preservation of the open door of trade in the Orient, that our

commerce may float upon every sea and penetrate every land.

These are the people, the institutions, the traditions, the policies, and the possessions of which God has made us his chosen keepers, and who will say that it is not a trust worthy of the noblest and most heroic defense possible to a race of men who, though they love peace and seek righteousness, are yet men of blood and iron in the defense of home and liberty and native

Let us now, in a word, inquire whether we shall probably still have wars in the future, and, particularly, whether our own country is in danger of attack by any one or more of the powerful nations of the earth.

Yes; in spite of the coming of the Christ, and of all the myriad forces for good, man is still a fighting animal. Notwithstanding our advanced civilization, he yet kills and maims and robs and plunders. This has been his nature from the beginning, and this it is likely to be for long, long ages to come. In the primordial forests he wrestled with his savage brother, hand to hand, for self and family; a little later he gave heroic battle for his clan; and now he fights collectively for his nation. And the nation is only an elaboration of individuals. It has the same passions, noble and ignoble, as the individuals of which it is composed. In our efforts to determine what we need, we should accept the teachings of history as they are and not as we would have them. True, man's nature does change, and it changes for the better, but it is only by slow, painful, and imperceptible degrees, such as the Psalmist had in mind when he said, "A thousand years in the sight of the Lord are but as yesterday when it is past and as a watch in the night." We may get a faint, though imperfect, idea of how slow is man's change for the better if we will but reflect that our bodies are no larger, no taller, no more comely than they were when Phidias first chiseled the human form in stone 2,300 years ago; that, although we are more efficient and more variously cultivated, nevertheless the human mind is probably no keener, no more profound, than it was when Aristotle taught the Greeks 2,400 years ago; and even more, we can not tell how much better we are than were the men of Israel when David sang and Solomon wrote 3,000 years ago. This harking back to the misty past may be only speculative and useless, the conclusions unsound, but we do know that man still savagely imbrues his hands in human blood and wickedly slays his fellow man. Why he does it we do not know, but that he does it we do know. Then, since we know that man will war upon man, and nation prey upon nation, is it not the part of wise men to prepare for that which we know will be and not risk our all in idle hopes for that which we merely wish to be? If we will glance over the history of the last century and a quarter, we shall see that more men have been killed in battle than in all the period of recorded history before, and even now the all-Europe slaughter is so great that it has been recently suggested that the present conflict be called the war of wars,

I do not think our country will be drawn into the European conflict, and I pray God that it may not, but no one can tell. On August 1, 1914, Sir Edward Grey stated that the relations between Germany and Great Britain were better than they had been in 15 years, but just four days later these two powerful nations were in the death grapple of war. I do not believe that we are necessarily in any immediate danger of foreign attack. but that we shall be attacked within the next few years, I have not the least doubt. Mars is high on his throne, the leaven is at work, all the world is in ferment, and no man knows what a day may bring forth.

One hundred and thirty-six years ago Washington laid down the maxim that no nation can be trusted to be peaceable and friendly any further than it is bound by its own self-interests. and all history, before and after, confirms his truism. Treaties are but "pieces of paper," and ententes and understandings count for naught when they clash with the greed and ambition of nations. Thus do the instincts of primitive man abide with

s. This is not fancy, it is history. Our position in the world is all changed. We are no longer protected by a majestic isolation. Man's genius, through steam and electricity, has destroyed all isolation. The nations have moved up close together and live in speaking distance. The oceans now make war infinitely more easy instead of more difficult. A half million soldiers can be brought across the Atlantic in 10 days, and across the Pacific in 30 days. The diplomatic, commercial, and social relations of the nations are rapidly becoming more complex and the points of collision constantly increasing. We, as a nation, are in the whirl of this vortex, and from it we can not extricate ourselves. But we can prepare to play the part of noble men and of an exalted nation. now for a moment view our relations to some of our more powerful neighbors.

The German Empire, while professedly friendly, does not in fact like us at all, and for several reasons. In the first place, the German nation has attained a degree of culture and efficiency which it vainly thinks not only entitles it to the mastery of the world, but which would justify it in imposing that mastery upon any and all people whatsoever. Then she hates our Monroe doctrine because, as she says, it makes us virtual overlords over all Central and South America, one-half of the unexploited globe, while she is compelled to remain cooped up within her narrow territorial limits, without a field for the display of her genius, or an outlet for her surplus population. Nor does she like either our commercial rivalry or our unrestricted trade in the munitions of war, which she, because of her military misfortunes, can not share equally with her enemies. It is a fact that a few years ago a member of the German general staff outlined a plan of attack on the United States by which 240,000 German soldiers, under the protection of a powerful naval fleet. could be landed on our shores within a period of 10 days; the cause assigned for the proposed attack being our alleged infringement upon German commercial rights.

Japan, although we first introduced her to the family of nations, holds and cherishes two festering grievances against us, one of them being our taking of the Philippine Islands at her very gateway and clearly within her sphere of influence, and the other our refusal to admit Japanese immigrants to our shores on equal terms with immigrants from the most favored nations of the world, and it is now generally believed that in the year 1907 she fitted out an expedition against us, going so far as to load her troops upon her transports, and that she was dissuaded from making war upon us by the intervention of Eng-

land, her new ally in peace and war.

Not even with Great Britain have we an assurance of continuing peace. Though we are blood of their blood and have lived with them in peace for a hundred years, nevertheless the English, with all their admitted goodness, have never been able to rise above the baneful creed of Washington's maxim of the supremacy of self-interest, and they have not hesitated to make war upon us, or upon any other nation, when their interests or ambitions were at stake. Let us, with fairness to Great Britain but with fidelity to ourselves, turn over a page or two of his-She fought with us against France from 1754 to 1763. and we drove the French from the Western Continent; she fought against us and France from 1775 to 1781, and we drove her from the United States; she fought against us from 1812 to 1814, and we established our rights on the high seas; she fought with Germany and against France from 1792 to 1815; she fought with France and against Russia in 1854; in 1915 she fights against Germany and with France and Russia. all this I am laying no fault at her door, but merely following the course of history and calling attention to the verification of Washington's maxim. Great Britain is, and thinks she must be, the naval and commercial mistress of all the seas; and if, in

the pursuit of our ambition for national supremacy, we should ever cross her purposes on the seas, to say nothing of other grounds of possible difference, we shall see that blood is even thinner than water and that the law of self-interest still obtains even with one of the most exalted nations on earth.

Having now briefly summed up the things of value which we as a nation are obliged to protect, called attention to some possible dangers, and noted a few probable sources of attack, let us next see whether, in a military sense, we are adequately

prepared for the national defense.

According to the last annual report of the Secretary of War, we have a standing Army of 4,701 officers and 87.781 men, in-Of these, 758 cluding the Quartermaster and Hospital Corps. officers and 17,901 men belong to the Coast Artillery, and are, therefore, stationary and can be used only in our city and harbor defenses; 1.008 officers and 18.434 men belong to the technical and nonfighting branches of the Army, such as military instructors, recruits, and men engaged in recruiting, leaving a mobile army-that is, an army that can be moved from place to place at any time of call-of 2,935 officers and 51.446 Of this mobile army, 9.572 men are in the Philippines; 8,195 in Hawaii; 2,179 in the Canal Zone; 849 in China; 862 Alaska; 4.090, until recently, at Vera Cruz; and 707 in Porto Rico, and the Secretary states that when he makes a new and immediately necessary assignment of quotas to our various posts outside of continental United States we shall then have left, for the protection of 100,000,000 people, and over 3,000,000 square miles of territory, a mobile army of but 24,602 men, a force just a little more than twice the size of the police force of the city of New York.

This little mobile army of ours, less than 25,000 in number, together with the small garrisons of our coast fortifications, is to-day the Nation's only regular force for the protection of this vast country, this veritable treasure land, with all its multiform interests, a continent stretching 3.000 miles from ocean to ocean, with a Pacific coast of 1.200 miles, a Canadian border of 3,000 miles, an Atlantic and Gulf coast of over 6,000 miles, and a Mexican border of 1,500 miles. And even this little nucleus of an Army must of necessity be scattered all over the United States, most of it many days' travel from New York, Boston, San Francisco, or any other place of probable attack. Germany or England or any other first-class European power could quietly embark an army of 250,000 men, arrive in the waters of New York within a period of 10 days, flank the forts of that place, go up the coast and land from open sea, enter New York, destroy it. sack it. burn it. or hold it for a \$5,000,-000,000 ransom at will, and be comfortably settled before our little Army could reach the Hudson, and when it got there it would be about as potent for our defense as would be a company of half-armed, half-trained schoolboys against a regiment of well-armed and well-trained regulars.

But not only would the city of New York be at the mercy of the invading enemy, either for destruction or for the levying of tribute, but the conquerors would be in the very heart of our stored arms and ammunitions, in close proximity to all our manufactories of military supplies, and near by the shipyards where all our vessels of war are built, while just a little farther away are the coal and iron mines and oil wells from which all our military supplies are originally derived. Thus a single unchecked invasion at this vital spot of the Nation might leave us utterly prostrate and helpless and lead to our final destruc-

tion or subjugation.

But some one has said that we might, like Pompey of old, stamp our foot upon the ground and call forth a million soldiers between sunrise and sunset. This is a dream and a delusion, and I pray that you will not be put to sleep by it. No army of fighting volunteers can be raised in a day, and if it could it would be practically useless, for it would have neither arms nor ammunition, and would be utterly lacking in that training and discipline so indispensably necessary in troops who are to fight the trained soldiers of an invading enemy. Washington said: "The firmness requisite for the real business of fighting is only to be attained by a constant course of discipline and service.' would only keep in mind the fact, for indeed it is a fact, that in all our great wars our raw militia and untrained volunteers have broken and run away at the first sight of battle, we might then appreciate the necessity of training and discipline. Of course, we have not put this black page in our school histories for our boys and girls to read, but it is, nevertheless, an established truth in the annals of our military struggles.

The plan of preparedness for the national defense which I

have in mind contemplates providing, within a very few years, an available, trained force of not less than 1,000.000 men, only a small per cent of whom would be regularly withdrawn from private pursuits and kept at public expense, the great bulk of

them to remain at home as a trained citizen soldiery, and it would be composed of four distinct ranks, namely, first, a regular army of not less than 150,000 men; second, a national reserve, composed of recruits trained for a time in the Regular Army, returning to civil life, keeping up regular drill practice, and held subject to call; third, a civil reserve, composed of organized companies in schools, colleges, universities, and other civil bodies, duly recognized by the United States, and thoroughly instructed and drilled by its Army officers, enrolled under rules of law, and held subject to call; and, fourth, the National Guard, or Organized Militia, of the several States of the Union, to remain, at at present, subject to the Nation's call to repel invasion,

The nucleus of 150,000 Regulars should at all times be kept at the height of efficiency and in the pink of preparedness. Above all, they should be kept fully and completely officered. should exemplify the last word in drill, dress, training, marksmanship, seasoning, and sanitation. Not a poorly trained nor a deficiently equipped soldier should be permitted among them. They should in every way be models for the other classes of soldlers. As the Regulars are, the reserves are likely to be. The American people should be ashamed if they permit any social distinction that degrades our soldiers. Their uniforms should be badges of honor, not liveries of shame. Entrance to our Army should be hailed as a high privilege and not as the

sullen performance of an unwilling duty.

The specifications for our national reserves should demand young men of strong bodies, of common sense, and of at least a common-school education, as well as the possession of soldierly traits of character. Their training should be rigid, thorough, and complete, and their salaries and subsistence such as to invite the enlistment of the very best material. return to private life their drills, practice, sanitation, and marksmanship should be followed up with the very greatest care, and their training, instead of being allowed to decrease, should be constantly improved, and there should also be provided for them regularly such a course of intellectual study as is calculated to discipline and cultivate their minds in matters

of true military and patriotic concern.

Too great stress can not be laid upon the enrollment, training, and equipment for military service of the young men of our schools, colleges, universities, and other civil bodies. here we have not only the physical qualifications of the soldier but high-class mental training as well, and this is always coupled with true patriotism and high devotion to duty. believe this to be one of the most promising sources from which we may obtain good soldiers for the defense of our country in the future. In England to-day Oxford and Cambridge Universities are practically deserted, their students being on the Continent battling heroically for their country. N. C., at Bingham School, under that fine master, Col. Robert Bingham, and that keen Army instructor, Capt. O. F. Snyder, we have a striking illustration of what military training in our schools can do for young men. Here we have a fine body of young fellows, with erect form, sound bodies, martial bearing, and trained discipline, and every one of them who has entered the military service of his country has performed his duty with marked ability and honorable distinction. In addition to preparation for the defense of their country, such training of our young men is to them an invaluable physical and social asset. This is especially true in an age when we have certain tendencies to effeminacy and weakness, at a time when the average young man eats too much, wears too much, sees too much, and sleeps too little. There should be some provision, either by the Nation or by the State or by both, by which our high-school boys should have at least training in the rudiments of military tactics, as they do in Switzerland and Australia to-day, and no boy should be permitted to attain the age of 21 without owning and knowing how to shoot a good rifle, and in his education sound discipline, manly courage, strict punctuality, high devotion to duty, and patriotic love of country should be deeply

Our National Guard, or the Organized Militia of the several States, although it has never received from either the Nation or the States the support to which it is justly entitled, has, nevertheless, a splendid history, has often covered itself with glory, and is capable of vast and useful military service. Instead of consisting of only 127,410, including officers and men, as it does to-day, it should be raised to 300,000 men, its standards should be improved, its men should be better paid its training should be made more thorough, and its constitutional functions should be more clearly and definitely defined. Considering the small cost of its upkeep in connection with its splendid achievements, it is entitled to the very highest praise.

Although it is not my purpose to speak of our Navy at this time, I nevertheless take the liberty of observing that it should

be raised to a fighting force of at least 50 high-class battleships with all the necessary subordinate and auxiliary craft; that all of its parts and equipments should be thoroughly coordinated and brought up to date; that every ship should be fully officered and manned; and that it should, withal, be brought to a rank among the navies of the world second only to that of Great Britain. This, of course, can not be done at once, but it should be the

goal for which we strive.

But you say all this will cost something. Certainly it will. And it should. It will be worth something. But when we are about to spend money for necessary national defense we should no more stand back on expense than when we go to buy food and clothes for our children, or to employ a doctor to treat our family, or to procure any other actual necessary of life which we must have whether it comes high or comes low. It is a case where expense is not a consideration. Adequate preparation for defense would be cheap at any price. I have no love for the man who is unwilling to fight for his country or to contribute to its necessary defense, and I can scarcely trust myself to describe him. He neither loves his country nor possesses the finer traits of the soul. But, as a matter of fact, the cost of the additional defenses which I advocate would entail no very large expenditure. A very considerable part of the overhead expense of this increase is already met, since no additional physical or housing plants, or administrative forces, would be necessary, leaving only the items of food, clothing, and pay to be provided for. A large saving could be effected by cutting out a number of our needless Army posts, some of which owe their existence not to the demands of the service but to the pork-barrel proclivities of politicians more ambitious than patriotic.

And now, anticipating the cry of "militarism," let me say that the little nucleus of a standing army of 150,000 men, which I propose, is only one-sixth of the standing peace army of Germany, although she is only one-seventeenth of our size and has but three-fifths of our population; is only one-fifth of that of France, with only one-seventeenth of our size and but one-third of our population; is but one-fourth that of Austria-Hungary, with but one-fifteenth of our size and one-half of our population; is only one-tenth of that of Russia, with twice our area and one and a half times our population; is but one-half that of Great Britain (exclusive of her colonies), with but one thirty-fourth of our area and but one-half of our population. There can never be any "militarism" in this country. Whoever raises the cry either does not know what he says or does not care. In either case. he is to be pitied. Our military and our civil affairs are as completely separated as are our church and state. We are not in the least danger of military dominancy. Our only danger is that we shall never be able to arouse the necessary military

spirit to insure our safety and protection.

My earnest hope is that every American citizen, unbiased by party interest, and unswayed by personal prejudice, may become seriously interested in the preparation of his country for its honorable defense, lest these shores of ours be some day trodden by foreign foes, and this glorious heritage of ours become the possession of alien enemies. Let us not forget that a few months ago there was a nation called Luxemburg, but it was not prepared to defend itself, and it has now passed off the map of the world forever; that Belgium, noble little Belgium, though she is fighting for her life as men have scarcely fought since the world began, is not quite equal to her self-defense, and that she is now probably in the last throes of a slowly expiring nation; that China is, and has ever been, powerless to defend herself, and that, step by step, the armies of her enemies occupy her lands and move nearer toward her sacred cities. Surely we shall not permit it to be so where man has made his best and most intelligent attempt at self-government.

Oregon and California Land Grants.

EXTENSION OF REMARKS

HON. WILLIS C. HAWLEY.

OF OREGON.

IN THE HOUSE OF REPRESENTATIVES, Friday, December 17, 1915.

Mr. HAWLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a decision of Judge Wolverton, of the United States District Court of Oregon, in reference to the Oregon and California land grants.

The decision is as follows:

First. That the decree heretofore entered in said cause so far as it affects the defendants, Oregon & California Railroad Co.; Southern

Pacific Co.; Stephen T. Gage, individually and as trustee; Union Trust Co., individually and as trustee, hereinafter called "the defendants." be, and the same is hereby, set aside and held for naught, but is adhered to in all respects as to the defendants and cross-complainants, hereinafter called the "cross-complainants," and the interveners.

Second. That the defendants and their respective officers and agents be, and each is hereby, enjoined from selling the lands or any part thereof granted either by the act of Congress approved July 5, 1866, as amended by the act of Congress of April 10, 1869, or by the act of Conpress approved May 4, 1870, whether the said lands be situated within the place or indemnity limits of the grants thereby made, to any person not an actual settler on the land sold to him, or in quantities greater than one-quarter section to one purchaser, or for a price exceeding \$2.50 per acre, and from selling any of the timber on said lands, or any mineral or other deposits therein, except as a part of and in conjunction with the land on which the timber stands or in which the mineral or other deposits are found and from cutting or removing or authorizing the removal of mineral or other deposits therein, except in connection with the sale of the land bearing the timber or containing the mineral or other deposits.

Third. That the defendants and their respective officers and agents be, and each is hereby, enjoined from making or agreeing to make, either directly or indirectly, any disposition whatsoever of said lands or of any part thereof, or of the timber thereon or any part thereof, or farm removing or authorizing the cutting or removal of the timber thereon or any part thereof, from removing or authorizing the removal of the timber thereon or hap part thereof; from removing or authorizing the removal of mineral or other deposits therein; from cutting, removing, or authorizing the cutting or removing or authorizing the removal or mineral or other deposits therein; from cutting, removing, or

Seventh. That the complainant have and recover from the defendants, Oregon & California Railroad Co., Southern Pacific Co., Stephen T. Gage, Union Trust Co., and each, its lawful costs and disbursements herein, taxed at \$——, and that execution issue therefor.

War-Revenue Tax Act.

EXTENSION OF REMARKS

HON. JAMES R. MANN.

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. MANN. Mr. Speaker, because the Democratic majority in the House refused a reasonable time for discussion and refused any opportunity to permit changes in the emergency internal-revenue tax law, I shall insert sample letters out of a large number which I have received, protesting against various provisions in the present law, which is to be extended one year by the joint resolution.

The following are the sample letters:

CHICAGO, ILL., December 14, 1915.

Hon. James R. Mann, Washington, D. C.

Washington, D. C.

Dear Sir: As manufacturers of toilet requisites, we protest against practically a war tax on toilet preparations. It amounts to 5 per cent on the wholesale price and has to be borne by the manufacturers and retailers. It places no tax on the consumers, for the reason it would upset all retail values. We consider that this tax on our line is a species of discriminatory legislation, of indefensible robbery, masquerading as an intelligent taxation, and of wanton insult, for which there is no present excuse or palliation. When Congress gets ready to tax all other trades—dry goods, hardware, jewelry, and all the rest—druggists and the drug and allied manufacturers will assert no right to exemption; but until then we will be amply justified in regarding such taxation as palpable discrimination, as a crime against our rights, and as an abuse of governmental power, and as a stigma upon the intelligence and sense of justice of Congress.

Yours, very truly,

Comfort Manufacturing Co., F. K. Livon, Manager.

COMFORT MANUFACTURING CO., F. K. LYON, Manager,

CHICAGO, December 7, 1915.

Hon. James R. Mann.

House of Representatives, Washington, D. C.

Dear Sir: We, as commission merchants, are being imposed upon under the present war tax. You are aware of the fact that we pay a special tax of \$20, aside from the fact that we are obliged to pay a tax of 1 cent on every bill of lading and the same amount on telegraph messages and telephone calls.

We do not ask to be relieved of all this burden, as we expect to have to pay our just portion of taxes, but, inasmuch as we pay the special tax for commission merchants, we believe the stamp tax should be eliminated or collected from the transportation companies instead of ourselves, and the tax on telephone calls and telegraph messages should also be eliminated or collected from those deriving revenue from those lines.

also be eliminated of concerced the lines.

We feel fully justified in asking your support to relieve us, and trust you will consider the matter favorably.

Fox & Godding.

Hon. James R. Mann,

House of Representatives, Washington, D. C.

Dear Sir: The question of raising revenue for the needs of the Government will be among the most important to be considered by the Congress now convened.

We are emphatically opposed to the continuance of the present taxes as imposed upon telegraph and telephone messages, bills of lading, and express receipts. As at present applied, these measures are unjust to the commission merchant. He has a direct-license tax of \$20 per annum. His business is such that he is necessarily required to use the long-distance phone and the telegraph to a much greater extent than the ordinary lines of business. The same thing applies to the taxes he is compelled to pay on freight and express receipts, because on account of the perishable nature of his goods he has to make daily shipments to his customers, paying the tax on each shipment, whereas the manufacturer or the ordinary merchant can make one shipment of goods that will supply his customer for weeks or months.

We believe a careful consideration of these things will lead you to the conclusion that the railroad and express companies, telegraph and telephone companies, should be required to pay the taxes on receipts and messages.

The President in his address also suggests a stamp tax on checks. While we do not oppose this form of raising revenue, it should be borne in mind that the commission merchant is compelled to make account sales daily of his consignments, sending a check for each, and, taking the average commission merchant as an example, his stamp tax on checks alone will run from \$150 to \$500 per annum. Should this tax be imposed, which seems not improbable, the Congress will then have taxed this one class of business men to such an extent that many of them will be practically forced out of business.

We respectfully submit the injustice of placing upon one industry the unjust burden of annual license, tax on telegrams, tax on long-distance phone messages, tax on express shipments, tax on freight ship

CHICAGO, December 10, 1915.

Hon. James R. Mann, House of Representatives, Washington, D. C.

Dear Sir: Permit us to call your attention to the unjust taxes imposed by the Government on the commission business.

First, commission merchants are called upon to pay an annual special tax of \$20 for the privilege of conducting their business. Then on top of that another special tax of 1 cent on every long-distance telephone call; on every shipment we make, either by express or freight; also on every telegram. These 1-cent items impose a tax of anywhere from \$2 to \$5 per day, according to the volume of business done.

We believe that the telephone, telegraph, rallroad, and express companies should pay this tax, as they are the ones that receive the benefit of the business we give them.

The \$20 per year tax on the commission business should, in our opinion, fulfill our obligation to the Government, so far as special tax is concerned.

oncerned.

The proposed tax on checks would impose a hardship on commission merchants, for the reason that they issue all the way from 100 to 300 checks per day, 75 per cent of which are for amounts running from \$1 to \$10. Such a tax would impose a burden on widows, children, and people of small means who might be fortunate enough to have a bank account. Their checks would necessarily be very small, but the tax would be the same as on a check for thousands of dollars. If there was an exemption on all checks under \$50 or \$100, it would go a long way toward relieving the class of people that only draw checks for small amounts.

To offset the decrease in revenues derived from import taxes, we believe that those who are receiving enormous benefits from the sale of munitions, etc., to foreign countries should bear a generous share of the tax burden, through a tax on exports.

We earnestly request that you use your influence to correct this unjust burden.

Assuring you that we will appreciate your efforts to aid us, we are

Assuring you that we will appreciate your efforts to aid us, we are, Yours, very truly, C. F. LOVE & Co.

CHICAGO, December 3, 1915.

CHICAGO, December 3, 1915.

Hon. James R. Mann,

House of Representatives, Washington, D. C.

Dear Sir: We, as members of the Western Fruit Jobbers' Association of America, and other related organizations; also, we, as one of the many business concerns in any line of business throughout the country, write you, protesting against the injustice of the revenue law which makes us, and all businesses, pay a tax on all our telegrams, our railroad bills of lading, our express receipts, and our long-distance telephone messages.

Besides the above, we are paying a license (revenue) tax and an income tax.

come tax.

LIII-4

The railroads have increased their freight rates and are demanding more; they have increased their demurrage charges; and their freight service, especially in the West, is rotten.

The telegraph companies only a few years ago increased the rates on their messages—in some instances as high as 35 per cent.

The reduction in rates supposed to have been made by the express companies is a farce; to many points the rates are higher than before the alleged reduction.

To have these several corporations saddle onto the business interests of the country—the businesses from which they (the corporations) get their profits—the tax that they (the corporations) are intended to pay is an outrage. It is not just that business should bear this burden, intended for those corporations.

The business interests of the country will rise en masse and champlon those men who will bring about the passage of a revenue law that will place this tax upon these corporations in such a manner that they can not shift it to other businesses.

Yours, truly,

BUTLER, HOMAN & Co.

SIOUX CITY, IOWA, December 2, 1915.

Hon. James R. Mann.

House of Representatives, Washington, D. C.

DEAR SIR: We suppose there will be considerable discussion at the coming Congress in regard to war-tax measures and an effort made to increase the Government's revenues.

In this connection we wish to call your attention to the great injustice that is being done the fruit and produce trade in the country by reason of the stamp tax on shipments and telephone and telegraph

by reason of the stamp tax on shipments and telephone and telegraph messages.

The fruit and produce trade as conducted in this country now is distributed largely among small fruit and produce houses located at almost every crossroads in the country. Shipments of perishable fruits in carload lots consist of anywhere from 400 to 1,200 packages, and are distributed largely to country dealers in small lots of 1 or 2 packages at a time by express. For instance, a carload of strawberries or raspberries would require perhaps 350 to 400 single shipments, necessitating a stamp tax of \$3.50 to \$4 on such a car.

In this way express shipments are very numerous, and the tax becomes a burden, not only to the middleman but everyone connected with the handling of fruits.

Besides, the business is done largely by telegraph and telephone, which adds materially to the burden on the fruit distributer.

In our own case we estimate it costs us from \$1,500 to \$2,500 per year for this revenue, which is altogether too great a tax on the business in comparison with what other Industries pay, where shipments are much heavier and the volume of business much larger.

Please bear in mind that the commission merchant is also assessed a special tax as commission merchant, and also where he handles cigars he is charged a special tax for selling cigars, in addition to the stamp tax.

We hope you will leek into this cerefully, and when the committee

chars he is charged a special charged a special charged as stamp tax.

We hope you will look into this carefully, and when the committee representing the fruit trade presents the matter to you that you will give their arguments your most carnest consideration.

Yours, truly,

HALEY-NEELEY CO.

CHICAGO, December 6, 1915.

Hon. James R. Mann.

House of Representatives, Washington, D. C.

Dear Sir: In reference to the special tax levied on commission merchants of \$20 per year, also the stamp tax on bills of lading, shipping receipts, telegrams, and long-distance phone messages:

While people engaged in our line of business are very glad to defray our share of the necessary governmental expenses, however, considering the very small margin of profit we derive from our capital invested, we feel we have been called upon to stand a larger percentage of this tax than we should when a comparison of margin of profits of this line of business is made with profits arising from many other commercial enterprises; therefore we appeal to you to do what you can in behalf of those engaged in this line of business when this bill comes up for reenactment, looking for a more equitable distribution of this tax by and between all kinds of business enterprises.

Thanking you in advance for your due consideration of our grievance, and trusting you will lend your good assistance in the furtherance of our cause, thereby bringing about a repeal of this law or the elimination of as much of this burden as possible, we are,

Yours, truly,

Hall, Wedge & Carter.

HALL, WEDGE & CARTER.

AURORA, ILL., December 7, 1915.

James R. Mann, House of Representatives, Washington, D. C.

James R. Mann,

House of Representatives, Washington, D. C.

Dear Sir: In regard to the war tax of 1 cent on all telegrams, telephone calls, and freight and express shipments, I wish to call your attention to the fact that this causes a heavy burden on the fruit and produce dealers, and while I do not want to object to paying taxes, still it does seem that this is unfairly thrown upon the shipper, as none of these public-service corporations stand any of the tax whatever and force all their customers to pay it instead.

It would seem to me that this tax should be distributed so that part of it would be paid by the public-service corporations.

The fact that a tax is assessed upon each express and freight shipment, telegram, and telephone call does not give them the right to throw the burden on the business men and compel him to pay it all.

I hope you will give this matter consideration and use your influence in helping to bring relief to the fruit and produce dealers under the present burden.

On account of the perishable nature of the merchandise very little business is done by mail and correspondence, and orders are nearly all tolls and telegrams and a great number of large and small shipments, all requiring revenue, whereas the retail merchants have few of these expenses, as they order most of their goods through purchasing agents or by mail, as sales are mostly local, so that very little of the tax burden falls upon them.

I want to assure you that I would not object to the taxes being double for defensive preparations, deficiencies, etc., if properly distributed so that everybody pays their share, and hope you will give the matter your consideration.

W. B. Davis Co.

CHICAGO, December 8, 1915,

JAMES R. MANN.

James R. Mann.

Dear Sir: After being forced into involuntary bankruptcy two years ago, we were just getting on our feet a little by making and selling tollet preparations, then we are suddenly slammed with a war tax that makes us pay a cash-in-advance tax on all the business we do plus all the retailer's profits. Every Item which we sell for 25 cents we have to stamp for 50 cents, and so on. The tax is just 5 per cent of our gross business. It is robbery, unfair, and discriminatory. We already pay increased taxes on increased cost of our drugs and chemicals, 700 per cent on alcohol, 20 per cent on all raw materials; and we protest against this measure being extended.

What can you do to help us?

Herreat A. Harris.

Chicago, December 8, 1815.

HERBERT A. HARRIS. CHICAGO, December 8, 1915.

The Hon. James R. Mann, Washington, D. C.

Washington, D. C.

Dear Sir: The dye industry in the United States is suffering great hardship on account of the war. Many materials for the manufacture of colors can not be had at any price, while those left on the market are almost priceless. This is especially true of hair dyes, for the colors are imported from Europe in most cases. In other words, hairdye manufacturers are simply doing their best to drift through the period of the war on the little, high-priced stock now left in this country.

Is it fair to put a burdensome tax on an industry almost driven out of business as it is? Especially so when industries directly benefited by the war are not being taxed. Toilet articles have borne the special stamp tax for 13 months. They have done their share and the burden should now be shifted to those benefited by the war who are obviously better able to support it.

Your kind support of any measure to release us from this burden on hair dyes, if the "war tax" is to be extended, is respectfully and most earnestly solicited.

Respectfully, yours,

HERBERT A. HARRIS. Residence, 6636 Kimbark Avenue, Chicago.

BROOKLYN, N. Y., December 4, 1915.

Hon. JAMES R. MANN, Washington, D. C.

Hon. James R. Mann,

Washington, D. C.

My Dear Sir: Referring to the reenactment of the emergency revenue-stamp law, we beg to inclose herewith copy of a letter, which has been addressed to Hon. F. M. Simmons, also to Hon Claude Kitchin, which goes into this matter thoroughly from our viewpoint.

You will note that this law has caused us to pay into the Treasury of the United States Government taxes at the rate of \$1,105.61 per month, or \$13,267.32 annually.

You will also note that we give the net earnings of the company for three years previous to the enactment of this law, and they averaged \$15,750.19. In other words, we had a successful business until the Government levied a tax on the output of \$13,267.32 annually, on the basis of the present business.

You will perceive that it was impossible for us to pass this tax along to the consumer, which evidently was the intent of the lawmakers, for the reasons given in our letter.

We also inclose copy of the brief which was submitted to Hon. W. M. Osborn, Commissioner of Internal Revenue, orally by Mr. L. M. Bourne, attorney for the company, last December, and it will be seen that the effect of the tax upon this business was even more disastrous than was predicted in the argument.

The reason we send copy of brief is to respectfully call your attention to the fact that talcum powder was not specifically mentioned in the emergency act at all, but was included by the commissioner by construction of the law, inasmuch as the word "cosmetics" was mentioned in the act, and talcum powder was included under this heading.

We hope that you will read the letter addressed to Senator Simmons and Congressman Kitchin, in order that you may be familiar with the record, and the actual facts and figures given in this correspondence are in accordance with the books of the company, and are more eloquent and forcible in their criticism of this unjust law than anything which can be said by the writer.

We respectfully ask your sid in the way of relief of some kind. We are perfectly

By P. E. PAGE.

General Manager.

CHICAGO, December 8, 1915.

Hon. J. R. Mann, Member of Congress, House of Representatives, Washington, D. C.

Sin: We notice from the newspapers that in the forthcoming session of Congress about to meet the emergency revenue act, or so-called wartax law, that expires by limitation on December 31 next is likely to

of Congress about to meet the emergency revenue act, or so-called wartax law, that expires by limitation on December 31 next is likely to be continued.

We are particularly interested in and oppressed by Schedule B of this law, and we sincerely hope that you will see your way clear to have that part of this law abrogated altogether or so amended, if it is continued, that the tax will be paid by the consumer at the time of the final purchase, so that it will not continue to act as an oppressive and discriminating tax upon a few, mostly small manufacturers, like ourselves, who can not well afford to bear such an additional burden, especially at the present time.

We do not wish to burden you with details or statistics unless you wish us to do so, as no doubt you are in a general way familiar with the subject, but we desire simply to call your attention to the fact that a great many of the materials entering into the manufacture of perfumes, tollet preparations, etc., have increased in price since the commencement of the European war, in some instances as much as three and four hundred per cent, while the general business conditions in this line during this period have not been at all prosperous from the standpoint of demand.

On top of this condition, which would have made it difficult for some amail manufacturers, like ourselves, to make any profit this year, along comes this war tax and adds 2½ per cent to the retail or selling price, or about 5 per cent to the wholesale price, an amount greater, we are

free to state, than our net profit amounts to. In our case at least, if this law that we believe is entirely unjust as well as unnnecessary is continued, it virtually means we are going to be legislated out of business.

if this law that we believe is entirely unjust as well as unnnecessary is continued, it virtually means we are going to be legislated out of business.

Does it not seem unjust, as well as absurd, that the Government should lay an oppressive tax on a small percentage of the business people of this country, a proportion of whom at least, who are in a similar line of business to ourselves, are already suffering from the unusual and disturbed conditions incident to the European war, while at the same time it is allowing the people and countries of Europe, who are responsible for this war, in so far as they are able to obtain them, to procure all the munitions of war and supplies of every kind that they can get or can pay for at a good stiff price, of course, without paying any extra or export tax to reimtures this Government for the disturbed conditions which it claims are the cause of its deficiency in revenue and for which conditions these countries and peoples are again entirely responsible.

Again, does it not seem to you absurd and unjust that small firms, like ourselves, that sometimes and it difficult to make ends meet and keep our heads above water in ordinary times, and much more so, as explained above, in these times should be so oppressively taxed as to be almost put out of business, when other large firms and millionaire corporations in certain favored lines that are making tremendous profits out of these unusual conditions are not paying a cent in taxes to make up this deficiency la revenue that the Government reports from these unusual conditions and which conditions these firms and corporations are profiting so enormously by?

In view of these facts that we have, for the sake of brevity, merely touched upon, we trust you will use your influence and record your vote against the continuation of this, in our opinion, absurd, unjust, unreasonable, and unnecessary law after its expiration on the 31st instant, as originally passed, or at least, if its continuation can not be successfully combated, that you

WARD & Co., P. TYRELL WARD, President.

CHICAGO, December 5, 1915.

CHICAGO, December 5, 1915.

JAMES R. MANN,

House of Representatives, Washington, D. C.

Dear Sir: We desire to call your attention to the unequal burden that the special tax of \$20 assessed on commission merchants brings upon us. We are obliged to pay this entire tax, when, as a matter of fact, our business has resolved itself into a basis wherein we have very little merchandise on a commission basis. It is practically all purchased. Why not prorate this tax so that it is shared all along the line, from the producer to the ultimate consumer.

This also applies on special stamp tax assessed on all bills of lading, telegrams, and long-distance phone calls. We are obliged to pay this tax for service performed by other people.

We trust that you will use your cooperation to relieve our share of the burden. We feel that we are being overtaxed.

Yours, very truly,

M. Lapidus Co. (Inc.),

M. LAPIDUS Co. (INC.), M. LAPIDUS.

CHICAGO, December 8, 1915.

CHICAGO, December 8, 1915.

Hon. James R. Mann,
Member of Congress, Washington, D. C.

My Dean Mr. Mann: The grain trade has during the past year and since the internal-revenue act of last year went into effect been burdened with an undue proportion of taxes, enough, in fact, to restrict business considerably.

I hope you will make it a point to do all you can to get these taxes lowered to a more reasonable basis and more in line with taxation charged against other lines of business.

Trusting this will have your attention, I am, with best wishes, Sincerely, yours,

A. L. Somers,

A. L. Somers.

CHICAGO, December 10, 1915.

Hon. James R. Mann, Washington, D. C.

Washington, D. C.

Dear Sir: The internal-revenue act of Congress of last year by limitation expires with 1915. It is credibly reported that it will be reenacted by Congress during the present month. Its provisions relative to grain transactions are burdensome and discriminatory. Other important commodities escape taxation altogether. They should pay their fair share along with grain.

The farmer and grain dealer has most of this tax to pay, as it begins in the country and only ends when the grain reaches Chicago and is sold. The millers and hedgers are all affected by the tax, and as you have a large constituency on the Chicago Board of Trade, I sincerely hope that you can see your way clear to take up the fight and try to get this tax reduced.

Thanking you in advance for any trouble I may put you to, I remain, Very truly, yours,

J. A. Edwards.

J. A. EDWARDS.

CRICAGO, December 11, 1915,

Hon. James R. Mann,

House of Representatives, Washington, D. C.

My Dear Mr. Mann: I am instructed by the officers and directors of the Chicago Board of Trade to say that they earnestly hope that you will do everything possible to secure for us a measure of relief from the burdensome tax which has been assessed on sales of products ou commercial exchanges the past year. It is their opinion that the tax

as it exists at present is discriminatory and consequently unjust, and if it is possible it should be eliminated.

This section of the tax is found on page 17 of Public Document 217, which states that "upon each sale, agreement of sale, or agreement to sell any product or mechandise at any exchange or board of trade or other similar place, either for present or future delivery, for each \$100 in value of said sale, agreement of sale, or agreement to sell, 1 cent, and for each additional \$100, or fractional part thereof in excess of \$100, 1 cent."

In view of the large amount collected from this source during the past year, when many other lines of business have paid no tax whatever except the taxes which we also pay, it would seem that we have a just and proper reason to ask that this tax be changed so as to read, "I cent for each \$200," instead of I cent for each \$100, if the elimination of the tax is impossible.

When I tell you that there has been approximately 500,000,000 bushels of grain handled through the Chicago market from producer to consumer in the most efficient manner during the past year, and that in addition to that an amount probably equal in size was sold through the Chicago market and routed to consumers through other gateways, the great value to the public of this efficient system is apparent.

I have the honor to remain, very truly, yours,

C. H. Canbr, President,

CHICAGO, December 10, 1915.

Hon, James R. Mann,

House of Representatives, Washington, D. C.

Dear Sir: When the stamp-tax act was enacted last year it was the intention, we believe, that mutual insurance companies should be exempted in the law.

We understand that the section referring to mutual insurance companies was so ambiguously worded as to be subject to misconstruction, and that the Internal Revenue Department has attempted to collect a tax upon the mutual insurance companies which will amount to many thousands of dollars.

We presume that it is very probable that this bill will be reintroduced. If so, we believe that the section referring to insurance should be so worded that there would be no question but that the mutual insurance companies are exempt from the stamp tax.

We inclose herewith a proposed draft of the insurance section which we would recommend be followed in the new law.

Thanking you in advance for any assistance that you render, we remain.

Yours, truly,

W. C. Ritchie & Co., R. H. Ritchie,

W. C. RITCHIE & Co., R. H. RITCHIE, 5127 Kenwood Avenue.

CHICAGO, December 7, 1915.

Hon. James R. Mann, House of Representatives, Washington, D. C.

House of Representatives, Washington, D. C.

Dear Sir: The following is copy of resolution adopted by the Illinois State Brewers' Association:

"Resolved by the Illinois State Brewers' Association in meeting assembled on the 29th day of November, A. D. 1915, That we earnestly protest against the continuance of the extra war tax of 50 cents per barrel on malt liquor beyond December 31, 1915, at which time said extra war tax will cease according to present law, and further, that we express to our Senators and Representatives in Congress this our protest against the continuance of the extra tax, and our hope that our Senators and Representatives will give this resolution their attention, approval, and favorable action."

It is earnestly hoped that you will use your best efforts to defeat the continuance of this onerous extra war tax.

Yours, truly,

Ernest Fecker, Jr., President.

ERNEST FECKER, Jr., President. WM. LEGNER, Secretary.

Los Angeles, Cal., December 8, 1915.

Hon. OSCAR W. UNDERWOOD, Washington, D. C.

Washington, D. C.

Dear Senator: During the consideration of the emergency tax bill in Congress last year I wired you that the projected tax upon claret wine was excessive, a product that I sell at wholesale at 15 cents per gallon f. o. b. California, and that it looked like ruin to me.

Through this ill-advised measure my cellars are full of wine, and I have been compelled to borrow sufficient money from bank to meet my current expenses.

This measure also placed a fortifying tax of 55 cents a sufficient with the control of the control of

have been compelled to borrow sufficient money from bank to meet my current expenses.

This measure also placed a fortifying tax of 55 cents a gallon upon brandy which preserves the grape sugar in sweet wine, equivalent to 16 cents per gallon for the wine so fortified, and, with the additional stamp tax of 8 cents per gallon, amounts to a total tax of 24 cents per gallon. In other words, this so-called war tax amounts to more than 50 per cent upon dry and sweet wines, and no distinction is made in light table wines, which retail at only 30 cents per gallon, requiring a stamp of 8 cents.

What has been the result? The wives and families of 15,000 vineyardists in California are made to suffer, and hogs were turned into many vineyards last summer, and thousands of tons of grapes rotted on the vines. The production of sweet wine in California has dwindled from 3,500,000 gallons in 1913 to 1,250,000 gallons in 1915. See internal-revenue reports.

It is one thing to say to the consumer that he shall pay this excessive tax and quite another to compel him to do so. As an illustration, in the Latin quarter of Los Angeles and San Francisco nearly every foreigner who drinks light wine with his meals (where grapes were to be had for almost nothing) made in the back yards and cellars from 5 to 500 barrels of wine and surreptitiously sells it to his kind, for which the Government will never get one cent of tax, and my wine, which is subject to tax and collection, remains in the cellar.

May we not hope for some relief? Otherwise, it spells ruin to every vineyardist in California.

Yours, sincerely,

Chicago, December 2, 1915.

CHICAGO, December 2, 1915.

Hon. James R. Mann, House of Representatives, Washington, D. C.

DEAR SIR: Relative to certain features of the Federal revenue law of 1914, which lapses by limitation the 31st instant, we wish to protest against the reenactment of the tenth item in section 3, that places a

specific tax of \$20 upon commission merchants, and also against that portion of the stamp tax which compels the sender or shipper to affix a 1-cent stamp on bills of lading, telegraph messages, and long-distance telephone calls.

Our business, while known as the commission business, is a legitimate merchandising business, and the singling of us out along with the pawnbroker, circus, and billiard hall is not just.

In the handling of vegetables the number of shipments made is disproportionately large as compared with almost any other line of business, and the invoices small. The very character of the business forces the use of the telegraph and telephone to a very large extent, with the result that, contrary, we think, to the intention of Congress, the burden of these taxes falls more heavily upon this line of business than upon any other, varying according to the general character of the business at from \$50 to \$1,000 per year.

We appreciate the need of revenue, but direct taxation that singles out either an individual or a line to bear an unjust portion of the burden is wrong, and it is our hope that you will give this matter your careful consideration and if investigation satisfies you of the correctness of our general statement that you will oppose a reenactment of these features.

We hope to at least have an opportunity to be heard upon these features.

Appreciating your consideration we are

Appreciating your consideration, we are, Yours, truly,

G. M. H. WAGNER & SONS.

CHICAGO, ILL., December 1, 1915.

Hon. James R. Mann, Washington, D. C.

Washington, D. C.

Dear Sir: As a partner in the above concern and a constituent from your congressional district, I wish to protest most energetically against a continuance of the present emergency tax law.

All liberal-minded people must admit that even under most economic conditions an enormous sum of money is needed to cover the running expenses of our Government, and I would feel unworthy of being a citizen of this country if I did not assist in the production of this much-needed revenue by paying a fair proportion of it; but the emergency tax law as it at present exists is hardly fair to our line of business, as we are obliged to pay a direct tax of \$20 per year, besides the stamp tax on telephone and telegraph messages and bills of lading, which in our case amount to a great deal more than the abovementioned direct tax.

I would therefore respectfully ask you to give this matter a few

I would therefore respectfully ask you to give this matter a few moments of your valuable time in order to convince yourself of the injustice of this tax toward us, and, if you find it so, lend us your assistance toward the defeat of this law if an attempt is made to reenact it either as a separate measure or as part of a new one.

Yours, sincerely.

NEW YORK, N. Y., November 20, 1915.

The Hon. JAMES R. MANN, Chicago, 111.

DEAR SIB: I beg to call your attention to the inclosed statement of conditions in our industry, the products of which, including tooth pastes, tooth and mouth washes, tollet soaps, perfumes, etc., are taxed under Schedule B of the emergency revenue act.

I sincerely hope you can see your way clear to vote to eliminate this most unjust provision, in the event that the emergency revenue act is extended.

most unjust processes and the extended.
Yours, very respectfully,
The Manufacturing Perfumers' Association,
A. M. Spiehler, President.

CHICAGO, November 22, 1915.

Hon. JAMES R. MANN. First National Bank Building, Chicago, Ill.

First National Bank Building, Chicago, Ill.

Dear Mr. Mann: Permit me to call your attention to inclosed booklet.

I hope your time will permit of its perusal.

About one-quarter of a million voters materially affected by Schedule B of the so-called war tax solicit your aid in securing its elimination. The industries in which these voters are engaged are as follows: Retail druggists, manufacturers of proprietary medicines, manufacturers of pharmaceutical preparations, manufacturers of barbers' supplies, manufacturing perfumers, manufacturers of tollet requisites, etc., and the employees of all above-mentioned industries.

Elimination of Schedule B enables us to continue in business. Retention of Schedule B means rulnation.

I earnestly, in behalf of myself as well as all engaged in above-mentioned industries, request you to do your utmost to wipe out this "wrong"

wrong." Yours, very truly,

The Washington Post on the day following the passage of this joint resolution in the House, published an editorial which is worth reading, and as this extension of remarks under leave to print does not in fact go into the temporary Record for several days after the Post editorial was published, I insert it as a part of my extended remarks:

THE DEMOCRATIC WAR TAX ON THE PEOPLE.

It was a score day for the Republicans yesterday in the House of Representatives when the majority of the Democrats went on record for direct taxation of the people of the United States for another year and the Republican membership of that body went on record unanimously against it.

The votes of the Democrats for direct taxation will be exhibited in every district where there is a possible chance for the election of a Republican candidate for Congress, in every State where there is a chance for election of a Republican Senator; and while seats of Representatives from the far South and Senator; and while seats of Representatives from the far South and Senators from the far South will not be endangered by the record made yesterday, scores of seats of the Representatives from the so-called border States and from the North will be lost to the Democrats if this direct taxation is fastened on the people while there remain open so many other ways of obtaining the funds needed by the Government.

There will not be a penny collected under this direct taxation but from this time henceforth will be referred to by Republicans as the Democratic tax upon the people of the United States.

A party very vigorous with its political work is the Republican Party, and it has already started in its work of educating the people to believe that direct taxation is evidence of Democratic inability to successfully administer the Government, and the vote of yesterday will but serve to establish such view in the minds of the people.

Every war-tax stamp and every penny paid for a war-tax stamp by the people from this time forward will be a Republican argument against Democratic administration and the candidates of the Democratic Party.

The state of the second state of the

Every war-tax stamp and every penny pain for a war-tax stamp by the people from this time forward will be a Republican argument against Democratic administration and the candidates of the Democratic Party.

Democrats and Republicans in the rank and file of the people are a unit in opposition to the taxation, and while party pressure and administration influence may succeed in forcing enough Democratic Representatives and Senators to support it and carry it over another year. November, 1916, will bring party disaster in both branches of Congress and probably in the Nation through resentment of the people as against this form of taxation. If the Democratic congressional leaders had been wise, they would have accepted the amendment offered to continue but four months or that for six months and in the meantime acted upon revision of the revised tariff, the issue of bonds or the issue of Treasury notes bearing no interest.

The Democratic Party has pledged itself to a revenue tariff for 40 years, and the Democratic voters and a large number of Republican voters would join in approval of raising the needed revenue through the tariff.

For Democratic leaders to say that can not be done is to stamp the Democratic Party as proclaiming false doctrine in the past or to admit their own inefficiency and lack of ability to provide revenue in the good old Democratic way.

Democratic and Republican rank and file alike would prefer by far that revenues be raised by the tariff than by direct taxation.

Millions of Democrats and other millions of Republicans would prefer an issue of Treasury notes bearing no interest to direct taxation.

If the question were put to vote of the people of the United States to-day, not 1,000,000 out of the 16,000,000 of voters in the United States would vote for direct taxation.

And with knowledge of this strong popular antagonism to this war-tax system the majority of the Democratis in the House yesterday voted to tax the people in that obnoxious way.

War-Revenue Tax Act.

EXTENSION OF REMARKS

HON. WILLIAM H. COLEMAN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, December 16, 1915.

Mr. COLEMAN. Mr. Speaker, I am opposed to the extension of the provisions of the emergency-revenue act for the period of one year as provided for in this resolution. The Treasury deficit now existing is not so much due to the smallness of revenue as to the extravagant expenditures under this Democratic administration, which expenditures not only necessitate the extension of the provisions of the emergency-revenue act for at least a temporary period, but also necessitate the levying of additional taxation. And inasmuch as a new revenueproducing act must be passed by the present Congress increasing the amount of revenue to be collected from our people to a sum far in excess of that which will be provided by the extension of the provisions of the present act the extension should not continue for a longer period than required for the passage of a new revenue measure and certainly not beyond the end of the present session of Congress, by which time new legislation must necessarily be had touching the matter of internal taxation.

Personally I adhere to the Republican theory of raising the greater portion of our revenue from the producer of foreign-made goods sold in our markets by means of a tax collected at the custom house. This indirect method of taxation, as experience has abundantly demonstrated, whether drawn from the history of the Roman Republic or Empire or from our own representative Republic, is infinitely superior to the collection of taxes by direct means, to say nothing of the great advantage accruing to our manufacturers and workingmen as a result of this system

It is unfortunate that our Democratic friends, with the rich experience of the past to guide them, persist in relying mainly on direct in preference to indirect taxation, and that they so steadfastly refuse to aid home industries by restricting foreign competition, while at the same time making the foreign producer. rather than the American citizen pay the bulk of the expenses of running our Government; and it is even more unfortunate that they are unable to pass a revenue law that will produce sufficient funds with which to pay the expenses of the Government, which they seem unable to do largely because of the extravagant man-ner in which they administer the public funds placed in their custody.

PRESENT CONDITIONS NOT NEW.

For what is happening under this Administration is so similar to what occurred under Cleveland's second term, when the Democratic Party, as now, were in complete control of both the legislative and executive departments of the Government, that the similarity should be carefully noted and compared for the benefit and guidance of the present as well as future generations. Then, as now, expenditures exceeded the receipts; then, as now, the Treasury was in a chaotic condition. Then a resort was had to the sale of bonds to replenish the depleted Treasury, which bonds to the extent of more than two hundred and sixty-two millions of dollars were sold to tide the Nation over the insufficiency of revenue produced under the Wilson-Gorman tariff law. And to-day, with similar conditions prevailing as a result of the Underwood tariff law, with our country now, as then, at peace with all the world, to prevent another issue of bonds excessive direct taxes and emergency taxes have been and are yet to be levied in a vain effort to prevent a Treasury deficit.

Let me call your attention with some degree of particularity to the conditions that prevailed from 1893 to 1897 in so far as our finances were concerned. For the fiscal year ended June 30, 1894, expenditures of the Government exceeded the receipts by \$69,800,000, and this was the result of the first year of Democratic rule following nineteen consecutive years under Republican laws in which receipts had exceeded expenditures, and throughout the four years of Cleveland's administration the expenditures continued to exceed the revenues. To repair the inroads thus made on the Treasury, bonds on four different occasions were issued; fifty millions in January, 1894; another fifty millions in November, 1894; more than sixty-two millions in February, 1895; and still later another issue amounting to one hundred millions; and all of this happened at a time when our country was at peace with all the world.

HISTORY REPEATS ITSELF.

Under this administration we find history repeating itself and a deficit at the end of the fiscal year 1914, prevented only by a resort to most unusual methods of taxation, especially in the history of our own country, leaving us at the end of the year with revenues exceeding expenses to the extent of \$34,418,000 after having collected in addition to the customs duties and the ordinary internal taxes additional revenues as follows: Corporation income tax, \$32,456,000; corporation excise tax, \$10.671,000; and individual income tax, \$28,253,000. And for three months of this fiscal year the Payne law was in operation and the customs receipts on imports admitted during these three months over what would have been collected had the Underwood duties prevailed, amounted to approximately \$31,500,000, and in addition to this the rates of the Payne law on wool and sugar were continued for a longer period to December 1, 1913, on wool and to March 1, 1914, on sugar, yielding in revenue approximately \$20,287,000 more than the regular Underwood tariff rates would have yielded, amounting in all to \$51,787,000. without which, notwithstanding the unusually heavy tax burdens levied, a deficit would have resulted.

The total customs revenues for this fiscal year were \$292,-320,000, while the internal revenue amounted to the immense sum of \$380,410,000, a much larger amount than ever previously raised by internal taxation. And after having levied this burdensome tax on the people, this same administration was later forced to the passage of the emergency-revenue act, which was only to continue until December 31, 1915, but is now under consideration for extension another year, or until December 31, 1916.

But with all the strenuous efforts of the party in power to raise revenue by all manner of taxation, including the emergencyrevenue act, the end of the fiscal year 1915 found the receipts to be \$697,910,828, as against disbursements amounting to \$731,399,759, or a deficiency in revenue of \$33,488,931. In this year the customs receipts were less by \$82,534,000, than the year preceding, while the previous year's high-water mark of internal taxes was surpassed and a new mark registered of \$415,-669,000, or an increase of \$35,259,000.

And just here I want to call attention to the popular misapprehension that our imports, as a result of the European war, are inconsiderable This popular notion is far from the true condition, and the question that should concern us and cause us alarm, in view of the real facts as to the volume of our importations, is this: What would have happened had it not been for the protective influence of the war?

In the fiscal year 1914 our imports reached the record-breaking sum of \$1,893,925,000, larger by many millions than the importations of any previous year in our Nation's existence, and yet our customs duties were less by \$19,000,000, than in the year 1912, when our importations were smaller in volume by the immense sum of \$240,650,000, while in the year 1915, with the war in full operation, our imports amounted to \$1,674,220,000, or \$20,-955,000 more than in the year 1912, and yet our customs duties,

Same and the same of the same

notwithstanding these greater importations, were less by

\$101.535,000.

Comparing, then, the conditions that existed at the close of the fiscal year 1915 with the conditions that existed at the close of the year 1914 or the years immediately preceding thereto, we find what seems to be the inevitable result of Democratic rule, expenditures exceeding the revenues of the Government, and this in face of a resort to methods of taxation heretofore unknown. And matters are still growing worse, for up to December 15 of the present fiscal year the customs revenues were \$10,917,000 less than for the corresponding period of the fiscal year 1915, while the internal tax was \$24,217,000 more than the corresponding period of the previous year. Thus we see internal taxation mounting still higher while the customs receipts are steadily declining, which condition bids fair to continue until the people of this country, speaking their opinion at the polls in next year's election, will put an end to this false economic rule and restore to power a party in every way fit to manage the affairs of this great Nation. With such a record of disaster following the two efforts of the Democratic party since the Civil War to put a successful tariff law on the statute books, is it any wonder that the President of these United States and other leading Democrats should now be demanding that the tariff be taken out of politics?

And now let me direct your attention to the extravagance of the sixty-third Congress as compared with the expenditures of the sixty-first and sixty-second Congresses. The last or sixty-third Congress expended \$1,415,432,152 which was \$113,292,692 in excess of the expenditures of the sixty-second Congress which in turn exceeded the appropriations of the sixty-first Congress by \$3,864,098. Now with this thought firmly impressed on your minds I call your attention to a plank in the Baltimore platform that reads as follows: "We denounce the profligate waste of money wrung from the people by oppressed taxation through the lavish appropriations of recent Republican Congresses, which have kept taxation high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a Democratic government and a reduction in the number of useless offices, the salaries of which drain the substance of the people."

Is it not amusing in the light of the experience of the past two years to read this platform pledge and compare it with the performance of the party that made such an appeal to the people of this country. Surely we will all agree that our Democratic friends are good preachers of economy when out of office trying to get in power, but poor practicers thereof after assuming the

reins of office.

CAUSE OF DEFICIT.

The real cause of the Treasury deficit is the extravagance of an administration that came into power on a platform of rigid economy, but instead of relieving the people of the burdens of taxation which they pointed out as then existing, and returning to that simplicity and economy which befits a Democratic government, they have surpassed all previous records in extravagant expenditures and added tax burdens too heavy for our people to bear.

Even with ordinary and reasonable government expenditures and with no war to interfere in any degree with importations the Underwood law would have miserably failed as a sufficient revenue-producing act, but with the engrmous increase in appropriations of Government funds under Democratic rule its diminished revenues are grossly inadequate to the public needs. Had the Payne bill been kept on the statute books, as the figures previously cited abundantly prove, a sufficient amount of revenue would have been produced to pay the expenses of the Government wisely and judiciously administered and under the present deplorable extravagance would have made unnecessary the emergency-revenue act.

DEPRESSION AND FAILURE.

Not only has the Underwood law been a complete failure as a revenue-producing act, but what is also true is that from the time of its passage, in October, 1913, to the breaking out of the European war, in August, 1914, it caused general distress and was directly responsible for throwing out of employment millions of our people, repeating the disastrous experiences through which we passed from 1893 to 1897.

To illustrate these generally distressing conditions I need only call your attention to the record of 18,280 failures during the calendar year of 1914, the largest number of failures in any one year in all of our experience, with the record-breaking volume

of \$357,909,000 liabilities.

Under its provisions, as under the provisions of the Wilson-Gorman law, idle mills and short-time operation of mine and factory was the general rule, and conditions under the Underwood law would have continued to be equally deplorable with

those that pursued us through the years of 1893 to 1897 had it not been for the enormous, altogether unprecedented, demand for war materials that came from foreign powers, relieving the situation somewhat and permitting wheels to turn that otherwise would have remained idle and industry to quicken that was already stagnant under the unwise provisions of this law.

This act so blighting to the industries of this country was supported by Democrats because they were committed to the economic policy it embraced and to which they still adhere notwithstanding the educating experiences through which they have now twice passed and which should prompt them to change their ways. It was also supported by some of the more radical Progressives, who, fearing to stand on the trusty beaten paths of experience and longing for any kind of a change, without regard to where it might lead them, preferred to plunge into the unknown realms of experiment which not only lead to the Nation's industrial and commercial depression but also brought disaster to those wanderers from tried Republican principles who took the fatal plunge.

SCHEDULE B.

In opposing the extension of this measure for a longer period of time than the close of the present session of Congress I do it because in the framing of a new emergency-revenue law we can correct some of the more flagrant abuses of the present act and levy our internal taxes in a more equitable manner, even though they can not be lessened.

I especially direct your attention to the unusually oppressive and unjust provisions of Schedule B of the act, where on the sales of small-priced articles of 5 and 10 cents a tax of 2½ per cent is levied. It is impossible to pass this tax in any portion to the purchaser, and the whole burden must be carried by the manufacturer and the retail dealer, and being thus placed on a small number of people instead of generally and more widely

distributed it is inequitable and unjust.

Considering further the tax that these manufacturers and retail dealers pay under other provisions of this same act, this oppressive section might well be abolished, as under other sections they are called on to pay a fair share of tax as apportioned among business men generally, and should not be required to pay what is in its operation a special tax upon a class of dealers and is subject to the criticism of being class legislation.

I conclude my remarks my saying that the Democratic majority, notwithstanding the deplorable condition to which their tariff law, coupled with their extravagance, has brought the Treasury of the United States, should not continue this unjust measure with its many objectionable features beyond the time that new revenue legislation can be enacted by the present Congress and the heavy tax burden now imposed on our people be equalized, if not materially lessened, as it should be, by transferring it in part to the manufacturers of foreign Governments who sell their products in competition with our people. And certainly our friends on the other side should agree to the amendment providing that the extension be limited to the end of the present session, by which time new taxation laws will have been enacted.

Abolish the Fahrenheit Thermometer.

"The change will have to be made some time, for it is simply inconceivable that the trrational Fahrenheit scale will be forever tolerated by an educated people."

EXTENSION OF REMARKS

HON. ALBERT JOHNSON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 14, 1915.

Mr. JOHNSON of Washington. Mr. Speaker, on December 6 I introduced House bill 528, providing for the discontinuance of the Fahrenheit thermometer scale in Government publications. My sympathy with this movement is hereditary, and in introducing the bill I felt that I was performing an act of piety to the memory of my father. He was by compulsion of circumstances a lawyer, by natural gifts and tastes a chemist, physicist, and inventor. One of the things I remember most vividly is the impatience with which he often complained of the nuisance of having to handle two thermometric scales, one used by nearly all scientists throughout the world, the other in popular use in English-speaking countries, whereby he was perpetually com-

pelled to convert one into the other, with perpetual nerve irrita-tion and loss of precious time. President Van Hise, of the University of Wisconsin, writes me that, as a result of the adoption of the centigrade scale by the American Institute of Electrical Engineers "an untold amount of time and labor has beer saved." In reading that phrase I thought I could almost been saved." In reading that phrase I thought I could almost bear my father's voice. It is a profound satisfaction to me to know that if he were living now he would thank me for this bill.

The movement was started by an article by Dr. Robert Stein in the Washington Post. I may add that much of the work in connection with the bill has been done by Dr. Stein.

ABOLISH THE FAHRENHEIT THERMOMETER.

By Robert Stein.

[From the Washington Post, Oct. 17, 1915.]

[From the Washington Post, Oct. 17, 1915.]

One glance suffices to show the simplicity of the centigrade, the complexity and clumsiness of the Fahrenheit thermometric scale.

Centigrade: Freezing point, 0°; boiling point, 100°.
Fahrenheit: Freezing point, 32°; boiling point, 212°.

The abolition of the Fahrenheit scale would be welcomed by scientists the world over. The centigrade scale is used in all countries except the United States and the British Empire. Even in these it is largely used by scientists, who are thus compelled to think in two scales, and to specify the scale by the letter C. or F. If you are told that the thermometer at some foreign locality registered 40°, without C. or F., you do not know whether the people wore Palm Beach suits or overcoats. Many a scientist ruefully remembers precious hours which he had to waste in trying to find out whether a given temperature was C. or F. If all temperatures were recorded in degrees C., the discomfort of doubt would not exist.

Freezing point, the zero of the centigrade scale, is the natural zero from which everybody consciously or unconsciously reckons. What is meant by 40° F. or 22° F. or -4° F.? You do not know until you find out how many degrees it is above or below freezing point. Thus—

40° F. means 8 degrees above freezing point (32 - 22).

-4° F. means 36 degrees below freezing point (32 - 22).

-4° F. means 36 degrees below freezing point (32 + 4).

Centigrade degrees require no calculation, because the figures themselves tell how many degrees they are above or below freezing point.

Thus—

22° C. means 22 degrees above freezing point.

22° F. means 30 degrees below freezing point (\$22 + 4).

Centigrade degrees require no calculation, because the figures themselves tell how many degrees they are above or below freezing point. Thus—

22° C. means 22 degrees above freezing point.

The Fahrenheit thermometer has remained in use simply because it is the oldest. It has a mere squatter's right. Constructed in 1720, and being the only accurate thermometer then in existence, it was adopted in England all the more readily because Gabriel Daniel Fahrenheit, a native of Danzig, in Germany, long resident in Holland and England, was a member of the Royal Society of London, in whose transactions some of his papers were published. He placed his zero at the lowest temperature known to him, to wit, 32° below freezing point.

The first thermometer with zero at freezing point was constructed in 1731 by René Antoine Ferchault de Réaumur, a mative of La Roehelle, in France, long resident in Paris. He called boiling point 80.

In 1742 the first centigrade thermometer was constructed by Anders Celaius, professor of astronomy at Upsala University, Sweden. In most Celaius, professor of astronomy at Upsala University, Sweden. In most The Réaumur was widely used till the French revolution, when, in the beneficent movement to decimalize all standards, the Celsius was adopted and officially called centigrade. The dominant influence of France at the beginning of the nineteenth century rendered to the world the great service of making the centigrade fashionable, with the result that the Réaumur has gradually gone out of use, to the great relief of all workers who have to compare the temperature records of different countries. The disappearance of the Fahrenheit would be a still greater relief.

Fahrenheit's mistake in placing the zero not at freezing point, but 32° below it, has been perpetuated for 195 years simply because no-body has taken the trouble to propose its discontinuance. It is a classic example of the incredible inertia of accomplished facts. Because a German i

Before introducing the bill I thought it best to submit it for criticism to some 200 scientists. Of the replies received to date 131 were favorable, 7 unfavorable. Extracts from the letters are appended. The necessity of concentration compels me, to my keen regret, to forego the pleasure of publishing these interesting letters in full, but I hope that an opportunity for so doing may present itself later on. The extracts contain the answers

to the objections that have been raised.

Many correspondents, as might be expected, take occasion to advocate the substitution of the metric system for our traditional weights and measures, while others deprecate any attempt to make the centigrade scale a yokefellow to the metric system. With the latter view I thoroughly agree. The metric system and the centigrade scale are two totally different subjects, and the attempt to yoke them together would merely create confusion. The essential advantage of the metric system lies in this, that it enables multiplication and division to be performed by the mere moving of the decimal point. This has nothing to do with the centigrade scale, because there is no occasion to multiply and very little occasion to divide degrees of temperature. Conversely, the essential advantage of the centigrade scale lies not in the division of the thermometric base into 100 degrees but in placing the zero at freezing point. This evidently has nothing to do with the metric system. Everybody will admit that the inconvenience attending the general introduction of the centigrade scale would be trifling compared with the inconvenience involved in the general introduction of the metric system. A mouse can enter where an elephant can not; but if the mouse is

tied to the elephant, you can easily see what will happen.

It has been suggested that four years is too short a time in which to make the change. If scientific men share this view, I shall, of course, be glad to accept an amendment lengthening the

period to 8 or even 10 years.

RESOLUTIONS.

BOTANICAL SOCIETY OF WASHINGTON, D. C., NOVEMBER 2, 1915.

Whereas the Botanical Society of Washington recognizes the confusion, inconvenience, and loss of time and efficiency occasioned by the lack of uniformity in recording temperatures in this country; and Whereas the centigrade scale is much simpler and more convenient than the Fahrenheit scale and is the present standard in all other countries except Great Britain, and is also in general use among scientific men throughout the world: Therefore be it

Resolved, That this society expresses its hearty approval of the efforts being made to obtain legislation requiring the use of the centigrade scale in all future Government publications.

RESEARCH CLUB OF THE UNIVERSITY OF MICHIGAN, NOVEMBER 17, 1915. I secured the adoption of a resolution favoring the bill by the Research Club of the University. (W. B. Pillsbury.)

POARD OF DIRECTORS AMERICAN CHEMICAL SOCIETY, DECEMBER 11, 1915.

Resolved, That the directors of the American Chemical Society are unanimously in favor of the bill presented by Hon. Albert Johnson for the adoption of the centigrade scale of temperature measurement in United States Government publications, with the understanding that for such time as may be deemed necessary the Fahrenheit scale may follow in parentheses where the various bureaus deem such inclusion wise.

AMERICAN ENTOMOLOGICAL SOCIETY, DECEMBER 13, 1915

At a meeting of the American Entomological Society, held December 13, 1915, H. R. 528, a bill to discontinue the use of the Fahrenheit thermometer scale in Government publications, was fully indorsed. (Henry Skinner, recording secretary.)

ROCHESTER ACADEMY OF SCIENCE, DECEMBER 13, 1915.

In the opinion of the Rochester Academy of Science, your bill permitting the use of the centigrade thermometer in the various departments of the United States Government is a desirable measure, and deserves our indorsement. The academy does not favor forcing it upon any department or bureau. (George II. Chadwick, secretary.)

EXTRACTS.

any department or bureau. (George II. Chadwick, secretary.)

EXTRACTS.

I wish to express my most hearty approval and to say that if this bill passes the result will be a decided increase in the efficiency of everyone who has to do with temperature measurements. It is hard to estimate the time which would be saved in the long rum by all users of the present double system, but it would certainly be very great. I wish to assure you of the most vigorous support of myself and of all my colleagues, as well as of the American Institute of Electrical Engineers, which body has done its best to support the gospel of the decimal system. (Comfort A. Adams, professor of electrical engineering, Harvard University, Cambridge, Mass.)

I believe the change would be a good one. (Chester Allen, assistant and field organizer, extension division, University of Wisconsin, Madison, Wis.)

I heartily favor the change from the Fahrenheit to the centigrade scale and am glad to indorse any measure to that end. I believe, however, that the change will naturally be a scmewhat gradual one, and that for the present it would be unwise to rely solely on the centigrade scale in certain classes of Government publications. Many of these publications are intended for popular consumption—for farmers and persons who are accustomed to thinking in terms of the Fahrenheit scale. Some of our practical directions to farmers include the tem of temperature. In that class of publications I think it would be preferable to state the temperature according to both scales. This would perhaps be allowable under the proposed legislation, the Fahrenheit denomination being given in parentheses after the centigrade. (E. W. Allen, Chief Office of Experiment Stations, Department of Agriculture, Washington, D. C.)

The proposed change commends itself on the ground of economy and efficiency in all aspects of Government work that touch upon scientific or permanently valuable contributions. The change has to come, and the sooner the better for the credit of all concerned.

I am heartily in favor of this law. (Bion J. Arnold, electrical engineer, chief subway engineer, city of Chicago, 105 South La Salle Street, Chicago.)

I approve the proposed law, in case the change is desired at this time by the officers of the Weather Bureau. (8, I. Bailey, Phillips professor of astronomy, Harvard University, Cambridge, Mass.

I think most emphatically that it is time the Government in its publications should rise to international scientific standards, and you will have the cordial support of the great body of scientific men. If our forefathers had not had some initiative we would still be using the clumsy English monetary system in place of our decimal system. It is a pity that they did not go farther while they were about it and change the system of weights and measures. Doubtless the only reason they did not do so was because, at that time, such problems were not regarded as within the jurisdiction of the Federal Government. (Joseph Barrell, professor of structural geology, Yale University, New Haven, Conn.)

Barrell, professor of structural geology,
Conn.)

It does seem to me that it would be a step in advance in our scientific and commercial relations with Latin America if the United States could generally adopt the centigrade system. The only suggestion I can make is that of the parallel use of the Fahrenheit with the centigrade scale until the latter could be generally understood and approved.
(John Barrett, director general, Pan-American Union, Washington,

can make is that of the parallel use of the Fahrenheit with the centigrade scale until the latter could be generally understood and approved.

(John Barrett, director general, Pan-American Union, Washington,
D. C.)

It would seem desirable to make this change. (Albert L. Barrows,
professor of zoology, University of California, Berkeley, Cal.)

This is a step in the right direction, and we are strongly in favor
of it. In the steel business it is especially desirable to have but one
scale, as in recent years a large proportion of the steel plants have
had to go quite thoroughly into the question of heat treatment, and a
great deal of research work has been done in different countries, employing both the centigrade and Fahrenheit scales. This has not only
introduced confusion, but makes it often necessary to translate one into
the other. (G. Bartol, president, The Otis Steel Co., Cleveland, Ohio.)

The centigrade scale is now used in all specifications for electrical
apparatus and in most scientific publications. Its use in Government
publications will go far toward securing its general adoption, which
is so highly desirable. 'Philip P. Barton, vice president and general
manager Niagara Falls Power Co., Niagara Falls, N. Y.)

The project should not need much urging since it involves relatively little inconvenience and expense. That it would be of great
advantage to bring the temperature scale of the people into conformity with that used by practical scientists, without exception,
throughout the world seems to me obvious. (Carl Barus, professor of
physics, Brown University, Providence, R. I.)

I should heartily favor the abolition of the Fahrenheit thermometer.
Of course it is already abolished in all chemical and physical laboratories. (George F. Becker, Chief, Division of Physical and Chemical
Research, United States Geological Survey, Washington, D. C. First
approval received Oct. 20, 1915.)

I am heartily in sympathy with the bill. It may be of interest to
you to know that the following committees, of

New York.)

I am heartily in favor of the general use of the centigrade. Scientists the world over use the centigrade scale only, as it is much simpler and more rational than the Fahrenheit. (Marston T. Bogert, professor of organic chemistry, Columbia University, New York.)

The bill meets our approval. The Fahrenheit scale is an illogical one: there is no reason for using 32° as freezing point and 212° as boiling point. The centigrade is used exclusively by scientists, and is the one in commercial use in practically all civilized countries except the English-speaking ones. It might be necessary to make an exception of the publications of the Weather Bureau until people at large have been educated in the use of the centigrade scale along with the Fahrenheit. (James E. Boyd, professor of mechanics; W. H. Minor, assistant professor of wine engineering; D. J. Demonet, professor of metallurgy; E. E. Semermeier, professor of metallurgy; Ohio State University, Columbus, Ohlo.)

Columbus, Ohlo.)

Like 99 out of 100 scientific men, I am heartily in favor of a change from the Fahrenheit to the centigrade scale of temperature measurement. Such a change means not only a step toward uniformity in scientific measurements, but an actual saving of labor and confusion. Scientific measurements and physical values and constants are more than ever of world-wide interest and should be expressed in terms which are intelligible anywhere in the world. (A. C. Boylston, chemist, Mallinckrodt Chemical Works, St. Louis, Mo.)

I have long been in accord with the tendency to standardize not only thermometers but other instruments, indeed, everything that could be standardized, so as to eliminate the trouble in these modern times of having to translate one weight, measure, or colu into the various types that we have in this good country of ours.

Let me illustrate. When we receive an order from the splendid Bureau of Standards—to the director of which, and his assistants, all honor—it comes to us in the metric system; it is the same from the Coat and Geodetic Survey; the same from the Smithsonian Institution; and, if I remember rightly, the same from the Weather Bureau. When, however, these orders come to us from the various arsenals of the Army, West Point Military Academy, United States Navy or War Department, they come to us in English measures.

The writer appeared before the Committee on Coinage, Weights, and Measures on February 6, 1902. The report of my examination, on page 84 of the records of that date, will give you my opinion of the centigrade system, for it is based on the proper kind of standard, viz, the

freezing and boiling points of water. Some systems, particularly the Fahrenheit, are about as sensible as the old colored man who said he had no business to buy a barometer, for did not the Lord give him the rheumatism to tell what kind of weather to predict? (John A. Brashear, chairman John A. Brashear Co. (Ltd.), astronomical and physical instruments, Pittsburgh, Pa.)

I wholly approve the substitution of the centigrade scale for the Fahrenheit. It is more logical to divide the scale into 100 degrees than into 180 plus 32 degrees, a very cumbersome method. (N. L. Britton, director New York Botanical Garden.)

To fix an early date for the use of the centigrade scale in Government publications may hasten the needed revision of textbooks in elementary, secondary, and higher education, and thereby lessen the confusion which is more or less inevitable in a change of habits. (Edward F. Buchner, professor of philosophy and education, Johns Hopkins University, Baitimore.)

I share with most scientific men a strong prejudice in favor of the centigrade. I am doubtful, however, whether it would be wise to exclude the Fahrenheit altogether, for example from the weather reports. I should think it might be better for some years to give the temperature in both scales as a transition measure to familiarize the people with the centigrade scale. (H. A. Bumstead, professor of physics, director Sloane Laboratory of Physics, Yale University, New Haven, Conn.)

The centigrade scale is now used in all scientific work and is in more general use throughout the world than the Fahrenheit scale. It seems an opportune moment to make the change, when we are trying to get into closer commercial touch with all the Latin-American countries. (Alfred E. Burton, dean Massachusetts Institute of Technology, Boston, Mass.)

Every laboratory guide for students, every reference text, and practically every book dealing with any of the chemical, physical, or biological sciences must be cluttered up with tables for conversion from one thermometer scale

The centigrade is easier to learn, easier to use. If the school children were taught the centigrade scale they would find it easier than the Fahrenheit. (Otis W. Caldwell, professor of botany, University of Chicago.)

I am in favor of the centigrade scale chiefly because it is more extensively used and therefore more international and more convenient. (Philip P. Calvort, professor of zoology, University of Pennsylvania, Philadelphia, Pa.)

I am pleased to have an opportunity to advocate the use of the centigrade scale. The Fahrenheit scale is an unnatural one. It merely "happened" that Fahrenheit scale is an unnatural one. It merely "happened" that Fahrenheit called the bolling point 212°. He might just as well have called it 170° or 269°. He called "zero" the lowest temperature be could obtain from the mixture of lee and sait. This may mean something to the maker of ice cream, but the operation of mixing ice and sait means essentially nothing to anybody else in the present day. Having fixed his "boiling point at 212° and his ice-and-sait temperature at "zero," the freezing point fell at 32°. The freezing temperature is something which the people in general fully comprehend and men of science have to deal with very frequently in their laboratorles. It is a perfectly definite thing in all occupations and in all countries. It is a natural starting point and it ought to be called "zero," as it is in the centigrade scale.

The interval of 180° between freezing and boiling in the Fahrenheit scale makes the unit of 1° too small. The general public does not appreciate the difference between temperatures 56° and 54° nor between temperatures 47° and 45° nor between temperatures and the contribution of our country, and in the greater number and more populous of our colonies, the people have no conception of what the temperature stands for. If they are interested and able to translate it into words, they invariably compute how many degrees it is below freezing. If the centigrade scale were in use they would know immediate

Museum.)

In scientific work the centigrade scale is used almost exclusively, both in England and in this country. In chemistry and physics one rarely sees any other scale employed. It would undoubtedly be a very good thing if the centigrade could be substituted for the Fahrenhelt. (F. W. Clarke, chief chemist, U. S. Geological Survey, Washington, D. C.)

I am heartly in favor of the bill. (P. P. Claxton, commissioner of education, Washington, D. C.)

Such a bill would be not only wise but timely. All scientific men use only the centigrade scale in everything. I myself do not know the temperature powadays in Fahrenheit terms. The Fahrenheit scale has been abandoned by the entire world, practically, with the exception of the United States and England. It has no scientific merit whatever and would be cumbersome were it not that it is absolutely ignored in scientific work. (Charles E. Coates, dean, Audubon Sugar School, Louisiana State University, Baton Rouge, La.)

I should be very glad to see the centigrade used in all scientific publications, including those of the Government. (A. D. Cole, head, department of physics, State University, Columbus, Ohio.)

It is commendable that the Government is taking such a progressive step. (William Coleman, professor of physics, Howard University, Washington, D. C.)

I thoroughly approve the bill. Uniformity of practice and of standards are desirable from every point of view, and we should at the earliest possible moment bring our practice into conformity with that of the majority of civilized people. (George C. Comstock, director, Washburn Observatory, University of Wisconsin, Madison, Wis.)

Probably no scientific man would hesitate to register his approval. Since all our scientific publications have made the change long ago, this action would simply make the Government scientific publications consistent with general scientific practice. (John M. Coulter, professor of botany, University of Chicago.)

I am heartly in favor of the bill. (S. A. Courtis, supervisor of educational research, Detroit public schools; consulting director, department of measurement, efficiency, and standardization, school of education, University of Oklahoma; secretary of section L (education), American Association for the Advancement of Science.)

I am in entire sympathy with your proposed legislation. (F. V. Coville, botanist in charge, Bureau of Plant Industry, Department of Agriculture, Washington, D. C.)

In common with practically all scientific workers, I have long adopted and consistently used the centigrade scale. Its advantages are so obvious that they hardly need mentioning, but it may be worth while to emphasize specially the fact that the cardinal points of the scale, namely, zero and 100°, are far more convenient for use, as is its decimal arrangement, than is the Fahrenheit scale. The fact that the centigrade is used by scientists in all countries and has been adopted by almost all the leading Governments of the world is a tremendous argument in its favor. (Henry C. Cowles, associate professor of botany, University of Chicago.)

On general principles, or because I favor whatever makes for simplicity and uniformity and economy of time

On general principles, or because I favor whatever makes for simplicity and uniformity and economy of time and labor, I approve the proposed change. I recognize, however, the almost insuperable difficulties to be overcome. (W. O. Crosby, professor of geology, Massachusetts Institute of Technology, Boston.)

The centigrade system is more convenient and in every way better than the others. If people only knew the system, they would want it. A campaign of education is all that is needed to make the change. Any authoritative public use of the system will help to introduce it. (Ulric Dahlgren, professor of biology, Princeton University, New Jersey.)

The change will be most enthusiastically received by all of us who are concerned with scientific matters, since the centigrade scale is the only convenient and logical one. The public is to a considerable extent accustomed to it now, and would find no difficulty in its use by the Government. (Edward S. Dana, professor of physics, Yale University, New Haven, Conn.)

I am glad to give a statement of reasons for abolishing the Fahrenheit scale.

The principal reason is that the majority of the civilized nations of

The principal reason is that the majority of the civilized nations of the world have abandoned all scales for the centigrade, and it is very desirable that there shall be uniformity in this respect throughout the civilized world. The fact that so many nations have united on the centigrade scale is an a priori reason for thinking there must be some advantage for it over other scales.

centigrade scale is an a priori reason for thinking there must be some advantage for it over other scales.

The zero point of the centigrade scale is something important, namely, the freezing of water, which every farmer and householder recognizes as a very critical temperature, while 100° is the point of boiling of water, which for every housewife is a very critical temperature. By the Fahrenheit scale there are about a hundred degrees experienced in our latitude, whereas by the centigrade there are only some 55. Every unit of the centigrade scale, therefore, becomes important and easily remembered, while the units in the Fahrenheit scale are too numerous to hold readily in the mind. Thus by the centigrade 0° is freezing, 5° is cold, 10° is low temperature, 15° is high temperature, 20° is the normal temperature for rooms, at between 20° and 25° we begin to divest ourselves of the standard clothing, plece by plece, 30° is already very warm, 35° is hot, and 37° is the temperature of the blood, while 40° is rarely reached in this latitude and constitutes a point of great danger to life.

The objection is sometimes made that there are too many occasions to use minus temperatures with the centigrade scale; but in view of the fact that in parts of our country temperatures of -30° and -35° Fahrenheit are common, it is clear that the Fahrenheit scale does not relieve us of these minus signs. In the centigrade scale, however, minus means something definite, to wit, the degree of freezing that the water in the lakes and in the ground is undergoing. As in the degrees above zero, so in the minus degrees, one of the centigrade degrees indicates a readily appreciable grade of increasing danger of freezing and of discomfort.

If it be urged that the finer division of the Fahrenheit scale is necessary for some purposes these units are divided into tenths and hundredths and eyen thousandths for greater precision, and that in scientific work, where great precision is required, the Fahrenheit scale has gone out of use altogether

lapse of a few years no one for a moment would consider returning to the antiquated system.

Naturally the makers of Fahrenheit instruments do not wish to junk their old stock, but here again the inconvenience will be only temporary and more than overbalanced by the opportunity that thermometer makers will have to concentrate their attention on a single scale. (Charles B. Davenport, director, Station for Experimental Evolution, of the Carnegie Institution of Washington (Cold Spring Harbor, Long Island, N. Y.).)

Scientists the world over, so far as I know, are using the centigrade thermometer. Before any change is made, the recommendation of the men in the scientific bureaus would be exceedingly valuable. (Eugene Davenport, dean and director, College of Agriculture and Agricultural Experiment Station, University of Illinois, Urbana, Ill.)

The object of the bill has my unqualified approval and I am of opinion that the best interests of the Government and the people will be subserved by adopting the centigrade scale. (Arthur P. Davis, Director and Chief Engineer, U. S. Reclamation Service, Washington, D. C.)

There is everything to be said in favor of this change for its simplicity and common sense, and I can not conceive any serious difficulties in the way of its adoption. (Bradley M. Davis, professor of botany, University of Pennsylvania, Philadelphia.)

I have not the slightest hesitation in intereding a project for the substitution of the centiferate thermometer wise in place of a place of the state scale. This has been regularly done in all the schedilic publications this laboratory since its foundation in 1904, and all our records are in oblysic of centiferate degrees. The literature of the subjects in good property of the subjects in good of the centiferate degrees. The literature of the subjects in good property of the subjects in good the subjects in good the subjects in the subject of the subject is not subject to the subject of the subject of the subject is not subject to the subject of the subject in the subject of the subject is not subject to the subject of the subject is not subject to the subject in the subject is not subject to the subject in the subject is not subject to the subject is not subject to the subject in the subject is not subject to the subject is not subject to the subject is not subject to the subject is subject is

Congress.

The cost to the Government would not be inconsiderable. Instruments and forms of the Weather Bureau would require change. The new notation for a time would have to be interpreted in terms of the old, and in other ways the popular texts would have to be expanded. There would be the same difficulty in combining old and new American temperature records that is now found in combining American records with

foreign; and some of our bureaus, the Weather Bureau especially, would be subjected to the censure or ridicule which conservatism is prone to bestow on rational reforms. The cost, however, would all be incurred in a few years, and, in my judgment, the effort and money would be well expended. (G. K. Gilbert, geologist, U. S. Geological Survey, Washington, D. C.)

Ingten, D. C.)

I have a copy of the revised draft of a bill to abolish the Fahrenhelt thermometer and will bring it to the attention of the American Society of Zoologists at its annual meeting in Columbus, December 28-31, and will recommend the adoption of a resolution favoring the enactment of the bill. (Caswell Grave, professor of zoology, Johns Hopkins University, Baltimore, secretary American Society of Zoologists.)

The plan has the peculiar merit that it is not of a nature to arouse any organized opposition; even those who are constitutionally opposed to innovation will not care enough about the movement to take active steps against it. (R. R. Gurley, M. D., 542 East Seventy-ninth Street, New York.)

I heartily approve of the proposition. (Thomas H. Haines, M. D.

any organized opposition; even those who are constitutionally opposed to innovation will not care enough about the movement to take active steps against it. (R. R. Gurley, M. D., 542 East Seventy-ninth Street, New York.)

I heartily approve of the proposition. (Thomas H. Haines, M. D., clinical director, Bureau of Juvenile Research, Columbus, Ohio.)

This bill has my hearty approval. (Percical Hall, president Columbia Institution for the Deaf Washington, 11 (Paul H. Hanus, professor of control of the Deaf Washington, 12 (Paul H. Hanus, professor of the Martington of the Columbia Institution for the Deaf Washington, 12 (Paul H. Hanus, professor of the Columbia Institution for the Deaf Washington, 12 (Paul H. Hanus, professor of the Columbia Institution for the Deaf Washington, 12 (Paul H. Hanus, professor of the Columbia Institution (Paul H. Hanus, professor of the Columbia Institution for the Columbia Institution (Paul H. Hanus, professor of Deaf Washington, 12 (Paul H. Hanus, Professor of Paul Hanus, Professor of Deaf Washington, 12 (Paul H. Hanus,

studying the papers published by the workers in other countries. (L. O. Howard, Chief, Bureau of Entomology, Department of Agriculture, Washington, D. C.)

To illustrate the inconvenience of the simultaneous use of two thermometric scales, let me say that the matter is much the same as if we used two systems of coinage—pounds sterling, shillings, and pence, and dollars, dimes, and cents—in our mints and in our commercial transactions. Some prices would be in pounds sterling, others in dollars. The double system would be costly, confusing, and profit nothing. The two scales of temperature are equally confusing. (H. D. Hubbard, chief clerk, Bureau of Standards, Washington, D. C.)

The strongest argument for the centigrade scale is its simplicity, (George F. Kay, head of department of geology, University of Iowa, Iowa City, Iowa director of Iowa Geological Survey.)

The Fahrenheit scale is unscientific to the verge of foolishness; it is clumsy and difficult to explain; it has practically been given up in scientific and in international work; it stands in the way of progress, civilization, and mutual international understanding. In electrical engineering the centigrade scale is the acknowledged standard, to which reference is made in contracts and specifications, as indicated by the standardization rules of the American Institute of Electrical Engineers. The selection of 212° for the boiling point of water is so inconsequential as to be quaintly amusing. Any bill which will help to relieve us of the humiliation of being the laughing-stock of Europe will be a boon to America. (A. E. Kennelly, professor of electrical engineering, Harvard University, Cambridge, Mass.)

You are right. The sooner we become interested in international measures, the better. (George F. Kunz, president New York Academy of Sciences, 401 Fifth Ave., New York).

The practical advantages of the centigrade scale over the Fahrenheit are so obvious to anyone who has had any experience in making, using, and comparing temperature measurements, and t

more convenient way of recording temperatures. (John Johnston, physicist, geophysical laboratory, Carnegic Institution of Washington.)

The Fabrenheit principle is absolutely unscientific and thoroughly antiquated. The passage of your bill would signal a great progress, scientific as well as economic, and would be the means of saving a great amount of time, energy, and expenditure. (Berthold Laufer, curator of anthropology, Fleid Museum of Natural History, Chicago.)

I take great pleasure in indorsing your bill most heartily. The chief object aimed at is to introduce simplicity in the place of the present complicated system. The desirability of the change is so evident that I can hardly see how the communication that you have sent me can be much enlarged upon. (A. O. Leuschner, dean of graduate school, University of California, Berkeley, Cal.)

I think that scientists will be unanimous—certainly the physicists will—in supporting your bill. It is an effort for us to think in terms of the Fahrenheit scale, and its use involves great loss of economy in time and effort. (B. P. Lewis, professor of physics, University of California, Berkeley, Cal.)

I am heartly in favor of the change. (Waldemar Lindgren, professor of economic geology, Massachusetts Institute of Technology, Boston, Mass.)

I hope that the bill will be enacted. (George Grant MacCurdu, greater)

I am heartily in favor of the change. (Waldemar Lindgren, professor of economic geology, Massachusetts Institute of Technology, Boston, Mass.)

I hope that the bill will be enacted. (George Grant MacCurdy, curator anthropological section, Peabody Museum of Natural History, Yale University, New Haven, Conn.)

I have the honor to transmit herewith the letters which have been received from the technical men of the Bureau of Mines regarding the proposed bill for the abolition of the Fahrenheit scale. You will note that it is practically the unanimous opinion that the centigrade scale should be used wherever possible, although under certain conditions it is felt by some that the Fahrenheit scale should follow in parentheses, at least until the public has become thoroughly familiar with the more modern scale of temperature. (Van H. Manning, Director Bureau of Mines, Washington, D. C.)

This whole question is one in which I am very much interested, but the change in scales has many far-reaching effects that are by no means appreciated by the majority of those whose approval is noted in the list you submit. It is obvious, however, that Dr. Stratton, of the Bureau of Standards, fully appreciates the complexities of the situation. I think existing legislation gives authority to introduce the centigrade scale, and additional legislation to that effect would seem to be unnecessary and have no more influence in abolishing the Fahrenheit scale than that already on the statute books. New legislation at this time should make the change more or less compulsory after a certain date, otherwise, I feel that it will serve no useful purpose. (C. F. Marvin, Chief of Weather Bureau, Department of Agriculture, Washington, D. C.)

The centigrade scale is in such nearly universal use by scientific men and there is such a preponderating weight of reason to support this usage that hardly any man of science as such could object to your bill. It is indeed unfortunate that the irrational and clumsy English system of pounds, feet, and Fahrenhe

director psychological laboratory, University of Kansas, Lawrence, Kans.)

The bill has my cordial approval. (W. J. V. Osterhout, professor of botany, Harvard University, Cambridge, Mass.)

The double standard is very confusing, and as practically all scientific workers use only the centigrade the Fahrenheit is quite unnecessary. (Richard M. Pearce, in charge the John Herr Musser Department of Research Medicine, University of Pennsylvania, Philadelphia, Pa.)

From a scientific standpoint, the change is undoubtedly desirable. (Edward O. Pickering, professor of astronomy and director of Harvard College Observatory, Harvard University, Cambridge, Mass.)

I am heartly in favor of the bill. In the mere matter of the description of the weather the scale is not of great importance, but in scientific calculations of thermodynamic quantities the centigrade degree has the advantage of being international in most branches of exact science. The only exception seems to be in steam engineering, where the Fahrenheit degree has vogue along with the centigrade in the United States and in Great Britain. Much real confusion and difficulty exists on that account. For example, in the case of a man trained as a chemist anywhere in the world, the centigrade degree has entered into all of his calculations of thermal quantities. When such a man enters a profession related to steam engineering and to some branches of chemical engineering operating in connection with heat engines in the United States, he has the greatest difficulty with the use of the Fahrenheit degree. These difficulties may be overcome by the use of numerous conversion factors, but such difficulties would be avoided once for all by the use of the centigrade scale, which would be distinctly encouraged by weather reports of the Government in centigrade degrees. (G. W. Pisrce, director, Cruft Laboratory, and assistant professor of physics, Harvard University, Cambridge, Mass.)

I most heartily approve of your bill. It will be an immense saving in time to all scientists an

every one.

I secured the adoption of a resolution favoring the bill by the Research Club of the university, a body of some 80 men who are selected for their interest and accomplishments in investigation of all kinds. (W. B. Pillsbury, professor of psychology, University of Michigan, Ann Arbor, Mich.)

Personally I favor the centigrade scale, but I think that certain bureaus of the Government, for example, the Weather Bureau, should be allowed, but not compelled, to use this system exclusively. (M. J. Rosenau, professor of preventive medicine and hygiene, Harvard University, Cambridge, Mass.)

I would express my unqualified approval. I have never met with the remotest shadow of an argument in support of the Fahrenheit scale. Everybody knows that the only reason for using this unsclentific and inconvenient scale is babit. It is high time to follow the example of other nations in adopting a scale which shall harmonize our temperature data with those of most of the world. (E. A. Ross, professor of political economy, University of Wisconsin, Madison, Wis.)

I am heartly in favor of the proposed bill, and I believe this opinion will be shared by practically every man of science in this country. The centigrade scale is now used to the exclusion of others in all scientific publications except those of certain departments of our Government. The advantages of the change would apply to others than those engaged in science. American travelers are bewildered on being confronted with the centigrade scale abroad. The passage of this bill would eventually remove this embarrassment. (Frank Schlesinger, director, Allegheny Observatory, Allegheny, Pa.)

I can only indorse this proposal as being to my mind a very desirable change. The Fahrenheit scale is inconvenient and clumsy. (W. A. Sctchell, professor of botany, University of California, Berkeley, Cal.)

The present use of two methods of registering temperatures by the Government is absurd. The Department of Agriculture in all its scientific reports uses the centigrade. (S. P. Sharples, chemist, 26 Broad Street, Boston.)

I heartily approve of this measure and believe there would be no difficulty in obtaining the formal approval and indorsement of practically all the scientific men in this country.

I inclose herewith a copy of a resolution which was adopted at the last reg

Natural Sciences, Philadelphia.)

It is greatly to be hoped that the bill will become a law. (George Oils Smith, Director United States Geological Survey, Washington, Decidis Smith, Director United States Geological Survey, Washington, Directorable that the irrational Fahrenheit scale will be forever tolerated by an educated people. A famous proverb says, "Never put off till to-morrow what you can do to-day." Suppose the change was post-poned till 1935; that would mean that the thousands of people who study temperatures recorded in different countries would be subjected for 20 years longer to the nuisance of having to think in two scales and having to convert one into the other. It would mean that thousands of new Fahrenheit thermometers would be made each year, to be discarded in 1935 and till then to afflict thousands of logical minds. It would mean that the intelligent and skilled workmen who make these thermometers would have to biush each time they etch the foolish scale on the wise instrument. It would also mean that the rising generation during the next 20 years must be taught an antiquated, irrational, difficult system and many thousands of students must be taught two systems, when by a little manly resolution we can relieve them of that burden and leave to them the positive enjoyment of learning the easy, up-to-date, logical centigrade scale. Finally, when the change does come, the inconsentation that the many many them to the rational scale.

Let us not shift our burden needlessly, singsisbly, cravenly onto the shoulders of our successors: they will have pienty of burdens of their own. Let us profit by the opportunity to earn high credit for energy and progressive spirit ourselves and to stimulate our successors by our example to earn similar credit in the many lines that will still be open to them. Of course, the born kickers, like the poor, are always with us, and they are doubtless getting ready now to say no: but when the change is made, as it is sure to be made, in the near future, they will cong

gain to the public will be educational. Of the 20,000,000 school children in this country few ever learn to understand what a degree of temperature means, because the Fahrenheit scale is too difficult to learn, too difficult to remember. Call freezing point zero and bolling point 100, and every child will at once understand it and remember it through life. (Middleton Smith, Bureau of Crop Estimates, Department of Agriculture. Washington, D. C.; member of the Point Barrow Arctic Expedition of 1881-1883.)

My first impulse is so strong in favor of the end you are endeavoring to accomplish, viz, to displace the Fahrenheit scale by the far more desirable centigrade scale, that I am almost led to favor any bill for that end. Yet upon careful reflection I feel that very careful consideration will have to be given to the form in which the bill is drawn in order that it may not cause serious trouble in the relation of the work of the Government to some industries that are intended to be assisted by that work.

Practically all scientific workers and a large percentage of engineers would welcome the general use of the centigrade scale. It is also probably true that no one factor would so materially contribute to the use of the centigrade scale as its adoption by the Government. The greatest factor in educating the public in the use of that scale would be the publication of weather reports by the United States Weather Bureau in terms of centigrade degrees. Indeed this question is so intimately related to the work of that bureau that I would suggest that any contemplated bill be submitted to the Weather Bureau for criticism and suggestions.

While it is true that a very large part of the engineering work of the Bureau of Standards is at present carried out on the centigrade scale, there are cases where, in view of the units of measurement employed in the industries, it is necessary for the bureau to publish its results based on the Fahrenheit scale, in order to make the work easily intelligible and really useful to those i

done so.

Again, take the question of clinical thermometers used by the physician. Hundreds of thousands of these are used by the physicians in this country, and many thousands are sent annually to the Bureau of Standards to be tested. If the results of our tests are to have any value, we must give the corrections in Fahrenheit degrees. Physicians will not at once abandon the Fahrenheit scale because the Government refuses to use it. Indeed, for some years the medical bureaus of the Government have been using clinical thermometers graduated on the centigrade scale.

will not at once abandon the Fahrenheit scale because the Government refuses to use it. Indeed, for some years the medical bureaus of the Government have been using clinical thermometers graduated on the centigrade scale.

I wish to make it clear that I do not regard the examples cited as in any sense insuperable obstacles to a bill that will accomplish what is desired. But such questions should be carefully considered in drawing up a bill, to prevent imposing a very serious handicap on the work of some of the Government bureaus.

Possibly some of the difficulties would be removed by stating that the centigrade scale shall be the standard scale after a certain date in all Government publications, but that the use of the two scales side by side, the Fahrenheit in a secondary or parenthetical sense, is permitted for a period of years, say five, before the latter is entirely outlawed. It would seem to me quite probable that such an arrangement would be most satisfactory to the Weather Bureau, as it would gradually accustom the public to the new scale. It is quite conceivable that great dissatisfaction would result if the weather reports were suddenly published in terms of the new scale.

There is one other feature that I should like to have understood, and that is just what constitutes publication. This bureau is called upon to test all kinds of instruments for the general public, including instruments for temperature measurement. A certificate of test is issued for such instruments. I would like to make the point that such a certificate of test does not constitute "publication" in the sense intended in this bill. Obviously, such an interpretation of the bill would seriously interfere with the functions of this bureau in its work of testing for the public I f the public continues to use Fahrenheit instruments for some time after the use of that scale has been abandoned by the Government, it is obvious that the bureau must report its tests in terms of the scale on which the instrument is constructed. For example, s

[Second letter.]

[Second letter.]

I am most heartily in sympathy with the effort to substitute the centigrade for the Fahrenheit scale. It is always difficult to make estimates of public opinion, but I feel fully convinced that scientific men are almost unanimously in favor of such a step, and a very large majority of our engineers would welcome the change, certainly the most progressive engineers would. We might as well admit that it would cause some inconvenience—"trouble," if you choose to call it such—but what important reform can be accomplished without inconvenience? I feel reasonably certain that a vast majority of our scientific and engineering public are of the opinion that the advantages resulting from the change would far outwelgh all the inconveniences that might result during the few years of transition from one scale to the other.

The strongest reason in favor of the substitution of the centigrade for the Fahrenheit scale is that it is a big step in the direction of a worldwide use of a single scale of temperature. It is probably safe to say that at least eight-tenths of the important scientific data in the world are published in the centigrade scale. Practically the only countries in which the Fahrenheit scale is used to any considerable extent are the United States and Great Britain, and in these countries the use of the

centigrade scale is constantly increasing. Thus in the regulations of the London gas referees the centigrade scale has been adopted for the testing of gas. The international weather map, published by our Weather Bureau, uses the centigrade scale, since the reports received from all other countries are transmitted in terms of that scale. Many of the committees of our technical and engineering societies, such as the American Society of Civil Engineers, the American Society for Testing Materials, the American Society for Municipal Improvements, the American Chemical Society, the American Electrochemical Society, the American Institute of Electrical Engineers, etc., have adopted the centigrade scale in the standard specifications and tests prepared for and adopted by these societies.

these societies.

In my opinion the strongest reason for the adoption of the centigrade scale is the one above given, viz. the international uniformity. Many other reasons, relatively less important, may be cited. The lower fixed point on the centigrade scale, the zero point, is a natural fixed point of great economic importance in the economy of nature. The freezing point of water, the large amounts of latent heat involved in the change of state of water to ice and vice versa, have an important bearing on climatic conditions, on the safety of crops, the preservation of foods, and every phase of our daily life. From every point of view, the centigrade scale, with freezing point of water 0° and the bolling point of water 100°, is a more rational scale than the Fahrenheit.

[Third letter.]

Our everyday affairs are closely related to the temperature at which water freezes. Its influence on climate, clothing, plant life, foods, transportation, and a hundred other phases of our daily life is so great that it is desirable that our temperatures be reckoned from that point. Thermometers are made and tested with reference to this natural fixed point. (Dr. S. W. Stration, Director Bureau of Standards, Washington, D. C.)

I thoroughly approve of your suggestion and should be glad to help in any way possible. (Carl C. Thomas, professor of mechanical engineering, Johns Hopkins University, Baltimore.)

You will have the support of the educated and scientific men of the country, and as soon as the oublic becomes accustomed to the change it will meet with popular approval. (J. B. T. Tupper, Chief of Law Division, Internal-Revenue Bureau, Treasury Department, Washington,

You will have the support of the educated and scientific men of the country, and as soon as the public becomes accustomed to the change it will meet with popular approval. (J. B. T. Tupper, Chief of Law Division, Internal-Revenue Bureau, Treasury Department, Washington, D. C.)

Of 11 members of our department of mathematics, practically all, Including myself, are of opinion that the change ought to be made. Institute of Technology, Boston, Mass.)

Not only do I approve of the proposal, but I have submitted the matter to Mr. F. A. Kartak, in charge of the State standards here, and he states that "the adoption of the centigrade scale of temperature measurement would be of inestimable value to the engineer as well as to the scientist. The electrical-engineering profession has been fortunate in the adoption of this temperature scale by the national society in this are suit an untold amount of time and labor has been saved. In connection with electrical testing and standardizing work this temperature scale is used exclusively, not only in the standards laboratory of the University of Wisconsin, but in all similar laboratories throughout the country. There would seem to be no real obstacle in the way of the general adoption of this temperature scale, except perhaps the inertial of custon, which will undothedly prove to be a smaller obstacle than will be supplied to the supplied of the supp

While I am duly conscious of the criminal waste of time which has been imposed upon the people of this country by the Fahrenheit scale, still I am disposed to exercise clemency, and would suggest that the Fahrenheit thermometer be not abolished, but simply retired to the privacy of museums, there to remain as evidence of foolish and wasteful conservatism. (Robert H. Wolcott, head of department of zoology, University of Nebraska, Lincoln, Nebr.)

I am strongly in favor of the use of the centigrade in all United States Government publications. Practically all other scientific publications have adopted this rule. (Charles Zeleny, professor of zoology, University of Illinois, Urbana, Ill.)

Protest on Proposed Methods of War Taxation.

EXTENSION OF REMARKS

HON. RICHARD OLNEY, 2D,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES.

Friday, December 17, 1915.

Mr. OLNEY. Mr. Speaker, should the proposed suggestion of President Wilson in his message to Congress on December 7 become incorporated into a bill, I reserve the right to dissent from that portion of the bill which would favor a tax upon checks, gasoline, and horsepower of automobiles.

Emergency Taxes-A Condition, Not a Theory.

EXTENSION OF REMARKS

HON. WARREN WORTH BAILEY. OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 17, 1915.

Mr. BAILEY. Mr. Speaker, in extending the emergencyrevenue measure for another year we are meeting a condition, not dealing with a theory. According to my lights, this measure offends against practically every canon of taxation. Yet it has one commanding merit, namely, the taxes in the main are so nearly direct in character that the people know when they are paying them. This is not true of the tariff taxes, which I regard as the worst of all, lending themselves most readily to abuses and encouraging in the largest degree governmental extrava-

However, there is one observation which I desire to make in connection with this emergency measure. It is this. There would have been no occasion for its original passage had the country cut its garment according to the cloth. When our revenues failed at the customhouses by reason of the cutting off of dutiable imports as a result of the war, it was the plain duty of the Government to reduce expenditures, especially where this was possible without injury to the public service. The obvious place for retrenchment was in the Army and Navy. There was no valid reason for the increased expenditures of the last year on our military and naval establishments. We were in danger from no quarter. This is not my word. It is the word of the President of the United States. A word more than once repeated. Yet we are spending more than \$250,000,000 this year for militaristic purposes. Had we reduced the expenditures on this account by half, which might have been done without injury to any interest of the country, this emergency-tax law would have been without any sort of warrant. We should have had no occasion to adopt it and to harrass the country with exactions which undoubtedly have aroused bitter resentments.

But there is ahead of us something much more serious than the reenactment of this emergency measure. We are face to face with the problem of meeting the cost of carrying out a program of military and naval expansion which would have seemed unthinkable a few years ago and which I now regard as utterly without warrant on any conceivable score. We are at peace with all the world. Neither our independence nor the integrity of our territory is threatened from any quarter. Our geographical location is wholly in our favor. Our relations with the family of nations in the main are friendly. There is not the slightest reason for suspecting any of them of ulterior designs upon us. Yet we are confronted by a demand that we shall enormously increase our defenses, that we shall plunge into a perfect orgy

of extravagance in naval expansion and Army aggrandizement. If the program which has been outlined shall be accepted by Congress, it will become necessary for us to increase the tax burdens on the people by two hundred millions a year for the next five or ten years. Will the people stand it? Can the Democratic party become responsible for laying these fresh

taxes and hope to retain power?

It should be borne in mind that this Congress has no mandate from the people on this subject. The issue of preparedness was not presented in the campaign of 1914. There has been no authoritative word from the country in favor of this staggering program. Its only support seems to have originated in certain remarkably active organizations with surprisingly intimate relations with the war traffickers and munitions makers of the country. As far as the great body of the people themselves are concerned I fail to find any evidence whatever that they are terrorized or that they are demanding of Congress what the metropolitan press is so vigorously and persistently urging.

As indicating in some measure the apparent temper of the people as a whole, I beg to call attention to certain resolutions and other formal statements and actions bearing on the subject, as set forth below. These could be almost indefinitely added to, but I am confining myself to expressions of a public nature made in my own State and my own district. I think that prac-tically every Member on this floor might supplement them with similar pronouncements from his own section and his own peo-

ple. The matter referred to follows

Extract from resolutions adopted by the Teachers' Institute of Somerset County, Pa., held November 25, 1915, at Somer-

Resolved, That the training of teachers should be such that they will be fitted to instill and develop the idea of the dignity of labor in the minds of the pupils, as well as the improvement of home life.

Resolved, That we are opposed to any movement that would encourage the establishment of military training as a part of the required course of study for our public schools.

Extract from resolutions adopted by the Teachers' Institute of Cambria County, Pa., held November 25, 1915, at Ebensburg. Pa. :

Resolved, That inasmuch as our public school instruction is based and founded directly on the thought of freedom, the Teachers' Institute puts the stamp of its disapproval on such movements as are of a war-like nature, such as the military drill and military instruction in the schools

The following resolution was adopted at a mass meeting of American citizens called for the purpose of forming a branch of the National Defense League at Johnstown, Pa., November 25, 1915:

Resolved, That it is the sense of this meeting that adequate National defense does not include an increase either in the Army or Navy at this time; and be it further

Resolved, That we commend Congressman Balley for his stand against such increase, with its accompanying increase in the tax burdens.

At a meeting of the legislative committee of the Pennsylvania State Grange, held at Harrisburg, Pa., October 20, 1915, the fol-lowing preamble and resolutions were adopted:

lowing preamble and resolutions were adopted:

Whereas the turbulent conditions in Europe has centered the attention of our people on the question of the National defenses, and Whereas we have been ably defended in the past without the extravagant tax burdens that accompany extensive naval and military equipments; we have depended upon the volunteer service of our people, and for a hundred years we have grown and prospered into a nation of industrial and commercial supremacy, and Whereas the war in Europe has demonstrated that preparedness does not prevent war, but that the excessive taxation due to preparedness has driven many good citizens to America to escape those burdens, and Whereas the Grange has stood for peace for many years and for the principle of arbitration, and Whereas we believe that many newspapers are not reflecting the sentiment of the people, but rather the self-interest desire of those who wish to profit by this war propagands; therefore, be it Resolved. That we are opposed to an increased standing Army or any material increase in the Navy.

Resolved, That we approve of the stand the President has taken to keep out of war, and

Resolved, That if a larger measure of military training is necessary, we recommend an educated citizen soldiery such as so ably defended this country before the establishment of the National Guard, as a trained volunteer Army has always been the surest defense of a country.

In this connection I beg to include extracts from the annual

In this connection I beg to include extracts from the annual report of Dr. N. C. Schaeffer, State superintendent of public instruction, to the governor of Pennsylvania, on the subject of militarism:

Whenever anything goes wrong in the state, the church, the home, or the community, people look to the school for a remedy. Although the National Government expends 67 per cent of its revenues upon the Army and the Navy, there is a growing feeling that all is not well with our means of national defense, and there are those who believe the defect should be remedied by the introduction of military drill into the public schools. Because life in the Army has so few attractions for the common soldier that the enlistments fall short of the full quota by many thousands, it is believed that the average pupil would acquire a taste for soldiering by the introduction of military instruction into our high schools and colleges. Because the girl in the modern home no

longer acquires the ability to make a good home, domestic science and the household arts must be taught in our public schools.

HIRING OF APPRENTICES

Because the hiring of apprentices has vanished from some trades and been limited to a selected few in others, the demand is made that the handicrafts shall be taught in highly-organized and well-equipped vocational schools. Because boys leave the farm in increasing numbers to seek their fortune in the city, agriculture must be taught to revive the interest in the farm and its operations. Whenever a new idea enters the skull of a reformer, the aid of the schools is straightway invoked, and the little woman is expected to accomplish reforms at which the editor and the philantropist have admitted fallure. In so far as the school ago is the proper period for teaching the trade or the vocation, it is justifiable to spend the taxpayers money for vocational education, but there are limitations in the age and sex of the pupils, in the amount which the taxpayer can furnish for such purposes, and in the demand which the public makes for preparation for the trades and vocations.

OBJECTION TO MILITARY DRILL.

Whether the occupation of the soldier should be made an integral part of vocational education is seriously questioned by experts in public education. Speaking of military drill as an exercise from a physiological point of view, Dr. Dudley A. Sargent, director of the Hemenway gymnasium of Harvard University, says: "My principal objection to military drill as a physical exercise is that it does not to any extent meet the physiological demands of the body." Hans Ballin, from whom this quotation is taken, goes on to say: "This judgment of the value of tactic exercises is not new by any means. The armies of Europe have long ago introduced gymnastics for the physical development of the young soldier. It was plainly demonstrated that military tactics did not straighten the young recruit or make him fit to endure the hardships of a soldier's life. Hence, officers were trained in the art of gymnastics, and the good results attained during the service were credited to the general work in gymnastics."

SWITZERLAND AS AN EXAMPLE.

SWITZERLAND AS AN EXAMPLE.

Switzerland's citizen soldiery is sometimes quoted as an example for us to imitate, but those who quote her example as an argument for military drill either forget or do not know that the Swiss youth begins drill with muskets only after he has reached the twentieth year, that is, at a time when the American youth has finished his high-school education. To introduce militarism into our public schools is a case of out-Heroding Herod by going beyond the practice of European countries.

War Revenue Tax Act.

EXTENSION OF REMARKS

HON. NELSON E. MATTHEWS. OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 17, 1915.

Mr. MATTHEWS. Mr. Speaker, Artemus Ward at one time described the mule as an "amoosin' cuss." When gentlemen upon the other side in this House undertake to show that the Sixty-third Congress expended less money than its predecessor, at the same time claiming that the present tariff law produces more revenue than did the Payne-Aldrich law during the same given time, one naturally thinks of Ward's description of the

If the claims made by our Democratic friends are true, why is it that week after week, month after month, since the present tariff law went into effect, the cash balance in the Treasury becomes less and less? On March 5, 1913, the Republicans turned over to the present administration a surplus of cash in the Treasury of \$82,219,619.97. To-day this surplus has vanished in spite of the fact that since then, under the so-called war-tax law, there has been collected and turned into the Treasury the sum of \$79,489,678.01 in cash up to November 1, 1915, as well as millions of dollars collected from the "income

When we know that imports during the past year have fallen off but very little, and that the average rate of duty collected on imports under the present tariff law is but 11.1 per cent, while under the Payne-Aldrich law the average rate of duty collected on imports was 18.4 per cent, we can readily understand why the Treasury is to-day practically bankrupt, there being a loss to the Treasury of more than \$100,000,000 of revenue from this source alone since the present tariff law went into effect.

Evidently the Underwood tariff law is an utter failure as a revenue producer for at least two reasons : First, the average rate of duty charged on imports is entirely too low, and the other is that at present over 70 per cent of all importations into this country come in free of duty. In fact, the Underwood tariff law has not fulfilled any of the claims made for it by its

sponsors, particularly so as to reducing the cost of living.

What the people of this country can not understand is why the present administration insists on raising the revenue reguired to carry on the Government from internal taxationwhich is in effect nothing more nor less than direct taxation-

rather than to raise revenue from a tariff on goods imported into the country, when it is a fact, disputed by none, that all the revenue necessary can be raised from this source, and all past experience proves that the country is never so prosperous as when such a protective tariff law is in force.

The query with the present administration seems to be, How can we raise money? The question as to reducing expenses and

saving money does not bother them.

The only conclusion that can be arrived at since reading the President's message and taking into account the action of the majority in the House in passing a resolution to extend the war tax for a year is that under no circumstances will they permit any revision of the present tariff laws in this Congress, except that they are forced to continue the tariff on sugar against their will and because their extravagance forces them

Surely the Republicans should be content to go before the country during the campaign of 1916 on that issue alone, if there were not any number of other issues, all of which can and

will be used with telling effect against the party in power.

The present condition of the Treasury makes this a most unfortunate time to propose a large increase in the Army and There are those who believe in preparedness in a sane, sensible way and who do not believe we should be carried off our feet by the conditions existing in the world to-day. A majority of our people believe that industrial preparedness is just as important as being prepared for war, and that it is un-wise and unpatriotic to build up one and tear down the other. And to many minds that is exactly what the President's plan will do. Industrial chaos is akin to war in its results.

Permit me to call attention to the beet-sugar industry of northwestern Ohio, which can not exist without protection. We have five beet-sugar plants built within recent dates, representing an investment of approximately \$5,000,000. During the season of 1914, two of these plants closed down on account of the tariff. By some means three continued operation, and the war in Europe came on in time to save them from destruction. In 14 counties, located in the northwest corner of the State, 2,712 farmers grew, harvested, and sold 219.205 tons of sugar beets to these three plants, for which they received the sum of \$1,084,915.60 in cash. During 1914, in addition, these three plants disbursed cash as follows:

Labor of all kinds	\$930, 481, 36
To railroads for hauling beets	102, 203, 43
For coal	62, 061, 80
For coke	6, 438, 00
For limestone	25, 925, 00
For miscellaneous supplies	119, 000.00

In addition to the above benefits to the farmers and community, experience shows that the farmers receive an additional benefit by an increased yield in other crops rotated with a beet crop, as follows:

and the second s	ent.
Wheat, increase in yieldBarley, increase in yield	49 52
Oats, increase in yield	48
Potatoes, increase in yield	46 25

Bankers, merchants, and, in fact, all classes of professional and business men are benefited more or less by the presence of these

great plants in their community.

They give employment to thousands of men, women, and children at wages from two to three times higher than wages paid for similar work in any of the beet-sugar countries of

Again, we must bear in mind that in this country the yield per ton per acre of sugar beets is, on the average, less than in either Germany or France, while the per cent of sugar extracted is greater there than here. For instance, take the year 1914; in the United States we produced 2,810 pounds of sugar per acre of beets, while in Germany they produced 4,559 pounds per acre and in France 3,223 pounds per acre.

The closing of these plants means a distinct loss to our com-munity, and our people one and all feel something should be done by Congress to prevent any such calamity, and they believe there is no better way than to place a tariff on sugar high

enough to be ample protection against all outsiders,

Ours is an agricultural district. Everything our farmers raise under the present tariff law is on the free list. What they use, such as grain sacks, has a duty placed upon it, while exactly the opposite of this prevails throughout the Southern

States. For instance, cotton ties come in free of duty.

During the past 50 years under a protective tariff we have built up in this country a home market for the products of our farms unequaled anywhere in the world. It is not good busi-

ness sense to now throw down the bars and invite the peoples of all nations to come and partake without price. They should pay some sort of premium for the privilege of doing business in our markets.

The agricultural interests in this country know there is no market like a market at their door and they do not propose to stand idly by and see it turned over to strangers, and unless something is done to relieve the present situation this administration will hear from the people at the next election in no uncer-

The present artificial stimulation given to many lines of business and the extraordinary demand for foodstuffs, both caused by the unparalleled war in Europe, can not continue after the war closes. Secretary Redfield recognizes the danger when he proposes what he calls an "antidumping law," which is impracticable and will not produce the results he claims for it, i. e., keep cheaply made foreign goods out of American markets, and will under no conceivable circumstances produce any revenue for the use of the Government. It will, however, be an additional burden of expense. It is only another way to try to avoid a revision of the Underwood tariff law, and, if possible, save us from the disastrous results of that law.

War-Revenue Tax Act.

EXTENSION OF REMARKS

HON. JAMES H. MAYS, OF UTAH,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 17, 1915.

Mr. MAYS. Mr. Speaker, while intending to vote for the joint resolution now before the House, I desire to say in explanation that the action will be taken, not because I favor the character of the legislation involved in the bill which the resolution undertakes to continue for one year but rather because the Treasury of our Government requires the funds to carry forward the tasks under way and to faithfully meet its obliga-tions. In this or any other similar emergency, regardless of party affiliations, I would place the interests of our country above all other considerations

The tax imposed by this bill is justly unpopular, not only because of the burden measured in dollars, but also because of the general impediments and annoyances to business.

Not since the Revolutionary days has a stamp tax met with any high degree of favor from the American people. Doubtless all arge portion of the citizens would prefer to pay a dollar tax on a suit of clothes without knowing it than to pay 10 cents upon a promissory note of \$500. This may be true even though the taxpayer is convinced that 80 per cent of what he pays never reaches the National Treasury, but, as stated by the gentleman from North Carolina, is employed to still further enrich certain favored enterprises.

I vote for this resolution, therefore, in the hope that very soon a comprehensive measure may be framed that will provide the revenues required by means less obnoxious to our people.

Though we have heard the emergency bill denounced as a "war tax in time of peace," as an "emergency tax when no emergency exists," still I believe that the evidence is convincing that a war does exist and has existed since August, 1914, and that such war has materially affected the imports into this country and the revenues derived from taxes thereon. posed from the beginning to this manner and form of taxation, I remember that just such a law was passed by a Republican Congress when the world trade was not nearly so much disturbed and when the war then existing could only by poetical license be called a war at all, especially in comparison with the general catastrophe which envelops the world and compels all neutral countries to take some similar action to that which this measure provides.

Several distinguished gentlemen tell us in this debate that this is an emergency tax when no emergency exists, and yet in the same breath say its passage is necessary to save the National Treasury from bankruptcy. I would call such an impending disaster an emergency. Though the gentlemen indulge in tactics unworthy of them in sounding exaggerated alarms, yet it appears the country will need the funds this bill provides. A study of the subject convinces me as a nonpartisan that the revenue bill which the present law superseded would have produced a somewhat similar deficit, if not a greater one, during a like period of time and under similar circumstances. It is evident to me that the present revenue system, including the income tax, has produced as much revenue as would have been produced by the Payne-Aldrich bill with its corporation tax during the same period beset by the same tragic circumstances.

Mr. Speaker, I believe in the income-tax feature of the present law because it places the burdens of Government upon the backs of those most able to bear them. It is better to tax the net income of those who live in luxury than to tax the empty home,

the food, or clothing of the poor.

would be prepared, therefore, to vote for such adjustment of the income tax or the inheritance tax of the general law as would ultimately provide the revenue produced by this bill which we are to-day extending, thus avoiding its long continu-In the meantime, however, no other source of relief for our National Treasury appears available; and pending the construction of an equitable and efficient measure by the Ways and Means Committee of the Congress, I would deem it my duty to vote for whatever relief may be necessary to preserve the integrity and credit of our Government.

War-Revenue Tax Act.

EXTENSION OF REMARKS

HON. JOHN H. STEPHENS,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 17, 1915.

Mr. STEPHENS of Texas. Mr. Speaker, I favor and shall vote for the extension of the provisions of the emergency revenue act for the period of one year as the resolution now under con-

sideration provides.

The reasons for its speedy enactment are so obvious to every Member of this House not blinded by partisan prejudice that I will not discuss it further. It is opposed by the Republicans because it provides for the raising of revenue by direct taxation, and every dollar raised by it will go into the Treasury of the United States for the benefit of all the people. But if it is raised by a Republican protective tariff a bounty of four dollars out of every five collected is pocketed by the manufacturing interests of this country. The cohesive power of public plunder through a protective tariff is all that now holds the Republican Party together, and its injustice was the reason for its repudla-tion by the voters of this Nation. The Republican Party favors the manufacturers; the Democratic Party favors the consumers. The Republicans favor the classes; the Democrats favor the

The preparedness for war propaganda, like the tariff, is being urged for revenue only, and that revenue is to be pocketed by the propagandists, who in most instances are the manufacturers the propagandists, who in most instances are the manufacturers of war materials, and, in my judgment, for their own profit are now engaged in trying to manufacture in this country a strong sentiment in favor of the so-called preparedness for war. I am compelled by my oath of office to oppose this expensive, unnecessary, unjustifiable, and hysterical preparedness program. I regret that this Democratic administration is seemingly half converted to this pernicious folly.

I am proud, however, that our able Democratic House leader,

Mr. KITCHIN, Congressmen TAVENNER, MONDELL, and others have already made able and convincing speeches in this Congress against this preparedness policy. We now find Democratic and Republican Congressmen alike fighting side by side against this

dangerous propaganda.

By no means is the popular opinion in favor of the President's By no means is the popular opinion in favor of the President's administrative program as exploited by the newspapers. The farmers' organizations and many of the fraternal organizations have taken active stands against it, claiming that a large Army would place a burden upon the people that is entirely uncalled for; that after the present European holocaust is over these warring countries will be so poverty stricken that it will be many years before they will be able to finance any war of conquest against as wealthy a Nation as the United States will be. Of all the people interviewed by me not one cared to see a policy all the people interviewed by me not one cared to see a policy of militarism fastened upon this country.

This view is expressed in scores of private letters recently received by me. A few of these letters I will here insert in the

RECORD as examples of the feelings and desires of the great mass of our splendid citizenship on this preparedness question:

ELECTRA, TEX., November 27, 1915.

Mr. John H. Stephens, M. C.,

Vernon, Tex.

Dear Sir: We, the undersigned citizens, petition you and sincerely hope that you will use your influence to kill the proposed increase in the Army and Navy, which is backed by private interests.

Yours, very truly,

ELMER JACKSON (And many others).

EX-SENATOR BAILEY ON PREPAREDNESS.

EX-SENATOR BAILEY ON PREPAREDNESS.

In a recent letter to a friend, in reply to one asking his views on preparedness, former Senator Joseph W. Bailey wrote:

"I am utterly opposed to the so-called 'preparedness' which the President is now so carnestly advocating. If I thought that this country was in any immediate danger of coming to blows with any other country, I would insist upon making a suitable preparation for the conflict; but I am utterly unable to understand how any intelligent person can think that there is even a remote possibility of our country engaging in a war at this time, or for many years to come. The only nations in the world with which a war would be anything like a serious matter to us are now involved in a struggle among themselves, from which they will not recover in 50 years. With millions of their best men killed in battle, with other millions crippled, and other millions diseased as the result of exposure, and with national debts which will aggregate at least \$40,000.000.000, neither England or France, nor Germany, nor Russia, will be apt to give any country, and, least of all, our country, any just cause of quarrel during the present century. All of this persuades me that there was never an hour in our history when there was less need of military preparation than there is to-day; and if we spend an additional sum of \$200,000,000 a year on our Army and Navy—and before we have gone very far we will be spending much more than that—we will have spent \$10,000,000,000 in the next 50 years in the face of a practical certainty that we will have no war; and therefore that vast sum, provided by the capital and labor of this country, will have simply been wasted.

"I understand, of course, that there are men in this country who believe in a strong Government, and who think that a great Army and labor of this country, will have simply been wasted.

"I understand, of course, that there are men in this country who believe in a strong Government, and who think that a great havy will make our country

WESTMORELAND FARMS FRUIT GROWERS' ASSOCIATION, Bellaire, Tex., December 7, 1915.

Hon. J. H. STEPHENS, Washington, D. C.

DEAR SIR: At a recent called meeting of this association of voters of Harris County I was instructed to advise you that after a long and full debate on the subject of preparedness it is our unanimous opinion that Congress is not warranted in making such enormous appropriations, which in reality will enrich a few special-privilege war jingoes and will further enlarge our taxes, which are now near the limit of

and will further enlarge our taxes, which are now near the limit of our endurance.

We further believe that such a program put through would only be an incentive to all Europe to combine against us.

We therefore request that you use your high office in our interests by working and voting against all propositions looking to a preparedness appropriation.

Yours, very truly,

W. J. Donaldson.

DALLAS SINGLE TAX LEAGUE, Dallas, Tex., November 28, 1915.

Hon. J. H. Stephens. M. C.

Washington, D. C.

Dear Sir: Are you for preparedness? Preparedness for whom? How do you propose to raise the additional revenue? Please advise.

Very sincerely,

G. B. FOSTER.

ELECTRA, TEX., November 27, 1915.

Mr. John H. Stephens, M. C.

Mr. John H. Stephens, M. C.

Dear Sir: As I think it is my duty to myself and country and humanity at large to do what I can to prevent war and help to bring about world peace, I ask you in the name of a single voter to oppose with all your power the proposed increase in the Army and Navy. And I sincerely believe, Mr. Stephens, that that is the sentiment of a great majority of the citizens of this land. This nation is safer from invasion now than in many years.

Sincerely trusting and hoping that you will do what you can to kill this measure, which is almost entirely supported by jingoes and private interests, I am,
Yours, most truly,

D. D. West.

GILES, TEX.

Hon, JOHN H. STEPHENS.

Dear Sir: Realizing that the preparedness bill is unnecessary and is a scheme by which the manufacturers of war supplies intend to make millions of dollars of profits and that it will cause us to be involved in a great war some time in the future, I write to you and plead with you in the name of humanity and peace to use your influence against said bill.

Yours, for peace and humanity,

T. E. Jourson.

T. E. JOHNSON.

WICHITA FALLS, TEX., November 25, 1915.

Hon. J. H. STEPHENS, Washington, D. C.

Hon. J. H. Stephens,

Washington, D. C.

Dear Sir: Congress is soon to meet, and you will be called upon to vote on one of the most vital questions that has ever come before that body, viz, the question of national defense. While I understand that you are already opposed to the measure, allow me also to voice my protest against further increasing the Army and Navy as is proposed by the administration. I do not believe this is a true means of defense. Great armies and navies did not keep Europe out of war nor lessen the carnage when war came, and how could the same means have a different effect here? Why should we fear European nations anyway? What sensible, able-bodied man would fear a cripple that is 3,000 miles away? By the time this war is over Europe will be little more than a cripple, burdened with debt, and will be unable to wage another aggressive war for a generation so why should we arm against her? We are a peaceful nation. Not 1 person in 10 is in favor of this movement for a greater national defense. The whole movement, it have destroyed their present markets, and, besides, they want a larger Navy to help force the collection of their war loans and to protect their commercial interests. The newspaper stories, to the effect that the people are in favor of the defense movement, are largely fakes put out by the same interests to mislead the public and enable them to accomplish their ends. If we must defend our coasts, let it be with mines and submarines, as Germany defends her coast. This would be a real defense and would not be so costly. We do not need a larger Army and Navy, and I trust that you will use your vote and influence to defeat the measure.

Respectfully, yours, the measure, Respectfully, yours,

JOHN H. STOKE.

PLAINVIEW, TEX., December 9, 1915.

Hon. John H. Stephens, Washington, D. C.

Washington, D. C.

Dear Sir I am pleased to note that you are opposed to our Government entering into an expensive and needless armament program. It is neither necessary nor in good taste at such a time as this for our Government to show its teeth and snarl just because the dogs of Europe are in a free-for-all.

We can serve humanity better by the example of a great nation unarmed and praceably inclined. I have talked with many people and have yet to find a man who wants to drill and get ready for war when none is in sight. We are patriotic all right, in spite of the fact that our Navy is not well manned in times of peace and in spite of the fact that our Army is short of recruits. There must be an imminent reason if Americans will leave their homes and drill for battle.

You have noticed that Canadian troops proved the best troops in Europe within three months after they were enlisted. Americans can always best the trained soldiers of Europe on even terms. If Europe should come here to fight we could easily stop the invasion, as we would be here first. If we prepare for war there is danger of getting into it. If we do not prepare for war other nations will not have to prepare against us.

into it. If we do not prepare for war other nations will not have to prepare against us.

With all the vast resources in men and money and provisions no nation would dare attempt to interfere with us. Our position, so far from the enemy, also makes us well nigh impregnable.

I trust that the enemies of the l'resident's preparedness program will submit to no compromise. The elements that make for war are making their last stand in the American Congress. Show them no constructions.

quarter.

There is a strong possibility that the events of the present war will make our preparedness program look ridiculous in a few months' time.

Let's not try to out-German Germany.

Yours, truly,

E. VAN DEVENTER.

BUFFALO, N. Y., December 27, 1915.

Hon. John H. Stephens, Washington, D. C.

HONORED SIR: Because I and so many young people in this city feel strongly against increasing the armaments of this country, I want to express my strong appreciation of your intention to vote against the bill for greater armaments to be presented this Congress.

May your influence help defeat the bill.

Sincerely, yours,

FLORENCE LITTLEFIELD.

GAIL, TEX., December 3, 1915.

DEAR SIR: I have just read the Dallas News of yesterday and see your views in regard to this big Army and Navy bugaboo, and I want to assure you that you are certainly on the right side. I consider it the grandest fake that ever was pulled on the American public, and this whole country is of the same opinion, and I sincerely hope and trust that there will be enough of the level heads to keep clear of any such crazy laws as some are willing to put on a peaceable and civilized country.

such crazy laws as some are willing to put on a peaceable and civilized country.

Now, Mr. Stephens, please rest assured that the people of the country are with you and against any militarism to the extent that is being proposed.

Hoping that this will not be amiss and that it will be taken in the spirit intended.

If you wish to know more of me, ask my friend Mr. W. R. Smith, from my district, and also tell him to help you out on keeping this country from the worst plague of its entire existence.

With best wishes, and hoping that you may be successful in your fight.

D. DORWAR, Yours, sincerely,

Mr. Speaker, I desire here to insert in the Record several protests from farmers' unions and other organizations of citizens opposing this war-preparedness propaganda. One of these is from my home town (Vernon, Tex.). I personally know that the patriotism of these protestants is undoubted. Their reasoning is logical and convincing; their motives in making these protests are patriotic and not mercenary; and this can not be truthfully said of the Navy League and other organizations

who are promoting this preparedness scheme. This is clearly shown by the following letter, written by Congressman CLYDE H. TAVENNER to Robert M. Thompson, the president of that league.

The letter is as follows:

House of Representatives, Washington, D. C., December 2, 1915.

Col. Robert M. Thompson, President Navy League, Washington, D. C.

My Dean Colonel: I assume from your letter of the 20th ultimo and from your various utterances as president of the Navy League that the impression you desire to create in the minds of the American people is that none of the men who founded or who have been or who are now directors of or contributors to the Navy League have ever been or are now in any manner interested in any concern which would profit financially from the \$500,000,000 bond issue for battleships, etc., which you are advecating. are advocating

are advocating.

I understand your position to be that none of the money which the Navy League has used to banquet Members of Congress and Secretaries of the Navy or to carry on the propaganda for the vastly increased naval appropriations which you advocate has come from any gentlemen who stand to profit therefrom. I contend that the opposite is true.

In your letter you request that I give you some specific information. I call your attention to the fact that Elbert H. Gary, who is described in the Directory of Directors for 1914 as "Chairman of the board of directors and chairman of the finance committee of the United States Steel Corporation," contributed \$1,000 on June 10, 1915, and that on the same date representatives of the J. P. Morgan estate subscribed \$2,000.

steel Corporation, "contributed \$1,000 on June 10, 1915, and that on the same date representatives of the J. P. Morgan, who is a director of the United States Steel Corporation, was formerly treasurer of the Navy League and is now a director of and a contributor to the Navy League, and that J. P. Morgan's brother-in-law, Herbert L. Satterlee, was one of the incorporators of the league and is at the present time the general counsel of the league. I also note that Edward T. Stotesbury, a member of the firm of J. P. Morgan & Co., and a director of the Baldwin Locomotive Works, Cambria Steel Co., Phoenix Iron Co., Riverside Metal Co., Temple Iron Co., Wm. Cramp & Sons Ship & Engine Building Co, and 54 other corporations, banks, and trust companies, is one of the honorary vice presidents of the Navy League.

I also call your attention to the fact that George F. Baker, fr., No. 2 Wall Street, New York, son of a director of United States Steel, contributed \$1.000 to the Navy League June 10, 1915.

I call your attention to the fact that Robert Bacon, formerly a member of the firm of J. P. Morgan & Co., and now first director of United States Steel, is a director of the Navy League.

I call your attention to the fact that Henry C. Frick, a director of United States Steel and 10 other corporations, banks, and trust companies, is one of the vice presidents of the Navy League.

United States Steel and 10 other corporations, banks, and trust companies, is one of the Navy contracts aggregating \$32,954,377 for armor plate alone, and if the Navy League's \$500,000,000 bond issue goes through Congress this firm will profit still further.

I call your attention to the fact that Allan A. Ryan, a director of the Bethlehem Steel Corporation, contributed \$100 to the Navy League on June 10, 1915, and to the fact that Allan A. Ryan, a director of the Bethlehem Steel Corporation and the American Locomotive Co., both of which concerns have profited hugely from European war orders, is one of the vice presidents of the Navy League. The Bet

partment armor contracts amounting to \$42,321,237, and if the Navy League's program goes through Bethlehem stands to receive increased orders.

From the foregoing it would appear that two of the three concerns composing the armor ring in this country have representation either among the contributors to the Navy League or among the officers or directors of the Navy League.

The Government has purchased from these two concerns, Bethlehem and Carnegie, \$75,275,614 worth of armor plate, paying an average price of approximately \$440 a ton therefor.

If this armor plate had been manufactured in a Government armorplate factory, which the Navy League has cold-shouldered, at least \$25,000,000 could have been saved to the American taxpayers. There have been 10 estimates by Government officials as to the cost of armor in a Government plant, and the average of these estimates is \$238 a ton. By contrasting \$440, the price we have paid the private manufacturers, with \$238, the cost at which we might have manufactured this armor in a Government plant, it is possible to obtain an inkling as to the reason we do not now have more preparedness to show for the colossal appropriations made for that purpose.

I note there are 31 directors of the Navy League. The personal fortunes of these 31 men, by the most conservative estimate, aggregate \$100,000,000, or \$3,000,000 to each director. I contend that any board of directors whose individual fortunes average \$3,000,000 can hardly be considered as representative of the views, feelings, and heartbeats of the great mass of the American people.

On November 19 I publicly stated that linasmuch as the Navy League insisted that its management and backers are entirely free from any atmosphere of war-trafficking influences, I would, as soon as Congress convened, introduce a resolution providing for an investigation of the league, psetifically requiring J. P. Morgan and other directors of the league, psetifically requiring J. P. Morgan and other directors of the league, psetifically requiring J

I now desire in all good faith to take the responsibility of making a suggestion to the Navy League. I suggest that you call a meeting of the board of directors and go on record in favor of the Government manufacture of battleships, submarines, armament; munitions, etc., in order that the people may obtain the preparedness which you are advocating at cost. I recommend that you either do this or fold your tent and quietly take your departure from the National Capital.

Very respectfully,

Clypf H. Tayenner CLYDE H. TAVENNER.

Mr. Speaker, I now present for printing in the Record a few more of the protests I have before mentioned. They are as follows, viz.:

Resolutions against war preparations.

[Adopted by Farmers' Union, Local No. 1331, of the Texas Division, at a meeting held on the 7th day of December, 1915.]

a meeting held on the 7th day of December, 1915.]

Whereas the President of the United States has announced that the coming session of Congress will be asked to make greatly increased appropriations for the Army, the Navy, and the National Guards, and for other purposes, included in a program to prepare this Republic for war; and

Whereas more than 60 per cent of all Federal revenues are now used for war expenses, a burden that is already too heavy to be borne by producers without protest; and

Whereas the National Farmers' Union in convention at Lincoln, Nebr., representing the organized farmers of 31 States, adopted the following resolutions:

lowing resolutions:

"Resolved, That we demand economy in all appropriations made by Congress and that we are especially opposed to any great increase in expenditures for the Army and Navy, but approve a reasonable outlay for coast defense by submarines or other weapons proved by recent experience to be effective for that purpose; and be it further

"Resolved, That we are unalterably opposed to a large standing Army and to any change in our military system tending to compulsory military service."

Therefore we, the members of Farmers' Union, Local No. 1331, of the Texas Division, located at Vernon, Tex., in regular meeting declare and order:

Therefore we, the members of Farmers Union, Local No. 1331, of the Texas Division, located at Vernon, Tex., in regular meeting declare and order:

First. That we are opposed to the proposed plan for making appropriations amounting within the next five years to more than \$2,000,000,000 for the Army and Navy and other war preparations.

Second. That we reaffirm and indorse the resolutions of National Farmers' Union against huge appropriations for war preparedness and particularly against a great standing army and a change in our military system that we believe, if adopted, would ultimately result in universal compulsory military service.

Third. We demand that our Senators and Congressmen vote against the proposed program for military preparedness and use all their influence to prevent any such measure from being enacted into law.

Fourth. We indorse the position of our official organ, the National Field, in opposing unnecessary appropriations for preparedness and Army and Navy increase.

Fifth. That copies of these resolutions bearing the signature of the president of this local and all other members present, and attested by the secretary, be sent to each of the Senators from Texas, to our Representative in Congress from the thirteenth district, the Hon. John H. Stephens, and to the local papers of this county for publication.

JOHN H. STEPHENS, and to the local papers of this county for publication.

Sixth. We demand that the Congress redeem all pledges made to the farmers and proceed at once to enact a rural-credits law, a law against gambling in produce options on boards of trade, a law providing for national standards for grain grading and inspection, and a law creating a national bureau of markets, all of which were indorsed by the National Convention of the Farmers' Union at Lincoln on September 8, 1915.

W. M. BOWMAN

W. M. BOWMAN.

President Farmers' Union, Local No. 1331.
M. D. OWENS, Sceretary.

To our Senators and Members of the House of Representatives in the Congress of the United States:

Congress of the United States:

We, the membership of the various district unions of the Farmers' Education and Cooperative Union of Texas, in convention assembled at Marshail, Tex., this the 13th day of December, 1915, desire to petition you, our Representatives, to vote against and use, in the name of humanity, every honorable means at your disposal to defeat the so-called 'preparedness program" that has been submitted to the body of which you are Members.

The Farmers' Union is a nonpartisan organization, and is forbidden by its constitution from engaging in partisan polities, and this rule has been religiously adhered to by the organization since the date of its birth in 1902.

The Farmers' Union is a nonpartisan organization, and is forbidden by its constitution from engaging in partisan politics, and this rule has been religiously adhered to by the organization since the date of its birth in 1902.

In his message to Congress the President of the United States declared that the "preparedness program" is not a partisan issue, but one in which all parties should join, irrespective of party lines or party affiliations; therefore we petition you, not as Democrats or Republicans or members of any other political faith, but as citizens and taxpaying farmers of the United States.

We are against "preparedness" for the reason that it leads not to peace but to war. The pathway of "preparedness" is strewn with murder, arson, suicide, wrecked homes, and financial ruin, while the pathway of peace is strewn with love, benevolence, prosperity, and happy homes. This Nation can never hope to be as well prepared as the great world powers now engaged in the titantic struggle of all the ages, and yet their "preparedness" lead to war and not to peace, the stated object of their preparation.

We can not understand how sensible men can urge "preparedness" as a prevention of war, when all the facts of history contradict them. "Preparedness" means that we are prepared to fight, and when a man is prepared to fight he is not looking for peace, nelther is a nation.

We are opposed to the "preparedness program" for the reason that it means the further enrichment of the few at the expense of the many. The tax burdens must be increased on the farmers and other producers of wealth if the "preparedness program" goes through Congress, and this increased burden will not add one dollar of wealth of the money derived therefrom will be absorbed by the Shylocks, who have become bold and arrogant as a result of the never-ending streams of gold that is flowing into their coffers from unfortunate, prepared Europe. We believe that the propaganda for "preparedness" is being carried out and financed by those who will be the di

The above communication was indorsed by the various district unions of the Farmers' Educational and Cooperative Union of Texas, and the secretary was instructed to send a copy to the Senators and Representatives of Texas.

I. E. CULVER,
Vice President and Acting President
Northeast Texas District Farmers' Union.
LOUIS GARMS,
President Pecan Valley District
Farmers' Union, Bangs, Tex.
N. H. DORSEX,
President East Texas Central District Union.
J. C. CHAPMAN,
Secretary District Unions.

GILES, TEX., December 5, 1915.

Hon. John H. Stephens, Washington, D. C.

Washington, D. C.

Dear Sir: We, the undersigned citizens of the thirteenth congressional district of the State of Texas, realizing the bill known as the "preparedness bill," which will be introduced in Congress at its next session, is a scheme by which the manufacturers of war supplies and money lenders contemplate to make millions of dollars of profits; and, furthermore, realizing that it is useless and will sometime in the future engage us in a terrible war, not only ask of you, as citizens of the United States, but demand of you, in the name of humanity and mercy, that you use your influence and power against said bill.

Washington, D. C.

Dear Sir: In glancing over the Dallas News of November 30 I read and was favorably impressed with an "open letter" from the Presbyterian pastors of Dallas to our honored Chief Executive, Woodrow Wilson, on the subject of preparedness. I feel that you, as our past, present, and future Representative, would enjoy reading the letter, and, lest you may have overlooked it, am taking the liberty of inclosing the clipping for your perusal.

If I understand the feeling of the people of this section—and I feel that I do—I have no hesitancy in saying that the consensus of opinion here tracks closely the thought set forth by the Dallas pastors.

With sincere regards, I am,
Yours, very truly,
Pastors Address Open Letter to President—New Plan For Na-

PASTORS ADDRESS OPEN LETTER TO PRESIDENT—NEW PLAN FOR NATIONAL PREPAREDNESS FOR WAR IS SUBJECT—EPISTLE, IN RATHER IRONICAL TERMS, SUPPORTS ADMINISTRATION DOCTRINE FOR PRESERV-ING PEACE.

At the regular meeting of the Dallas Presbyterian Pastors' Association yesterday morning official action was taken favoring the new plan for national preparedness for war—if that plan is worked out along the lines suggested by the pastors—in an open letter addressed to President Woodrow Wilson. The method of preparing for war, particularly with reference to those who shall bear the brunt of the service and pay most toward the financial support of the new move, is the question of greatest importance, is the intination of the letter, which rather ironically supports the doctrine of preparedness.

The letter states that "the pastors of the Presbyterian churches of Dallas have loyally and affectionately followed your leadership during the years of your administration. The difficulties also which have gathered about you, and which have required almost superhuman wisdom, and which you have so wisely met, have linked us to you by the bonds of a still deeper sympathy."

It states that the ministers have watched with growing anxiety the rising tide of interest in preparation for war, and that they have felt alarmed at many of the proposals suggested for the consideration of the President and Congress, but that they feel themselves free to address the President on the subject of peace, still believing that he is the most valuable friend of peace among the rulers of the world.

APPEALS FOR STAND.

the most valuable friend of peace among the rulers of the world.

APPEALS FOR STAND.

The letter appeals to the President "that you stand like a rock against the clamorous demands of the militarists of the Nation and against entrance upon a career that will in any measure satisfy those who profit by the trade of war."

It suggests that the President suggest that the Government itself manufacture its own war munitions, thus testing the patriotism of those who have cried out for war, and that no private concern manufacturing war material hereafter shall be permitted to make more profits than the interest rate of a law-abiding national bank.

The letter suggests "that you insist that this Nation in the enlargement of Army and Navy shall stand for enforced military service. Volunteer service has falled to fill the ranks of our Army and Navy with the men provided for by previous legislation." In times of peace men have been too much attached to civil pursuits, it sets forth, to serve for the meager wages offered, and suggests that in the enforced service it be the policy of the Government to begin with those of the wealthier classes, since it is they who get more protection, and they should therefore give more protection. "The wealthier centers which are so imperiled to-day will be first struck at by our near-at-hand portentious enemy, and should pay the greatest price in treasure and time and blood for deliverance."

It is further suggested, because of the constant improvements in military equipment, necessitating frequent changes, that it be the policy of the Government to pay as it goes in building up a great Navy and providing equipment for a great Army, and that this payment be made largely by a tax on incomes, graduated according to the size of the income, and a tax on the luxuries of life. It sets forth that this is just, since it is the well-to-do class that will get more immunity from the enemy. It is contended that full payment should be made now, since "future generations should not be required to pay for

PURPOSE OF LETTER.

The purpose of the letter and the spirit it intends to convey appear in the concluding paragraph, which suggests:

"As everybody wants peace, even Europe, that you, as the head of the Nation, assure the nations of the world, which are slowly bleeding to death on the battle fields of Europe after all their years of preparation, that our little spurt at preparedness is only in the interest of peace; that we apologize to Christianity, which we have come to

doubt; to our brothers in all the nations, whom we have come to suspect and fear; and to God, whom we have taught our children for our national lifetime, by both our coins and our churches, to trust."

'The letter is signed by the Revs. J. Frank Smith, J. H. Burma, Whitiam Fred Galbraith, Glen L. Sneed, William M. Anderson, James L. Bowling, A. B. Carrero, George S. Fulcher, and Gary L. Smith.

The following recent editorials from some of the leading papers of Texas show clearly the trend of public opinion in that State. They are as follows:

[From the Dallas Democrat.]

When the present agitation for preparedness began, the preparationists disclaimed favoring militarism. "Adequate defense," they said, was
ail they wanted. To-day, the mask has been dropped. Universal compulsory military service is their demand. Nothing more extreme in
militarism is possible. The terms "preparationist" and "militarist"
have become synonymous. Both describe an advocate of practically
the same military system for United States as prevails in Germany,
France, Italy, or Russia.

[From the Longview Times-Clarion.]

With England spending a million dollars an hour for several years, and France, Germany, and Russia going into bankruptcy at even a more rapid gait, to say nothing of the millions of men being killed, it is downright foolish to think about any of those nations being dangerous enemies for the next 50 years at least.

[From the Albany News.]

Senator J. C. McNealus and other brave journalists are telling their readers that the big financiers and others who are so valiantly championing the cause of preparedness have a special reason. They are interested in factories that will profit by the large expenditures for war supplies. He is, no doubt, much in the right. There is much of selfishness as well as patriotism back of the movement for preparedness. We need some preparation for defense, but not the billions necessary to make us a nation prepared for conquest.

Mr. Speaker, a few weeks ago I was interviewed in this city by a reporter of a local Texas paper on this preparedness ques tion. The following report was made by him to his paper:

OFFOSES DEFENSE MEASURE—CONGRESSMAN JOHN H. STEPHENS SAYS HE IS OPPOSED TO PRESIDENT'S PREPAREDNESS PROGRAM.

WASHINGTON, December 1.

Washington, December 1.

The plan of Representative C. H. Tavenner, of Illinois, for a comgressional investigation to ascertain the source of the sentiment for the preparedness program is warmly indorsed by Representative John H. Stephens, of the Texas delegation.

"I am willing to join Mr. Tavenner for the investigation," said Mr. Stephens. "It would be interesting to ascertain just how much of the inspiration has come from makers of war munitions and armor plate. Certainly, if my section of the country reflects true conditions, it does not come from the people."

Mr. Stephens is against any enlargement of the Army or Navy unless it be in the number of submarines, and then, he says, he would have to be shown they are necessary.

The Dallas News, one of our leading Texas papers in com-

The Dallas News, one of our leading Texas papers, in commenting on this interview, says:

If George Washington were alive to-day and still an advocate of preparedness, probably Congressman Stephens, of Texas, would demand to trace George's opinions to their "source."

Mr. Speaker, in reply to this statement I will say that George Washington in his last message to his countrymen advised them to beware of foreign alliances and entanglements.

The big stick-or the T. R. brand of preparedness for warpolicy of the present administration is directly opposed to President Washington's policy. If preparedness means anything it will eventually lead us into foreign complications and possibly war. And again, is not the News aware that this country during Washington's administration was a very weak country and had the British colonies of Canada on the north, the Spaniards on the south, the French on the west, and many hostile Indian nations to contend with? Did we not then need an Army and Navy vastly more than President Wilson does now? The danger to this country was then apparent and pressing, and it was, in fact, attacked soon after that—in 1812—by Great Britain, and France also was then threatening us with war. And about this time many Indian wars were waged against the inhabitants of our frontiers. As for myself, I have no trouble in seeing many reasons for Washington's use for an Army and Navy.

On the other hand, President Wilson, in his last message to Congress, says that we are now at peace with all the world; and, if so, why do we need a great Navy and Army? I believe that I have fully answered the demand of the News and given "George's" reasons for his preparedness program. Now, will the News as frankly give any safe or sane reason for its support of this hysterical preparedness propaganda at this time? How would the News raise the money to finance this great naval and military program? What nation is the News preparing to fight? What nation proposes to go to war with us? When will this mythical war begin? The German Kaiser is called the war lord of Europe; is any good and true American citizen willing for our country to follow in Germany's footsteps and create war lords? Mr. Ellis O. Jones, in his publication called Life, publishes a new psalm of war. In paraphrasing the Bible

psalm it truly depicts the horrors of war and war lords. is as follows:

PSALM OF WAR.

[Ellis O. Jónes, in Life.]

The war lord is my shepherd; I shall always be in want. He maketh me to lie down in mean trenches; he leadeth me into chill

He haraseth me to be down in mean treatnes; he leadeth me into chili waters.

He haraseth my soul; he leadeth me into hellish combat for his fame's sake.

Yea, though I come unscathed from the shadow of death, I shall be no better off, for thou art still with me; thy tyranny and thy taxes discomfort me.

Then are represent dengar for we in the presence of so called enomies:

discomfort me.

Thou preparest danger for me in the presence of so-called enemies; thou makest me useless toil; my cup runneth empty.

Surely evil and hatred will follow me all the days of my life and I shall dwell in the army of the war lord forever.

Mr. Speaker, if further answer to the News item is required, I will let Senator McNealus, a member of the Texas Legislature and the publisher of an excellent Democratic paper in Dallas, answer the News statement. The editorial is as follows:

[From the Dallas Democrat, Dec. -, 1915.]

answer the News statement. The editorial is as follows:

[From the Dallas Democrat, Dec. —, 1915.]

Gov. Ferguson is likely to regret these intemperate utterances against William J. Bryan before another twelvemonth of time shall pass. When the voters of Texas shall have fully and seriously considered this preparedness question, Gov. Ferguson will discover that William J. Bryan will not be standing alone in opposition to the unjustifiable Army and Navy increase policy of President Wilson.

Are such Texas Democrats as Congressman Hardy, Dr. S. P. Brooks, John M. Duncan, J. W. Bailey, and scores of others who could be named, who share the same views that Mr. Bryan does on this preparedness policy of the President, also guilty of treason?

It is almost laughable to see Gov. Ferguson praising his own brand of patriotism and statesmanship as superior to that of W. J. Bryan, There was once a toad who tried to swell himself into the size of an ox. And that toad's name was not William J. Bryan, either. Gov. Ferguson should beware the toad ego.

President Wilson, when nominated, posing as the opponent of purse-proud plutocracy and protective-tariff piracy, seems in less than three years of occupancy of the White House to have gone over, political bag and baggage, to the camp of the rapid-fire chiefs of big business and special interests. This European war has made that element in the United States daringly, defiantly, desperately dollar mad. This European war has been so amazingly profitable to them that they are money-crazed, with fear that when the war shall end their golden harvest will end with it, unless some new plan be provided to continue the war-time profits during a period of peace. This element constitutes the real fountain head of this preparedness policy. It has worked its propaganda adroitly masterful. It has used the alarm-clock publicity policy with exceeding skill. It has found an ally in the Army and Navy League. It saeks to turn the hayrake and the hoe into repeating rides and machine guns, the plow an

Mr. Speaker, about one year ago-December 8, 1914-Henry Watterson, in an editorial in his paper, the Courier-Journal, asks this question: "Shall our American Republic be Prussianized?" With this question as his text he treats this preparedness subject in his well-known logical and masterly manner. editorial is as follows:

[From the Courier-Journal, Louisville, Tuesday morning, Dec. 8, 1914.] SHALL OUR AMERICAN REPUBLIC BE PRUSSIANIZED?

Dear God and Father of us all,
Forgive our faith in cruel lies,
Forgive the blindness that denies!
Cast down our idols! Overturn
Our bloody altars! Make us see
Thyself in Thy humanity!"

—John Greenleaf Whittier.

"An inquiry into the state of the Nation's defenses," the high-sounding sobriquet of the movement started by the plate-armor combine to rob the people, and fathered by a Massachusetts Congressman, were more fitly and accurately entitled "A plan to put Woodrow Wilson in a hole," and for other purposes, the "other purposes" being a taking issue and campaign funds for the Republicans, along with galore of personal exploitation for the spread-eagle orator whose favorite stunt is "to wrap the flag around him, march down to the footlights, fire two hoss pistols, and die like a son of a gun!"

The scheme presents three distinct aspects for the consideration of reflecting men: First, its fraudulent, partisan character; second, its empty patriotic appeal; and, third, its untimely promulgation of a wicked principle.

"I am very much afraid," says Mr. Gardner, eager to get in his work and unable to restrain his partisan intention, "that the President means to lay the cold hand of death upon the whole movement."

But how could the President do that? The "movement" is for the Congress, not for the Executive. Even here, however, the Gardner prejudgment of the President is supplemented by the charge made in advance that the Rules Committee will not allow it. Thus, before the assembling of Congress, we had proof that the proposed "inquiry into the state of the Nation's defenses" was not an emanation of patriotic solicitude, but a play for party advantage.

Coincident appears a yet more sinister figure upon the scene. This is an association calling itself "The National Security League." Its

arrival would be suspiciously prompt even if we did not know that every job big enough to pay its way along the turnpikes and through the toligates of legislation always reinforces its invisible lobby with a harching club of noisy zealots—willing dupes of the drum and the fife—who dearly love to carry torchlights and are every ready to rally around bonfires and pie counters.

The Nation to all such is in perpetual peril. If it were not, what would become of the professional life-savers? Sixty years ago, according to the Know-Nothing rescript, the Pope was going some dark night to swim the Atlantic and, like a duck upon a June bug, swoop down upon the helpless Stars and Stripes. These 10 years since Japan liked Russia it has been the Mikado, who, like a submarine, was going to swim the Pacific and swoop down upon Chinatown. Statesmen with osculatory intellects and 22-inch collars, seeking to establish a system of paternalism, based upon woman suffrage and prohibition, have never wearled of depicting the terrors of invasion and rum. Year in and year out they have held up the Nation by the tail as a horrid example of unpreparedness and depravity. To whom the Courier-Journal has said, as it now says to Representative Gardness and the National Security League, adopting the words which Capt. Simon Suggs on a memorable occasion addressed to Parson Jediah Bullin, "Don't crowd the mourners nor rush the growler!"

memorable occasion addressed to Parson Jediah Bullin, "Don't crowd the mourners nor rush the growler!"

II.

Cold-storage statesmanship is the order of the day. Senator Henry Capor Lodge comes bravely to the support of his kinsman. When did this expert in the unfeeling arts of piousness, prejudice, and patriotism fail to note the nail on the barn door, seeing the door itself to at all? Premising that the Gardner resolution should be passed by both Houses, the Massachusetts Senator is reported in a recent interview as follows:

"We hear it said that from our Regular Army and militia combined we could not at this moment get together 120,000 men for our defense. If has been publicly stated that we have not sufficient ammunition even for such troops as we have; that our fortifications for our greate rites are very insufficient; that we have few if any guns of greater range than those on battleships; that such troops as we have, instead of being concentrated at the points where they are needed, are scattered through the country at different posts in positions where there is no need of troops. It is said that we have nothing resembling reserves, either of men or ammunition, and no sufficient arrangement made for providing mines to protect our harbors. It for one, would like to know, and I think the American people would like to know, whether or not there is truth in these statements."

This would seem to be an accusation of somebody. It reads very like an indictment. Yet, subjected to a little analysis, it misses the mark intended—that is, the present Democratic administration of the Government—because if there be anything wanting to our national defense it licth not with the Democrats but with the Republicans. For whatever is or is not they are solely responsible. From the 4th of March, 1891.—16 years—the Government was in the hands of the party of which Senator Lodge is a leader. Most, if not all, of the time he has been a member of the Senate Committee on Naval Affairs. How comes it that, with vast moneys expended

where would senator Lodge have resident which send the troops even if they were in possession of adequate arms and sufficient ammunition?

But, horrible to relate, our cities are undefended; the fortifications are tumble-down and mounted with popguns. Again, who is to blame if not the Republicans, and what have they done with the vast sums of money they have pretended to be spending all these years?

Senator Lodge—we are quoting him as reported by the New York Sun, a friend and not an enemy of the proposed inquiry—multiplies the counts in his arraignment of his party. The Republicans have done even worse by the Navy than by the Army. Here, being of the Naval Affairs Committee, the Massachusetts statesman ought to be an authority. What could Mr. McKinley, Mr. Roosevelt, and Mr. Taft have been thinking of when they let things go to such rack and ruin? During the 10 years between 1903 and 1913—6 of them under Roosevelt and 4 of them under Taft—more than twelve hundred millions of dollars were spent on the Navy. Now, these Republican agitators tell us that we have little other than junk to show for it and charge it to the Democrats, whilst the plate-armor people stand around and say, "We don't need any foreign contracts. As soon as Congress meets we shall have plenty of American contracts. Mr. Longe will fix it in the Senate and Mr. Gardiner in the House." But let us resume our interesting citation by a Republican of his fellow Republicans. Senator Longe continues:

"If we turn to the Navy, we can read in the newspapers almost every day statements of a similar character. I know myself that we are short of scout cruisers, kaving only three. A proper number of fast scout cruisers is essential to the efficiency of the fleet.

"We are Insufficiently supplied with aeroplanes and hydroplanes, which are so essential to modern warfare.

"We have a large number of submarines—not enough in proportion to our fleet—but it is stated that many of those of early types are not at all up to recent standards and would be practically

done. It is not a party question in any sense, and the national defense ought never to be a party question."

No; it is not "a party question" if the Republicans are to be held responsible, but it is "a party question" where the Democrats may be held, for, as Senator Lodge concludes, "We are spending some \$250,000,-000 a year on our Army and Navy and we ought to know what we are getting for our money and whether for that money we are securing the highest possible efficiency," his preceding remarks tending, if not intended, to arraign the Wilson administration.

In the Senator's despite, and in defense of the administration, the Courier-Journal might with deference submit that Mr. Wilson may have his doubts about the expediency of spending great sums of money upon armament for which there will be no immediate use and which by the time it is called for may be obsolete and valueless.

Where is the urgency that excites Representative Gardner—the exigency that impels Senator Lodge—the danger that arouses the National Security League?

To meet the dilemmas suggested by these questions the organizers of the new war party cite the accomplished ex-Mayor George Brinton McClellan, of New York, now a professor at Princeton, who does not believe that the European war will bring about universal disarmament and peace. On the contrary, he thinks that when it is over it will be only a question of soon or late when we shall have to stand by our guns. They quote him as follows:

"No matter who wins it is almost certain that at some not far-distant time we shall be confronted with the alternative of either abandon.

and peace. On the contrary, he thinks that when it is over it will be only a question of soon or late when we shall have to stand by our guns. They quote him as follows:

"No matter who wins it is almost certain that at some not far-distant time we shall be confronted with the alternative of either abandoning the Monroe doctrine or fighting to maintain it. We have made of it a great national principle, a question of national honor, so that if we abandon it we must concede that we are not strong enough to maintain it; that we are only a second-class power, at the mercy of all the swaggering bullies of the earth. If we fight for it in our present unprepared condition, there can be but one outcome. A triumphant and victorious Germany would have little to fear from us, and while we might possibly in the end be able to check Japan by herself, we could scarcely hope to do so if she received help."

The Courier-Journal has said something like this. If the Kaiser could win, it would become a certainty. In that event Germany would rise on its hind legs to say "to hell with your Monroe doctrine." But the Kaiser can not win. When the allies have finished him they will be too much played out to think about any more fighting.

Naturally, England, being our next-door neighbor and foremost competitor for markets, would be likelest to tackle us. But the impediments are almost insuperable. Outside of trade neither wants what the other has. England was, and is, and will continue to be, in favor of disarmament. It was Germany that, requiring foreign exits and entrances, and resolved and prepared to fight her way out, forbade. With Germany prostrate and the others exhausted—the isolation of the United States still our best defensive—it will be our own fault if we have to go to war with any nation. Hence, Prof. McClellan's appeal that Americans "awake to their present condition of unpreparedness, and that immediate steps be taken to build up a national defense." coming from the son of a soldier, if not a soldier, loses much of its

III.

III.

Backed by a self-constituted and self-styled body of exclusive patriots—"The National Security League," obviously organized and financed by the plate-armor people—it is at once an effrontery and an affront, not to say a stupidity. In Representative Gardner to sneer at the President as "a hopeless pacifist," and to turn upon dear old Andrew Carnegie as the enemy of his country and his kind.

"In my opinion," says the Massachusetts warrior, "the effect of the vast sums of money spent by Mr. Carnegie in his peace propaganda has been to blind Americans to the fact that our national security from a military point of view is undermined," adding that "every Army and Navy officer to whom I have spoken tells me the same story of inadequate security," as if he could expect any other testimony from witnesses whose trade is war.

All this while Mr. Gardner tells us nothing we did not know before. His proposed "inquiry" could lead to nothing not already to the hand of every Member of Congress. As well arraign Jesus Christ for preaching peace on earth, good will toward men, as Andrew Carnegie for taking the word out of the mouth of the Saviour and contributing millions of money to spread its blessed portent throughout the world.

Before the war in Europe the cause of arbitration as an international agency was making progress. But the voluntary disarmament of the nations was obviously a long ways off. It seemed to most people an iridescent dream. With what is going forward it becomes at least a possibility.

There have been wars and wars. As far as history reaches backward, blood has been the single recourse of diseased ambition, the only balm for wounded pride. There have been wars and wars; dynastic wars; religious wars; territorial wars; but never a war like this; heroism driven from the earth, mercy vanished from the heavens; individuality lost in brutish multitudes and death-dealing machinery; pity fied, generosity dead, in place of glory, the gluttony of greed and hate, the agencies of blind, unsparing destruction

spirit upon the souls of men. Then, but not till then, our time will come.

What shall be our attitude? Shall we speak for civilization, shall it rise for the Christian religion which we profess, standing uncovered to the sun in robes of living light, or shall we appear, like Mars, capapie, in full armor, the old dread specter of fury and force? Shall we say to Europe, "Fight no more; henceforth the world shall be at peace and it shall be written over the portals of every people, 'They shall beat their swords into plowshares and their spears into pruning hooks; nation shall not lift up a sword against nation, neither shall they learn war any more'"?

There is hope that something may come of it. Germany beaten—perhaps ground to the dust even as Belgium is—will be, must be, disarmed. Then, why not the rest? The debts will remain to be paid. The men will be needed in the fields. But if to get a party issue in America a group of baffled political leaders are permitted to Prussianize our Army system under the plea of national defense, laying the foundations for a militariat at Washington like that at Berlin in the interest of corrupting murder mills and ambitious soldiers, it will be but a question of time when what is happening there will happen here. In

short and in fine, a question the people should begin to consider is, Shall we fall in with Senator Lodge and Representative Gardner to worship at the shrine of Krupp, even to the footstool that holds the Kaiser's feet, or follow the genius of the American Republic up the steps of the throne of God?

Even the Prussian militariat, with the Kaiser at its head, must begin to see the futility of its pan-German scheme of world conquest. When all is lost they will fully realize it. Forty years the Germans have been taught by their philosophers to believe that war is the state of man. Forty years their professors and historians have told them it was the hope of Germany. During these years the armor makers and the saber rattlers—who derive a profit from war and for whose benefit myrlads of good men are fed to powder—were preparing for war.

It will not do for any German now to put up a poor mouth and to attempt denial of this. That there was provocation, especially in England and France, may be true enough. Germany had been commercially put in a pocket. There was sore need of colonial expansion. The mistake lay in the idea that war was a remedy, that it was inevitable, and that if it was bound to come Germany was best prepared for it, England supposed to have her hands tied in Ireland, and no one suspecting the Belgians of such power of resistance.

It was precisely the mistake that Napoleon made. Two years before his fall Napoleon could have secured world peace and the confirmation of his dynasty, with a larger France than he had found. He refused it and went to his finality. All his calculations falled him, as all the Kaiser's calculations have failed him. The very elements rose against him, as they have risen against the Kaiser. It seems a doom fixed upon God-defying ambition.

Let us agree that no such opportunity was offered the Kaiser as was offered Napoleon. Let us even allow that the Kaiser felt himself obliged to fight, and that the defeat of his wondrous preparedness is not a punishment but a destiny. All thi

were before?

This brings us face to face with what we have called our civilization, and that again brings us face to face with what we have called our religion.

and that again brings us face to face with what we have called our religion.

Is Christendom a Christian? Are we, the American people, a Christian people? If in the green leaf we are thus to rush to our guns with Senator Looge and Representative Gardner, what may we not have to do in the brown? Is the Republican Party to repeat in the United States under the guise of patriotism and the national defense the self-same error which lured Germany and the unknowing, unasked, unconsenting German people into their present awful plight?

Is the Republican Party, beaten on the old issues, to reconstruct and revitalize itself by a popular appeal having the alleged glory and prowess of the Nation for its text—war as its ultimatum—making a combine between the saber rattlers, the plate-armor makers, and the voters as the German militariat representing a feudal caste, the Kaiser at its head, made alliance with the German middle classes, embracing the money kings of Berlin and Hamburg and the infidel doctrinaires of Bonn and Heidelberg? In short, are we, the American people, to be led unconsciously into adopting the gospel of war and the setting up of an all-powerful military aristocracy, as the unhappy, the unfortunate Germans were?

Have we a Treitschke among us? Is his pseudonym Henry Cabot Gardner? Nietzsche is dead. But his spirit liveth and roameth abroad, at the moment taking a look-in upon Congress.

Emergency Revenue Legislation.

The House of Representatives, through its constitutional control of revenues, can keep the Government, in all its branches, close and responsive to the people.

EXTENSION OF REMARKS

HON. BENJAMIN C. HILLIARD,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. HILLIARD. Mr. Speaker, in the consideration of the pending resolution, which has to do wholly with the production of revenue, the attitude of the House of Representatives should be dignified and sobered above that which would attend the consideration of any other bill or measure, for the reason that this subject is the first essenial in the conduct of every society and every Government, and, under the Constitution, a power, a duty, and a responsibility lodged solely with this branch of Congress.

I shall vote against the resolution, though to do so it appears I must, for the moment, part company with the majority of my political brethren in the House.

I shall not speak at great length and, perhaps, considering my very recent advent here, should not speak at all. Still the Sixtyfourth Congress is a new Congress, and I am as old in the present Congress as any other Member. The Constitution provides for a new Congress every two years, and by that pro-vision it must have been in contemplation by the framers thereof that some, if not all, of the Members of the succeeding Con-gresses would be new. While it is conceivable that every Member of a Congress would have had no previous service here, it is not reasonable to suppose that because all were new there would be unanimous silence throughout the sessions

And speaking of new Congresses and new Members, I venture to hold the opinion that if this Congress were composed entirely of new Members the resolution now under consideration would not only have no chance of passage but would not have even been offered, for the law is universally denounced as unjust and discriminatory, and those here advocating the extension thereof for another year frankly say that it is most unpopular. Of good laws there is no such criticism; neither do those favoring a good law find it necessary to confess the unpopularity of the measure. The wonder is that a law not pleasing to anyone should have been originated in the House in the first instance; and, second, that a resolution to extend it should now be offered. The answer is that neither the law nor the resolution was conceived in the House of Representatives or in the mind of any Representative. This will be the subject of some further remarks before I close.

I take it that there is no occasion to denounce in its details a law that is without a sincere advocate. It is a safe prediction that if left to a vote of the people in not a single congressional district in the whole country would there be enough favorable ballots to make a count necessary for any purpose other than to show how ridiculously small was the number who wished to continue its operation. In my district the law is openly and repeatedly denounced, and no one favors it. Indeed, everybody was rejoicing that, as was provided in the bill, the 31st of this December would see the end of it. I would have been against the bill when originally offered. My constituents are against it now. I am against it. In my opinion, there was no emergency existing at the time that warranted the passage of this bill; but if then emergent, since March 4 last a new Congress, with a membership having intimate knowledge of the innermost feelings of the people, and in the enjoyment of a splendid salary from the people's Treasury, has been available for the consideration and enactment of a fair and equitable revenue law.

If the Constitution is not to be wholly disregarded, all bills for the production of revenue must originate in the House of Representatives; but it is a matter of current knowledge that the emergency revenue act, the one which the joint resolution now under consideration would extend another year, was in no sense its creation or desire, nor of any Member thereof; and the same agency that dictated the bill in the first instance, although eminently respectable, yet without constitutional authority or responsibility, is the moving spirit behind the resolution now pending. I am against the matter and the manner. I oppose it because it was not well conceived. I resent it because it was not legitimately conceived. Had its father remained in his own constitutional bed the child would not have raised its condemning voice in this House nor lived to witness the political death of well-meaning Democratic Representatives, many of whom, against their judgment, were induced to give it doubtful and unwilling recognition. And now, as the time approaches when by law this killer of Democratic Congressmen was to be executed, the same constitutionally irresponsible author is insisting that the execution be postponed for another dreary 12 months, and that not only the people, our constituents, shall provide for its care and keeping during that time, but that the Representatives shall be the victims of its death-dealing pro-

We can not escape the burden of this stamp tax as a House of Representatives nor as Members of the House unless as Members we individually vote against it, and this notwithstanding the fact that no Member of the House would of his own volition, as I am persuaded, have offered the resolution, and that the House, as such, acting freely, as is contemplated in the Constitution, would not pass the resolution. The Senate may vote to pass the resolution if the House does, but the responsibility over there is not the responsibility that exists here. When the storms gather and political annihilation is threatened, Senators may well point to the Constitution, and, drawing themselves up to the full stature of their irresponsibility, with more or less success parry the thrusts made at their vitals by shifting the responsibility to the House, where, as they would quite correctly say, bills for raising revenue must originate, and that the presumption always is that the Representatives are well advised, or at least that the Senators are justified in believing the House was cognizant of what it was doing and the significance thereof. Nor is this all, Mr. Speaker; the people presumably could pull their belts up one more hole and live through another year of this law, although many more pulls would not be required to exhaust the holes in that direction; but who is able to say that December 31, 1916, will witness the demise of this ill-gotten child? If its baneful life can be preserved for one year more, it will administer an "early frost" to enough Democratic Representatives to land it safely among the traditional friends of stamp taxes, where it would enjoy

every reasonable expectation of life eternal.

What of the emergency in the first instance? Because of the war abroad the expected tariff revenues fell off many millions, but by reason of the same catastrophe did not the individual incomes of the great masses of the people also suffer severe diminution, and in the aggregate much more than the loss in Government receipts? What do the people do when their incomes are suddenly and unexpectedly reduced? Do they go on expending as much as before or do they economize and adapt themselves to the new conditions? The answer is evident and one which no common man can fail to understand. should the Government, in like circumstances, have gone on spending money just as if there had not been a rift in its income? Where was the justice in visiting on the people this stamp-tax burden? And where is the equity in continuing it Why could not the Government have given an exhibition of that fortitude so eloquently, yea, and so frequently, pro-claimed as a wonderful virtue for the people, and practiced economy? As soon, however, as the calamity came—a disaster not due either to our people or to their Government, and which reduced the Government's income as well as the income of all but a few favored ones-the Government, denying itself nothing, at once proceeded to visit on the people an iniquitous stamp tax. I am not unmindful of what administrative appointees and governmental experts would be able to do with this simple statement, but I do know, as they do not know, what the people are thinking, and I know, too, as they do not seem to care to learn, what the people deserve at the hands of their Representatives.

The people of my district, Mr. Speaker, understand my language and the intonations of my voice, though both are strangely new in this historic presence. I am here by no other right or charter than that which they graciously granted. Nor is there involved herein, or at all, the question of whether I shall come again. The sole consideration between my constituents and me is as to my faithfulness now, and from day to day during the period of my present commission. They believe I have and hold the perfect vision of their day dreams and will not and could not fail them. So much do they believe this that while, with other Representatives, if proven derelict, they would simply be angry and make plans to retire them to private life, in my case they would be heartbroken. I know what to do in this instance, and with God's help, for which I pray, I shall discern their interests during my service here and cast my every vote as though all Denver were seated in the galleries. They know, if Washington does not know, that on all genuinely Democratic measures no caucus will be required to cause me to vote as they desire I They know, too, which is still more important, that on any question offered which I do not believe to be Democratic no caucus would influence me in the least, and that I would oppose it to the last, and alone, if I found myself so. They will believe without question, and there exists no power anywhere to dissuade them, that on the pending resolution I am simply more Democratic than the caucus.

Granting that at the time of the original enactment of the bill an emergency existed, in the same session of Congress that enacted this bill, the revenue provided therein, and more, could have been raised by adding the whole thereof to excessive and reasonably unrequired incomes and to inherited fortunes or estates. If there was not time then, there was another session of the same Congress which lasted from the first Monday in December, 1914, to March 4, 1915, and from that date to December 6, present, there was a new Congress on the pay roll of the Government, and a constitutional method is provided by which the Congress could have been put to work to solve the problem of revenue. Even now that this Congress is here, pursuant to the automatic action of the Constitution, it is purposed, not that a new and comprehensive revenue plan shall be developed, one inflicting no unusual and unfair burden upon the activities of the ordinary industries of the country and the heads of families enjoying only reasonable and living incomes, but to continue the present law, and to pass it through this House practically with-Why so hurry a revenue bill of the consequence of this? Why not devote the remainder of this week and all of next to its consideration? There would still be another week before the old law would expire. The men of the country, not without mental distress, denying to their families many of the usual remembrances of this glad season, accepting the inevitable fortunes of disjointed conditions in the world, will not enthuse unduly over the long holiday season the well-paid Representa-tives of the people are to take instead of working on a measure that would afford relief rather than continue burdens. Besides, an equitable bill could be passed as quickly and with more votes.

If an income-tax bill were introduced that operated only on incomes large, princely, and unneeded, properly graduated, and on inherited fortunes, likewise adjusted, and which would visit no burden while the owners lived, not only would every Democratic Representative in this House, as I believe, respond as one man for its adoption, but every Representative of any inde-pendent group here would as heartily join therein as the Democrats. More than that, whatever any Representative thought might be the objection of some of the fabulously wealthy of his constituents, not a Republican in this House would dare to incur the displeasure of the everyday working people of his district by voting against it. Indeed, I grant he likely would have no desire to oppose a measure so just that nothing approaching hardship or injustice would result, but would welcome such an opportunity properly to distribute the expenses of the Government; and upon the announcement of the vote, in-stead of the usual exultant shout on the one side and on the other a look of determination to prevail next time, all here would join in one unanimous and prolonged cheer and shout of victory. How much better that would be than to continue to visit on a protesting people this iniquitous stamp-tax law, which even its author only justified in the first instance as emergent.

It is urged as a matter of party expediency that the Democrats should keep the Treasury overflowing, in order that the Republicans may not claim it depleted because of the reduction in tariff duties; but the people can be trusted to understand the situation. It is as shortsighted on the part of the Republican Party to think that the people would care to return to robbertariff conditions as it is on our part to believe that a Treasury less full than in ordinary times would not be accepted with greater equanimity than vaults bursting with funds exacted from the people by means of stamp taxes. The Republican Party is preparing to assume that the people do not know enough to distinguish between conditions in normal times and European war-occasioned times, and to hug to its hungry political breast the delusion that the people will again embrace high tariff; at the same time the Democracy seems to labor under the delusion that the only way to answer or combat the false philosophy of the opposition is to hit the people in a sore spot, and by this emergent method take from them much that they have been able to save because of reduced tariff.

In Nicaragua the oxen used for hauling loads, instead of being yoked in the manner common in the United States, have the yoke attached to their horns; this makes the angle of contact such that as the brutes begin to feel the load, in order to prevent loss of physical equilibrium, they lower their heads, and, of course, the greater the burden the nearer the heads of these faithful brutes are forced to the ground; and it is said that no native, cruel though he may be, is so unmindful of his own safety as to make the load heavy enough to cause the noses of his "yoke" to touch the ground. The animals will submit to any burden up to that point, but if the unhappy driver does not desist ere the dust is touched there will be one less recruit for the next revolution. This bit of philosophy is submitted for the enlightenment of those gentlemen whose researches have been confined either to expurgated volumes of history or who dwell so apart from the weight of the load that they are wholly unimpressed with the disastrous results of

Representative government, both as to potentiality and stability, would not be the subject of speculation if Representatives only would represent. The Representatives in Congress alone possess the power, through constitutional control of the sources of the revenue, to keep the Government in all its branches close and responsive to the people.

The House of Representatives can on any day in this Congress, the next, or in any subsequent one, even as it could have done in any preceding Congress, take exclusive charge of the business committed to this branch of the Congress and determine in fact, as in theory is now done, both the sources and

the sum of all revenue.

If, through neglect or failure to take the initiative, the House continues to permit its most sacred function to be controlled or considerably influenced by that branch of the Government which should have to do only with the proper disbursement of collected revenues the time will surely come, it may be soon, when the mighty power of public opinion will find expression in some plain man of the people, who, sensing the genius of our form of government and the powers and limitations in and of the coordinate branches thereof as set forth in the Constitution, and appreciating clearly, as thoughtful men must now appreciate, that if there is to continue permanency of devotion on the part of the people taxation burdens must be lessened rather than increased, will be chosen President; and after he shall have taken the oath prescribed by the Constitution he will come into this Hall and, looking out as on a horizon extending to the boundaries of the country, will address the Representatives of the people somewhat after this manner:

You are assembled here as the chosen Representatives of the many constituencies which compose this Government. You are fully aware that all bills for raising revenue must originate in the House of Representatives; and there is another link in the chain of your responsibility, if I may be pardoned a reference to a matter evident enough to thoughtful students of governmental problems as well as to public officials who understand that the less exactions made of the people the better and more respected the Government will be, but which has been little emphasized by those who previously have advised you from time to time, and that is that it also is within the spirit of the Constitution that the chosen Representatives of the people shall determine the aggregate amount of the revenue to be taken from the people. I use the expression "taken from the people" with full understanding of its exact purport; for, let the sugar coating or disguise be as nearly perfect as men can make it, whether accomplished by direct or indirect means or measures, not a dollar is used by the Government that does not in some manner add its weight to the backs of the people.

This leads to another thought: You can not represent your people back home, either in fact or constitutionally, if you yield any part of your power to influences emanating from other departments of the Government. Congress has long since driven the lobbyists from its Halls, and in this effort it was well advised, at least by one, and perhaps others, of my distinguished predecessors; but I am not unmindful that lobbyists do not necessarily confine their efforts to Members of Congress, and you can not know that other public officials, however eminent and distinguished, who presume to advise you on matters constitutionally and exclusively within your jurisdiction, have not themselves, unwittingly or otherwise, been persuaded to the views they so plausibly present to you; and the more exalted the official the more reason there is to be chary of his counsel, for wholly apart from the fact that the Representatives should at all times insist upon their constitutional right to determine every phase of revenue problems within themselves alone, the greater the man and the higher his official position the less likelihood you have of successfully coping with him, and the more apt you are, under the spell of his words and importance, to forget the already existing burdens of your constituents, surrender your views and Avoid them; and more particularly do I warn you against attempts to influence you made by any member of my Cabinet. Cabinet ministers are allowed me in the discharge of my duties, not yours. They know nothing about your respective constituencies, neither in theory nor in fact; in the matter of imposing tax charges they are without responsibility, sworn or otherwise, to the people. You, and only you, have the consti-tutional power in the premises and you must, whether you will it or not, bear the responsibility of every burden visited upon the Let your eye be single as to the sum which the people should pay, not as to the amount which the appointive Government employees could expend. Governments are not different from families. Some years greater expenditures can be afforded There should be just and discerning discriminathan in others. tions made from year to year. And here again you should think, and think seriously, of the people back home. In Washington no thought is given the bearers of the burdens of taxation unless you give it. Others are not charged with the duty, and that would constitute their answer to the protests of an overburdened and dissenting people, while as to you there would be left only the right to read the name of your successor in the roll call of the next Congress, and the poor privilege of telling such of your constituents as would deign to stop and listen how you yielded on the point because some one not responsible to a constituency for the imposition of taxes said it was necessary.

You should not overlook the fact that no sum of consequence will be saved to the people unless you work the saving by leaving it with the people. Once the money is provided in the Treasury, it will be used. Few fathers with money in the bank can withstand the pleadings of the family for the present use thereof, even though the appearances indicate the urgent need therefor during the next year. No President has yet been able, once the money was available, to stand out against the special pleas of those interested in showing how it could be used, and not saved. I fear I could not, surrounded constantly not by those who bear the burdens but by the ones who live off the people, either by direct salaries, which is remarkably abused, or by special interests which profit fabulously by exploiting tariff legislation. You should not impose upon me the safeguarding of more money than you can conscientiously exact from the people. The Government enters many fields in which vast sums of money are used, much of which could be postponed to a more

favorable day and some dispensed with altogether, to no material disadvantage of the country and to the great relief of the people. If less money is provided, only the requisite things will be done. In other words, the Government will survive to the people and the generations with millions less of annual revenue than very many respectable experts would undertake to prove was quite impossible. Furnish just such sum of revenue, and no more, as you would exact from the people if you were to act in their very presence. That which would be wrong back home will not be right in Washington. Each of you must remember that while no constituency would expect its Representative to stand out unduly over trifles, still if you do not represent thoughtfully, guardedly, and faithfully the people of your district, they will not be represented at all, nor will they have a potent or any voice in the most vital branch of their Government.

In the improbable event that any Cabinet minister or other officer in the executive branch shall attempt to control or influence any act of the House of Representatives in relation to the raising of revenue, you are advised now that in so doing he will not be representing me; but should you become convinced, for even Presidents are only men, that notwithstanding my professions I had caused the attempt to be made, you will know, and the country should be advised, that I had fallen from my high estate, been unmindful of your exclusive prerogatives, and forgotten wholly the limitations with which the Constitution surrounds me.

I shall now withdraw and go to the place provided by law for my use. My first act will be to scourge from the departments and bureaus all manner of lobbyists, and likewise and simultaneously and forever, against the same influence, shut and seal the doors of the White House; and as I go I shall feel assured that all Members of the Congress will refrain from any effort to influence executive officers in the determination of questions peculiarly executive in character; for, as must be recognized, influence thus exerted would tend toward a demoralized service in the departments and invite, as sure as men are human, an exchange of compliments on the part of the Congress.

Let these two great branches be as independent one from the other as was the conception and matured plan of the founders of the Government, and there will be less of favoritism and more of justice; and it is justice in government that points to permanency and stability.

War-Revenue Tax Act.

EXTENSION OF REMARKS

OF

HON. LOREN E. WHEELER,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. WHEELER. Mr. Speaker, I desire to record my protest against the extension of the provisions of the emergency-revenue act for the period of one year as provided for in this resolution. It is of vital interest to the people of my district and shoulders upon them an unjust and obnoxious war tax for which they are bound, and justly so, to hold the errors of a Democratic Congress responsible.

The people of my district are equally as patriotic as those living anywhere in this country, and they are always willing, as has been so forcibly demonstrated in the past, to rush to the aid of the Government in time of need and distress, but I do not believe they will permit this or any other Congress to impose upon them such unjust, unnecessary taxation without voicing a protest.

To me the affliction which my Democratic friends are about to impose upon those least able to bear it is one of the results, not only of a Democratic tariff bill which has failed to meet Democratic demands for appropriations, but of the gross extravagance which has prevailed during a Democratic administration.

not saved. I fear I could not, surrounded constantly not by those who bear the burdens but by the ones who live off the people, either by direct salaries, which is remarkably abused, or by special interests which profit fabulously by exploiting tariff legislation. You should not impose upon me the safeguarding of more money than you can conscientiously exact from the people. The Government enters many fields in which vast sums of money are used, much of which could be postponed to a more

ness system and a depleted Treasury is a return to a Republican

I, for one, do not believe that the people upon whom you have imposed this iniquitous stamp tax will be deceived, but I do feel that when the time comes to record their protest they will show by their ballots that they have properly charged this outrageous burden to Democratic mismanagement.

It may be that you expect to fool the people by alleging that our diminished revenue customs, which you say makes necessary the infliction of this so-called "war tax," is entirely, or in large measure, due to obliterated imports. If you do, you yourselves are destined to be fooled, for the reports issued by your own Democratic administration show that our imports have done very well, despite the European war.

In recent months they have outdistanced the record established during the year 1914. Take, for example, October. During that month the imports amounted to \$149,172,729, which were some \$11,000,000 more than for the corresponding month last year and \$16,000,000 more than for the corresponding month in 1913. The full November reports have not yet been made public, but the weekly returns show them to be very large, and even December is promising to make an unusual record.

Compared with the 10 months of 1913, the imports for the corresponding period this year were short only \$9,000,000; but this difference has been almost, if not completely, wiped out by the greatly swelling imports of November and December.

Some idea of how really big our imports have been in the last year may be gathered from the fact that in the whole fiscal year of 1913—ending with June of that year—our imports were only \$1,813,008,234. If the 12 months of this calendar year do not equal the 12 months of that fiscal year, they will come so near it that the shortage will not be worth mentioning. It has been only in recent years that this country ever imported in 12 months as high a value of foreign products as we imported in only 10 months of the calendar year of 1915.

From the fiscal year of 1905 to 1909, inclusive, there was no year when the imports for 12 months were as big as they were in the 10 months of this year. In the whole of 1910 the imports were only \$1,557,819,988, in 1911, only \$1,527,226,105, and in 1912 only \$1,653,264,934.

Therefore the plea that the European war is responsible for this stamp tax; that the European war has completely obliterated our imports, thus depriving us of the revenue necessary to run our Government, must be abandoned by my Democratic friends. If they desire to be fair with their constituents, if they desire to show that they in no wise wish to deceive the public, they will go before the people and admit that this stamp tax provided in the war-revenue tax act is only the result of another Democratic blunder.

War-Revenue Tax Act.

EXTENSION OF REMARKS

HON, CHARLES E. FULLER. OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. FULLER. Mr. Speaker, because of the great haste with which this resolution was forced through the House, without time for thorough consideration or discussion, I desire, under the leave given to extend remarks, to express my entire disapproval of this method of legislating and of this kind of taxation. We ought to need no war tax in times of peace; and if we did, no more unjust, unequal, and oppressive system could be conceived. I am opposed to all systems of direct taxation by the Federal Government except in case of dire necessity, and then it should not and need not bear oppressively on the poorer class of people or those of only moderate means. These are taxed sufficiently by the States and the municipalities; they are required to, and do, pay taxes on all their tangible property, real and personal, according to its value, for all the expenses of the State and local governments, for schools, roads, bridges, and all other local improvements and benefits. Federal revenues, all experience has shown, can best be raised by an internal-revenue tax on liquors, tobacco, and so forth, and by a tariff on imports. Even the Democratic Party has always in its platforms advocated a tariff for revenue. Then why not have a tariff that will produce sufficient revenue? Why extend this burdensome tax on thrift and industry for a whole year while

Congress is here to legislate, presumably, in the interest of our own people? Let us have a tariff for revenue, at least, and one that will easily, on the vast amount of imported goods now coming from abroad, produce all the revenue needed for the economical administration of the Government and for reasonable and necessary preparedness, about which we hear so much.

I have been much surprised at one feature of this war taxnow extended for another year by this resolution, without any opportunity to amend or change any of its provisions-and that is the wonderful solicitude shown for railroad, steamboat, telegraph, express, telephone, and the like corporations. They are not required to pay anything, but they must collect from their patrons a tax of 1 cent on each receipt or bill of lading for each shipment or each message sent, so that the tax falls, not on the rich corporation but on the common people. Ingenuity in making the tax a direct one on the people could hardly go further. Real estate is not taxed if a man keeps it, but if he is compelled to sell he must pay a tax for that privilege by putting a stamp on his deed. A great merchant, with large capital, buying and selling on his own account, pays no tax on his business under this act, but a small commission merchant must pay a tax of \$20 a year; and he does not get off with this, either, for, dealing mostly in fruits, vegetables, and other goods of a perishable nature, much of his business must be done by the use of the telegraph and telephone, and every time he uses either of these he must pay a tax of 1 cent, which in the aggregate amounts to a considerable sum, and many small commission dealers have been driven out of business, for the benefit of whom? It seems to me that the Democratic idea is to tax the people rather than the corporations and our own people rather than the foreign manufacturer or importer. I append, as expressing my views, two editorials from a great independent newspaper, the Washington Post, as follows:

THE DEMOCRATIC WAR TAX ON THE PEOPLE.

It was a score day for the Republicans yesterday in the House of Representatives when the majority of the Democrats went on record for direct taxation of the people of the United States for another year and the Republican membership of that body went on record unanimously

Representatives when the majority of the Democrats went on record for direct taxation of the people of the United States for another year and the Republican membership of that body went on record unanimously against it.

The votes of the Democrats for direct taxation will be exhibited in every district where there is a possible chance for the election of a Republican candidate for Congress, in every State where there is a chance for election of a Republican Renator; and while seats of Representatives from the far South and Senators from the far South will not be endangered by the record made yesterday, scores of seats of the Representatives from the so-called border States and from the North will be lost to the Democrats if this direct faxation is fastened on the people while there remain open so many other ways of obtaining the funds needed by the Government.

There will not be a penny collected under this direct taxation but from this time henceforth will be referred to by Republicans as the Democratic tax upon the people of the United States.

A party very vigorous with its political work is the Republican Party, and it has already started in its work of educating the people to believe that direct taxation is ovidence of Democratic inability to successfully administer the Government, and the vote of yesterday will but serve to establish such view in the minds of the people. Every war-tax stamp and every penny paid for a war-tax stamp by the people from this time forward will be a Republican argument against Democratic administration and the candidates of the Democratic Party.

Democratic administration and the candidates of the Democratic Party.

Democratic administration and the candidates of the Democratic Representatives and Senators to support it and carry it over another year. November, 1916, will bring party disaster in both branches of Congress, and probably in the Nation, through resentment of the people as against this form of taxation. If the Democratic Party has piedged itself to a revenue tariff

PROPOSED TAX ON PROSPERITY.

Before Congress met, Mr. JOHN J. FITZGERALD, chairman of the Appropriations Committee, wrote as follows regarding the problem of Government revenues:

"The prosperity of the country, the development and extension of commerce in every form, the continued and remunerative employment

of labor, the happiness and contentment of the people are all dependent upon the fiscal legislation of the Sixty-fourth Congress."

There is one Democrat who sees what his party is up against. He discusses the situation very frankly, indeed, and does not conceal his anxiety over the perplexities that confront his party. He admits that "it is safer to continue a system to which the people are accustomed than to substitute novel and equally exasperating taxes." Therefore he expressed the belief that the war revenue tax would be reenacted. On the question of a bond issue Mr. Fitzagazal does not agree with some of his Democratic colleagues. He makes no effort to concal the fact that a huge sum has been taken from the current funds of the Treasury to pay for the Panama Canal:

"The sum of \$222,432,586.66, which should be available for the current needs of the Government, has been expended in the construction of the Panama Canal—a permanent work. Whether the time is propitious for an issue of 3 per cent bonds is a matter for thoughtful consideration; but even though those bonds be issued there will still be the necessity for legislation to increase, by a very extraordinary sum, the current revenues of the Government."

But why should Congress confine its attention to 3 per cent bonds aggregating only \$222,000,000? There is nothing to prevent Congress from authorizing the issuance of bonds in any amount at any rate of interest.

The Democratic Party has before it the choice of revising the idriff and thus raising revenue, of issuing bonds sufficient to return to the Treasury the cost of the Panama Canal and the cost of permanent national defenses, and of imposing new, exasperating, burdensome taxes upon thrift and industry.

The Democratic leaders have already shown that they do not have the moral courage to make a right-about-face on the tariff. They cling to the assertion that the present tariff is not a fallure as a revenue producer and is not injurious to American industry.

These leaders are equality lacking in c

Also the following letter, which is to the same effect as many others which I have received:

AURORA, ILL., December 7, 1915.

CHAS. E. FULLER,
House of Representatives, Washington, D. C. Chas. E. Fuller,

House of Representatives, Washington, D. C.

Dear Sir. In regard to the war tax of 1 cent on all telegrams, telephone calls, and freight and express shipments I wish to call your attention to the fact that this causes a heavy, burden on the fruit and produce dealers, and while I do not want to object to paying taxes, still it does seem that this is unfairly thrown upon the shipper as none of these public-service corporations stand any of the tax whatever and force all their customers to pay it instead.

It would seem to me that this tax should be distributed so that part of it would be paid by the public-service corporations.

The fact that a tax is assessed upon each express and freight shipment, telegram, and telephone call does not give them the right to throw the burden on the business man and compel him to pay it all. I hope you will give this matter consideration and use your influence in helping to bring relief to the fruit and produce dealers under the present burden.

On account of the perishable nature of the merchandise very little business is done by mail and correspondence, and orders are nearly all tolls and telegrams and a great number of large and small shipments all requiring revenue, whereas the retail merchanits have few of these expenses as they order most of their goods through purchasing agents or by mail, as sales are mostly local, so that very little of the tax burden falls upon them.

I want to assure you that I would not object to the taxes being double for defensive preparations, deficiencies, etc., if properly distributed so that everybody pays their share, and hope you will give the matter your consideration.

Yours, truly,

W. B. Davis. Co.,

W. B. Davis.

W. B. DAVIS Co., W. B. DAVIS.

War-Revenue Tax Act.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL. OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES.

Friday, December 17, 1915.

Mr. SIEGEL. Mr. Speaker, we are at peace with the entire world. The resolution before us, however, has been commonly called a war-revenue bill, and we are asked to continue the imposition of a direct tax of over \$100,000,000 at a time when the Nation is following its normal paths. Nothing extraordi-nary has occurred in our midst requiring the saddling of this additional tax. Our people at all times desire to have the true facts told to them.

I have listened to all the remarks made by our friends on the other side of the House, but I have not heard one word from

them that the fact is that the present tariff bill is a failure as far as producing sufficient revenue to run the Government. We all know that we are confronted with a greater deficit this year than before and that the only way that direct taxes, such as are included in this resolution, can be avoided is by the enactment of a protective-tariff law.

At the same time we are told that the passage of this measure for an additional year is but the forerunner of a further series of direct taxes, which are to be levied upon gasoline, checks, automobiles, and other necessities in daily

That the present tariff bill is a failure has been emphasized by Mr. William Randolph Hearst, who in a signed editorial has said:

has said:

Why can not the Democratic Party frankly confess that its free-trade theories are a mistake, have always proved to be a mistake, and are now proving to be a mistake; * * * War or no war, the Democratic Party's tariff policies were proving failures. * * * Foreign goods were coming into our country, perhaps not in sufficient quantity to raise an adequate governmental revenue under the reduced rate of taxation, but certainly in sufficient quantities to deprive our American manufacturers of their home market and our American laborers of employment. American men out of employment are parading the streets. * * * American factories were closing and discharging their employees, and, instead of America shipping more goods abroad than before the reduction of the tariff, America was importing more and shipping less, with the balance of trade going more and more to our disadvantage. * * Another consequence of this European war is the opening of foreign markets to our products. We could have kept our home markets with legitimate protection. If home markets are desirable and advantageous, as they certainly are, let us retain them for our American producers by a tariff for protection. A tariff for revenue only has proven to be a tariff for insufficient revenue only.

Some people have been under the impression that the great

Some people have been under the impression that the great war in Europe has decreased our importations and that our deficit has been caused in that manner, but we know now that such is not the fact. There has been a net increase of importations for eight months from March 1 this year of at least \$55,000,000 compared with the same months of 1913. With a protective tariff law in force we would not be here to-day discussing the raising of revenue by direct taxation.

The gentlemen on the other side tell us that we have a wave of prosperity at the present time. I concede that we have a so-called wave of prosperity, which is bound to suddenly terminate the very minute we stop shipping abroad the vast quantities of war material that Europe is now purchasing and having manufactured here.

can readily perceive that when the great war shall have ended and peace shall reign once more in Europe the very nations now engaged in the terrible conflict will make more than herculean efforts to manufacture larger quantities of merchandise than they ever produced before. It will not surprise anyone who has given the matter any earnest or serious consideration that we shall see the spectacle of the very men now in arms being sent back to work under direct governmental supervision with the sole object in view of having Europe's mills and factories operated with the greatest efficiency.

We shall see the finished products shipped over here in tremendous volume, and with the present tariff duties in force our workingmen will soon discover, as they have in the past, their inability to compete with the cheaper labor of Europe, which will

be still cheaper after the war.

Experience has taught us that the inevitable consequences will follow. As soon as our manufacturers find that they can make more money by jobbing merchandise instead of manufacturing it they will buy abroad, bring it into this country, and simply close their factories, because in that way they will be enabled to obtain larger financial returns,

There will be numerous manufacturers and employers who will be the last ones to adopt the measures that I have referred to before, but if their competitors are to have such an open field, what can we expect them to do? I say that the remedy is obvious. This country has always had its most prosperous times under a protective tariff. At such times we have seen the fur-naces of the country in full blast, the mill running full time, and our factories without number being operated overtime. How can you forget the scenes that were enacted in the summer and fall of 1914 in New York City when thousands of unemployed were constantly marching the streets seeking work and begging for it and at the same time other thousands were being fed by charitable organizations? Surely, Mr. Speaker, the memories of our people are not so short that they have not retained a lasting impression of what we saw last winter in the large cities of our country.

Our friends on the other side in 1912 told us that if the Democratic Party came into power, under a tariff for revenue there would be a reduction in the cost of living and with it the Government would be run on a most economical basis.

Each year since 1896 on the 1st day of March Bradstreet's, which is a large commercial agency of high standing in this country, publishes a table which is part of its uniform publication, showing the comparative wholesale prices of commodities.

I have taken this table for the years 1913, 1914, and 1915. and it will readily be seen therefrom that there has not been any reduction in more than one-half of the commodities daily used by the average family, and that there has been no reduction in the total cost of living.

I read to you Bradstreets tables for the years 1913, 1914, and 1915, which are as follows:

	Mar. 1→		
Commodities.	1913	1914	1915
Hogs. prime, Chicago Beef, carcasses, per pound. Milk, New York, per quart. Eggs, fresh, New York, per loaf. Pork, mess, per barrel. Mutton, carcasses, Chicago Bacon, short ribs, smoked, Chicago, per pound. Hams, smoked, per pound. Lard, western steam, per pound. Butter, creamery, best, per pound. Cheess, choice, eastern factory, per pound. Mackerel, No. 1, Bays, Boston, per barrel. Sheep, prime, Chicago. Codifish, larga, dried. Sugar, granulated, per pound. Coffee. Tea, Formosa, Oolong, superior. Molasses, New Orleans, per gallon. Salt, fine domestic, per sack. Rice, domestic, per pound. Flour, straight winter, per barrel. Barley, No. 2, Milwaukee, per bushel. Corn, No. 2, mixed in elevator. Rye, western. Apples, per barrel. Gingham, Amoskeag, Boston, per yard¹. Standard sheeting, Southern, per yard¹. Cotton sheeting, Southern, per yard¹. Cotton, middling uplands, per yard¹. Petroleum, refined, per gallon! Quinine, domestic, in bulk, per ounce.	.11625 .04275 .25 .04275 .25 .100 .115 .115 .115 .100 .36 .175 .100 .043 .125 .108 .043 .108 .055 .108 .055 .108 .055 .108 .055 .068 .068 .068 .068 .068 .068 .068 .068	\$0. 1225 .12125 .04750 .31 .04 23.00 .25 .1525 .104 .315 .18 22.00 .6.25 .8.00 .04 .09125 .175 .35 .108 .06 .4.30 .705 .725 .4.00 .0625 .08 .095 .095 .095 .095 .095 .095 .095 .095	\$0.10 .1050 .05 .25 .05 .20.00 .133 .1087 .14 .0975 .31 .1675 .14.00 .0575 .0775 .0775 .0775 .0775 .140 .08125 .08125 .0825 .086 .085 .085 .085 .085 .085 .085 .085 .085

1 Raw and manufactured textiles which enter into clothing, beddings, etc.

I do not know a single man throughout the country who has bought a suit of clothes any cheaper during 1914 or 1915 than what he paid for a similar suit of clothes during 1912 or 1913; but I do know that the Treasury of the United States has not received the duties that the importers would have had to pay on the cloth were a protective tariff in force at the time instead of the present tariff.

The Democratic convention at Baltimore in 1912 adopted a platform which contained the following:

We denounce the profligate waste of money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a Democratic government and a reduction in the number of useless officers, salaries of which drain the substance of the people.

The platform also contained "Our pledges are made to be kept when in office."

The Democratic Party has had control of the House of Representatives during the years 1911, 1912, 1913, 1914, and 1915. Let us see what the appropriations made during the times re-ferred to were and are. They are as follows:

1911	\$978, 521, 087
1912	995, 799, 462
1913	988, 353, 340
1914	1, 057, 605, 694
1915	1, 089, 408, 777

Whatever I might say can not equal in words the strong and emphatic language used by the distinguished Representative from Brooklyn who is now presiding, who said:

From Brooklyn who is now presiding, who said:

We charge the Republicans for 12 years of my service in the House under Republican administration with being grossly extravagant and reckless in the expenditure of the public money. I believe that charge to be true. I believed that my party when placed in power would demonstrate that the charges we had made in good faith were true. We are entitled to the help and support of the Members of this side of the House in honest efforts to carry out the pledges of the Democratic Party and in our attempts to show that what we charged in order to get into power was true. We have not had that support. Our Democratic colleagues have not given that support to us thus far during this session of Congress. They have unnecessarily piled up the public expenditures until the Democratic Party is becoming the laughing stock of the country.

I believe that our friends on the other side have not been economical in the running of the Government; nor has the present tariff ever produced sufficient to run the Government; nor has there been any reduction in the cost of living, as was

promised by them during the campaign of 1912.

Mr. Speaker, I feel that this country does not want the resolu-

tion which is going to pass to-day because you have the numbers.

I have heard from the business men of my district, and they are opposed to it. I have heard from the small storekeepers and the workingmen of my district, and they request me to vote against it. I shall follow their requests, because I believe that they are right. I agree with them. I shall vote against the passage of this resolution levying direct taxes such as are contained in this resolution when a protective tariff law would render such a levy unnecessary.

Mr. Speaker, on such questions as national preparedness our citizens know that for our flag and country Republicans are ever ready to make every sacrifice, standing shoulder to shoulder with men of all parties in support of such a policy. tariff and kindred subjects, however, we have a right to speak plainly at all times, and particularly so when we conscientiously believe that a great injustice is about to be done by the passage of this resolution.

I am looking forward to 1917, when a protective tariff will be enacted, with the consequent return to that condition of prosperity and contentment not only for the manufacturer but also for the retailer and employee, with peace in our midst, with our flag respected, both at home and abroad, as in the days of our lamented McKinley, and with the sun shining on a land of equal opportunity for all, whether big or little, rich or poor, white or black.

War-Revenue Tax Act.

EXTENSION OF REMARKS

HON. LUTHER W. MOTT.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 17, 1915.

Mr. MOTT. Mr. Speaker, three years of Democratic rule in this country are drawing to a close, leaving in the wake of these wasted years, popular disaffection at a regime which has again proven the fallacy of low tariff and free trade, with no protection for American industry. The predictions of three years ago have been fulfilled in every particular in this respect, and the apprehensions of close students of economic and industrial conditions have been found to be verified as each day follows the other toward the close of one of the worst periods of industrial depression that this country has ever known for a similar short

This condition is not found alone in the centers of industrial endeavor; it has extended even to the sacred depths of the United States Treasury, in Washington, and no better proof of the condition of affairs is needed than the frantic efforts of my Democratic colleagues to jam through the extension of the warrevenue act as if this was a broad blanket to screen from prying

eyes the shortcomings of their party policies.

This, I take it, is not a proper occasion to discuss the failures of Democratic diplomacy abroad, but I know of no time more fitting to talk about that which we find at our very doors-conditions of which even the little children know. It is not out of place to talk hard times now; we have only to look back for the past two and one-half years, and that glance of retrospection will show just what Democratic policies mean to this country and its people.

Certain optimistic Democrats have donned their rose-tinted spectacles and have through this means and through their mouthpieces and their blased printed mediums, sent broadcast a message of prosperity based on figures. The old saying that figures do not lie, but that falsifiers may juggle figures, was never better applied than in this instance. You and I have often heard and perhaps have often used the expression, "The pulse of the people." It is evident that these false prophets

pulse of the people." It is evident that these false prophets have never placed their fingers on that pulse or felt its adverse throb within the period I refer to.

In this first instance, What is prosperity? You will find that it has no synonym in the English language which fully explains the meaning it conveys. It stands for peace; it stands for plenty; but, more than that, it stands for hard cash dollars and cents in hand. Not in vain promise, not in idle predictions, but in actualities; and it is with the latter that I choose to deal.

Democratic prosperity, of which now the first dull mutterings are heard, may be found in the first two years of this administration, in the closed factories, the bread lines, the soup houses, and the thousands of honest workmen applying for public charity, where charity had been scorned for a lifetime. This is the prosperity behind Democratic promises. This is the prosperity which has been the running mate of every Democrat who has adhered to his party beliefs in administering the policies on which his party principles are based; and this is the prosperity which every Democrat promises will come in the future if he is believed and his word and deed are accepted as The profit columns of the ledgers of American industries are the answer to the question, "What is prosperity? and more pertinent still, but never mentioned in these wouldbe prosperity sermons, the records of the proceedings of the United States courts in bankruptcy afford another convincing reply to the query and will show just how extensive this pros-

But to return to Democratic claims of this condition, their reasons for a change of mind, and reasons for the present unjust

taxation of our people.

In the first place, there is in Europe to-day a regrettable condition of affairs, where a dozen nations are at war. This war is in its second year, and had its inception just when this country's industrial affairs were at a low ebb. This war, awful though it might be, became at once the sole property of the Democratic Party, which took Mars to its shrunken bosom and embraced it like the lost one that had been found again. war still continues to be the property of the Democratic Party, and party leaders are as proud of it as if free silver had never been its pet adopted child and 16 to 1 its slogan. This adopted child is exhibited and flaunted like a battle banner to the bre It is the excuse and pretext for the war-revenue act, and the apparent reason for making the cost of living still more costly. The war in Europe has made in America, through its foster mother, the Democratic Party, a lamentable condition of affairs which approximates in the suffering inflicted nearly that in some of Europe's ravaged States

It is the reason for the necessity of taxes, which are in this particular instance wholly unnecessary, or I should say would be unnecessary, if the Democratic Party policy had been the success which has been claimed for it by its wholly misguided followers. The necessity in this instance seems to be to cover up these party shortcomings. There are but 100 cents in each dollar, but out of this dollar, your dollar and mine and everyone else's, the Democratic Party wants to take the toll for its This toll is being taken and will be taken more mistakes. heavily from the workingman. It is the great Christmas greeting of good will toward men which a benevolent party in power extends to a hundred millions of people, with a proviso from the head of that party, the President, heralded through the presidential message, for further additions to this tax which shall grind alike upon the farmer and the city man in a tax on

automobiles and checks drawn on banks.

It will soon cost money to have a bank account and cost a farmer in assessed tax for cutting his silage and pumping his water through the tax on gasoline. The latter product is the plaything of a combination and rises and lowers in cost, but the cheapest price is yet too high, and the Democratic Party aims to force the farmer back to hard work and hand labor. It aims thus to rob the poor man of his comforts and the moderately well-off man of his petty luxuries. The reason, of course, as anyone who believes what he hears from the lips of Democratic leaders will tell you, is the war in Europe, the Democratic Party's own private, solely owned, and wholly controlled little private war. America, where the nations at war feed and recruit their supplies for war, must pay the bill

through Democratic policy.

All of which brings us up to a period of a little over a year ago when Democratic prosperity first began to be apparent to Demo-That period in our commercial history saw the birth of a new industry, a new sort of business-the war order. This business in the grand total of many component parts comprises millions of dollars in value, with profits commensurate with the risk taken with the European world topsy-turvy in conflict and half a dozen other nations tottering on the ragged edge of near precipitation. With the coming of this new business, the war, which had caused so much industrial depression and suffering, became the fondest hope of Democracy, for every man whose buildings and machinery were adapted for munitions making, saw his chance to recoup his losses, and again the war was claimed by Democracy, this time for the good of the country.

But are war orders legitimate business? They come to us because our factories may deliver the goods which are, thank heaven, not needed at home, and because they offer the only

relief from conditions brought about by Democratic abuse of power and ignorant tampering and experimenting with the prosperity and happiness of the people of the greatest Nation on the globe. But it will not be long, as time is reckoned, before the Democratic war in Europe will take its former stand as the reason for coming hard times. No one wants to be a harbinger of hard times, close money, few jobs, and all the rest of the accompaniments of hard times, but the wise men are those who look well into the future and give some consideration to the present and past in making plans for that future.

The war in Europe can not last forever. It has developed now into an endurance contest, and when the first flutterings of the wings of the dove of peace are heard then will come the deluge. It shall be a deluge of regrets and broken promises for many, but more than that will be a deluge of foreign-made goods dumped into the American market to sell at what they may bring to help pay the taxes abroad which were levied to pay for American goods, which helped to make the war last Factories in Europe are not idle. The Governments abroad have found it necessary to operate them under Government control to provide labor for those not at the front, and the product of these factories, of this cheap labor, will find its way to these shores to compete with American products. Where will be the Democratic protection then? the American manufacturer dependent on the benevolence of Democratic principle be then? Just where he was when the Democratic Party first started to claim the war as the need It is now costing the American public more to finance the Democratic pet war, in which they are not inti-mately interested or concerned, than it did to finance the Spanish-American War, in which they were an active party. The computations of Democratic leaders must have gone wrong.

American manufacturers, business men, workmen, and farmers must prepare for that time. It is time now to take steps to prepare for conditions which will as surely follow the war in Europe as night follows day. It may be well, too, in passing, to review what has taken place in the past three years since a reduction of the tariff and the placing on the free list of many manufactured and agricultural products has made possible competition, which has proven and will be rulnous to the American producer, whether he be business man or farmer.

There should be nothing fair in this, but it is so in spite of news

from Wall Street of millions lost and fortunes won. But this

is all false prosperity, prosperity which has for its foundation

nothing as stable even as quicksand, and when the crash comes the "war bride" will be a widow and there will be many mourn-

ers at the funeral of the favorite, more recently adopted favor-

ite, child of the Democratic Party.

Democratic extravagance is the reply as to the why of extra taxes, and Democratic impotence and incompetence in vital matters of Government administration is the reply to present conditions necessitating a "war" tax. There is only one solution to the great national problem, that being the retirement of the party which has again proven its inability to properly handle the affairs of the greatest country in the world.

The President, the recognized leader of the Democratic Party,

is, as I have said, perfectly cognizant of the condition of the Treasury, due to the extravagance and ill-advised expenditures made during his administration, and in his own words, from his message delivered at the opening of this session of Congress, the following proves the point:

It is made my duty by law, whenever the estimates of expenditure exceed the estimates of revenue, to call the attention of the Congress to the fact and suggest any means of meeting the deficiency that it may be wise or possible for me to suggest. I am ready to believe that it would be my duty to do so in any case; and I feel particularly bound to speak of the matter when it appears that the deficiency will arise directly out of the adoption by the Congress of measures which I myself urge it to adopt. Allow me, therefore, to speak briefly of the present state of the Treasury and of the fiscal problems which the next year will probably disclose.

disclose.

On the 30th of June last there was an available balance in the general fund of the Treasury of \$104.170,105.78. The total estimated receipts for the year 1916, on the assumption that the emergency revenue measure passed by the last Congress will not be extended beyond its present limit, the 31st of December, 1915, and that the present duty of 1 cent per pound on sugar will be discontinued after the 1st of May, 1916, will be \$670,365,500. The balance of June last and these estimated revenues come, therefore, to a grand total of \$774,535,605.78. The total estimated disbursements for the present fiscal year, including twenty-five millions for the Panama Canal, twelve millions for probable deficiency appropriations, and \$50,000 for miscellaneous debt redemptions, will be \$753,891,000; and the balance in the general fund of the Treasury will be reduced to \$20,644,605.78. The emergency revenue act, if continued beyond its present time limitation, would produce, during the half year then remaining, about forty-one millions. The duty of 1 cent per pound on sugar, if continued, would produce during the two months of the fiscal year remaining after the 1st of May, about fifteen millions. These two sums, amounting together to fity-six millions, if added to the revenues of the second half of the fiscal year, would yield the Treasury at the end of the year an available balance of \$76,644,905.78.

The additional revenues required to carry out the program of military and naval preparation of which I have spoken, would, as at present estimated, be for the fiscal year 1917, \$93,800,000. Those figures, taken with the figures for the present fiscal year which I have already given, disclose our financial problem for the year 1917. Assuming that the taxes imposed by the emergency revenue act and the present duty on sugar are to be discontinued, and that the balance at the close of the present fiscal year will be only \$20,644,605.78, that the disbursements for the Panama Canal will again be about twenty-five millions, and that the additional expenditures for the Army and Navy are authorized by the Congress, the deficit in the general fund of the Treasury on the 30th of June, 1917, will be nearly two hundred and thirty-five millions. To this sum at least fifty millions should be added to represent a safe working balance for the Treasury, and twelve millions to include the usual deficiency estimates in 1917; and these additions would make a total deficiency estimates in 1917; and these additions would make a total deficiency of some two hundred and ninety-seven millions. If the present taxes should be continued throughout this year and the next, however, there would be a balance in the Treasury of some seventy-six and a half millions at the end of the present fiscal year, and a deficit at the end of the pear, a total deficit of some one hundred and twelve millions. There are many additional sources of revenue which can justly be resorted to without hampering the industries of the country or putting any too great charge upon individual expenditure. A 1 per cent tax per gallon on gasoline and naphtha would yield, at the present estimated production, \$10,000,000; a tax of 50 cents per horse-power on automobiles and internal explosion engines, \$15,000,000; a stamp tax on bank checks, probably \$18,000,000; a tax of 50 cents per horse-power on automobiles and internal explosion engines, \$15,000,000; a stamp tax on bank

The President, too, shows his ignorance of conditions which affect the ordinary citizen, and it is evident, too, that he does not see the White House mail. I have received within the past six months hundreds of letters from residents in my district, and many of them are from prominent Democrats-manufacturers and business men for the most part-who are disgusted with the administration and the commercial results it has brought about. War orders do not extend to all parts of the country. I wish, for the purpose of showing how strongly some of these men feel, I might read their letters, but I must resist the temptation, and It may be enough to say that the party which they have supported for years in its adverse days will not know their help again at a time when the party is supposed to be enjoying success. I protest on behalf of the people of my district against the extension of the war-revenue act, and against the enactment of any further legislation which will tend to have the effect of making a comparative few pay for the enjoyment of the millions.

The Emergency Revenue Bill.

EXTENSION OF REMARKS

HON. GEORGE HUDDLESTON.

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. HUDDLESTON. Mr. Speaker, under the general leave granted by unanimous consent on December 16, 1915, I desire to present my views upon the extension of the emergency revenue act and to state why I will vote for such extension.

The matter under consideration is the extension until December 31, 1916, of the provisions of the act entitled "An act to increase the internal revenue, and for other purposes," approved October 22, 1914. This law, commonly known as the emergency revenue bill, was passed to produce revenues, a deficiency in which was occasioned by the falling off in importations from foreign countries and a decrease in internal revenues, all incident to the European war.

The emergency revenue law of 1914 was largely copied from and is similar to the Republican war-tax measure of 1898. The latter was passed because of the need for increased revenues occasioned by the War with Spain. The law of 1914 was passed because of a decrease in internal revenues from spirits and tobacco, and so forth, and in tariff receipts occasioned by the European war. The circumstances under which the two laws were passed were quite similar. The law of 1914 was an emergency act in the strict sense of the word.

It will not do to say that because this Nation was at peace no emergency existed, since emergencies may be as well created by wars between foreign nations as by a war in which the United States takes part. Indeed, it must be admitted that the disturbance in the fiscal affairs of the neutral nations of the world caused by the European war was much greater than the derangement in our income and expenses occasioned by the Spanish War of 1898.

The Democratic general revenue bill of 1913 was most success ful as a revenue producer. During the nine months prior to August 1, 1914, during which time the law was in untrammeled operation, greater revenues were produced than during any similar period under the Dingley tariff or the Payne-Aldrich law. On August 1, 1914, there was a surplus in our Treasury, a condition which had not existed on any August 1 during Taft's administration. The European war produced world-wide business depression. A panic of unprecedented proportions confronted the whole financial world. Trade was paralyzed, business confidence destroyed, and a period of depression ushered in. Our foreign trade, both of import and export, was suspended, and foreign credits reached a prohibitive premium. In a few months a foreign demand for our food products developed and a trade balance in our favor began to accumulate, which was soon large enough to place Europe in our debt, so that the price of foreign exchange soured to unprecedented prices. The effect of these sudden fluctuations, loss of credit, and interruption of the channels of trade, lack of shipping, and so forth, was necessarily disastrous to ordinary commerce. Our import trade is even now only partially recovering, and will not likely reach normal figures until some conclusive development in the course of the war.

In America, within a few weeks after the breaking out of the European war, profound business depression existed. The depression pervaded the entire country in its industrial and financial affairs. In my section of the country, the iron and steel district of the South, there were three overlapping depressionsthe financial and industrial depression, which existed elsewhere, and the cotton depression, which was peculiar to the South. Over the country generally business was suspended, work stopped, and thousands were thrown out of employment. The result was a long period of enforced economy. This first had effect, as was proper, upon luxuries; the use of spirits and tobacco greatly decreased, and there was little demand for luxuries imported from foreign countries on which it was our policy to levy tariffs. The decrease in public revenues was therefore instantly felt, and, in a measure, for the reasons stated, was out of all proportion to the injury which business had sustained, great as such injury was,

In this state of our fiscal affairs the emergency revenue law of 1914 was enacted. It was in every sense an emergency measure, and was intended to be only temporary. It was expected that the European war would soon end and that business would be resumed with the realization of normal revenues. The war has lasted much longer than was expected by anyone, especially by the nations which entered into it. We have not by any means yet recovered from its effects upon our revenues. It will be yet months before the American people fully recover from the business depression beginning in August, 1914, and until such recovery is fully made some temporary arrangement to cover the deficiency in revenues must be made. The emergency is as real now as it was in 1914 and must be met patriotically and real now as it was in 1914, and must be met patriotically and

not by seeking petty party advantage.

The question may be asked, Why when the deficiency in revenues was foreseen were our expenditures not cut correspondingly? Any answer made to this question must be unsatisfactory. Undoubtedly our Government spends too much money. There is undoubted waste and unquestionable extravagance, but where will you begin to cut expenses? It is too late to start a movement for economy after a temporary shortage in revenue The economies practiced must be systematic and real and should reach every item of unjust or unnecessary expendi-Everyone who has had to deal with public affairs realizes that it is much easier to increase revenue than to cut expenses. Practically every economy proposed involves a bitter and violent opposition. Many times such opposition comes from the people themselves, who are misled into thinking that everyone must get his share. Growing out of this feeling we have our "pork-bar-rel" legislation for public buildings and other works of public improvement. Constituents frequently demand of their Congressmen that they procure the expenditure of public money in their districts, and alas, too often, it appears that these expenditures are desired more for the purpose of a temporary benefit to local trade and industry than to a desire for a permanent public improvement of real and substantial value. we have organized governmental activities along certain lines, in appropriations for Army and Navy, for agriculture, and so forth, and unless a thorough overhauling of the system is to be made it is manifestly unfair that under the spur of temporary pressure we should knock off this or that appropriation and thereby disrupt a well-developed organization.

The emergency revenue law of 1914, by its terms, expires on December 31, 1915. Immediate action for its extension is there-

fore imperatively demanded. To carry out this law and to collect the revenues which accrue under it an organization has been perfected consisting of clerks and other officers. If the law is not reenacted before it expires this organization will be completely destroyed. The collectors will go out of office and the whole system be disrupted. A reorganization at some later date would cause a heavy expenditure of public money. fore, if we are to have the law reenacted, the act of extension should be immediately adopted. If the matter is left for action until a general-revenue bill can be considered, several months will be consumed with partisan haggling over its terms.

As a matter of principle, I oppose the provisions of the emergency revenue law which provide for stamp taxes. I regard this as a highly objectionable form of taxation. True, it has the merit of being direct in its operation. The people who pay the tax know that they are paying it. The money is not taken from them by stealth through forms of import duties so as to leave a basis for the fallacious contention that the for-

eigner pays the tax.

The principle of direct taxation must be approved, because the people who pay are thereby directly made aware of the extent to which they are being mulcted and may take action to relieve themselves of unjust burdens. A great objection to stamp taxes is that they lay a direct burden upon commerce; business is made to pay for its existence. The man of sloth pays nothing; the man of industry is made to suffer. tendency is to clog trade and to handicap commercial transac-I believe that no nation should rely for any substantial part of its revenue as a penalty for the activities of legitimate commerce and trade.

Another great objection to stamp taxes is the great inconvenience to which the people are put in their collection. The comparison made by the gentleman from Wyoming [Mr. Mox-DELL] in his speech upon this subject is most apt. Our Government stands at telephone booths, telegraph stations, cashiers' windows, and in other most unwelcome places to exact its revenues penny by penny, a trifling sum at a time, from those who

have to pay. A man is frequently put to inconvenience and trouble in procuring stamps out of all proportion to the importance of the business transaction for which the stamps are

In rural districts and away from business centers generally the inconvenience of stamp taxes is frequently most exasperating. Even in commercial centers business men are subject to frequent irritation and annoyance. For illustration, a few weeks ago a man of my acquaintance desired to have a small business transaction. The amount of stamps required to make the transaction valid was only 17 cents. He first went for the stamps to a leading real estate office—the clerk who had charge of the stamps was at lunch. Thence he went to a bank-it was after banking hours and the stamps had been locked in the safe. Next he walked six squares to the revenue collector's office and over his counter bought the 17 cents in stamps, tendering the clerk a silver dollar in payment; but behold the clerk shook his head; he could not make change, so the man handed him back the stamps and put his dollar in his pocket and walked out, for that was the last straw, and in his exasperation abandoned his transaction.

The aggregate collections from stamp taxes on everyday business transactions must be small, and, no principle being involved, it would seem that the Government should give up a method of taxation so harassing to citizens. I do not think that I shall ever support another stamp-tax measure which involves in its operations so much inconvenience to the people.

It should not be believed that the emergency act of 1914,

which it is now proposed to extend, represents to any degree a Democratic principle. To the contrary, this law is a close copy of the Republican revenue measure of 1898, and credit should be

given to the Republican Party for its invention.

The Democratic general revenue law of 1913, sometimes called the Underwood bill, represents to a large degree the ideals of the Democratic Party upon the matter of a levy for national revenues. I quote from the tariff plank of the national Democratic platform adopted in Baltimore in 1912

We declare it to be a fundamental principle of the Democratic Party that the Federal Government under the Constitution has no right or power to impose or collect 'ariff duties except for the purpose of revenue, and we demand that the collection of such taxes shall be limited to the necessities of Government, honestly and economically administered.

As for myself, I stand squarely upon this plank. Though I represent the largest manufacturing district in the South I give my fullest and freest adherence to the principle of tariff for The declaration of the Baltimore platform it seems to me is fundamental in Democracy and any apology for it or evasion of any of its implications constitute a betrayal of |

the real principles of Democracy. It is difficult to square some of the provisions of the general tariff law of 1914 with this plank. A moderate tariff levied upon all imports of whatsoever kind, with increased rates upon luxuries and articles which are not necessaries of life, seems consistent with the Baltimore declaration. Another legitimate subject of revenue is domestic products, taxes upon which when levied at all should be upon articles which are not necessaries of life, such as spirits, beer, tobacco, and things which contribute chiefly to luxury or pleasure.

I stand upon the principle that a large part of our necessary revenues should be derived from taxes upon incomes. lieve that the Nation in future should come to rely more and more upon taxes upon inheritances and accumulated wealth. I believe that we should give fuller recognition of the doctrine that the burdens of taxation should so far as possible be lifted from the backs of the poor and that the wealth of the country should pay the greater part of the expenses of Government. The activities of Government consist in chief in the administration of justice, in the preservation of order and public defense, and the protection of property in general. It is only fair that the expense of protecting wealth should be paid by that which enjoys the protection.

Of all forms of taxation the most iniquitious is that which under the guise of raising revenue for the public welfare enables producers and manufacturers to lay an unjust charge and to exact an unjust price from American consumers. Especially is this so when the necessaries of life are involvedthe everyday needs of the everyday man. A tax such as thisand practically all protective tariffs come under the ban-is a perversion of American ideals and American institutions; it is

a fraud upon the American Constitution.

Emergency Revenue Tax Act.

EXTENSION OF REMARKS

HON. JOHN N. TILLMAN, OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 17, 1915.

Mr. TILLMAN. Mr. Speaker, no one can dispute the fact that at the time the Sixty-third Congress passed the act which the resolution under consideration seeks to continue, that an emergency existed justifying its passage, and no one can deny that an emergency exists now, justifying its extension. The President has recommended this legislation, it therefore becomes an administration measure; the Democratic caucus has indorsed it, making it a party measure; our party is charged with the responsibility of providing revenue for necessary expenditures, therefore no party man can well afford to vote against the pending resolution.

It has been stated on both sides of the chamber to-day that direct taxes are never popular. That is true and the Republican Party, with characteristic cunning, has taken advantage of this perfectly natural antipathy to fasten upon the country the unscientific and clumsy iniquity known to political economists as the protective tariff, which protects the few but fleeces the many. Our dislike of direct taxes will prompt us to protest the payment of a penny on a telegram, and yet not complain when compelled to pay a half dozen dollars in the way of bounty to a

protected clothing manufacturer.

On the minority side they say to-day, as they have been saying all these years, "Let the foreigner pay the tax." The President was accused of a lack of dignity when he said that the Republican Party had not acquired a new idea in 30 years. He stated the truth. The foreigner first pays the custom duties, but the consumer pays them finally, and for every dollar that goes into the Federal Treasury in the way of custom duties many times one dollar goes into the deep pockets of the protected manufacturer because of the unfair Republican system

of taxation.

Direct taxes are fair, they are democratic, they go directly into the Treasury, but people detest them because they are not used to them and feel them acutely because they know it when they pay them. It is something new; therefore not understood. The policy of paying more taxes, but paying them indirectly, has fastened itself upon the Nation, to the Nation's hurt.

For almost half a century the United States has collected practically all of its revenues from consumption taxes. During

these years \$20,000,000.000 came into the Federal Treasury through customs and taxes from internal revenues. These taxes were largely paid by people of modest means, and, worse than that, the people who pay these taxes are tricked into the belief that they are paying value for these goods, whereas in fact they are not only paying for the goods, but are paying an enormous head tax as well on every article purchased. We have been collecting less than 10 per cent of the public revenues from direct taxation. The other great nations collect perhaps 50 per cent of their revenue directly.

We collected in 1914 from custom taxes two hundred and ninety-two millions and three hundred and eighty million from internal revenues; in this last amount must be included taxes

from incomes.

Direct taxes are equitable and desirable in that they are collected from wealth, from inheritances, from property, from vast estates, rather than from the poor. The tax of over six hundred million from customs and from internal-revenue taxation is only a part of the burden of indirect taxation. The duties imposed on imports make these imported articles higher to the consumer, and also enhance the selling price of domestic goods in circles protected by tariff legislation.

Approximately \$2,000,000,000 annually must be paid by Amer-

ican consumers because of the tariff.

In comparison with foreign countries we pay extravagant per capita custom taxes. This country collects \$3.20 per capita custom taxes; Germany collects \$2.50; France, \$2.60; Italy, \$2; Japan, 40 cents. Our internal-revenue tax, largely paid by the poor, totals \$3.25 per capita, the per capita indirect tax totaling \$6.45.

We should raise more revenue directly—impose taxes on in-heritances and bequests. About \$3,000.000.000 change hands annually through death. We should increase the tax on incomes coming from investments, tax smaller incomes than are now being taxed, secure taxes directly from property, rather than continue the Republican policy of collecting by indirect methods enormous revenue from the people least able to pay it.

Emergency Revenue Tax Act.

EXTENSION OF REMARKS

HON. BURNETT M. CHIPERFIELD.

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES.

Thursday, December 16, 1915.

Mr. CHIPERFIELD. Mr. Speaker, were the subject matter of the resolution under discussion of less importance to the people, and particularly those whom I represent, I would hesitate to burden this record with an extension of my remarks.

Upon the motion of the gentleman from North Carolina [Mr. KITCHIN] the debate hereon has been limited to two and onehalf hours, and only one-half of this time is available for use by

this side of the House.

When one reflects that the matter covered by the resolution affects the entire population of the United States—although it must be admitted that some States, and particularly those of the majority of the Democratic side, are not so heavily touched by it—the attitude of the majority side is difficult to understand upon any other theory than that it is a studied and deliberate attempt upon their part to forbid full discussion of the resolution on the floor of the House and to prevent the open expression of the severe criticism that it merits.

It may be that the importance of the measure is not so great in the opinion of these gentlemen as to merit much discussion, but that opinion will not be shared or upheld by those who will finally pass judgment at the polls upon this measure.

The burden falls heavily upon the State which I have the honor to represent, and in this way and upon the behalf of my constituents I desire to leave upon the record my protest against the passage of the resolution that imposes it.

Of the entire internal revenue collected in the United States the State of Illinois pays more than one-eighth part, or for the fiscal year ending June 15, 1915, it paid the enormous sum of

\$56,242,546,12,

It was the second State in the Union in the list of internalrevenue contributors.

We are told by the majority that the measure is one of absolute necessity to save the Treasury from utter depletion.

It has been denominated by them as a " war tax.

Such juggling with words and terms is wholly puerile and will deceive no one.

The statement that it is a war tax may be a sop to ease the apprehensions of those who vote this tax upon the people, but no one else will be deluded by it.

The "wayfaring man, though a fool," will laugh at the clumsy attempt to misbrand this burden imposed by the Democratic Party at a time when profound peace prevails within the borders of this land.

If the measure is a necessity, as they claim, it is because of the fact that the Treasury of the United States is empty and bare, and stands so as a monument to the incompetency and financial mismanagement of the present administration.

When the Republican administration left office on the 4th day of March, 1913, the Treasury was in a most flourishing condition, notwithstanding the fact a very unusual expense had been incurred by the Government in the building of the Panama

There was then in the Treasury a balance of \$149.000,000.

There was then upon the statute books of the Nation a tariff law that was sufficient to provide from customs collected revenue enough to efficiently run the Government, pay all of its expenses, and to accumulate a handsome surplus.

This surplus was growing month by month, thus putting the financial standing of the United States upon a wholly sound and solid foundation and thereby aiding every legitimate business en-

terprise in the land.

The sum so collected came to the Trensury without visible

burden upon the people.

The gentleman from North Carolina [Mr. Kitchin], in quoting a statement which he claims was made by the late Senator Dolliver, justified in part the imposition of the stamp tax extended by the resolution, because he contends that Senator Dolliver said that for every dollar which goes to the United States Treasury from customs that \$5 goes into the pockets of those conducting the business enterprises of the Nation.

He very well could have gone yet further and said that if this statement attributed to Senator Dolliver is correctly quoted, then that for every \$5 which goes into the pockets of those conducting the business enterprises of the Government \$50 goes into the pockets of the labor of the United States employed in

such enterprises.

In order that it might be true to its oft discredited policy and traditions our opponents upon the other side of the House speedily repealed this revenue-producing, business-stimulating, labor-employing measure.

In so doing they struck a blow at the industry and labor of the country well understood by all, apparently, except those who

struck it.

In order that they might take \$5 from the pockets of those conducting the business enterprises of the country they would also strike down the \$50 which goes into the pocket of labor.

It would serve no useful purpose to recount the business and industrial loss and suffering that followed the repeal of the Republican tariff law.

The sears produced by such repeal are yet visible upon the body of labor and of productive industry.

It is true that the existence of such scars is denied by those who constitute the majority, but such denial is made to suit the purpose of the present hour.

Light is shed upon the business health of the country since such repeal by considering the number of failures that occurred in 1912 and in 1914.

In 1912 (under a Republican administration) the failures were 15,452 and the total liabilities were \$203,117,391.

In 1914 (under a Democratic administration) the failures were 18,280 and the total liabilities were \$357.908,859, or, as compared with 1912, an excess of business failures of nearly 3,000 with an excess of liabilities of \$154,000,000.

As bearing also upon the general prosperity of business, the corporation income tax is \$3,983,308.18 less for the fiscal year ending June 30, 1915, than it was for the fiscal year of 1914. Can this denote anything but an unprosperous year in the affairs of such concerns?

If the corporation income tax is nearly \$4,000,000 less for 1915, how much less must have been the actual incomes of such corporations?

For the fiscal year of 1914 the corporation income tax was \$43.127.739.89. For the fiscal year of 1915 it was \$39.144.531.71. The effect of this legislation will not be determined in this

House or here finally weighed.

It is the whole body of the people who will give the verdict after this Congress has adjourned.

True it is that while in session we are apt to magnify our importance, but at a future day we will be calmly and dispassionately judged by our masters, who will not be blinded by the glamor of "pomp and circumstance."

It is sufficient to say that the Democratic majority stand indicted by the people of the land, charged with having grievously injured both industry and labor. Judgment of condemnation and punishment will be pronounced at the polls in November next, and there the industrial evil here wrought will be corrected.

In the last presidential campaign the Republican administra-tion of affairs was denounced as recklessly wasteful and wick-edly extravagant and it was castigated and held up to scorn by

Democratic orators upon every stump.

The Democratic platform was vigorously outspoken with pro-fession of horror at Republican extravagance and profuse with promises of Democratic economy.

The result after the election was precisely what might have been expected and as always heretofore been realized whenever the Democratic Party has been intrusted with power.

Instead of economy upon the part of this administration there

has been a program of extravagant appropriation.

No one can be found who would be rash enough to contend that a more efficient administration of affairs has been produced under this administration.

No one can truthfully be heard to say that a better government was given, but, despite all promises and platforms, the Sixty-third Congress (Democratic) made appropriations of \$177. 000,000 more than did the preceding Congress, which was Republican.

It has invariably been so, that when power is intrusted to the Democratic Party that receipts have been diminished, and in place of a surplus there has been a deficit and instead of economy there has been reckless extravagance.

In this last instance the party ran true to form.

Following the repeal of the tariff law the Treasury balance

immediately commenced to diminish and disappear.

As stated before, on the day when President Wilson was inaugurated there was in the Treasury of the United States the sum of \$149,000,000.

September 30, 1915, the Treasury balance had been reduced to \$41,000 000.

On December 15, 1915, the Treasury balance is variously estimated to be from \$20,000,000 to \$1,000,000.

Somewhere between the two last-named sums is the real

It is apparent that the Treasury is bankrupt, and has been made so by the reversal of and departure from the policy of

the Republican Party.

The first 13 days in October, 1915, the Treasury balance dropped \$11,598,304, or more than \$800,000 per day.

September 27, 1913, under a Republican administration, the Treasury balance was \$127,091,178.

September 27, 1915, the Treasury balance was \$41,870,422.

In other words, in the two years under Democratic mismanagement the Treasury balance has been depleted \$85,220,756. leaving at this time a balance utterly insufficient for the needs of the country, and requiring to be replenished, as contended by the majority, by a continuation of the special tax sought by the resolution under consideration.

The original act which was entitled "An act to increase the internal revenues, and for other purposes," was introduced by the Democratic side and urged in the Sixty-third Congress with

an apology.

It was stated that it was only a temporary expedient, and by its terms its operation was limited to December 31, 1915.

Our opponents at all times have bitterly denounced a tax of this kind, that imposes a burden of such a nature on the people.

The Republican Party has never approved of such a policy. except in time of actual warfare or following actual warfare, for the purpose of paying war indebtedness.

The effort has not been made many times in the United States to raise revenue by such methods, but whenever it has been attempted it has been prompted by a necessity growing out of the need to raise money to pay for a war then in progress or to pay indebtedness incurred by a war.

It has never been thought to be warranted by the deficit occurring in time of profound peace and in the absence of physical

disaster.

As nearly as is possible I have collected a list of the laws whereby such taxes have been imposed.

Following the Revolutionary War, resort was had to this method of taxation, as follows:

Act of June 5, 1794. (1 Stat., 373.) Tax on carriages. Act of June 5, 1794. (1 Stat., 384.) Tax on snuff and re-

fined sugar.

Act of June 9, 1794. (1 Stat., 397.) Tax on property sold at anction.

Act of May 28, 1796. (1 Stat., 478.) Tax on carriages. Act of July 6, 1797. (1 Stat., 527.) Tax on vellum, p Tax on vellum, parchment, and paper, including paper used for certificates of naturalization, licenses of attorneys, letters patent, charter parties, bottomry and respondentia bonds, receipts for legacies, insurance policies, exemplifications, bonds, bill of exchange, promissory notes, protests, powers of attorney, drawback certificates and debentures, bills of lading, inventories, insurance and bank shares.

Act of February 28, 1799. (1 Stat., 622.) Amendment of act

of July 6, 1797.

After the War of 1812 a like resort was had to his method of taxation for the purpose of raising funds to pay the expenses of that war. Such enactments were as follows:

Act of July 24, 1813. (3 Stat., 35.) Act of July 24, 1813. (3 Stat., 40.) Tax on refined sugar. (3 Stat., 40.) Tax on carriages,

Act of July 24, 1813. (3 Stat., 44.) Tax on sales at auction. Act of August 2, 1813. (3 Stat., 72.) License tax on retailers of liquor and foreign merchandise.

Act of August 2, 1813. (3 Stat., 77.) Tax on bank notes,

bonds, and bills of exchange.

Act of December 15, 1814. (3 Stat., 148.) Tax on carriages. Act of December 23, 1814. (3 Stat., 159.) Tax on sales at auction, license tax on retailers of liquors, and foreign merchandise.

Act of January 18, 1815. (3 Stat., 180.) Tax on manufactured iron, candles, hats, umbrellas, paper, playing and visiting

cards, saddles and bridles, boots, leather.

Act of January 18, 1815. (3 Stat., 186.) Tax on household furniture and watches.

Act of February 27, 1815. (3 Stat., 217.) Tax on gold, silver, and jewelry.

Again was this true during the days of the Civil War and for several years following, where the following impositions were made.

Act of July 1, 1862. (12 Stat., 432.) Act of July 16, 1862. (12 Stat., 588.) Tax on sugar.

Act of March 3, 1863. (12 Stat., 713.) Amendment of act of July 1, 1862.

Act of June 30, 1864. (13 Stat., 223.) Act of March 3, 1865. (13 Stat., 469.) Amendment of act of June 30, 1864.

Act of July 13, 1868. (14 Stat., 98.) Amendment of act of June 30, 1864.

August 2, 1886 (24 Stat., 209), a tax was imposed on oleo-margarine for the protection of the butter and dairy indus-

October 1, 1890 (26 Stat., 567, 620), a tax was imposed on opium for restrictive and revenue purposes, upon the same theory that taxes are imposed upon the manufacture of liquors.

June 6, 1896 (29 Stat., 253), a tax was imposed upon filled cheese for the protection of the cheese and dairy industries.

Then came the War with Spain, and the following enactments were made for the purpose of providing revenue for the carrying on of that war:

Act of June 13, 1898. (30 Stat., 448.) War-revenue act. Act of March 2, 1901. (31 Stat., 938.) Amendment of war-

August 5, 1909 (36 Stat., 11, 112), a tax was imposed on corporations, upon the theory that they should contribute in a greater degree to the support of the Government.

April 9, 1912, a prohibitive tax was imposed on white phosphorus matches (37 Stat., 81) to prevent the occupational diseases thereby occasioned.

The present Democratic administration has, since it came to power, imposed taxes on opium, cotton exchanges, and the long list of articles above set forth by the original act of October 1914, which it is now proposed to extend by House joint resolution No. 59.

The Republican Party in its internal-revenue legislation in times of peace has only taxed those articles which by the common consent of the people should be taxed, such as the manufacture of liquors and tobaccos, opium, etc.

This act goes further than any act ever heretofore passed for any purpose, and, with much detail, brings the tax home to every person.

Every home and every person, no matter how humble, must pay its tribute because of the failure of the Democratic Party to provide sufficient revenue to run the Government.

Evidently it was the intention of the framers of the law to make it as burdensome and therefore as obnoxious and objectionable as possible.

In 1898, when the question of raising additional revenue for the expenses of the Spanish-American War was pending, Hon. OSCAR UNDERWOOD, later leader of the Democratic side of this House, in protesting against the passage of the act then proposed as a war measure, to impose a somewhat similar tax, spoke as follows:

House, in protesting against the passage of the act then proposed as a war measure, to impose a somewhat similar tax, spoke as follows:

Any man who buys an article on which tariff taxes are levied, such as shoes, hats, clothes, etc., or consumes an article on which an internal revenue tax is collected, such as beer, tobacco, medicines, etc., payshis tax into the Federal Treasury. If the necessities of a poor man's family require him to consume as much of the necessities or needs of life as his rich neighbor, then he must pay as much taxes, although he does not receive in any due proportion the same return from the Government by way of protection.

It is a well-known fact that one man in New York City owns over \$100,000,000 of improved real estate, and yet he lives in London; he does not buy his clothes, his liquors, tobacco, or other articles of necessity or luxury on which our Government collects taxes here; and, not withstanding the fact that he pays no taxes to our Government, we are to-day fortifying New York Harbor at great expense, raising and maintaining a vast Army and Navy—for what?

To prevent our Spanish foes from sending a fleet of war vessels up the Hudson River and destroying his property, whereas this man's tenants, who are sending their sons to the front to answer their country's call, who will be compelled to pay the war taxes levied under this bill, may have no property that needs protection; possibly they could put their all in a wagon and haul it into the country beyond the reach of the enemy's guns.

Of course the above is an extreme case, but it illustrates the proposition that taxes levied on consumption, such as tariff and internal-revenue taxes, do not justly or equitably distribute the burdens of government. The man who has wealth may pay more taxes than the man who has not, because he may wear a few more clothes or smoke better cigars, but in proportion to his wealth you can readily see he does not begin to pay his fair proportion of taxes.

Now, one of the great objections to the me

As we sit here, far removed from the people who must bear the burden, we may delude ourselves with the belief that they do not complain of this law; but if we do so delude ourselves, a rude awakening awaits us, for throughout the length and breadth of this land a cry of protest goes up from every class against the continuation of this irritating burden.

Let us see who are affected:

- 1. Bankers upon their capital stock.
- 2. Brokers.
- 3. Pawnbrokers.
- Commercial brokers.
- 5. Customhouse brokers.
- 6. Proprietors of theaters, museums, and concert halls.
- 7. Proprietors of circuses.
- 8. Proprietors or agents of all other public exhibitions or shows
 - 9. Proprietors of bowling alleys and billiard rooms.
 - 10. Commission merchants. 11. Dealers in leaf tobaccos.
 - Dealers in tobacco generally.
 - 13. Manufacturers of tobacco.
 - 14. Manufacturers of cigars.
 - 15. Manufacturers of cigarettes.
 - Bonds, debentures, or certificates of indebtedness.
- 17. Agreement of sale or to sell products or merchandise at any exchange or board of trade.
 18. Promissory notes.
- 19. Bills of lading or manifests for shipment by express and freight.
 - 20. Telegraph messages.
 - 21. Telephone messages.
 - 22 Indemnifying bonds. 23. Certificates of profit.
 - 24. Certificate of damage.
- 25. Certificates issued by any port warden or marine sur-
- veyor.

 26. Any certificate required by law.

 27. Contract, broker's note, or memorandum of sale.

28. Conveyances or deeds.

- 29. Entry of any goods, wares, or merchandise at any customhouse
 - 30. Entry for the withdrawal of goods.

31. Insurance policies.

- Indemnity insurance policies.
- Passage tickets to any foreign port.

Power of attorney.

- Power of attorney to sell or rent real estate, etc.
- Protest of commercial paper.
- Parlor-car seats.
- Sleeping-car berths.
- 39. Perfumery and cosmetics.

40. Chewing gum.

From these sources it is contended by the administration that a sum ranging from \$85,000,000 to \$100,000,000 is to be raised.

There is hardly a person in the country who is not called upon to pay a part of this tax to meet the deficit caused by the destruction of the revenues which formerly were raised under a protective tariff, framed in accordance with the policy of the Republican Party.

It is contended by those who support this resolution that the present administration of affairs has brought great prosperity to our people.

Let us see upon what they base such contention.

It is their claim that our industries within the last few months have not suffered from foreign competition, and that our export trade has been greatly augmented thereby, finding a better outlet for our productions and giving greater employment to our people.

With reference to the claim of exports, it may not be out of place to examine the facts.

I quote from a statement made by another:

I quote from a statement made by another:

From January to September, 1914, the Democratic tariff was in operation. During two months of this period—August and September—our export trade was greatly stimulated by the European war and the consequent demand for war munitions.

From January to September, 1913, the Republican tariff law was in operation. The world was at peace, but during the entire period the business of this country was a prey to the doubt and anxiety which invariably accompany tariff tinkering and the prospect of the adoption of a free-trade policy.

Nevertheless, our exports for the 1913 period amounted to \$1,733,-000,000, while for 1914 they amounted to \$1,467,000,000—a decrease of \$266,000,000 in nine months under the Democratic tariff law, or at the rate of nearly \$30,000,000 a month.

Contracts for war supplies were entered into with American manufacturers by the belligerents immediately upon the declaration of war, but not until January, 1915, did our export trade become a commercial torrent which reached its greatest volume in September, when over \$300,000,000 worth of American products were sold abroad.

With their usual assurance the Democratic Party deep not

With their usual assurance, the Democratic Party does not hesitate to claim the entire credit for the condition which has made increase exports possible.

They blindly close their eyes to the fact that until months after the commencement of the European war our industries were prostrated and our labor was idle.

Every child knows that the reason for the temporary revival of business has been the European war.

This war has brought about an increase of exports and a decrease of competitive imports.

So far as imports are concerned, the war has relieved temporarily the Democratic Party from the consquences of its tariff

The war and its effect upon importations have given the best possible illustration of the beneficial effect of the protective policy of the Republican Party.

In time of peace we discourage, by this policy, and to a large degree prevent, the importation of goods from abroad by the imposition of customs duties to such an extent as to prevent unfair competition with American labor and with the products of our fields, mills, and factories.

Our opponents sought to strike down this protection and to admit upon a competitive basis the products of other lands, evidently to "sharpen the wits" of our producers, as President

Wilson averred was necessary.

This tariff policy of the Democrats was largely nullified by the unexpected events abroad, which culminated in the great struggle now raging.

Men were called from the field and the factory to the battle

line and they ceased to produce industrially.

No longer were the goods and wares produced in foreign lands so largely sent abroad, because they were required where produced for home consumption.

Indeed, such warring nations could not supply the local demand for their own requirements, and the need of goods manufactured in this country soon became evident, and from such lands the call went out for our products.

The unusual and extraordinary requirements of such warring nations for munitions of war, guns, vessels, supplies, foodstuffs, and clothing soon commenced to draw upon the resources of the United States, and as a result of the demand from abroad came an opportunity for industrial activity which was seized upon by our factories and producers.

This meant the employment of a considerable part of our labor, and in such lines as the demand existed there was an

improvement in the industrial condition.

To allow credit to our opponents for this condition would be to extend it where it does not belong and give it where it is not merited.

-and we all hope it will be very soon-the strife Some daywill cease and men will be released from the demands of war.

Upon their return to the forge, the field, the mine, and the factory there will be substituted for the activities of war an industrial revival, and it will be followed by a commercial invasion such as this Nation has never known.

The energies of war will then be transformed into a determination to make a conquest of our markets and the markets

of the world.

Then our people will call again for the protection of the Republican Party to stand between them and the flood of foreign-made productions and commodities and our own industries, realizing that the policy of the Democratic Party contains

no remedy for the evil that will then menace and threaten.

The real balance in the Treasury of the United States is to-day a mystery. No man can tell just what sum is available for the payment of the expenses of the Government. By a system of accounting which no one not in the secret can understand the balance in the Treasury overnight was increased by the Secretary of the Treasury-but only on paper-\$88,000,000.

When, in good faith, a Member upon this side did inquire of the gentleman from New York [Mr. FITZGERALD] what amount was actually available in the Treasury for necessary public expenditures, the distinguished gentleman, with good-natured wit, responded that he would not make the disclosure, because if he did it would stimulate the rapacity of the Republican

Even he, the chairman of the Appropriations Committee, re-

fused to reveal the secret.

He need not have entertained such fear.

After the destruction of the Treasury balance by the Democratic policy, and after the extravagant expenditures by the Democratic Congress in its last session, there would have been nothing left to invite an attack from any source.

Every great situation has a counterpart in the petty events of life, and here, again, in the Treasury shortage is repeated on a vaster scale that tragedy of nursery days where-

Old Mother Hubbard
Went to the cupboard
To get her poor dog a bone.
When she got there
The cupboard was bare,
And so the poor dog had none.

The field for rapacity or exploitation on the part of the Republicans would have been as inviting as a land visited, ravaged, and devastated by flood, famine, war, and pestilence.

Indeed, it is not within the imagination of man to conceive how, after, the despollation of the Treasury balance by the Democratic side, there would be anything of value remaining which had been overlooked for either Republican pillage or any public need.

In view of the many promises that all of the affairs of the Government should be conducted with "pitiless publicity" it not passing strange that even the real amount of available cash for public expenditures should be shrouded in darkness and maintained in mystery?

Some time has been devoted by my Republican colleagues in admonishing the other side upon the error of its ways.

Although new in the service upon this floor, it would seem to me most plainly to be an effort wholly wasted.

There have been a number of instances in the history of our Government when our opponents have been placed in power.

Without exception, such an administration has been attended by business and industrial disaster.

No wisdom has been obtained by this party as the result of such unfortunate experiences.

It has acquired no wisdom, and as often as the opportunity is presented its mistakes are repeated.

At the end of one of its administrations it is always found in the same pit.

Advice and admonition is but wasted.

Apparently "they see not."

In the words of old the situation can best be summed up: Ephraim is joined to idols. Let him alone.

War-Tax Act.

EXTENSION OF REMARKS

HON. BEN JOHNSON, OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. JOHNSON of Kentucky. Mr. Speaker: The republicans, when discussing what has come to be known as the War-Tax Act, generalize by saying that there are many, many instances of unjust tax levied by that Act, but not one of them yet has undertaken to indicate the particular items of tax which they assert are unjust and burdensome.

The people generally never have seen the Act, and all they know about it is that because of the European war a direct tax has been levied upon certain occupations and certain manufactured articles. The republicans are wise in generalizing and in not inviting particular attention to any one of the items

when they criticize the Act.

The first item of the Act increases the tax from \$1.00 to \$1.50 upon each barrel of beer. The general tax-payer will not com-plain at that item of taxation. The next item is a tax of two cents upon each quart of "still wine." The average tax-payer throughout the country will not complain of that tax. The next item of this much abused Act is a tax of twenty cents a quart on champagne. Nobody but the rich ever see champagne. It costs five dollars a bottle. Those who are rich enough to pay five dollars a quart for champagne certainly will not mind the twenty cents tax. I doubt if there are a dozen men in my entire congressional district who ever bought a bottle of champagne. Therefore, my constituents certainly are not among those who will complain of the tax upon champagne.

The next item of the Act imposes a tax of fifteen cents per quart upon "fortified wine". The average tax-payer throughout the country is not protesting against this tax. Certainly none of my constituents are. The next item imposes a tax of one dollar on each one thousand dollars of bank capital and surplus. The people generally do not have this tax to pay, as the banks themselves pay it. Recently I was all over my congressional district and visited every bank in the district. not one of them did I hear a complaint about this small tax upon the capital stock and surplus of banks. The next item of the Act imposes a tax of thirty dollars per year upon "stock and bond brokers". But few tax-payers throughout the Union pay this tax. I do not believe there is a man in my congressional district who has it to pay. The next item of the Act imposes an annual tax of fifty dollars on "pawnbrokers". There are pawnbrokers in all of the cities of the country, and everybody knows they live by extortioning from the poor and distressed. I for one am not in favor of relieving the pawnbrokers of this tax and imposing it upon the people generally throughout the land. The next item of the Act imposes an annual tax of twenty dollars on each "commercial broker". There is not a single "commercial broker" in my district, and my district is the usual rural one. Those who would repeal that tax upon the few commercial brokers in the cities would place it upon the backs of the men, women and children throughout the length and breadth of the country. The next item in the Act imposes an annual tax of ten dollars on each "custom house broker". Considering the magnitude of our country there are comparatively but few custom house brokers. Certainly none of the farming classes and but few of the inland classes have this tax to pay. The next item of the Act imposes an annual tax of from fifty to one hundred dollars, according to the seating capacity, upon "theaters". Therefore, the proprietors of the theaters pay this tax which the general mass of the people are excused from. The next item of the Act imposes an annual license of one hundred dollars upon "circuses". This is another instance of where those most able to bear the tax are made to pay it. The next item of the Act imposes an annual tax of ten dollars upon "other public exhibitions". bitions". The next item of the Act imposes an annual tax upon "billiard rooms". Those who are struggling for meat and bread and who should be excused from the payment of tax certainly are not taxed by this item. The next item imposes an annual tax of twenty dollars upon "commission merchants". The next item imposes an annual tax of from six dollars to twenty-four dollars upon "dealers" in leaf tobacco, according to the quantity handled. It will be noticed that this tax is upon "dealers" and not upon growers. The next item imposes

an annual tax of four dollars and eighty cents upon "tobacco whose sales do not exceed two hundred dollars per annum. The next item imposes a tax upon "manufacturers of tobacco and cigarettes", according to the amount of sales. The next item imposes a tax of five cents on each one hundred dollars of the "bonds and debentures of corporations". item imposes a tax of two cents on each one hundred dollars of sales of stock in "corporations". The next item imposes an sales of stock in "corporations". The next item imposes an additional tax of one cent on each hundred dollars of sales of merchandise, where such sales are made on "boards of trade". The next item taxes "promissory notes" to the extent of two cents on each hundred dollars. "Bills of lading" are taxed one cent each. Telephone and telegraph messages costing fifteen cents and more are taxed one cent each. The next item imposes a tax of fifty cents upon each "indemnifying bond". Then "corporation certificates" are taxed twenty five cents each; while "other certificates" are taxed ten cents each, "Brokers contracts" are taxed ten cents each, "Deeds of cone" are taxed fifty cents on each five hundred dollars of "Entry for withdrawal" of goods from "customs warevevance ' houses" are taxed fifty cents. "Original policies of insurance' are taxed one-half of one cent on each one dollar of insurance. Under that item purely cooperative or mutual fire insurance companies or associations carried on by the members thereof. solely for the protection of their property and not for profit, are exempted from the tax. So, also, are all policies of "re-Every policy of insurance or bond or obligation of the nature of indemnity for loss, together with policies of accident insurance, health insurance, and "workmen's compensation insurance" go untaxed. Tickets for passengers sold in the United States for passage by vessel to a foreign port, if costing not more than thirty dollars each shall bear a tax of one dollar. Those costing more than thirty dollars, but less than sixty dollars, are taxed three dollars each. Tickets costing more than sixty dollars are taxed five dollars each. Powers of attorney to vote in the election of officers of a "corporation" are taxed ten cents each. "Powers of attorney" to sell or lease real estate are taxed twenty five cents each. "Protests upon bills of exchange etc.", are taxed twenty five cents each. Seats in "palace are taxed one cent each. On each five cent bottle of "cosmetic" there is levied a tax of one-eighth of one cent. tax of four cents is levied on each one dollar's worth of "chewing gum "

The various items of the Act disclose the self-evident fact that no very poor man necessarily bears any part of the tax which is imposed by this much abused Act.

The gentleman from Illinois, (Mr. Mann,) the republican leader, has inserted in the Record twenty-six letters from persons who are protesting against the continuance of this tax.

The first one of these letters is from the Comfort Manufacturing Co., Chicago, Illinois, protesting against the payment of a tax of five per-cent on "toilet requisites", and also complaining because this tax is levied upon the "manufacturer", instead of upon the "consumer".

The next one of these communications is from Fox & Gedding, Chicago, Illinois, who are dissatisfied because they have to pay an annual tax of twenty dollars as "commission merchants". They complain of the additional tax of one cent on each "bill of lading".

The next letter filed by the gentleman from Illinois is from A. E. Barker & Company, Chicago, Illinois. This firm also complains because they have to pay a tax of twenty dollars as "commission merchants", and one cent upon each "bill of lading, express receipt etc.,".

The next letter filed by the gentleman from Illinois is from C. F. Love & Company, Chicago, Illinois, who also complain because they have to pay a tax of twenty dollars as "commission merchants", and a further tax of one cent upon "long distance telephone messages", as well as a tax upon "bills of lading".

The next one of the letters filed by him is from Butler, Homen & Co. Chicago, Illinois, protesting because they are necessarily as the second of the letters filed by him is from Butler, Homen & Co. Chicago, Illinois, protesting because they are necessarily as they are not as the second of the letters filed by him is from Butler, Homen & Co. Chicago, Illinois, protesting because they are necessarily as the second of the letters filed by him is from Butler, Homen & Co. Chicago, Illinois, protesting because they are necessarily as the second of the letters filed by him is from Butler, Homen & Co. Chicago, Illinois, protesting because they are not as the second of the letters filed by him is from Butler, Homen & Co. Chicago, Illinois, protesting because they are not as the second of the letters filed by him is from Butler, Homen & Co. Chicago, Illinois are not as the second of the letters filed by him is from Butler, Homen & Co. Chicago, Illinois are not as the second of the letters filed by him is from Butler, Homen & C. Chicago, Illinois are not as the second of the letters filed by him is from Butler, Homen & C. Chicago, Illinois are not as the second of the letters filed by him is from Butler, Homen & C. Chicago, Illinois are not as the second of the letters filed by him is from Butler, Homen & C. Chicago, Illinois are not as the second of the letters filed by him is from Butler, Homen & C. Chicago, Illinois are not as the second of the letters filed by him is from Butler, Homen & C. Chicago, Illinois are not as the second of the letters filed by him is from Butler, Homen & C. Chicago, Illinois are not as the second of the letters filed by him is from Butler, Homen & C. Chicago, Illinois are not as the secon

The next one of the letters filed by him is from Butler, Homan & Co., Chicago, Illinois, protesting because they, as members of the "Western Fruit Jobbers' Association of America", have to pay a tax of one cent upon each "bill of lading, express receipt etc.,".

The next of these letters is from Haley-Neeley Co., Sioux City, Iowa, making a general protest against the payment of one cent upon each "bill of lading", and upon each "long distance telephone or telegraph message", costing fifteen cents or more.

The next one of these communications alled by the gentleman from Illinois is from Hall, Wedge & Carter, Chicago, Illinois, protesting against the tax of twenty dollars a year levied upon "commission merchants".

The next is from W. 3. Davis Company, Aurora, Illinois, complaining particularly of the one cent tax upon "bills of lading, express receives etc".

The next letter is from Herbert A. Harris, Chicago, Illinois, complaining of the tax on "toilet preparations".

The next letter is also from Herbert A. Harris, sent out from his residence on Kimbark Avenue, Chicago, Illinois, complaining of the tax on "hair dyes".

The next letter is from the Talcum Puff Company, of Brooklyn, N. Y., complaining against the payment of a tax on "talcum powder".

The next letter is from Ward & Company, Chicago, Illinois, complaining because the tax levied upon "perfumery, hair dyes, tooth paste" and other articles set out in schedule B. is not paid by the people who use them, instead of by the manufacturer.

The next letter is from M. Lapidus Company (Inc.), Chicago, Illinois, This firm also protests against paying the tax as "commission merchants", and also insist upon prorating the tax between producer and ultimate consumer.

The next letter is from A. L. Somers, Chicago, Illinois, who says that the grain trade has suffered during the past year because of the War-Tax Act which went into effect last year. He wisely declines, however, to state in what respect the grain trade has suffered because of the War-Tax Act. It is more likely that grain trade in "Bucket-shops" has suffered.

The next one of these letters is from J. A. Edwards, Chicago, Illinois. The principal complaint of this gentleman is because the "hedgers" on the "Chicago Board of Trade" are displeased with the Act.

The next letter is from C. H. Canby, Chicago, Illinois, complaining because he disapproves that part of the Act which imposes a tax of one cent upon each one hundred dollar trade made in a bucketshop.

The next letter is from W. C. Ritchie & Co., Chicago, Illinois, who complain that the Commissioner of Internal Revenue has misconstrued the language of the Act relative to mutual insurance companies. There is sent with this letter a new "draft" of that section, written by this firm, which they would like to see engrafted upon the Act.

The next letter is from Ernest Fecker, Jr., President, Chicago, Illinois, transmitting a copy of a resolution adopted by the Illinois "State Brewers' Association," protesting against the increased tax of fifty cents per barrel on beer.

The next letter is from W. H. Crabtree, Los Angeles, California, protesting against the payment of a tax upon "claret wine and fortified liquors."

The next letter is from G. M. H. Wagner & Sons, Chicago, Illinois, protesting against the payment of twenty dollars upon "Commission merchants," and also protesting against the one cent tax on "bills of lading etc."

The next letter is from P. L. Zulfer, Chicago, Illinois, pro-

The next letter is from P. L. Zulfer, Chicago, Illinois, protesting against the twenty dollar tax on "commission merchants," and also protesting against the one cent tax just referred to.

The next letter is from The Manufacturing Perfumers' Association, New York, N. Y. They protest against the payment of a tax on "toilet articles."

The next letter is from John Blocki, Chicago, Illinois, who complains of the tax on "perfumes and toilet requisites."

It will be observed that nearly all of the letters referred to are written from Illinois, and that not one of them was written by a farmer or a laboring man.

The Gentleman from Illinois then inserts into the Record an editorial from the Washington Post, the leading republican paper of Washington City. The editorial is headlined:

"THE DEMOCRATIC WAR TAX ON THE PEOPLE."

The trend of the editorial is to criticize the levying of a "direct" tax by the democrats, instead of an "indirect" or "hidden" tax as the republicans are accustomed to impose. The editorial in the Post goes on to say that the votes of democrats in Congress for "direct" taxation will be exhibited in every district where there is a possible chance for the election of a republican candidate for Congress. Whether I should be the democratic nominee in my district or not I will welcome a joint discussion with the republican nominee for Congress, whoever he may be, upon the question as to whether or not this "direct" tax, placed upon the luxuries of life, is better or worse for the people than the republican, "indirect" tax levied upon the necessities of the people.

The editorial further says:-

"There will not be a penny collected under this 'direct' taxation but from this time henceforth will be referred to by republicans as the democratic tax upon the people of the United States."

If such is to be the issue no one will welcome it more than the democrats will. The democrats will be more than willing to contrast the "pennies" collected under this "direct" tax on beer, the "direct" tax on still wine, the "direct" tax on cham-

pagne, the "direct" tax on fortified wine, the "direct" tax on stock and bond brokers, the "direct" tax on pawnbrokers, the "direct" tax on commission brokers, the "direct" tax on customhouse brokers, the "direct" tax on theaters, the "direct" tax on circuses, the "direct" tax on theaters, the "direct" tax on stock in corporations, the "direct" tax on bucketshop transactions, etc., as against the dollars levied and collected by the republican, "indirect" method resorted to by them in taxing the hats, caps, clothing, boots, shoes, and practically all the other necessities of life.

The editorial placed in the RECORD by the gentleman further

says:—
"Democrat and republican rank and file alike would prefer by far that revenues be raised by the tariff than by direct taxation"

I assert in contradiction to this statement that the rank and "file" of the people would prefer to know how they are taxed, and upon what they are taxed, rather than to be taxed by the "indirect." hidden method practiced by the republicans. Under the system which the Post chooses to call the "democratic tax" the people know upon what articles the tax is levied, and they know the extent to which that tax is levied. But, under the "indirect" method employed by the republicans, not one man in a thousand knows how much tax is imposed upon his coat, how much tax is imposed upon his overalls, how much tax is imposed upon his underwear, or how much tax is imposed upon the other articles of necessity.

The republicans have boasted that they have been able to raise a billion dollars a year by taxing the people and at the same time conceal from the people the articles upon which that tax was imposed. I accept the challenge, and say that the democratic party is proud of the fact that it does business in the open; that it attempts to deceive nobody, even the most ignorant, and that the republican party has survived only because it has succeeded in levying an "indirect" tax upon those articles which all of the people use and must have. If the republican party had levied a "direct" tax half as great as the "indirect" tax which they have levied upon the people, then the people long ago would have risen in rebellion, and would have overthrown that party and its secret methods of taxation.

Again referring to the "direct" tax which the Democrats have imposed upon luxuries, and not upon articles of necessity, permit me to say that only very recently the "United States Public Health Service" found it necessary to issue a bulletin of warning to the American people concerning the "harmful effects" of the widely used cosmetics which are taxed in the War-Tax Act, about which the republicans complain so much, and which the republicans say they would repeal, notwithstanding that the gentleman from Michigan [Mr. Fordney], who is the ranking republican on the great committee on Ways and Means, has here said on the floor of the House, that the Treasury of the United States would go bankrupt unless the War-Tax Act were continued. According to that bulletin the "face lotion" and the other "cosmetic" manufacturing establishments in the United States had grown in number from sixty-seven in 1879 to four hundred and twenty-nine in 1909, and that list does not include "the many hundred laboratories in which these same preparations may be compounded as a side line.

The same bulletin says "a very conservative estimate of the cost of cosmetic preparations to the consumer would be in excess of \$50,000,000 annually".

Among the preparations usually classed as "cosmetics" for use on the head and face are: "hair washes, hair tonics, hair dyes, shampoo powders, complexion powders, toilet powders, freckle lotions, face enamels, toilet waters, face creams, and beauty washes".

The bulletin just referred to speaks of these things as "present day frauds". The same bulletin, in speaking of "beauty washes and face enamels", says that ordinary white lead is called, in these lotions, "beauty white, silver white, Dutch white. French white, London white, Roman white, China white", and that "lead poisoning" frequently results from their use. The bulletin asserts that an eminent scientist expresses the belief that many cases of general nervous trouble, some of insanity, and perhaps some of paralysis are caused by the use of cosmetics containing lead.

The same bulletin says, in substance, that Epsom salt, which can usually be purchased at five cents a pound, is a much used ingredient in popular "skin and wrinkle lotions," and when sold in those lotions sells at the rate of from two dollars to four

dollars per pound. And yet the republicans only a few days ago in this House voted solidly against continuing a tax of one-eighth of one cent on each five cent bottle of their goods.

The bulletin says that many of the so called "beauty lotions" and toilet powders are primarily fraudulent, and that the price at which they are retailed to the public is out of all proportion to the actual value of their components. I am informed that commercial Epsom salt, which is the principal ingredient for wrinkle-removing preparations, sells at wholesale at from two cents to three cents a pound, and that each pound will probably make five gallons of the wrinkle-removing preparation.

The much complained of Act which is under discussion places a tax of one-eighth of one cent upon each five cent bottle of this wrinkle-remover. Yet, only the other day the whole republican party in the House went on record as being opposed to having the compounder of these "wrinkle-removers" pay a tax of only one-eighth of one cent upon each five cent bottle, when the contents of the whole bottle does not cost the manufacturer as much as one-eighth of a cent. This is but one instance out of a large number where the republican party, in general terms, undertakes to criticize the democratic party because it has levied a "direct" tax not only upon articles of luxury but upon fraudulent articles.

In my opinion all that is necessary to have popular approval of the War-Tax Act is to have the people generally know what is in that Act; and, when the time arrives for discussion of public measures before the people, I shall select this Act and make it one of the principal topics of discussion when I re-appear before the people of my district.

War-Revenue Tax Act.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. CARTER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. CARTER. Mr. Speaker, owing to the fact that the Democratic majority in the House refuses to make any changes in the emergency internal-revenue tax and even went so far as to refuse a reasonable time for discussion of this important bill. I desire to enter my protest against the continuance of this tax for another year and my reasons therefor.

I believe that this direct taxation is only the evidence of the Democratic inability to successfully administer the Government of this great country. The deficit in the Treasury to-day is not only due to the small amount of revenue derived from the Underwood tariff but from the extravagant and unwise expenditures that are being made by the administration to-day. I believe in the good old Republican theory of raising the greater portion of our revenue by a tariff on foreign-made goods.

This indirect tax has proven far better than a direct tax, to say nothing of the advantages and the protection which it affords our American workingman and the manufacturer as well. I am surprised that my learned Democratic friends would not listen to the proposition to agree to the amendment to continue this tax for a period of four or six months, at least, giving them in the meantime a chance to revise the present unfair tariff. I believe that the rank and file of this country, both Republicans and Democrats alike, would prefer that this revenue be raised by the tariff than by this direct taxation. I believe the rank and file of the country, both Republicans and Democrats alike, would prefer a bond issue or the issuing of Treasury notes, without interest, to direct taxation.

Despite the trade demoralization due to the European war imports for the nine months ended September. 1915, amounted to but \$25,000.000 less than for the corresponding period ended September, 1913, under a Republican protective tariff, while the duties collected for the 1915 period were over \$94,000,000 less than for the 1913 period. Imports for the 1915 period were \$108,000,000 less than for the 1914 period, but the duties fell off \$45,000,000. The following figures are taken from the official reports of the Department of Commerce:

1913, nine months, Republican law (peace period).

 Imports
 \$1,327,000,000

 Duties collected
 \$242,624,000

 Average duty rate
 per cent

 18.3

1914, nine months, Democratic law (two months war).

1915, nine months, Democratic law (protective war period).

Imports ________\$1, 302, 000, 000
Duties collected ________\$148, 225, 000
Average duty rate ______per cent _______\$11.3

Herein lies the fatal defect of the Underwood law as a revenue producer. It is not because the war has cut off imports to such an extent as to create a deficit. It is because such a large percentage of our imports are now coming in without paying a cent of revenue to the Government. It will be noted that the bulk of imports is nearly as great as it was under a Republican protective tariff. Had the Republican average rate of duty been collected on the 1915 imports, we would have realized the sum of \$238,266,000, or about \$90,000,000 more than was actually realized.

It has become not merely a probability but a certainty that cessation of war and the removal of the blockade will throw an immense quantity of foreign-made goods upon American markets. It is no less a certainty that every dollar's worth of foreign goods sold here will deprive the American workman of a dollar in wages and will also mean a dollar of good American money taken out of the country to aid in establishing industrial prosperity abroad. Under the Democratic tariff the promises that the cost of living would be lowered has not materialized.

In the exhilaration of partially restored prosperity in some localities in the United States some business men seemed temporarily to overlook the fundamental unsoundness of our economic position. In the pressing effort to recover the losses sustained during the few months that our markets were wide open to foreign producers business men seemed to forget that European war is only a temporary bar against importation of foreign products.

But as the time draws near when this war must close and remove every obstacle that protects the American producer the thoughtful citizen is beginning to view with dread the return of those depressed conditions which existed at the time the war broke out. Men who walked the floor at night in 1913–14 trying to devise ways to keep bankruptcy notices off their doors do not relish a return of those nerve-racking experiences. Their present desire is to make certain that no such deplorable conditions shall again exist.

In the study of ways and means they have no better way to judge of the future than by the past. They know that goods imported from abroad must supplant a corresponding quantity of goods produced in this country, if procurable here. They know that the only method of shutting out foreign products in normal times is by the imposition of an import tariff. They know that when the low-tariff or free-trade schedules were established in 1894 and again in 1913 importations increased and American producers were deprived of their home market to a corresponding degree. They know that such importations were checked in 1914 only by the European war, and that when the war ends the importations will begin again with a greater impetus than ever before, because the buying power of Europe has been nearly destroyed. They know that Germany, in particular, will be forced to dump her products here because prejudices arising from the war will preclude marketing of German products in England. France, Belgium, Russia, or Italy.

In the face of these facts the thoughtful and foresighted American can see nothing but a protective tariff to keep American enterprise active when the war shall have ceased.

There are several facts which no one disputes:

First. The call of millions of men in Europe from industrial activity to military operations decreased production on that continent.

Second. The war not only decreased production abroad but destroyed many products already manufactured and created new and enormous markets.

new and enormous markets.

Third. The only large producing nation ready to supply the commodities most in demand by reason of the war was the United States, hence this country received a greater part of the war orders.

Fourth. As soon as the armies of Europe are disbanded those millions of men will return to manufacturing and other productive enterprise.

Fifth. European nations will be impoverished, and the United States, as a result of its large favorable trade balance, will be the only country in a position to buy extensively

the only country in a position to buy extensively.

Sixth. As a consequence of high prices paid by buyers of war equipment wages in many American industries have been increased, and when European producers again begin activity the

American producer will be thrown into competition with factories paying the lowest scale of wages, while American mills pay the highest.

The foregoing facts present a situation which the business men of America must meet, and they are now giving it most careful thought. It is a situation which will confront not merely large manufacturers of the country but every farmer, merchant, mechanic, and laborer who depends for a livelihood upon the general prosperity of the Nation.

" A HALF-TOLD TALE."

Secretary McAdoo made a statement a few days ago in which he settled the present troubles of the Treasury Department with the statement that the United States would have a balance of \$76,000,000 on hand at the close of the present fiscal year if special taxes and the sugar tariff were reenacted.

He would have made a more important contribution to the symposium on "Whither are we drifting?" by comparing that prospective balance with what we have had in the past.

On June 30, 1914, the general-fund balance was \$162,000,000, By June 30, 1915, it had dropped to \$104,000,000. Now we have the encouraging statement from Mr. McAdoo that by next June the balance will be as high as \$71,000,000.

In other words, the administration has spent only \$86,000.000 more than the Government receipts of the past two years.

What would be the status of Mr. McAdoo if the United States were a private industrial corporation, and in answer to a question from the board of directors he defended the work of the manager on the ground that there was still a working balance half as large as that which was left in the Treasury when the former manager was discharged for extravagant methods?

What would be his answer when the directors asked him how large the balance would be after two more years of \$43,000,000 annual excess of expenditures over receipts?

Would not the directors begin to wonder whether that former

manager was such a poor business man after all?

Let me also call your attention to the extrav

Let me also call your attention to the extravagance of the Sixty-third Congress compared to the Sixty-second and the Sixty-first Congress. The last Congress spent \$1.415.432.152, which was \$113.292.692 in excess of the expenditures of the Sixty-second Congress. In view of the plank of the Democratic Party in Baltimore, denouncing the Republican Party for its appropriations, we ought to call on the Democratic Party to practice what they preach.

Take the Post Office Department, for example. That department comes into the district, which I represent, and abolishes two rural routes by consolidating them with those of adjoining towns. It also takes away from a rich agricultural district an afternoon mail service which was served to 400 people and which was used by those farmers to sell their merchandise through the aid of the parcel post. What is the result? The people of those towns are very seriously inconvenienced. Many of them receiving their mail from two to six hours late. Others have to walk one-half mile. Then, again, many others, including the town officials of Sherborn, Mass., are compelled to change the post-office address of the town in order to obtain their mail. Many people are compelled to go without service at all, while others have to hire messengers to go to the post office to receive their mail. Business houses and farmers alike are handicapped as the result of the recent orders of the Post Office Department.

The post-office officials tell us that the people are most fortunate to receive mail delivery at all and that many millions of people throughout the country are deprived of this privilege. The department admits that it does not make a field investigation of conditions and admit that they do not know of the local conditions under which the patrons have been receiving their mail, and yet they claim that this is an administration of business efficiency.

Were this a question of economy wholly, it would not be so bad; but when one learns that the Postmaster General has created 50 new rural routes in Arkansas, 50 in Missouri, 46 in Texas, and 33 in Oklahoma during the past year, and has then come into Massachusetts and has so disorganized the rural service that it looks as if the northern rural service has been butchered to make a southern postal holiday.

In spite of the disorganization of our rural routes in Massachusetts, causing untold discomfort to thousands of patrons, the department asks us to submit suggestions toward the establishing of additional rural-service routes in my district.

What I want and what I demand is that the Post Office Department stop demoralizing the rural service in my district, to restore to those towns their former rural routes, and to leave us alone.

I would like to have extended in my remarks at this time a portion of an editorial which appeared in the Boston Herald, December 29:

Of one thing Mr. Burleson, of Texas, the present Postmaster General, deserves preeminence. He is giving the Post Office Department the worst administration in its history. And he is trying to hide the evidence of his own folly by a ceaseless clamor to have Congress let him take over the telephone and telegraph. It would be a sad day for American business if all its agencies of communication were run on the same standard of inefficiency as Mr. Burleson now runs the post

I believe that if we had a high protection for the coal-tar industry that the manufacturers would not find themselves in the position which they are to-day, at the mercy of the British Government, who have been interfering with the oversea export trade of Germany, acting under the orders of its council of March 11, 1915.

If we had a high-protective tariff on dyestuffs, we could establish a coal-tar industry in this country and would not have to be dependent on other countries for this important product.

Look at what has happened as the result of the dyestuff situation in New England alone. A few days ago one of our prominent New England manufacturers paid \$5,000 for three barrels of alizarine red, which he formerly bought for \$140, and yet our Democratic friends are against high protection for our industries and prefer the direct-taxation plan to the indirect-taxation plan.

I would like to extend in my remarks a letter which I received to-day from a prominent manufacturer in my district:

I would like to extend in my remarks a letter which I received to-day from a prominent manufacturer in my district:

Franklin, Mass., December 27, 1915.

Hon. William H. Carter.

How so of Representatives, Washington, D. C.

Dear Sir: Your several favors or circular letters received, the last of which was in relation to the logwood question.

Kindly accept my appreciation and thanks for advising and confirming information I had received direct from the secretary of the American Association of Woolen and Worsted Manufacturers, who is in close touch with the British Embassy, and it was through our association of wool when the embargo was place tuplon it on account of certain firms selling the wool to Germany.

I have fust received this morning a letter which informs me that the steamer Lucy Neff, with 1,000 tons of Jamalca logwood, which is the best in the world, had sprung a leak in the storm and gone to the bottom off Cape lienry. I think there is only 55,000 tons of logwood grown in the control of the control

I will give you one instance which was presented to me by the vice president of one of the largest German importing houses only a few days ago. One manufacturer in New England was so much in need of an alizarine red that he bought through a broker as follows: Three barrels of 20 per cent alizarine V 3 W red paste. This was sold before the war at 13 cents per pound. The price this manufacturer paid was \$4.50 per pound. In other words, for 1,100 pounds—3 barrels—ne paid \$5,000, whereas before the war the whole shooting match would have been bought for \$140, or thereabouts.

Now, this is only an extreme case, but many have paid from 1,000 per cent to 2,000 per cent advance, so we had better pay a little more to establish the making of dye material in this country and not be dependent as we are to a consultation of the standard of the world to day to go around. Singleton Worsted Co., By Geo. F. S. Singleton, Treasurer.

War-Revenue Tax Act.

EXTENSION OF REMARKS OF

FRANKLIN F. ELLSWORTH. HON. OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 17, 1915.

Mr. ELLSWORTH. Mr. Speaker, I am opposed to this resolution for the reenactment of the so-called war-revenue tax.

First, if it may be conceded that this is an emergency because of obtaining sufficient revenue with difficulty owing to the European war conditions, the question is whether or not it is such an emergency as ought to call for a measure as extraordinary as the one now in force. It seems to me that we ought to resort to a direct tax of this kind only in cases where the extremity of war involves our Nation directly, and that we ought first to exhaust every possible means through the readjustment of the tariff schedules before resorting to measures of this nature. If we do not do so, then it seems to me that we have not the taxing reserve power for occasions which are truly extraordinary where we are directly involved in a war with a foreign as nation.

It is not altogether a question of the amount of the tax in specific instances, but the time and trouble and incidental expense necessitated by business concerns and the inconveniences caused to the millions of people who are not adept in business transactions bring about a confusion and interference with business which it does not seem to me is at all justifiable regarding the comparative magnitude of the aggregate revenue received.

I will venture a statement that the collection of a million dollars by this method involves a waste of time and incidental expense of the persons complying with the requirements of the law equivalent in value to a half million dollars. It is a sum total made up of trivial and noncomputable sums, but it is certain that the incidental energy and expense involved do not make such a tax a practicable one when the emergency, if there is one, is caused by conditions which only affect us indirectly and incidentally.

I would favor, first, a proper revision of the tariff schedules based upon a reasonable protective basis, or, if our friends on the other side of the House insist upon a revenue basis, I would be willing to see this resolution passed and put into effect the provisions of the present law for a long enough period, say three or four or five months, to enable them to revise the tariff according to their own notions, placing a duty, for instance, on the products of the Tropics in which we do not compete, which, if they have not totally abandoned their theory of a tariff for revenue, ought surely to be taxed for revenue purposes before a direct tax is imposed upon the people, as provided in the measure which this resolution seeks to reenact.

Congress and Our Seaboard Harbors.

EXTENSION OF REMARKS

HON. WILLIAM S. BENNET. OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 4, 1916.

Mr. BENNET. Mr. Speaker, under leave granted to extend my remarks I include the following paper:

CONGRESS AND OUR SEABOARD HARBORS.

[Address by the Hon. R. A. C. Smith, commissioner of docks of the city of New York, before the National Rivers and Harbors Congress Dec. 9, 1915.]

Mr. Chairman, ladies and gentlemen, our seaboard ports are the hands of the Nation spread out to the world to receive its wealth and to offer in exchange the surplus resources of our wonderful country. To cripple our harbors is to cripple the Nation. Our harbors are national assets. The prosperity of the great ports means the prosperity of the country as a whole; their neglect and decay inevitably spell commercial disaster to all of the States.

It would seem the truth of this is so obvious and so impressed upon the Congress of the United States that it would only be necessary to demonstrate the urgent needs of our great ports to insure sympathetic attention and appropriations.

The fact is, however, that Congress has shown so frequently and with such uniformity that it is deaf to pleas on behalf of urgently needed improvements in the harbor of New York, that the city has come to feel that the National Legislature looks upon harbor improvements as matters of local rather than national importance.

I am not one of those who delight in quoting foreign examples for the discomfiture of my own country. In matters of port development, however, it is impossible not to contrast the broadminded national view of the problem taken by England, Germany, and France with the narrow provincial attitude of

The port of New York is not jealous of the other ports of the country. Its officials without exception realize that prosperity for any port is reflected in the general national prosperity, which is what we are all working to secure. The port of New York, therefore, has seen with deep regret that the Congress of the United States can remain blind to the very great injury to the entire country which its neglect of the Atlantic seaports causes. The city has listened to the annual debates upon river and harbor bills filled with destructive criticisms of projects similar to the immortal river in Florida, which, it is claimed, is dry so many months in the year that Congress was urged to insure it against fire. It has looked in vain, however, for proof that our national legislators appreciated the great constructive problems of national conservation of our great seaports.

It is without local jealousy, but in the broadest national spirit, that I remind you that although the port of New York handles approximately 50 per cent of the imports and exports of the entire country and has turned into the Treasury of the United States, through its customs, upwards of \$5,000,000,000 since 1880, it has received only a little less than \$20,000,000, slightly

over 21 per cent of the total appropriations made by the Federal Government for river and harbor purposes. This meager appropriation does not mean that there have not been great and urgent needs in the port of New York, which have been called to the attention of the Rivers and Harbors Committees of Congress repeatedly, both by the port officials and by the United States Army engineers directly in charge of the Government work.

The most pressing need of the port of New York at the present time is the adoption of a new project for the improvement of the so-called East River. I venture to bring this specifically to your attention because it is of far more than local importance, both when viewed from the standpoint of the commercial needs of the country and from the requirements of the national defense.

The East River is, as you all probably know, a tidal strait about 16 miles long and from 600 to 4,000 feet wide, connecting New York Harbor with Long Island Sound. The navigable channel has always been tortuous and dangerous owing to the presence of numerous shoals and reefs. In 1868 a project was adopted by Congress for the removal of a number of these obstructions to provide for a channel 26 feet in depth. Approximately 70 per cent of this project has been completed. long been apparent, however, that the project of 1868 was entirely inadequate for this important waterway. tion of the project completed by Col. William M. Black, Corps of Engineers, early in 1912 recommended the provision of a through channel 35 feet in depth. He proposed the adoption of a project calling for the expenditure of thirty-two and one-half million dollars, which was later modified to a project of \$13,398,000, which was considered immediately necessary. Despite the strong and repeated representations to Congress in favor of this project on behalf of the city of New York, it has not been adopted by Congress. What foreign power would neglect the connecting link between Long Island Sound, a great land-locked sen 120 miles long, and New York Bay, one of the most wonderful natural harbors in the world?

The city of New York itself has spent large sums to develop the port, not only for the commercial expansion of the harbor but to fit it as an efficient part of the national defense and as a secure haven in time of maritime disturbance. The State of New York has spent almost \$200,000,000 on a great inland waterway which adds materially to the prosperity of many States. The people of New York feel, therefore, that they can not justly be accused of selfishness in seeking to get from Congress the relatively small appropriation which is necessary to make the East River Channel available both for commerce and for ships of our Navy.

At a time when the whole country is aroused over questions of national defense it is not amiss to direct the attention of this Congress to the neglect of what in time of war might prove an invaluable waterway for the ingress and egress of a fleet engaged in the defense of the entire Atlantic coast.

I feel that I can not too strongly urge upon the National Rivers and Harbors Congress to consider these matters carefully and dispassionately. Your association represents interests throughout the entire United States. It is therefore free of the taint of selfish local sectionalism and peculiarly equipped to create a country-wide sentiment in favor of a national project of the first Your association represents interests throughimportance. I feel that if I have stimulated your interest sufficiently to persuade you to investigate the matter further your conversion to ardent advocates of the project is certain.

War-Revenue Tax Act.

EXTENSION OF REMARKS

HON. HENRY W. WATSON. OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. WATSON of Pennsylvania. Mr. Speaker, I oppose the adoption of the pending resolution. The problem of taxation has always been a troublesome question for the Democratic Party to solve. They did not find the solution in the Underwood Tariff Act, when they endeavored to pay the expenses of the Government without increased taxation. Inquire of history and you will learn that all free-trade administrations have had the same record—a deficit in the Treasury. The resolution now before this House provides for the extension for one year

from the date of its expiration of the Democratic emergency war-revenue act of 1914. This act has been, and will continue to be, a burden on our people, as they realize that there is no emergency save that of nursing an old and decrepit policy of free trade. The Democratic Party claims that the great industries of our Nation have grown "too fat" under a protective tariff policy; seemingly they do not care how lean the workmen may become under free trade and their iniquitous internal We are informed that there will be presented to Congress another bill to further increase our taxes in order to meet the plans of the executive department; a tax on automobiles, a tax on manufactures, and a tax on gasoline as outlined by the President in his message to Congress, and probably these taxes will be enacted into law. Then the farmer will be reminded, at each turn of his gasoline engine, that he is paying a tax in order that cattle, swine, poultry, and eggs may be shipped into this country free of duty. Our bountiful country has nearly every climate from which to draw resources; millions of acres of mountains and hills for grazing purposes, vast acreage for growing grain, cotton, and nearly all the raw materials industries; unlimited wealth stored in the earth; oceans, inlets, bays, and rivers to supply the food of the waters; no large standing army to maintain; few civil pensions to pay; and no royalty to keep. Our taxes ought to be growing but to the contrary the Democratic Congress has increased our internal taxation in order that foreign countries, with their system of pauper wages, may send their wares to our shops, under low customs duties, to paralyze our market for home-made products. The war has greatly restricted immigration. Thousands of men have returned home to respond to the calls of their mother countries, therefore a dearth of labor, and wages have increased because of the great demand for men to make munitions of war. This the Democratic Party calls "prosperity and high wages," developed by the Underwood Tariff Act. Did this act reduce the cost of living as it was promised it would? Compare the present prices of the work-man's necessities with those prior to 1913, and we will find that they are all higher than they were then. This increase can not be attributed to the war, for all articles of food greatly rose in price during the spring and summer of 1914. When the war is ended and the smoke of battle has cleared away, when the soldiers return home and the wheels of foreign industries again move, when the commerce of the seas is once more opened, then will follow, if the present national policy continues, a period of depression, adversity, and anarchy that never has been equaled on American soil. If this country ever needed a protective tariff policy, she needs it now, in order to pay the deficit created by the Democratic Party, preserve our industries, protect the wages of our workmen, and reestablish our former prosperity. The great opportunities that are being offered our country should not be neglected and our position should be maintained, for we are destined to contribute to the world its financial and commercial policies.

War-Revenue Measure.

EXTENSION OF REMARKS

DYKE, VAN HON. CARL C.

OF MINNESOTA.

IN THE HOUSE OF REPRESENTATIVES.

Thursday, December 16, 1915.

Mr. VAN DYKE. Mr. Speaker, the development which strikes me with great surprise in the debate upon revenue measures before this House is the fact that the minority sets up in the foremost niche of the Republican hall of fame the discarded Payne-Aldrich tariff law, which was the origin of their recent woes and the fruitful cause of their downfall from power in all branches of the Federal Government.

It was the Payne tariff which started the Republican insurrection, first on the floor of this House and then in every ballot booth in the United States; and now the minority proposes to exalt it with a crown of olives. The first response of the American people to the Payne tariff in the congressional election following its enactment, was to convert a House that was Republican by the strong margin of 219 to 172 into a Democratic House by the still heavier margin of 228 to 162. But that was only the beginning. The insurrection begun by the Payne tariff in 1909 and 1910 widened into the still more serious breach of 1912, when the Republican President, who in the second year of his term had begun his tour of the country for reelection with his famous Winona eulogy of the glories of Payne-Aldrich taxes, closed it at the polls in ignominy with the electoral vote of only two States in the Union. And yet on this floor to-day the Republican minority attempts to resurrect from the grave into which it was swept by the people the skeleton-I may say the skull and crossbones-of the Payne-Aldrich remains and, surrounding it with a halo of glory, presumes to foist it again upon the body politic as their ideal of the measure which we now should employ for raising Federal revenue.

Mr. Speaker, I fully realize that I would owe this House and

the American people an humble apology for recognizing as an issue a law which they by such an overwhelming verdict have consigned to oblivion were it not for this regrettable fact that the only answer of the minority opposition to the measures offered by the majority for meeting the requirements of the Government in this period of revenue emergency which the war has imposed upon every government upon earth, is the plaintive wail, "Please adopt the Payne-Aldrich tariff!"

Although every national legislative body now in session on God's footstool is doing just what we are doing-devising ways and means to effectively meet the revolutionary effects upon national revenue created by a war which is devastating half the world and has attacked the business and taxable values of all Christendom-the opposition to the well-considered policies laid before us for consideration has but one cry, and that is, "The source of all our woe is the repeal of the Payne-Aldrich tariff!"

Although the effect of the war in the other 10 Republics of the Pan American continent has been far more disastrous to national revenue than in the United States, and although the blow to their customs revenues has extended in many cases to all their sources of national income, creating widespread currency depreciation, forcing issues of national bonds, which this country has helped to finance, and producing bank failures and in some instances widespread commercial depression and panie, the ravens of discontent perched upon the remains of the Payne-Aldrich corpse on the opposition wing of this House repeat in chorus the croaking refrain, "It is all due to the Underwood law, which replaced our dear Payne-Aldrich tariff!"

Over on the other side of our northern international boundary line, where the population and the natural resources and development are pretty much the same as on our side of the line. and where tariff laws and national finances differ from ours only in slight degree, the reduction in customs revenue for the 12 months ending with August, 1915, as compared with 1913. was 33 per cent, and the resulting depression to business and to the national finances of the Canadian Dominion were so severe that American bankers and investors have gone to the rescue with purchases of scores of millions of Canada's public bonds and industrial securities; and yet the high-tariff minstrels who sing to us from the minority wing of this House continue to chant, "Nothing has happened to the world but the Underwood law, and there is no balm in Gilead but the Payne-Aldrich tariff!"

Over on the other side of the Pacific Ocean, where the live and aggressive little Empire of Japan holds dominion upon the sea and where the soil is fertile in the production of statesmen with designs for imperial advancement, the volume of revenue from import duties during the first 12 months following the war, compared with that for the calendar year 1913, shows a shrinkage of over 50 per cent, and yet the revenue opposition of this House persist in the declaration that the loss of our revenue is wholly due to the substitution of the Underwood law for the Payne-Aldrich tariff, and in offering their panacea for all the ills of war can find music in no national anthem except "My Payne law, 'tis of thee!

However, Mr. Speaker, there is one substantial consolation in this revenue cry of our unhappy friends of the high-tariff minority, and that is that the only safe way to advocate a tariff measure before the American people is to call it a "revenue measure." When, with the aid of the protected beneficiaries, they first conceived and made this wonderful Payne-Aldrich concoction, the idea of its being for the benefit of public revenue never occurred to them. At that time it was admittedly rather barren of revenue virtue, and so in order to make up for its revenue deficiencies they were compelled to attach a codicil in the shape of a corporation income tax. It was conceived in the brain of tariff-protected beneficiaries and enacted into law by their representatives as an act of, for, and by the industrial beneficiaries of the high-tariff system; and yet to-day this same measure is advocated by the same Payne-Aldrich school as the beau ideal of tariff for revenue only.

The champions of Payne-Aldrichism to-day have forgotten even to mention the fact that their chief interest was the pro-tection of "labor," which usually is made the goat of every subsidy demanded by tariff beneficiaries. They have forgotten even that their deep concern was the protection of "infant industry," which for a half century has been the guise of in-terests powerful enough to control tariff legislation. They have forgotten even their time-worn "home-market" cry to the effect that the proper function of a customs tariffs was to keep out the foreign goods which paid customs duties. No; the measure which six years ago was favored by every tariff-protected trust in America as the most effective tariff act yet devised for shutting out foreign goods and insuring industrial monopoly against competition is to-day presented by concerted action of the high-tariff minority in both Houses as the great and original model of tariff for revenue only.

The gospel preached by the sons of Democracy during the 40

years or more they wandered in the wilderness, Mr. Speaker, has not been in vain, and the principles inculcated by the people through the ballot in the past three congressional elections have not been in vain, when the representatives of the high-tariff propaganda advocate their panacea as the simon-pure, one-andonly revenue measure, the only customs revenue measure on the face of the globe during this period of the world's greatest war that will produce liberal revenue as abundantly as in time of peace. Not in vain, indeed, has been the Democratic gospel a century, that the Government could levy taxes only for public revenue, when even the interests behind monopoly's Payne-Aldrich tariff are compelled to represent themselves as the

missionaries of revenue reform in order to get a public hearing.

For now a half century our high-tariff friends have argued that the purpose of protection was to keep out the importations which are the source of customs revenue, but to-day, in the debate before this House, we learn that the true mission of Payne-Aldrichism is the production of revenue, which can only come through opening the gates to foreign dutiable goods. Only six years ago the high purpose of the Payne tariff was to secure the home market against foreign competition, to cut down the volume of imports upon which are levied the tariff duties; and now the mission of that same tariff, as alleged by our protectionist friends, is the production of abundant revenue, which can only come through abundant importations of foreign goods.

Like the rod of Moses which smote the rock of Horeb and caused abundant stream; to gush forth to water the people and the live stock of Israel, bringing forth cool and refreshing springs from rock cliffs in time of drought, the Payne-Aldrich tariff will generate out of the walls of protection, framed to bar out foreign goods, generous streams of customs revenue when importations cease in time of war. And like the quality of mercy and the rain from heaven, it will bless him that gives and him that takes.

As a revenue producer it has already been ably shown by the centleman from North Carolina [Mr. KITCHIN], chairman of the Ways and Means Committee, that the Underwood law is far superior to its predecessor, the Payne law. The Underwood law went into effect, in its general provisions, October 4, 1913, and from that day until the opening of the European war, July 31, 1914, proved its superiority over the Payne law not only in the justice of its taxation but in the volume of the revenue it rendered unto the Federal Treasury. On January 1, 1914, the last of the Payne schedules, the wool duties, expired. During the seven months of 1914 down to the day of war the Underwood law produced \$233.594,641 of Federal revenue, as compared with \$215,756.042 for the Payne law during the corresponding period the year before. The Underwood law excelled in revenue production by a margin of \$18,198,599 in the only period of its unhampered operation. It beat the Payne law by a margin of \$2,600,000 per month, or over \$30,000,000 per annum. Its revenue efficiency, even from the very starting post of its career, was greater than that of the law it displaced; and it is the history of every revenue law that it does not reach its normal rate of efficiency until after a year or two of operation have developed its administrative machinery and the currents of business have become adapted to its operation.

The majority in power, which is charged with responsibility for the national finances at the time of the passage of a revenue bill, is naturally compelled to take into consideration all the sources of Government receipts and not merely those flowing from the single given measure under fire, such as some particular tariff law. It is therefore worthy of note that the total ordinary receipts of the Federal Government for the fiscal year 1914, 30 days before the war, were \$734.673.000, against \$724,000,000 under the Payne law in 1913 and \$691,000,000 in 1912.

bursements was \$34,000,000 under the Underwood law, as compared with \$15,000,000 for the fiscal year 1910, after the first complete year of the Payne law, and a deficit of \$58,000,000 for 1909 under the protective Dingley schedules unaided by a corporation-income tax.

There was a heavier reduction in the volume of dutiable imports for the fiscal year 1915, as compared with 1914, than during the year of our Spanish War in 1898, and for 1899, at the close of that war, there was a substantial \$90,000,000 gain in dutiable imports; and yet we find that the deficit under the Underwood law for the fiscal year 1915, after a year of war which brought disaster to the revenues of practically all even of the neutral nations of the world, was only \$33,000,000, as against an \$89,000,000 deficit in 1899, a \$20,000,000 deficit in 1909, and a \$58,000,000 deficit in 1910, all under tariff schedules

approved and created by the party of our revenue critics.

Under the last year of the McKinley Act there was a deficit of \$69,000,000, and under the last year of the Dingley Act there was a deficit of \$58,000,000; while the Payne Act never compared in any year of its existence with the Underwood law as a producer of revenue; and yet our minority friends wish the country to believe that the type of revenue act which their philosophy evolves is a model for public revenue.

In spite of all the exigencies of a war which has revolutionized the finances and incomes of the nations of the world, the total ordinary receipts of our Government for the fiscal year 1915 are only 6 per cent less than for 1914, 4 per cent less than for 1913, and are higher than for 1912. For this we have to thank the fact that our Federal revenue no longer depends, in the main, upon customs taxes collected from articles of consumption, the volume of which fluctuates not only with every wave of war that disturbs the commerce of the globe, but fluctuates with every period of rain or drought or commercial depression or panic which affects the flow of international commerce.

The Underwood law has brought into our fiscal system the income tax, based upon the principle incorsed as scientific and just by all the leading taxation authorities of the world—the principle of taxable ability. It is not only the most just tax and the most dependable, but it is the rock of salvation in a time of war when customs taxes are will-o'-the-wisps, subject to the will of every foreign zephyr. What would be the predicament of the warring nations of Europe to-day were they dependent upon customs revenue for the support of government?

Take the case of Japan, located on the opposite side of the globe from the European war zone, and note how its revenue from import duties has been shot to pieces since August 1, 1914. In 1913 its collections of import duties were 73,580,000 yen, or an average of over 6,000,000 yen per month. During the 12 months following the opening of the war its total import duties were only 33,797,000 yea, or 2,800,000 yea per month. Here is a revenue shrinkage, caused by a war nearly 4,000 miles away from its boundary, amounting to 54 per cent. During nine months of this year, ending September, Japan's import duties are only 22,429,000 yen, as against 61,000,000 yen for the same months in 1913, a shriveling of customs revenue reaching the alarming proportions of 63 per cent. And yet our friends, the minority, want us to believe that we had only to go back to their tariff schedules to escape the ravages of war in our Federal revenue. They pretend that had we adhered to the protective-tariff plan, such as prevails in Japan, and had not brought into the Underwood law the new features of the income tax, with an extension of the corporation tax, and arranged the tariff schedules on a revenue basis, which constitute the three main features of the Underwood law, we would not have suffered revenue losses, although the entire revenue map of the world about us shows rents in tariff revenue beyond precedent in history.

The immediate effect upon the customs revenues of the 10 Republics of South America during the early months of the war was to cut their national incomes practically in half. Their national treasuries suffered so severely that a wave of currency depreciation and moratoriums to guard against bankruptcy swept over all South America. Banks suspended business and commerce was prostrate. The commercial relations and banking relations established between this country and our Pan American neighbors, coupled with substantial investments of American capital and the organization of branch banks under the operations of our Federal reserve act, are gradually restor-ing the South American Republics to a normal basis. One of the prime factors in this recuperation is the enormous volume of South American wool, hides, coffee, and other Latin American staples which our country is absorbing through its free list. At the end of the first fiscal year, June 30, 1914, after its going into operation, the surplus of ordinary receipts over dis-

Argentina, which perhaps has been the lightest sufferer of the larger South American Republics.

The customs duties of the Argentine Republic for the current year to October 1 are \$67,189,000, as against \$101,976,000 for the same period in 1914, including three war months, and \$144,695,000 for the same period in 1913 prior to the war. The customs revenue shrinkage, even as against last year, is 33 per cent, while against 1913 it is over 50 per cent.

South American countries have to resort even to direct taxes upon rural and city property in some cases to float their maturing obligations, while issues of bonds to meet current expenses are more or less the rule, this country being the principal market for these securities.

The Dominion of Canada during the 12 months ending with July this year-the first complete year of war and revenue disaster-collected \$78,784.427 of import duties, as against \$117,-566,866 for the same period in 1913. The shrinkage is 34 per cent. But in order to hold the revenue loss down even to this percentage the Dominion Government has made repeated tariff changes, all for the purpose of revenue. On August 21, 1914, three weeks after the war began, the Canadian Government put into effect a sweeping revenue tariff, with a substantial British preferential, increasing by 100 to 250 per cent the duties on leading revenue articles, such as sugar, coffee, liquors, and tobacco, with a substantial advance all along the line of revenue articles. In spite of these increased duties the loss of revenue by March 15 aggregated \$28,000,000, necessitating further experiments at rate increases. But even with these rate increases on articles selected purely as to their revenue-producing character Canada's revenue loss from import duties reaches during the first year of the war, as we have seen, 34 per cent as compared with the normal period of 1913.

The reports of our American consuls, as compiled by our Commerce Department, show experiments with tariff changes, with a view to repairing the ravages of war in a large share of the countries of the earth; but the war revenues resulting from these tariff changes indicate very indifferent success in mitigating the evils of tariff for national defense in time of war. The statistical comparisons above given for Japan, Canada, and Argentina are capable of duplication over a large section of the civilized globe. It shows the lack of dependability of a tariff system for national support in time of war; and some of the tariffs relied upon by other countries for their national revenue are nearly as bad as our late-lamented Payne-Aldrich creation, being more or less related thereto in purpose and origin.

INCOME TAX.

The lesson of this war in taxation is that the income taxthe new principle of taxation brought into our fiscal system by the Underwood tariff-is as preeminent in its dependability in time of war as it is just in its application and wise in its exemption from interference with commerce and industry. The income tax is to-day the revenue foundation of England, France, Germany, Austria, and Italy, among the warring powers of Europe, and the first element in their program of national preparedness: Even their bond issues would be impossible were it not for the existence of a thoroughly reliable and long-tried income tax system of raising national revenue to take care of the bonds at maturity and the annual-interest payments. fundamental proposition examined by American bankers at the time of the recent \$500,000,000 loan, as shown by the financial circular issued by the banking syndicate, was the certainty of the British and French income tax systems to produce the revenue to redeem the bonds.

From the 12-page circular issued by the National City Bank of New York, I take the following statement, covering the 70year history of the British income tax:

In spite of the increase in expenditure in the last 15 years, the burden of the normal governmental expenditures is much less than it was in the days of Mr. Gladstone, having regard to the great expansion in the income and wealth of the nation. Relatively the burden on the wealthy has not increased, while the burden on the great mass of the people has been greatly reduced in proportion to their incomes. The following statement of incomes assessed to income tax since the income tax was introduced in 1843 furnishes a fairly good indication of the relative growth of the nation's income from decade to decade:

Incomes assessed to income tax

Annual control of the	
1843-44, exempt under £150	£243, 830, 000
1853-54, exempt under £100	286, 885, 000
1863-64, exempt under £100	371, 103, 000
1873-74, exempt under £100	543, 026, 000
1883-84, exempt under £150	628, 519, 000
1893-94, exempt under £150	673, 712, 000
1903-4, exempt under £160	902, 759, 000
1913-14, exempt under £160	1.186,000,000

It should be noted that the above statement of income does not include salaries and wages exempt from income tax. This additional income in 1913-14 amounted to about £1,400,000,000, whereas in 1843-44 it was only £235,000,000. The nation's total income in 1843-44 was

about £460,000,000, and in 1913-14 it was £2,400,000,000, a more than fivefold growth.

To show the lightness of the burden of taxation in Great Britain, in proportion to the income available, in 1913-14 in comparison with 1859-60, and with 1815-16, I present the following statement:

	Popula- tion,	National in- come per an- num.	Taxation per annum.	Annual ex- cess of in- come over taxation.
1815–16.	20,000,000	£300,000,000	£62,000,000	£238,000,000
1859–60.	29,000,000	700,000,000	66,000,000	634,000,000
1913–14.	47,000,000	2,400,000,000	164,000,000	2,236,000,000

The great increase in the margin of income in excess of taxation, both actually and in proportion to population, will be evident from the following statement:

	Income per head.	Taxation per head.	Income in excess of taxation per head of population.
1815-16.	£15	£3.1	£11.9
1859-60.	24.1	2.2	21.9
1913-14.	51.1	3.5	47.6

The burden of taxation in England has thus been growing smaller from decade to decade over the last century until it has become quite mismportant in comparison with the national income available for jaying it. A century ago the great mass of the British people were burdened with indirect taxation, while the burden of direct taxation falling on rich people was insignificant. Now, there is practically no burden of taxation on the great mass of the people and only a very moderate burden upon the rich. In no country in the world, with the exception of the United States, has the burden of taxation been as light as it has been in Great Britain in proportion to the national income. What other country can show absence of taxation upon practically all necessaries of life and upon most comforts and that it draws its revenue almost entirely from the taxation of luxuries?

A similar chapter in the successful operation of the income tax could be written for Germany, France, Austria, and Italy. So familiar are the American people to-day with the merits of the income tax-the principle of which over three-fourths of the States of the Union indorsed through the amendment of the Constitution as a foundation for the income-tax section of the Underwood law-that I desire herewith to call attention only to the following features of the analysis quoted from the above high banking authority:

First. That the effect of the income tax, contrary to the position of the Payne-Aldrich school, which opposes the income tax as a "penalty upon success," has had no such effect in Great Britain, where since 1860 the national income has increased at a rate more than double that of population. Although British revenue from the income tax has increased from about \$325,000,000 in 1860 to over \$800,000,000 in 1914, or something more than doubled, the annual excess of income over taxation In the same period has nearly quadrupled. This makes it very plain that the fear of "penalizing success," as expressed by our political opponents of the Underwood law and its income-tax provision, has no foundation in the above 75-year record of the United Kingdom.

Second. We have it from the authority of the National City Bank of New York, the greatest financial institution in the United States and the depository of the greatest corporate opponents of the income tax, that-

A century ago the great mass of the British people were burdened with indirect taxation, while the burden of direct taxation falling on rich people was insignificant. Now, there is practically no burden of taxation on the great mass of the people and only a very moderate burden upon the rich. In no country in the world, with the exception of the United States, has the burden of taxation been as light as it has been in Great Britain in proportion to the national income.

This tribute to the justice, the success, and the governmental efficiency of the income tax is not taken from the Democratic platforms of 1908 and 1912, or from the speeches of the Democratic Members of Congress elected to both Houses in 1914, or from literature of the great educational campaign which put the income-tax provision into the Constitution of the United States, or from the speeches of Democratic Representatives and Senators in this Capitol Building in the session of 1913, when the Democratic Party wrote the income tax into the Underwood revenue law of our country. To the contrary, the above tribute to the income tax is the official financial statement of the bank whose corporate depositors have been the most bitter enemies of the Underwood law, as they were the chief champions and beneficiaries of the notorious Payne-Aldrich tariff. Here is another evidence that the world does move, and that the eyes even of the great corporate blind—and they frequently on matters of public welfare are the most hopelessly blind of all-may

be opened to the gospel of good government and the principles

of just taxation.

What is the history of the advocates of the Payne-Aldrich tariff in regard to the just principle of the income tax? When the Supreme Court, in a divided opinion, and against what was deemed all precedent in the Supreme Court decisions of this country, declared unconstitutional the Democratic income tax of 1894, the Democratic Party continued its fight for this principle and made it a national issue in the campaign of 1908. In order to meet this issue Mr. Taft, in his acceptance speech as Republican presidential nominee in 1908, gave it as his personal opinion that the Democratic plank demanding the submission to the people of an income-tax amendment to the Constitutional was wholly unnecessary, and that he, as President, could draft an income-tax law that would be valid without constitutional amendment.

But when Mr. Taft, the candidate, became President Taft and sent his message to the extra session called to draft the Payne-Aldrich tariff, he completely forgot his income-tax pro-fession, and to meet the admitted revenue deficiencies of the tariff law his administration was pledged to enact advocated instead an inheritance tax. So overwhelming was the incometax sentiment of the country and so little was the interest in Mr. Taft's inheritance-tax substitute that the Senator from New York, Mr. Root, was compelled to admit (Cong. Rec. 44, 4002) that even in the Senate in 1909 an income-tax provision would have received "a majority of the votes of the Senate."

The Senator from Rhode Island, Mr. Aldrich, who was joint father of the Payne-Aldrich Tariff Act, declared (Cong. Rec. 44, 3929) that an income tax "is sure in the end to destroy the

protective system.'

So the inheritance-tax provision, in which no one took interest, was withdrawn; and, in order to compass the defeat of the threatened passage of one or the other of the income-tax bills proposed, "the corporation tax substitute," as it was called by Senators Aldrich and Root, was put into the Payne-Aldrich

The reason why the chief sponsors of the Payne-Aldrich bill-President Taft and Senators Root and Aldrich—inserted the light corporation tax in the measure was frankly stated by Senator Root (Congressional Record, vol. 44, p. 4002) in answer to the question why President Taft sent in the corporationtax amendment:

He did that, sir, of course, because in his judgment it was better for the country that the tax upon the business of corporations should be incorporated in our law than that the general income tax should be incorporated in our law.

In other words, the Payne-Aldrich tariff law was fathered and placed in our statutes by the leading representatives of the interests which sought to defeat the will of the people of the United States for a national income tax. No jugglery was left undone to accomplish the defeat of a general income tax. As stated by the committee of expert accountants to whom the "corporation tax substitute" was submitted, its exemptions of corporate earnings from taxation "violated all the principles of sound accounting." It gave the administration which passed of sound accounting." It gave the administration which passed the Payne-Aldrich tariff complete supervision over the corporations affected, to the exclusion of State interference, and protected them from publicity in their accounts, and it levied upon them the lightest possible corporation tax in payment for this protection.

Are the interests who advocate the Payne-Aldrich tariff today and seek the repeal of the Underwood law any more loyal to the income tax as demanded by the people and incorporated in the Underwood law than when they sought its defeat six

years ago?

Are the people of the United States any less opposed to the principles of the Payne-Aldrich tariff and any less loyal to the principles of the Underwood law and its income-tax provision

than they were in 1912 and 1914?

Certainly, Mr. Speaker, there is no evidence on either of these questions that would warrant any Member of this House pledged to the principles of just Federal taxation as embodied in the Underwood law to turn traitor to his convictions at this time and take a measure that the people have consigned to oblivion. It is the duty of this Congress, as I conceive it, to uphold the existing law and meet the exigencies forced upon our Government alike with all Governments in this time of world war, and to that end enact such additional measure as temporary emergency may require. Holding fast to those principles of just taxation which the American people have approved with their ballot, our duty is to uphold the Government with such added measures as the time and the emergency may demand of patriotic statesmanship.

War Taxes.

EXTENSION OF REMARKS

OF

HON. CHARLES H. RANDALL,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. RANDALL. Mr. Speaker, there is under consideration to-day House joint resolution 59, a proposal to extend for one year the emergency war taxes which first went into effect on October 22, 1914, three months after the European war broke out.

This is an unpopular law, and the easiest thing for a lawmaker who wishes to avoid criticism at home to do is to vote against it. In fact, the rôle of popularity is easy if you wish to avoid all responsibility. I once knew a man, long a Member of Congress, who gave the secret of his success. He never voted for a tax bill or against an appropriation. He secured good appropriations for his district, but never bothered about raising the money to pay them.

Neither the Democratic Party or the Republican Party is responsible for the European war which wiped out our income at

the customhouse on August 1, 1914.

South American Government finances were prostrated by the same blow, and Canada suffered enormous revenue losses. there is neither an Underwood or a Payne-Aldrich tariff law in

any of those countries.

Therefore an unpredjudiced citizen must see the necessity of raising emergency revenues from other sources than tariff charges. This law which taxes notes, telephone and telegraph messages, and so forth, can not but be unpopular; in fact, it is pestiferous. But who will propose a popular taxing system? My friend from Wyoming (Mr. Mondell) derides the system because chewing gum and face powder are paying war tribute. It is true that many complaints have come from chewing gum and perfumery manufacturers and from hardly anyone else. My inter-pretation is that here are at least two instances where the war tax could not be passed on to the consumer, for chewing gum and perfumery are sold at the same old price.

The gentleman from Illinois [Mr. Mann] proposes that this law shall only be extended to April 30, 1916, instead of December

aw snail only be extended to April 30, 1810, instead of 2 census.

31, 1916. He says this Congress can pass another extension later on if necessary.

Ah, yes; I see the specter of that new extension. That's where this \$500,000,000 military and naval expansion program will come in, if that loophole is left open.

There is where we will mortgage our children and our chil-

dren's children to the god of war.

There is where we will throw away America's opportunity to

write an end of the war horrors which curse the world.

How can we propose to Europe's prostrate war-crushed countries that all nations disarm if we are engaged in a frantic effort to outstrip the world in the manufacture of instruments of murder?

PANICKY PREPAREDNESS.

We are to be asked to find new and more pestiferous ways to tax the people, because an overwhelming panic has been spread over the land by the American jingoist-newspaper and states-

If we could find a way to fortify against the jingo juggernaut

nothing could make a lasting peace surer.

The hysteria caused by the black headlines in yellow newspapers cost this country great loss of life, untold millions of money, and misery which will never end. It gave us a problem in which there exists our only possible diplomatic tangle of a serious nature—the Philippines. And a certain chain of yellow newspapers actually boasted that it caused the war—the Spanish-American War!

Every intelligent student of American history now knows that Cuba would have been freed from Spain without any war or the shedding of one drop of blood. In the archives of the State Department there is correspondence which proves that Spain had agreed through Prime Minister Sagasta to withdraw the army of Spain from the Island of Cuba before Congress declared

war against Spain.

That piece of panickyism by the yellow press, the munitions manufacturers, and embalmers of beef for soldiers' rations cost us the lives of 16,000 young men—the flower of the land. The pension list already exceeds forty millions, and more than a billion dollars went out of the Treasury to get what—the Philippines, and we don't want them.

Of all times in history, now is the time to keep cool-and learn.

No nation will attack us—not just now. They are all busy.

The late John D. Long, Secretary of the Navy in Roosevelt's cabinet, said, in a letter to Secretary Daniels:

I think the American people should not get panic-stricken over the esent European condition, as if we were in danger of attack by the eat nations, which will come out of that conflict bankrupt and exusted and recognizing the vital need of a long peace for their re-

And former Secretary of the Navy Herbert, of Cleveland's

Now is precisely the time we should keep cool and study carefully the lessons being taught by the war in Europe. Twelve months hence we shall know better how much to expend for naval construction and what to spend it for.

WAR STOCKS MUST BE SUSTAINED.

But this sort of program does not suit the war trust, which has sent war stocks up more than \$1,000,000,000 in Wall Street. The market must be maintained or there will be great disaster in the stock market. The United States Government must give a vote of confidence at once and incidentally order \$500,000,000 in war armament.

The war trust is the wickedest trust in the world. It promotes

wholesale murder for the profits which it can secure.

I have one secretary, but need two. The extra man would be kept busy opening and examining the voluminous correspondence and elaborately illustrated booklets which I receive every day from the innumerable navy leagues and defense committees. I note the names of J. P. Morgan and Hudson Maxim as directors of some of them. Morgan's firm boasts that it has handled \$500,000,000 in munition contracts on European orders. And Maxim receives a royalty on every gun of his invention.

WHO WILL ATTACK US?

Will it be England? Her estimated wealth is eighty-two billions. She has spent forty billions already in this war. And she has 4,000 miles of unprotected territory along our northern

boundary. Not England.

Will it be Germany? If so, why? She has lost half of her export business which came to us. Will she want to recover that trade or continue to lose it, for what?

Will it be France? Same answer.

Will it be Italy? No.
Will it be Russia? How, and what for?
Will it be Japan? Ah, there's the rub. Japanese will overwhelm us some day. Thirty thousand of them are running around in the blackberry patches of California looking for an opportunity to massacre our whole population of 3,000,000 be-

fore breakfast, according to the senior Senator from my State.

At the beginning of the present war Japan had the highest per capita debt of any nation in the world, namely, \$300 for every man, woman, and child in the Flowery Kingdom. To-day Japan's debt is not reduced, but the European nations at war surpass her, for every man, woman, and babe in the warring countries is staggering under a debt of \$400. And the end is not yet. Keenest statesmen of broad vision are at the head of the Japanese Government, but the wicked jingoist troubles the Japanese public, just as he does here. We have not dealt with the Japanese question in a statesmanlike way in California. Our alien land law would have been all right if it had been enacted to apply alike to all nations.

Among the most fervent appeals for peace was an address delivered to the recent world's peace conference at the Panama-Pacific Exposition by Count Okuma, president of the Peace Society of Japan. The only belligerent note in his address was

So long as there exist nations or individuals who believe or exalt themselves as absolutely superior to others, so long will armaments and armed conflicts continue to mar the peace of the world.

Anson Phelps Stokes, of Yale University, says:

The Japanese Government, by undertaking to check all emigration of Japanese workingmen to this country, by its generous cooperation in the San Francisco Exposition, by its conspicuously friendly attitude toward the various American commissions visiting Japan, and in other ways, has shown its desire to improve relations with this country. We can dismiss all thought of an attack by Japan if we will treat the Japanese, who are a sensitive and proud people, courteously and fairly, adopting immigration and land-tenure laws that apply alike to all foreigners.

elgners.

Japan knows that her sphere of influence is Asiatic, not American,
She could not turn to any profitable account a square foot of our continental territory.

PEACE MAKES PEACE, WAR MAKES WAR.

Prof. Sumner, of Yale University, with his cold logic, sums up the whole business of preparing for war by trying to match the armaments of Europe. He says:

There is no state of readiness for war; the notion calls for neverending sacrifices. It is a fallacy. It is evident that to pursue such a
notion with any idea of realizing it would absorb all the resources and
activity of the State; this the great European States are now proving
by experiment. A wiser rule would be to make up your mind soberly
what you want, peace or war, and then to get ready for what you want,
for what we prepare for is what we shall get.

A DISHEARTENING PROSPECT.

I know nothing more disheartening than the announcement recently made that the United States—the one great country left in the world free from the hideous, bloody burdens of war—is about to embark upon the building of a huge armada, destined to be equal or second to our own—

Said Lord Rosebery, presiding at the Rhodes lecture in the University of London.

It means

He added-

that the burden will continue upon the other nations and be increased exactly in proportion to the fleet of the United States. I confess it is a disheartening prospect that the United States, so remote from the European conflict, should voluntarily in these days take up the burden which after the war will be found to have broken, or almost broken, our

POWERFUL INFLUENCES MAKE CONGRESS HELPLESS.

Benton, in his Thirty Years' View, writing in 1850 (v. 2, p. 577), summarizes the demand for more ships in his time as fol-

A powerful combined influence pushes forward an augmented navy without any object but their own interest—first, the politicians, who raise a clamor for war at the return of each presidential canvass and a cry for ships to carry it on; next, the naval officers, who are always in favor of more ships, to give more commands; and, thirdly, the contractors who are to build the ships and get rich upon their contracts. These three parties combine to build ships, and Congress becomes a helpless instrument in their hands.

MORE EFFICIENCY, NOT GREATER APPROPRIATIONS.

I shall vote for the extension of the war-tax measure before this House, because it is necessary to protect a Treasury depleted as a result of the European war; and I shall vote for its extension for one year in the hope that its enactment will operate to prevent the serious consideration by this Congress of another war-revenue measure destined to load upon our people the awful burdens which press upon the European nations. In times of peace we have been militaristic enough. for I shall append a table showing that we have spent more money upon our Army and Navy from 1901 to 1912 than did either Germany or France, and we equaled Great Britain upon a peace basis during the same years. If we have not secured as much "preparedness" for our money as they have, then it is not more money that we need, but more efficiency in its expenditure: Total Army expenditures, 1901-1912.

United States	
France	1, 774, 631, 558
Great Britain	2, 486, 126, 900
Total naval expenditures, 1901-1912.	
United States	
Germany	
Great Britain	
Grand total for Army and Navy, 1901-1.	912.
United States	
GermanyFrance	
Great Britain	

All of the above figures, except for Great Britain, are for "preparedness" expenditures in times of peace. During this period Great Britain made an estimated expenditure of one and one-half billions on account of the Boer War, thus reducing her grand total to about that of the United States.

Rural Credits.

EXTENSION OF REMARKS

HON. LADISLAS LAZARO.

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday January 4, 1916.

Mr. LAZARO. Mr. Speaker, it is time for us to pass a rural credit law, and I hope to see this Congress pass a comprehensive measure of this kind during the present session. In the last Congress we enacted into law a great and beneficial measure with reference to the banking and currency system of the United States—and, of course, I refer to the Federal reserve law. No one denies the great good that has resulted from this legislation; but we have not completed our task in this regard.

Let us look for a moment into the status of the question of agricultural finances. The subject of rural credits was mentioned in the platforms of all of the great political parties of 1912, and each pledged itself to action for the betterment of credit facilities on the farm. The Democratic platform declared as follows:

Clared as follows:

Of equal importance with the question of currency reform is the question of rural credits, or agricultural finances. Therefore we recommend that an investigation of the agricultural societies in foreign countries be made, so that it may be ascertained whether a system of rural credits may be derised suitable to conditions in the United States; and we also favor legislation permitting national banks to loan a reasonable proportion of their funds on real estate security.

The Republican platform contains substantially the same declaration, in the following words:

It is as important that financial machinery be provided to supply the needs of the farmer for credit as it is that the banking and currency system be reformed in the interest of general business.

The Progressive Party pledged itself to "foster the development of our agricultural credit."

President Wilson said:

Systems of rural credit have been studied and developed on the other side of the water, while we left our farmers to shift for themselves in the ordinary money market. You have but to look about you in any rural district to see the result, the handicap, and embarrassment which have been placed upon those who produce our food.

Pursuant to those views, in the spring of 1913 a commission of seven members, appointed by the President, traveled through Europe and cooperated with a commission made up of members appointed by governors of the several States to study the agricultural credit conditions in the Old World. At the same time the Department of Agriculture began an extensive and thorough study of the subject. In his annual message to us on the 2d of December, 1913, President Wilson again referred to rural credits in presenting to Congress "the urgent necessity that special provision be made for facilitating the credit needed by the farmers of the country." Even before the Federal reserve law was finally disposed of the Committee on Banking and Currency delegated a subcommittee to begin work on the question, and this subcommittee is prepared to submit a report to the whole committee.

So it seems to me, Mr. Speaker, and I believe it to be the opinion of those who have studied this question most carefully, that the House Committee on Banking and Currency has all of the information needed and is in a position to report a measure to this House which we can enact into law. While we have other great questions claiming our attention at this time, I confidently hope that this important subject will not be side-

tracked during this Congress.

We admit that the United States is an agricultural country, that agriculture is the foundation of our prosperity, and I can not think of any law that would do more to build up our agriculture than a good, sound rural-credit law. We know that the wonderful commercial expansion and industrial development of this country would have been impossible but for the credit facilities especially designed to meet the needs furnished for so many years through our national banking system and improved by the Federal reserve act. But this wonderful banking sys tem, as good as it is, provides no adequate facilities to meet the needs of our tremendous and growing agricultural interests. A rural-credit law that would relieve the average farmer from the burden which excessive rates of interest and short terms imply, enacted at this time, would round out the financial re-form begun in 1913. Without this separate financial system it is impossible for our banks to meet the situation, and wise and far-seeing bankers understand that the permanent prosperity of this country depends upon the promotion of our agriculture. Therefore, I say, we need a law under which each farmer can buy his own farm and pay for it with money borrowed at a cheap rate of interest and on long terms-a law that will permit the Government to lend its credit to make the liquefaction of this enormous security, which is absolutely sound and forever certain, on the best possible terms. The Government could not possibly ever lose one dollar by so doing.

One of the most serious problems we have to meet to-day is to stop the steady flow of population from the country to the already congested cities and towns. Another matter akin to that problem is the cost of living. It is not strange that the cost of living is becoming higher and higher every day when we study the distribution of our population. In the beginning of this country about 8 per cent of the people lived in the towns and cities, whereas to-day we find half of our population are in the congested centers, consuming instead of producing our food—

buyers instead of sellers. We want to encourage our boys and girls to remain on the farm, and how are we going to do it? The first step to be taken is to give every man, woman, and child who tills the soil a chance to own it. This is the foundation stone upon which alone can be builded a profitable and attractive country civilization. The small farm owned by the man who works it is the best plant bed on which to grow strong men. A landless population will always make a Mexico, but the strong citizen standing in the doorway of his own home is itself a builder and defender of the Commonwealth. Philosophy and oratory have tried to reverse the current of men and families leaving the farm and going to the cities, but the cry of "back to the farm" will continue to fall upon deaf ears unless something is done to make living in the country more attractive and profitable.

Long ago it became apparent to the wise statesmen and economists of the leading European countries that the worn-out soils, by centuries of use and abuse, needed reclamation and improvement in order to produce the very best results not only to make agriculture profitable to the individual farmer but especially to enable each rival country to produce the products of the soil as cheaply as possible in order to compete with other rivals in the markets of the world. This need led to the birth of the rural credit financial systems in Europe separate from the ordinary banking systems. We likewise need such a system from an economical standpoint, both nationally and locally. Not only must we be able to compete with the other nations of the world but it is necessary that the farmers of this country own their own farms in order to produce their products at a cost sufficiently low to enable them to derive enough profit from their lands to pay their taxes, build up their homes, improve their communities by establishing schools and churches, and build good roads. We must enact a rural credit law soon or we will continue to see this country of ours becoming a land of tenants and unable to promote its own civilization. Anyone who has kept up with the subject knows that there is a growing feeling of uneasiness over the growth of land tenancy, and fear has been expressed lest this country should become a country of tenant farmers and absent landowners after the fashion of Ireland. The man who deeply feels and understand this obligation, who most clearly sees this opportunity, and who is willing to lend his efforts in the enactment of this much-needed law will most surely serve his day and generation.

While our attention is taken up for the present with the question of national defenses and we are trying to agree on a measure of reasonable preparedness to protect the American people in case of emergency, which all practical men who understand human nature and are familiar with history admit is necessary, let us not forget that we also need industrial preparedness, and that this can not be brought about without making agriculture profitable. We are working hard to build up an American merchant marine, but we will have but little need for a merchant marine if we can not produce agricultural products at a cost to

compete successfully for the markets of the world.

In the face of the situation and with knowledge of the experience of the world before us, gathered at great cost and officially published for our information, we can delay no longer to apply the remedy. We agree on the principle, and we have given our experts opportunity to work out the details, and a measure should be brought in which we can enact into law before we adjourn.

Rural Credits.

EXTENSION OF REMARKS

HON. CHARLES H. DILLON,

OF SOUTH DAKOTA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 4, 1916.

Mr. DILLON. Mr. Speaker, under the leave granted me for extension of remarks on the subject of rural credits, I am presenting a speech delivered by Hon. H. L. Loucks, of Watertown, S. Dak., at Sioux Falls before a rural-credit gathering.

In 1886 Mr. Loucks was the president of the Dakota Farmers' Alliance and has made a lifelong study of farm economics. I am sure those making a study of this subject will be interested in Mr. Loucks's discussion of this important subject.

Credits is one of our great governmental activities and ought not to be monopolized by any class of people for selfish purposes.

The question naturally occurs, Why should not the Government regulate the interest rates on farm-mortgage loans and present a system that will eliminate all profits?
The speech is as follows:

RURAL CREDITS.

[Speech of H. L. Loucks, Watertown, S. Dak.]

Rural credits is now at the front as a national issue. In discussing it we should lay down certain fundamental principles toward which our efforts should be directed. If they are sound, by keeping them to the front we establish a safe base and can accept of any measure that leads in our direction.

Our medium of exchange, whether of metal or paper, is a public utility created and issued by our Federal Government for public use. No individual, combination of individuals, corporations, or State can legally make or issue money, and none should be permitted to monopolize it. It is by far the most important public utility of any civilized nation or people.

It should be administered in the interest of and be readily accepted by all of the citizens of the sovereign creating it and

be a full legal tender for all debts, public and private.

Like all public utilities-municipal, State, or national-it should be administered without special favor and without private profit as is our medium for the exchange of intelligence-the post-office system.

Money, like any other commodity, when uncontrolled is subject to the law of supply and demand. When controlled by private interests it becomes the greatest of all monopolies.

An essential function should be stability. It is impossible to have a stable currency based on any single commodity, and more especially a metal depending wholly upon the chance of discovery.

The present currency law in recognizing the fact that money

based on value is just as good as money stamped on value, and much more convenient, has taken a long step toward the scientific solution of the money problem.

The authors and advocates of the Aldrich currency bill and the present currency law succeeded in their educational campaign in proving that money is not necessary for the transaction of our business; that all we need is credit and a check book, which in the main is true.

For the exceptions Federal reserve bank notes and minor coins will do. The Aldrich currency bill provided for the gradual retirement of all of our present currency from general circulation. The same is practically true of the Owen-Glass law. Whatever power is lacking in the law itself has been conferred on the Federal Reserve Board, and retirement is rapidly progressing. Our medium will soon be Federal reserve bank notes.

In Europe and Australia agriculture is given special favors by the several Governments, and secures the use of money for less than does commerce and industry. Here we pay on an average two to two and a half times as much. We do not ask for any special favor for agriculture.

All we ask is to be placed on an equal footing with commerce

and industry and should not be satisfied with less

The amount to be provided should be governed wholly by the law of supply and demand for use, and should respond to that demand automatically. The per capita basis belongs to the past. We are no longer exchanging individuals, but labor and the products of labor.

The control of this public utility in the past by one class of nonproducers, whose sole aim was private profit, has resulted disastrously for both producer and consumer and in the un-paralleled concentration of wealth in the hands of a few.

Under our present system the currency will be issued by the Federal reserve banks and loaned on commercial paper. These, backed by the credit and taxing power of the Nation, will be the very best currency ever issued by any nation.

Why limit that loan and indersement to commercial paper?

Investment paper secured by farm land or stable farm products in store should be and is better security. Leading Chicago bankers say that they prefer to loan their money on wheat in store than on Government bonds. It is the best security known to investors.

The Federal reserve bank notes are now issued without interest to the reserve banks by the Federal Government, the only charge being the actual expense incurred (less than one-tenth of 1 per cent); in other words, at cost. (See sec. 18.) For a public utility that principle is sound, but indefensible when granted to a private business for profit as at present. medium of exchange should be issued at cost by the Federal unit to every industry on exactly the same terms as to security, expense, and interest.

The advocates of rural credit should take the broader view, accept the principles of the present law, and insist on its ex-

tension so as to provide for equal opportunity for all-the laborers, mechanics, professional and business men and women, as well as the farmers. Encourage every citizen to become a producer and home owner by giving him a chance.

A nation of prosperous home owners should be our goal.

All those who are directly or indirectly interested in agricultural development production, as well as those interested in the price of farm products and home ownership, should demand and insist on a separate investment system for longtime loans which could be administered at a mere fraction of the expense of the commercial system.

The two systems are not antagonistic or competitive and have developed side by side in Europe to their mutual advantage.

The solution for rural credits is the organization of a Federal investment bank to do for investments just what the Federal reserve bank is supposed to do for commerce. There need be no expensive commissions.

If we make use of our present units of government we can have the maximum of security at the minimum of expense.

First. A Federal investment bank authorized to issue Federal notes for purposes of production and development.

Use the several State governments as the second

Third. Organize a State development bank, or make use of some department already established, such as our South Dakota commissioner of school and public lands, which has successfully loaned our school-land funds on farm lands ever since statehood.

Fourth. The county commissioners, who now handle our school funds for the State department, or a similar county board for other States

Fifth. The individual applicant for a loan.

With each of these units except No. 4 the work will be largely clerical, and as the loans will be long-time loans, the clerical cost will be comparatively small; indeed, less than in any other country where the clerical work is not done voluntarily.

Now as to security, we will reverse:

First. The applicant. As the county would have to indorse the note, the applicant would have to satisfy the county authority as to his personal character and the so-called moral risk. The value of the property would usually be known to some member of the board; if not, the cost of investigation would be nominal.

Second. The county board. The clerical work could be done by one of the present county officials in the courthouse. The security being satisfactory, the county would indorse the note, thus making it as good as a county bond. For this the county should receive one-half of 1 per cent of the annual interest. All over the actual expense involved should be placed in a reserve fund to protect the county against any possible loss

Third. The county would then forward to the State investment bank or department whose duty it would be to pass upon the application, and if approved pass on to the State. they should also be allowed one-half of 1 per cent. All over the actual expense to also go into a reserve fund for protection.

Fourth. The State authority if satisfied would then indorse and send to the Federal investment bank as the asset on which to loan the bank notes. For this the State should also receive one-half of 1 per cent, and likewise place all over the expense incurred in a reserve fund for protection against any possible loss. The security then would be better than a State bond.

Fifth. The Federal investment bank should receive one-half of 1 per cent, and all over the expense be set apart as a reserve fund for protection. This would make a total interest of 2 per cent. A conservative estimate of the expense with the experience of Europe and Australia as a guide would be not more than 1 per cent. The reserve funds would not be private profit, but would belong to the public.

There is nothing new in this method as to Nos. 1, 2, 3, and 4. They are now and have been for many years in successful operation in this and other countries. No. 5 is a duplicate of our Federal reserve bank law, which our financial experts claim to be the most perfect financial law ever enacted, with the exception that we provide for one-half of 1 per cent interest to the Federal Treasury as a protective reserve fund, and the Federal

reserve banks pay no interest,

Where would the Federal Government get the money? Just where they get the Federal reserve bank notes. I am not asking for money, just Federal investment bank notes, and I am in favor of eliminating any provision for gold redemption, but would make them a full legal tender for all debts, public and private, without any exception clause. They are not intended to be for use in and "good in Europe," but for home use.

A United States bank note, properly secured by the borrower, indorsed by the county, State, and Nation, with the taxing power of each back of it, should be good enough for any Ameri-

can citizen, and would be even better than the Federal reserve bank note.

To sum up:

First. It will eliminate private profit from any public utility in accord with the best modern economic thought.

Second. It will provide a medium of exchange with the maximum of security and at the minimum of expense.

Third. It will furnish the use of credit for development and production at a little lower rate of interest than any of our competitors have.

Fourth. It is no experiment. Every feature is in successful operation now somewhere.

Fifth. It is very simple, requiring very little new machinery.

Mr. Moore on "Common-Sense Preparedness."

EXTENSION OF REMARKS

HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 4, 1916.

Mr. BENNET. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech delivered by the Hon. J. HAMPTON MOORE, a Member of the House, before the National Rivers and Harbors Congress in December last, on the subject of "Common-Sense Preparedness."

Mr. MOORE said:

Mr. President, ladies and gentlemen, speaking of "preparedness," for that, in a way, is my theme, there was an old fellow down in the State of our distinguished friend the Senator from Louisiana, President Ransdell, who, having on one pleasant moonlight night dallied too long with John Barleycorn, wended his way homeward across a stubble field that was left by some prize-winning Louisiana corn boys until he struck a worm fence from the vicinity of which proceeded a commotion and a rattle, which to his trained mind indicated the proximity of a snake. The rattle in particular was ominously distinct, so he righted himself for a moment, did the old fellow, and then, striking an attitude of defiance, said, "Ready to strike, are ye? Well, gol darn ye, strike now, for you'll never find me better prepared!" [Laughter and applause.]

Now, that occurred in the days before they stopped using

whisky in Louisiana. [Laughter.] President RANSDELL. That has been a long time ago. [Re-

newed laughter.]

Mr. Moore. And I do not intend that you shall know what it was the Senator from Louisiana said to the Congressman from Pennsylvania "a long time" ago, either. Nor do I tell this story because I am at the tail end of the list of speakers this morning. I need it in a way to point a moral. I do not want to see drunken preparedness for war in the United States. [Applause.]

DO NOT WANT WAR.

I do not want war at all, new or ever; no man who has had experience in war, we are told, wants to see it again. I do not want to be led into war by any fool pacemaker or peacemaker, by any jingoist, nor by any ammunition maker. I want peace for my country's sake, for the sake of my wife, for the sake of my children, for my own sake, and for the sake of those who are to come. [Applause.]

I do not want to be misled or misdirected: I do not want to have burdens placed upon the backs of the people who do not deserve to have burdens placed there. I do not want to be thrown into any conflict, national or international, but if war is forced upon us I want to be duly and sensibly prepared for

war. [Applause.]

Appropriations are about to be asked for the purpose of increasing the Army and the Navy of the United States. listened to the President of the United States on Tuesday last as he told those of us who are Members of Congress what was expected of us in the matter of preparedness-not for war, I hope, but for that peace to which we all aspire. I listened to his suggestions as to how we were to pay for this preparedness, and I regret to say there was not one word as to that commercial and industrial activity of the country which must in the end pay for war or preparedness for war.

THE PROPLE MUST SUPPORT WAR.

If war should come, there must be something to support the soldier apart from the soldier's own service. The soldier does not create revenue. I said this to this convention last year. The of Congress of that day said, would never dare to tackle us

soldier must rely upon revenue that is created by somebody The naval man does not create revenue; the Navy must rely upon revenue that is created by some one else. Who is it and what is it that creates revenue not only to conduct the ordinary bureaus and departments of the Government, but to maintain the soldiery and the Navy of the United States? is the man of commerce, the man of industry, the man of agriculture—those who labor within the United States.

Our revenues come from the people, and all taxes levied for the purposes of war must come from the people. War is not only loss of life and of blood; it is a loss of the energy of the people. We undermine the entire social, industrial, and commercial fabric when we go to war, and it takes years to restore the conditions that are thus distorted and overridden.

PRACTICAL PREPAREDNESS LIMITED.

Now, I have some thoughts as to practical preparedness along the Atlantic and the Pacific coasts, but it is not my purpose to enlarge upon the details now. I am to talk upon a "commonsense preparedness," which contemplates a substantial basis for all our activities, whether in peace or war. I may pause, however, to wonder whether we would be duly prepared at this time to meet the situation that would immediately confront us along the Pacific coast if a blow should be struck at the Hawaiian Islands and our 9,000 men new stationed there should be overcome. It would not hurt us a bit if we were to have increased fortifications along the Pacific coast. To be sure, there is a fine harbor down yonder at San Diego, in southern California; there is a navy yard and naval station in the vicinity of San Francisco, and we have the Bremerton Navy Yard at Puget Sound; but there are many hundreds of miles of coast line between these points where a landing force of well-organized, experienced, and efficient soldiers or marines might land with the view of spreading themselves all over the western border.

DANGER WHERE THE WEALTH IS.

If that is true of the Pacific coast, what shall we say of the Atlantic seaboard, where the greatest wealth of the Nation is invested in industries and business enterprises and where in a small area we produce more than 50 per cent of the manufactures of the whole United States? We have some defenses there, but are they equipped to meet any well-organized force that might come over from Europe and suddenly attack them? there not numerous landing places round about New York and the other large Eastern cities from which the enemy might proceed to attack our poorly manned defenses?

Our splendid coast artillery is now largely occupied in our colonial possessions. We have a mere handful of men in the vicinity of New York, and it is not impossible that an enemy might come into Hampton Roads and proceed up the Chesapeake At the head of the Delaware Bay, approachto Baltimore. ing Philadelphia, we have three small forts, which at the present time are cared for by 200 men, who are not sufficient to keep the Government property in working order. Suppose an enemy should seize the city of Savannah, which is now looming up as one of the industrial cities of this country, or going up the St. Johns River make a landing and take Jacksonville, what would the people of the Nation say, when Congress might have given relief, if—bear in mind "if"—it had only opened up the canals and increased our coast defenses.

" IF " IS THE FATAL WORD.

If we could have gotten our ships through, some one will say, it might have been different. "If," indeed, is the fatal word, for the facts are that in event of attack neither our torpedo boats nor our submarines nor our smallest gunboats could get through the Atlantic intracoastal waterways even to aid our coastal fortifications.

The enemy might take all of our Government works and our arsenals, capture our great stores and our great bank buildings, so far as our inland waterways are concerned. We have not improved our opportunities, but have neglected the waterways upon which our little boats could deploy and through which they might go to the rescue of those who were attacked, or to drive

invaders back. [Applause.]

Ah, you say it is a far-fetched story, do you? You say it is an overdrawn picture, do you? Well, do you remember 1776, when the nations were not so well trained and organized, nor so efficient as they are in warfare to-day? Do you remember reading that the invader landed on our shores, and that it took us seven long years to drive him back? Do you remember that it had to be done by the boys who came from the farms, boys that had been dragged in from the woods and the fastnesses of the mountains? Well, turn to the pages of your histories if you do not remember.

THE ENEMY DID COME BACK.

Do you remember 1812? Well, the foreign foe, the Members

again. Speeches were made upon the floor of Congress in which the very idea was ridiculed as impossible. It was said we had driven the enemy out once and he would never come back, but he did come back. And we are irritating foreign nations to-day; we never did that before. Foreign nations are holding up our trade to-day. So they did then, and we resented it then. I will say nothing for the moment as to what we are doing now.

But people said then, as they are doing to-day, that there would be no war, that Great Britain had had enough; but Great Britain came over, and Great Britain renewed the war. Admirat Graddock came up the Potomac River and made a landing. The British forces took up their march upon the Capital, and our brave army, composed mostly of untrained militia, unprepared, of course, marched out to meet him at Bladensburg. I know about that, because my grandfather was one of them. They came back with their tails behind them. The enemy came up and took this beautiful city of yours—not so beautiful then as it is now—and he sacked the public buildings, took our records, burned the Capitol, and the President of the United States went over the river, so that he would not have to suffer the humiliation of capture. We had a great many people then who thought it would be impossible, but it was done; it was done by an organization that we were not able to cope with, unpalatable as it is to admit it.

THE PRESIDENT'S PREPAREDNESS PLANS.

I heard the President on Tuesday say what he thought was needed in the way of Army enlistments and increased forces on land. I also heard him say what was needed in the matter of our Naval Establishment. Let me read briefly what he said about the Navy:

The program to be laid before you, Members of Congress, contemplates the construction within five years of 10 battleships, 6 battle cruisers, 10 scout cruisers, 50 destroyers, 15 fleet submarines, 85 coast submarines—

And I emphasize that-

4 guaboats, 1 hospital ship, 2 ammunition ships, 2 fuel-oil ships, and 1 repair ship.

I will not read further in detail, but there is much more.

This program of Navy expansion is to extend over a period of five years, and we are now to raise the revenue to build these ships. Well, I would like to see them built because of the industries of this country, not for war but for the maintenance of [Applause.] But if we are to build them we must have the means with which to build. How are we to get the money? Before we dash into these vast expenditures and increase the tax burdens of the people, would it not be well to give the people a fair show to earn that with which to make the expenditures? Peace and the arts and handicrafts of peace support our warriors and our sailors; we are dependent upon our internal employments for revenue; and yet we propose now to increase our armament upon shore and upon sea without a word for internal development, except as it comes up grudgingly from members of the Rivers and Harbors Committee, who are only "hopeful" that some recognition may be obtained for those instrumentalities of nature, which, adequately improved, would enable us to proceed with the vast trade and commerce of the country.

RAILBOADS CONGESTED AND NO HELP.

Railroads are congested, cargoes of grain from the West are tied up miles from New York, great magnates of the iron horse are complaining and wondering what is to be done to relieve the congestion, but still there is to be no river and harbor bill this session of Congress if the "pork-barrel" economists can stop it.

Railroads competent to do the business! James J. Hill, who has not been with us often since, told us from this platform in 1907 that we were not then competent with our railroads to do the ordinary normal business of the United States, and there has been no marked expansion in railroad building since.

Now, when trade is looking up again, when the farmer is beginning to come into his own, when the great crop-producing States are seeking a market, the output of the munition makers enters the arema and the railroads are unable to carry our freight. The word has come down the line—we have heard it in the House; you, Mr. President, have heard it in the Senate—railroads issuing embargoes, but there is to be no rivers and harbors bill this year. We have got to put up with the railroad problem again. Yes; increase your Army and Navy, build; our battleships, overload your railroads, but let your rivers and harbors stand where they are; let them remain as they were in the days of George Washington and Thomas Jefferson. They understood them better then than we do in this year of our Lord nineteen hundred and fifteen, and they appreciated them more. [Applause.]

THE BUILDING WITHOUT AN ELEVATOR.

I am going to tell another story. I will take it away from the Senator from Louisiana and put it on some of our friends over yonder in the great metropolis, where the magazine writers in the lofty skyscrapers feel so absolutely sure they are beyond the range of 12-inch guns from the open sea. man there who had plenty of money. Some of the men who have made money are not always the most far-seeing either. because they engage in very wonderful undertakings, to stop wars on the other side of the water and things like that, when they might more sensibly use some of their millions here helping us at home. But this man built a 16-story building just because he had the money to do it; he got the best architects, established a foundation and superstructure of stone and steel. provided hardwood finish, tessellated floors, and the best equipment generally. After the building was finished he asked his friends to a great banquet on the roof. "A fine structure," he said. "Yes," said his guests, "but where is your elevator?"
"Well," he said, "I didn't think an elevator necessary; the staircase is safer."

We are in exactly that position with regard to preparedness in this country to-day, both as to commerce and war. We are going to spend a lot of money for naval equipment, put a lot of jackies on the high seas, and after we get them there it will be inconvenient to have them home again, because our coastal waterways are insufficient to accommodate them. Oh, yes; we have the port of New York; we can keep a few of them there. We have Narragansett Bay; we could keep some of them there. We have Narragansett Bay; we could keep some of them there. We have a splendid haven at Hampton Roads, but when we want any one of these ships to pass inside from one of these great ports to another they can not do it. We have only the old-fashioned staircase to go upon; we did not think it necessary to put in an elevator nor to open the channels.

THE AUTO WITHOUT THE GAS.

Now, you men from the interior who sometimes chide us from along the coast line because we talk preparedness, let me ask you what would you think of a man out in Missouri, where they "want to know," if after he had provided himself with a highif after he had provided himself with a highgrade wagon built of the finest hickory and adorned with a waterproof hood, all hitched up to the best team of full-blood Percherons you ever saw, he should put his family aboard and start out across the prairie without a feed box or a provision chest? That family would be in the same predicament that we are in along the coast line to-day. Or, let us say to those of you who come from country districts and have more automobiles than we have-and I am glad you have-suppose after you graduate from that machine that is made by the great peacemaker, who is going to bring the warring kings and kalsers of the world to-gether—suppose after you had dispensed with his well advertised product you got a limonsine for seven, and your wife liked it, and you posted all your friends that you had a splendid 60-horsepower engine on it, and invited some of them to join you, and then just as you had all gotten comfortably seated and you had given your chauffeur the word to go, he should say, "Boss, we have no gasoline

BLOCKED INLAND ALONG THE COAST.

Are we not in about that fix to-day? We are in that position along the New England seaboard and in the Middle States; you are along the Pacific coast; and we certainly are in that position down on the Gulf to-day, according to the gentleman from Texas, who spoke a little while ago.

There are 1,800 miles of coast line along the Atlantic and there is more of coast line over on the Pacific coast. There is an exposed coast along the Gulf. And the Great Lakes are not to be left out of consideration in war times, either.

As a matter of fact, we have got more exposed coast to protect than any other country in the world. Along the Atlantic seaboard we have more wealth to protect than we have anywhere else in the country. We have more people to look after. Yet a few years ago when we wrote to the Secretary of the Navy and asked him, in view of the fact that he was going to send four torpedo boats down from the Philadelphia Navy Yard to Charleston, to send them through inside waterways, he said, in effect, "We would be very glad to do it, but there is not sufficient depth of water to accommodate these small vessels, and they will have to be sent outside." And he did send them outside in time of peace, not of war; on down the Delaware out to sea and by Cape Hatteras, where they were struck by a storm and driven out of their course. Some of the men were injured. The vessels themselves were damaged, but were returned to Norfolk and repaired at a considerable cost to the Government. That was in time of peace. The tax-

payers of the country paid that bill, which might have been spared if the inside passage had been adequate.

MR. DANIELS SEES FOR HIMSELF.

And here is another. Last year we made a great convert to the waterways cause. In the expedition of the Atlantic Deeper Waterways Association up the Hudson River we asked the Secretary of the Navy to go with us. We also asked Mr. Daniels to send some of his boats up the river, so that the people who sustain the Navy might have an object lesson with regard to the value of their property. He sent us the Dolphin, one of our smallest and swiftest dispatch boats; and the Dolphin stopped at Hudson, part way up the river, because, drawing 17 feet of water, she could not go any farther. We were bound for the important cities of Albany and Troy and the entrance to the New York State Barge Canal, that leads on to the Great Lakes. It is that canal that puts the Great Lakes into communication with the Atlantic and makes possible the cheap freight rates that the gentleman from Tennessee was telling you about a min-The Secretary of the Navy not only sent the Dolphin on that uncompleted expedition, but he sent a little torpedo boat. It got up to Albany, and there it stuck in the mud, and we had to wait for the tide to get it out; it could not reach the Erie Canal, and hence, if it had been necessary to come to the rescue of any of you gentlemen who live along the Lakes, our Navy could not have gotten to you; we were blocked.

And this is the great United States that is ready to spend a vast sum of money for armament and fortifications, and yet does not give a continental, apparently, about its waterways. When the Secretary of the Navy saw the plight of his own vessels he did not mince words about the value of inland waterways, and at the Savannah convention of our association last month one of the strongest and most forceful papers ever written on this subject was received from Mr. Daniels, to whom I wish all credit as a keen and appreciative observer to be given. [Applause.]

ANTIQUE CANALS INSUFFICIENT FOR ANTIQUE SHIPS.

When that great waterways convention of the Atlantic association was being arranged for at Norfolk in 1909 I asked the custodians of the replica of the Half Moon, the ancient craft in which Henry Hudson sailed across the seas and in which he discovered the Hudson River, to send her down after the Fulton-Hudson celebration through the inland canals from New York to Norfolk. So interesting a type of vessel would have been a great attraction in the southern city; but upon careful inquiry it was found that the model was a little too wide to pass through the locks of the Delaware & Raritan and Chesapeake & Delaware Canals and that her draft of water was a little too deep to be accommodated in those canals, the same, of course, that we now have along the Atlantic seaboard for the benefit of our Army and Navy as well as for commerce. That is to say this antique model, representing the ships in vogue 300 years ago, a model only, that had come over to this country not upon the water but on the bow of one of our modern ocean steamships, could not pass through our up-to-date canals. [Laughter.]

LOSS OF LIFE AND PROPERTY.

Some of our friends-I do not mean to point them out particularly, because we will thrash this out in Congress-sometimes say to us, when we agitate for the improvement of our streams in order that we may develop commerce and be ready for war if war should come, that we are so near the coast line that it is useless to spend money upon interior improvements. One of the greatest of the leaders from the interior upon my side of the House gave out some years ago the thought that it was unnecessary to open these canals, because we were within a biscuit throw of the ocean." It is not unreasonable that such comment should come from interior States, but it is not true and it is not fair, for every 10 years along the Altantic Ocean, by reason partly of the failure of Congress to perfect our canals and provide for our commerce, we lose-not we of the East alone for it is western property as well-not less than \$40,000,000, in addition to twenty-two hundred lives, which was the record from 1900 to 1910. Those lives, it seems to me, would be worth saving. Life is not worth much in war, to be sure, but the old story goes now as ever, that it is all right to send boys to war, or around Cape Hatteras, provided it is not your boy. Every one of these twenty-two hundred men had a father or a mother or a brother, and many of them were the protectors of homes, the care of which now devolves largely upon the community. We could save many of these lives, and we could get our commerce safely through protected waterways if Congress had not delayed their improvement.

SHIPS MUST HAVE SOME PLACE TO GO.

Many of the additional ships that the President recommends for the Navy I am prepared to support him in building, but where are these ships to go? They can not live always upon the sea; they should have fresh-water basins; they must be repaired once in a while, even if we never go to war with them. We can not keep them forever out on the open seas in the salt water. And where are we to keep these little coast submarines of which so many are recommended? Are we to keep them out in the open sea? Are they to stay out there in time of peace until the cooped-up crews are suffocated? Or if they are driven in-it does not sound well that American sailors should be driven; but suppose they are driven in by an enemy, and they come into the port of Hampton Roads and are chased up the Chesapeake Bay—could they get through to the navy yards at Philadelphia or New York? No; under present conditions they would be blocked at Chesapeake City and could not get through, There is not sufficient water in the canals to let them through. So it would seem the Government of the United States wants to build ships without first having the streams on which to float them. It is written somewhere in the Scriptures that "he who provideth not for his own house is worse than an infidel."

Why are we going into this thing, entering upon a controversy with the world; preparing, as it were, to challenge other nations, and yet neglecting back home to keep our house in order? The cobwebs are here, why not brush them off? The dirt has accumulated in the rivers and harbors, why not remove it? We should not be put in the position of going out "to mix it up" with our neighbors, and then, if they drive us back, have no place to go. That would be the plight of our small vessels of war to-day if they were driven in; and everybody, including the jingoists, knows that they can be driven in by superior numbers.

PREPARE OUR WATERWAYS NOW.

We have 50,000 miles of inland waterways in the United States, more than 25,000 miles of which are navigable and capable of operation. Every mile would be of service under certain circumstances. Are we to prepare them for war after war comes? Are we to wait, as we did when we declared war against Spain, to make our preparations? Or are we to do as is usually done by the jingoist and the money-maker in war times—start the thing going without a basic preparedness, and then spend, spend, spend, and waste, waste, waste, both life and treasure, patience and honor?

Down in the State of North Carolina alone—and it is one of the Atlantic coastal States—there are no less than 2,500 miles of navigable waterways. Surely they should be prepared for commerce. Commerce is the feeder of industry, and it is the basis of the revenues of the country. We must prepare ourselves for something else than war, even though we should not engage in war. We have longer to live at peace than war, and we should prepare to take care of ourselves in peace.

Down along the Atlantic coast, apart from the 300,000,000odd acres of land still to be given away to those who would till it in this country, only one-half of the farm land in the original thirteen States has been used to advantage for tillage purposes. We can accommodate millions of people who want to do business in agriculture.

East of the Appalachian Chain we can take care of industry, but we can not do it if everything must be transported along the line of one railroad, or if there is only one railroad to come and go on. We have 160,000,000 acres of arable, tillable, and well-irrigated land in the thirteen original States, only a little more than half of which is under cultivation. The people could use this land, here in the East, where the markets are good, if the waterways that God placed there at our disposal were properly improved for purposes of transportation.

A CONTRAST OF APPROPRIATIONS.

With all respect to our Army and to our Navy and all those branches of the Government service which do not create revenue, proud as we are of them, we find that in 40 years there has been appropriated for and expended upon the Army nearly \$2,000,000,000 and upon the Navy more than \$2,000,000,000; and upon pensions, which are the result of war, more than \$4,500,000,000, a total of upward of \$8,500,000,000, spent in 40 years for war, preparedness and the consequences of war; while for commerce and industry, which have supported these expenditures, or at least for rivers and harbors, which promote commerce, only \$680,000,000—not billions, remember—have been spent. Contrast that with the more than \$8,500,000,000 spent for war and you understand the situation.

Thus the plod horse of our entire commercial and industrial fabric, the burden bearer of our revenues, receives encourage-

ment at our Government's liberal hands to the extent of \$680,000,000, while war, Navy, and pensions, which depend upon commerce and industry and upon the rivers and harbors that carry that commerce, receive over \$8,500,000,000. [Applause.] It is worth pondering when you hear about the "pork barrel."

LESS FOR THE FOREIGNER-MORE FOR OURSELVES.

Much of the jingoism and false patriotism due to money making arises from the desire to obtain good prices for commodities sent abroad. In my judgment it would be better for us if we devoted a little more attention to the possibilities for giving our people lucrative employment in the United States. We still have plenty to do in the development of our own natural resources. Do not forget that the United States is the best market in the world.

Our foreign trade is not a picayune compared with our own consumption within the United States. Since I came upon this platform figures have been handed to me by those who are intensely interested in this subject, which, it seems to me, should be referred to briefly. There has been a wonderful exportation of grain from this country during the period of the war in Europe, and much ado has been made about our carrying capacity and our ability to meet these foreign conditions. have been worrying about the foreigners without noticing that the prices seem to be soaring here at home; and yet as we worry about this foreign trade the statistics handed to me a few moments ago show that from January 1 to December 7, 1915, the Atlantic seaboard grain terminals, all of them working 11 months, Canada included-all of them sending grain abroadhandled a volume of traffic which was not equal in weight to that which passed through the Soo Canal up yonder in Michigan in the single month of October. Talk about your foreign trade, why should you worry! In one month we passed more tonnage through the Soo Canal than we sent to Europe in 11 months, the war demand included. [Applause.]

NO MILITARY DESPOTISM WANTED.

Ladies and gentlemen, the present agitation for preparedness is all right in its way and Congress may be safely trusted to disassociate the good there is in it from that which is selfish and sordid. The agitation overshoots its mark, however, if it tends to create a spirit of militarism which fails to regard the civic and business welfare of the country. In other words, a military agitation that does not take into account our civil rights in the United States would be a failure. No such propaganda could permanently succeed that failed to recognize our right to foster and develop commerce and industry and to profit thereby. Our Army and Navy are composed of brave and serviceable men, who entertain no thought of a military despotism. They ought not to be educated by us or encouraged by agitators to hope for or to believe in one. It is fair that they should seek and deserve the sympathy and support of wealth-producing and the wage-earning public. It is true that neither the Army nor the Navy are as strong as some of us would like to have them in the event of war. and Navy combined at the present time is not numerically greater, approximately, than the actual number of men killed in some of the battles of the present European war, as, for instance, the battle of the Marne. If we are going to get into trouble with any European or Asiatic power-and I do not see why we should-we are certainly not prepared, numerically, in the matter of trained men nor in the matter of munitions to meet a well-equipped enemy.

COMMERCE MUST BE CONSIDERED.

We can not employ more men nor buy more munitions without money. The truth is that at the present time our financial house is not in order to provide any more men or any more munitions without imposing additional taxes on the people. If we agree that it is a good thing to employ more men in the Army and Navy and to provide more munitions, including coast defenses and the like, then we must be prepared to give the people an opportunity to earn more money to pay the bills. What the people now need, in view of their tremendous productive ability, is improved and increased transportation service in order to reach a profitable market. The railroads, which do the bulk of the common carrying, are admittedly incapable of doing it all; the natural carriers of the fruits of American toil, the waterways of the country, are not sufficiently developed to be of great service. The opportunity to improve these important auxiliaries to the commercial life of the Nation is now at hand and comes with greater plausibility at this particular time because of this very discussion of preparedness.

DIVERSIFY OUR EMPLOYMENTS.

We have been holding our increasing population in the already congested cities and we have been forcing them to live in the vicinity of the railroad lines, thus restricting their power of

production and specializing their lines of employment. The opening up of the inland waterways, especially along the Atlantic coast, where I am most familiar with them, would operate to the advantage of the entire country in diversifying our population and our employments and would contribute to the happiness and to the patriotism of the employed. With individual homes thus created, and with commerce and industry thus encouraged, there would be better reason for seeking revenues to sustain an increase in the Army and Navy. In addition, the civic spirit which arises in part from the acquisition of a home and from a proprietary interest in the soil would insure a firmer patriotism and a fighting spirit for defensive purposes at least that would bode no good to an invader. If we are to have again "the spirit of '76," of which we are historically so proud, we must be assured that the common welfare is not to be subordinated to any sinister or selfish influence. [Applause.]

GOVERNMENT'S GREAT INTERESTS INVOLVED.

The Chairman reminds me that I have reached and overstepped my time limit, and I know it; but there is another thought I wish to bring to your minds before closing. It has to do with the Government's own interests in our inland water-ways. The Department of Commerce, which was spoken for yesterday by Mr. Redfield, the Secretary, was created to foster, promote, and develop our trade at home and abroad; and I want to say as regards his waterways talk, even though I do not belong to the same party that he does, that the speech made here by him yesterday was unquestionably one of the best public utterances that have come from a Cabinet officer on this subject. Mr. Redfield fully comprehended the waterways situation in this country. [Applause.] And he has reason to, because as a matter of fact the Department of Commerce has a fleet, and it ought to have a fleet, because within the scope of the department are the Coast and Geodetic Survey, the Bureau of Naviga-tion, the Lighthouse Service, the Steamboat-Inspection Service, and the Bureau of Fisheries, all having to do with our inside waterways. I do not see how the Government, through the Department of Commerce, can fail to be interested in this subject.

The Navy Department, of course, is one of the oldest and most important of our departments. It has many vessels of small draft that can and do use some of our waterways. It ought to be able to use many of them for big ships in times of peace and for strategy in times of war. The Secretary of the Navy has gone on record in this matter, as I have already indicated. It is not necessary now to go into details as to the number of naval vessels that do operate upon our rivers, but they all ought to be able to enter fresh-water basins along our coasts if only for repairs. And if we are to increase our torpedo and submarine service, we certainly should have the connecting waterways between the naval bases. In this respect the Government should keep its house in order for its own sake.

FLEET OF THE WAR DEPARTMENT.

But it is of the War Department that I wish to speak particularly. The people ought to know a little more about the War Department's interests in waterways. I do not believe that many of you ladies and gentlemen who try to keep posted on the general subject know as much as you ought to about this. Some one say's "What does a soldier know about water? He is not webfooted." Some one else asks, "What does Mr. Secretary Garrison know about It? His forces are land forces." Well, that is where they all make a mistake. The Army engineers are in direct charge of our rivers and harbors. They look after the development of our waterways for commerce, and they would be in charge of engineering projects in war time. No appropriation by Congress for waterway improvements is apt to be made without the approval of the United States Army engineers, backed up by the Secretary of War. The Secretary, in fact, is the commander of one of our largest fleets. Under his direction there are no less than 2,500 vessels of one type or another operating upon the high seas or on the inland waters. Most of them naturally are small boats plying the inland streams. With such an array of Government agencies in one department alone it is difficult to understand why the Government should get parsimonious about its waterway improvements. But what is more to the point, the work which the War Department does with its 2,500 boats is supposed to be done in the interests of commerce and industry, for the maintenance of navigation, which is the excuse for the War Department's control of our rivers. It can not be wholly regarded as a war measure, and it ought not to be, for we are more anxious to promote commerce than we are to promote war.

THE CIVIC AND COMMON-SENSE SPIRIT.

If, therefore, we are going to deal with this matter of preparedness on a common-sense basis and not in a spirit of hysteria, let us permit preparedness and the navigability of our streams to go hand in hand with commerce and industry. We need the latter to sustain the former. The Government itself acknowledges its responsibility to nature's common carriers by utilizing them for the purposes of all the departments of the Government and particularly those of War, the Navy, and Commerce. The Government has gone too far into the development of our inland waterways to withdraw its support from them. It can not do so without putting an embargo upon business that can not otherwise be served, nor without denying to labor and industry necessary and wise avenues of employment. It can not discourage the internal development of this country without reducing the civic pride. It is to be hoped, therefore, that the Government will not stultify itself upon this great problem, but will deal with it in a liberal and common-sense spirit. [Applause.]

Dyestuffs Difficulty Acute, Textile Manufacturers Say.

EXTENSION OF REMARKS

HON. EBENEZER J. HILL. OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 5, 1915.

Mr. HILL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article giving the actual conditions in regard to the acute situation of dyestuffs. The article is from the Annual Review of the Journal of Commerce, a purely business publication. It will only take a short space in the Record and Members will want to see it, as they may be called upon shortly to vote upon it.

The article is as follows:

[From the Journal of Commerce, Jan. 4, 1915.]

DYESTUPPS DIPPICULTY ACUTE, TEXTILE MANUFACTURERS SAY—IT IS THE ONE MENACING ELEMENT IN THE PROSPERITY OF THE INDUSTRY—EXORBITANT PRICES NOW PREVAILING FOR COLORS ARE FOR THE MOST LIMITED QUANTITIES—COLORS COST MORE IN GOODS THAN ALL OTHER MATERIALS AND LABOR COMBINED—TABLES SHOWING WHAT HAS HAPPENED SINCE THE WAR, IN ADVANCES FOR COLORS—CONSUMERS ARE TO BE MULCTED BECAUSE OF INFLUENCES OUTSIDE OF THE COUNTRY THROTTLING TEXTILE INDUSTRIES HERE—DEMANDING MORE DRASTIC ACTION BY THE GOVERNMENT.

The dyestuffs difficulty is the most menacing element in the textile outlook. Manufacturers who are dependent upon more liberal supplies of coal-tar products from Germany, or a con-tinuation of supplies of logwood and other products from countries that are British colonies, consider it very strange that more is not done by the Government to protect home interests that involve the employment of thousands in the silk, cotton, woolen, leather, and paper trades. The dyestuffs situation at this time is really acute.

At present prices the color in many staple lines of fabrics costs more than the total cost of other materials, labor, and general expense combined. The exorbitant prices now prevailing

for colors are only for the most limited quantities. Only very rarely can an original package of goods be obtained, and most lots offered for sale are from 10 to 300 pounds.

No shipments of any importance of the standard colors have been received from Germany, practically the only source of supply, since last March. The mills of necessity have gone on using up the stocks they had on hand. One concern may have had a larger supply than another and, by making exchanges and practicing most rigid economies, with the cooperation of the trade, have been able to keep operations close to normal lines. Even where this has been possible the costs have been most extraor-

To bring this matter to prominent attention in the buying end of the goods market, as well as with the hope that it will arouse a stronger sentiment for relief in governmental circles, some facts and figures concerning textile dye costs and conditions are herewith appended.

The advance in bleaching powder has been from 1½ cents a pound to 11 cents a pound, the former price being the one ruling before the war, the latter being the spot price guoted just before the holiday. Other heavy chemicals used in bleaching have been advanced in like manner, despite the fact that many of them are made in this country in quantities to supply all

needs.

The books and correspondence of a group of printers and from them finishers were gone over in the past two weeks, and from them

the following table was prepared, showing just what has happened in color and chemical costs since the war started:

1 11 Leaster Louis Maria	Before war	Spot.	Futures.
Acids:	Cents	Cents.	Cents.

Caustic soda.	.019	.051

I Not obtainable

Despite all that is sent out from Government sources for political purposes, despite all that is said concerning the probability of a dye industry being established in this country, and despite every consistance attributed to those who want to hamper mills for diplomatic or war purposes, the cold facts of the situation are that the time has come when every consumer in this country is about to be mulcted because of abnormal costs of textile production, having nothing to do with great profit to labor, increased dividends to manufacturing stockholders or any other normal form of influence benefiting the industry in particular spots or at large.

The efforts that have been made to use substitute dyes are far greater than the trade realizes, yet in this particular the condition has been reached where exorbitant values are nullifying those efforts. For example, note the advance in logwood extract from 5 cents to \$1, the advance of 500 per cent in fustic, hypernic, and cutch, the average advance of 50 per cent in simple pigment colors—not fast—all of these things being substitutes that came into large use after the war started.

Influences outside of this country, manufacturers say, are doing a great deal to bring about the conditions where costs of fabrics will be advanced beyond all reason, where many fabrics can not be made, and where substitute fabrics will command prices that have no relation to cost of production. The textile manufacturers of the country, apart from political affiliations, believe that intelligent action by the Government will help them, and part of that action involves getting dyes from Germany or making it plain to England that interference with American commerce in dyestuffs can not be tolerated.

The Life and Character of Mr. Justice Joseph Rucker Lamar, Associate Justice of the United States Supreme Court.

EXTENSION OF REMARKS

01

HON. CARL VINSON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 4, 1916.

Mr. VINSON. Mr. Speaker, my colleague [Mr. Tribble] has just announced to the House the death of Mr. Justice Joseph Rucker Lamar, an associate justice of the Supreme Court of the United States, which occurred in this city on Sunday evening.

It seems to me eminently fitting that the House should pause in its work to note the passing of this eminent jurist, stainless patriot, and virile American. The country bows its head in sorrow over one of Georgia's gifted sons.

His loss will be greatly felt by his fellow members of the Supreme Court and those that have had dealings with that high tribunal, for they have long since learned of the great and tireless industry and painstaking care given to every question that came before him for settlement, and his profound and deep study and knowledge of the law has made a lasting impression on the bar of the country, for he mastered the science and applied it well.

Possessing a wonderful analytical mind, he devoted his time to study and reading in such well-chosen lines as to make his fund of general information almost boundless. Possessing these splendid qualities, he made a deep and lasting impression of the most pleasant character in Washington in both official and social circles. He will be missed in this city, in which he has in the last years of his life resided. But it is in Georgia, his native State, that he will be most mourned. In Georgia, where as a boy and man he has spent years; years when he made his winning fight that afterwards led to the high position that he was called upon to fill, and which he filled with credit to himself and to his Nation.

Mr. Justice Lamar came of a family which has been conspicuous in many lines of endeavor, and he has sustained the proudest traditions of that family and added great honor to its name.

He died in this city on January 2, 1916, five years almost to the day after his appointment to the Supreme Court of the United States.

He came of French Huguenot stock. Thomas Lamar, head of one branch of the American family, and his brother Peter came from the Province of Anjou in France and settled first in Virginia and then in the colony of Maryland. A certificate of nationality granted by Lord Baltimore in 1663 recited that they were "late of Virginia and subjects of the Crown of France." John Lamar, another brother, came over later. He was the forbear of L. Q. C. Lamar, a lawyer and judge of the superior court, and of the junior L. Q. C. Lamar, legislator, United States Senator, Cabinet member, and justice of the Supreme Court of the United States. Mirabeau B. Lamar, another descendant, helped to achieve the independence of Texas and was the second President of the Republic.

Rarely in the history of this country has it occurred that two men of the same family have achieved the high distinction of serving on the Supreme Court. Associate Justice L. Q. C. Lamar served on the bench from 1888 to 1893 and Associate Justice Joseph R. Lamar from 1911 to 1916.

Other members of this distinguished family who have come into prominence were Gazaway B. Lamar and Henry G. Lamar, both of whom served in Congress; Albert R. Lamar, a briliant journalist and formerly editor of the Macon Telegraph; Lucius M. Lamar, speaker pro tempore of the Georgia house of representatives, member of the State senate, and later United States marshal of the southern district of Georgia; William Bailey Lamar, judge of the superior court and formerly a Member of Congress from Florida; Charles A. L. Lamar and Jefferson Lamar, colonels in the Confederate Army, both of whom were killed during the war, the former near Columbus and the latter at Crampton's Gap; Rev. Andrew J. Lamar, of Nashville; and Rev. James S. Lamar, of Augusta, pastor of the Church of the Disciples.

The last named married Mary Rucker, a daughter of Joseph Rucker, banker and planter of Elbert County, Ga., and to them was born Joseph Rucker Lamar. He saw the light on the plantation of his maternal grandmother at Ruckersville, Elbert County, on October 14, 1857. He spent his early life in Augusta, attended the Richmond Academy, later attending the University of Georgia and Bethany College in West Virginia, where he was graduated in 1877. He also graduated in law from Washington and Lee University and was admitted to the bar in Augusta in 1878. Except during two years of service on the supreme court of Georgia he lived in Augusta until his appointment by President Taft in December, 1910.

When we stop to think that from a hundred million people only nine men are chosen for a single body their greatness seems established. Still his selection was no surprise to his friends who knew him best, but apparently what they had always expected. His mental and moral qualities seemed to conspire to place him upon the bench. He had unusual intellect with the highest moral and religious tendencies.

Mr. Justice Lamar received the highest honor that can come to an American lawyer in being called to a court that exercises a most profound influence on the course of this great Republic, and at no period of its existence did questions greater in importance or more far reaching in their influence come before the court than the questions which were solved by that tribunal during his incumbency.

During his service as an Associate Justice he participated in the hearings of some of the most noted cases that have ever been argued before that court, and not even during the days when Marshall was molding the Constitution and adding undying fame to his name, were questions of more importance to the people and to generations yet to be born than those passed upon by the deceased justice.

From the first day of his appearance as a member of the Supreme Court, Judge Lamar was recognized as a forceful personality, a profound lawyer, a clear thinker, and a man of untiring industry. Some of his decisions were written a dozen or even 20 times, until he was perfectly satisfied with them. They were clear and fluent and fine specimens of judicial reasoning.

In their delivery Justice Lamar was easy to follow. His voice was clear and resonant, he sketched briefly the minor features of the case, and brought out the main points in decisions of the court or in his dissenting views with great clearness and convincing force.

Membership on the Supreme Court is an honor compared to which any other in the Government has little attraction. It was not always so regarded, for the first Chief Justice, John Jay, resigned to accept election as governor of New York, to which he had been chosen while absent from the country on a special mission to England, where he negotiated the "Jay treaty."

But from the accession of John Marshall to the chief justiceship of the United States, the court has steadily risen in dignity to the place intended by the Constitution for it to occupy. The unique position of the court is aptly summarized by Hannis Taylor, who says it is "an institution without a prototype in history."

It is the only court in the world which has the power to annul the legislation of its country. As the guardian and interpreter of the Constitution it has the power to review acts of Congress and to declare that such acts as in its judgment are not in harmony with that instrument have not the force of law and that Government officials seeking to carry out such legislative acts are proceeding illegally. From its decision there is no appeal save to revolution or to God.

Justice Lamar was one of the few men ever named to the court by a President of the opposite political faith. In no other selection that he made for high office did President Taft show better judgment. He picked the right man. He won the hearts

of all Georgians when he chose this distinguished son of the State to the high place for which his abilities so well fitted him.

President Wilson recognized the qualities of lawyer and diplomat in Justice Lamar by selecting him as the principal commissioner of the United States to confer with the so-called A. B. C. mediators of Argentina, Brazil, and Chile in an effort to reach a solution of the Mexican problem. In the work of the Ningara Falls conference in 1914 Judge Lamar bore himself with credit.

I wish to pause here for a moment to commend the farseeing statesmanship of President Wilson in bringing together these distinguished representatives of Latin America to confer with our own jurists as to the solution of the difficulty we were facing in turbulent Mexico. It helped to create a better feeling within all of the countries south of the Rio Grande. It showed the United States not as a big brother but as a sister Republic eager to advance the interests of all the Americas.

Mr. Justice Lamar had a part in this work the equal of that

of any of the diplomatists there gathered. His innate southern courtesy, his genuineness, and his industry made a deep im-

pression upon his associates.

Exhausted by his arduous labors and the great responsibility which rests upon members of the United States Supreme Court, he went to White Sulphur Springs, W. Va., last June to rest and recuperate. He seemed to improve, but in September a clot formed in an artery, resulting in partial paralysis and the temporary loss of his left arm and leg. With invincible fortitude he planned to return to work in October when the court resumed its sittings, but his condition forbade.

During the Christmas holidays he contracted a deep cold, which caused congestion of the lungs. His heart, already weakened by hard work and the overstrain of his illness, could not bear up under the added strain. Despite the best medical assistance, he succumbed to the pale messenger that never tires and never pities, the messenger that called Sappho away from her songs and Letitia Landon away from her grief, the messenger who piloted Poe "to the misty dim regions of Weir."

It can be truly said that he died in harness; a slave to duty. In his unremitting application to duty, he failed to heed the limitations of a failing physique which established barriers that could not be passed without loosening the silver cords and breaking the golden bowl of life. I fancy that he knew this, and in the silent watches of the night that he took counsel with his own spirit, and it was horne in upon him that in the dis-charge of his duties he was literally taking his life in his hand; was deliberately shortening a career that was rich in the promises of still greater honors and usefulness to his country.

His distinguished career is not alone the property of the people of Augusta, but Augusta can ever take just and growing pride in this her illustrious, and probably her most illustrious,

His body has been taken to Augusta, surrounded by every mark of respect due to his high office and every evidence of affectionate regard which loving friends could offer.

As was said of a great king of old we may say of him. "Having served his generation he fell asleep and was gathered to his fathers."

The National Defense.

EXTENSION OF REMARKS

HON. JOUETT SHOUSE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 6, 1916.

Mr. SHOUSE. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD upon the subject of the national defense. I desire to submit copy of a telegram received from Mrs. Lillian Mitchner, president of the Woman's Christian Temperance Union of Kansas, and copy of my answer to

TOPEKA, KANS., December 30, 1915.

JOUETT SHOUSE, M. C., Washington, D. C.

Dear Sir: In behalf of the 10,000 members of the Woman's Christian Temperance Umon I wish to urge you to vote against preparedness as it is now contemplated by the administration. The people of Kansas want peace.

President Kansas Woman's Christian Temperance Union.

House of Representatives of the United States, Washington, D. C., January 5, 1916.

Mrs. LILLIAN MITCHNER, President State W. C. T. U., Topeka, Kans.

My Dear Mas, Mitchner: Your night letter of December 30 reached me in due course and would have been answered more promptly save that I desired to wait until I might have time to enter fully into a discussion of the question of national defense that instigated your

message.

I think it is not necessary for me to say to you that any suggestion from the splendid organization over which you preside will always have the most earnest and the most careful attention at my hands. I endeavored to show by my course in the State senate, as I shall endeavor to show throughout my service in Congress, that I deeply sympathize with and am strongly committed to the great policies of national advancement for which you and the excellent women associated with you contend.

pathize with and am strongly committed to the great policies of national advancement for which you and the excellent women associated with you contend.

Let me add also, in response to your statement that "the people of Kansas want peace." that I fully agree with that estimate of the desires of our people, and with it I am in the fullest possible accord. There is no citizen of Kansas more anxious to see peace preserved, more anxious to see us kept out of the awful maelstrom of the European war than am I. Only if peace may not be kept with honor am I willing to see our country become a party to that war. And I carnestly pray that in the wisdom and under the guidance of Him whom we all worship it may still be permitted to us, as it has been permitted to us, to remain the one great nation of all the world at peace with all the world.

You say that on behalf of the 10,000 members of the Women's Christian Temperance Union of Kansas you wish to urge me to "vote against preparedness as it is now contemplated by the administration." Let us for just a moment review the program of preparedness as outlined by our President. I feel that such a review is wise and timely, because there have been grave and gross misrepresentations of what that program contemplates, of what it embodies, and of the alleged departure from the policy of our Government that will be brought about if it is carried through.

In the first place, our President does not urge a large standing Army, He urges merely the addition of a few thousand men to the present standing Army in order more properly to man our coast defenses. But for the nucleus of a real Army, if we are ever called upon to use one for the defense of our liberty and our property, he suggests the formation of what is popularly denominated a "continental army," to be recruited from the citizenship generally, with the idea of about two months service each year and subject to a call to the colors for three years.

An enlistment of 133,600 men a years throughout a period of three years,

months service each year and subject to a call to the colors for three years.

An enlistment of 133,600 men a years throughout a period of three years, with two months military training each of the years of service, according to the President's suggestion, would give us a basis of 400,000 disciplined citizeus trained to the use of arms around whom could be rallied a great volunteer army in case of war.

Personally I am not inclined to favor this proposition of a continental army. Already we have the basis for a first-class military force through our State militia. The difficulty is that the militia in a vast number of States is at the present time more or less of a farce, and different methods of discipline and of training must be introduced if it is going to be made the effective body that will be necessary if we are ever called upon to defend ourselves.

My view is that it will be better to supply those needed methods, the necessary training and all equipment that should be added, and to work through the present basis of the State militia, somewhat enlarged and very considerably improved, than to adopt the proposed plan of the continental army. Under no circumstances do I favor a large standing army, and I shall not vote for a large standing army under the conditions which now obtain in our country.

The claim is made by many that any expansion of our military system will create a spirit of militarism in this country. I have no fear of such result. Only a radical departure from our present system of government would make it possible. Democracy and militarism can not go hand in hand. The enlargement of our State militia or National Guard surely need not be viewed with apprehension. And working through the channels already established, with the addition of trained officers necessary to carry on the work, it seems to me that we can effect the basis for a most excellent army of defense should the need for it ever arise.

Now to take up the other feature of the proposed program. The President holds, as do all othe

be prepared to prevent the landing of a hostile force or invasion by a foreign foe.

The President does not contemplate any departure from the program of naval expansion entered upon years ago. All he asks and all he suggests is merely a hurrying up of the completion of that program with the view of giving us within 5 years instead of within 15 years, for instance, a Navy regarded by those who have given the closest study and the greatest thought to the subject as of a size necessary properly to defend ourselves

It is true that the hurrying up of this program and the construction of several hattleships in one year, where hitherto only one has been constructed, will cause very considerable immediate additional expense. It is true that the complement of submarines and of other accessories to make our Navy more effective in modern warfare will add further expense. But, all told, with the small additions to the armed forces of the country, with the large additions necessary to the equipment for armed forces, and with the additions to the Navy in all its branches which are suggested, the expenditure for Army and Navy will be increased for a period of five years from about \$250,000,000 per year, which we are now spending, to about \$350,000,000 a year, if the President's plan is followed and carried out in all details. And probably the suggested increase will be scaled by Congress.

This annual expenditure of \$250,000,000 has been going on for years. No hue and cry has been raised against it. It has not been considered militaristic or a species of graft, it has been looked upon properly as our national insurance against war. Do not present conditions, unprecedented and alarming as they are, justify a reasonable increase of that insurance?

I am sure you will agree, my dear Mrs. Mitchner, that if two years ago some man had taken the floor in our Halls of Congress or in any other public place and had predicted that at this time practically the whole of Europe would be at war, we should have regarded him as an alarmist,

devastating Europe for more than a year could ever be permitted in this age of what we are pleased to call enlightened civilization.

I know that it now seems to many thoughtful men impossible that our country can be invaded for a number of years to come because of the belief on their part that when the present war is over practically every nation of Europe will be so burdened with debt, so devastated of men, that another war to any of them must prove a matter of far distant, indeed. And yet if we view the future in the light of events that history has recorded we must look upon that future with grave concern to our Nation.

The teaching of history indicates that no war has ever merely dragged itself out, that a decisive victory by one side or the other has always been accomplished before a war has ended. And by that token one side or the other to the conflict raging in Europe must be convincingly victorious before this war will end. Suppose at the end of this war Europe should be ruled from one capital. Surely under such conditions no thinking man or woman could contend that this country is safe. At best we have only the ill will of all the belligerents. At worst we have the intense hatred of several of them and the desire by them to be revenged for real or fancied injuries suffered at our hands.

Furthermore, history teaches that war has a striking tendency to do away with all ideas of moral value and moral equation and moral consideration; that an officer or a common soldier, as the case may be, hardened to war, becomes frequently when the opportunity offers little better than a robber and a bandit, and that the leaders of nations long engaged in war look eagerly for any prize that seems rich enough to warrant them in going after it and so little protected as to make capture possible.

The two continents of this hemisphere offer to-day the richest prize

consideration; that an officer or a common solder, as the case may be, hardened to war, becomes frequently when the opportunity offers little better than a rober and a bandit, and that the leaders of national long owner and them in going after it and so little protected as to make capture possible.

The two continents of this hemisphere offer to-day the richest prize in the world. North America is more prosperous, more desirable, than it has ever been before. South America is scarcely second in potential wealth and in its attractiveness from a colonization standpoint. It may be, I think it is, altogether prosperous, more desirable, than it has ever been before. South America is scarcely second in potential wealth and in its attractiveness from a colonization standpoint. It may be, I think it is, altogether prosperous to the foreign and the standard ward to be a substantial of the protection of our sister republics of South America, is going to be called seriously into question and that it will be necessary for us either to defend or to renounce that doctrine.

It has been one of our national tenets for nearly a hundred years. It has been and is the expression of or the projuct to attain and to preserve the liberty that is our greatest blessing. To renounce it would mean absolute disregard of the principles which we have hitherto maintained, and if we are not going to renounce it we must be prepared to defend it against any possible aggression.

I said a while ago that I believe this continent is not in serious danger of attack from a European mation when the present war closes; but I do not feel the same degree of complexency with reference is being preparing herself carefully with the idea of ultimate world domination. She has grown rich during the European war, rich beyond her wildest dreams. She has supplied to the allies every article that she could manufacture, and nothing has been bought from us by them until Japan had been given the

President Wilson.

There are at this time a number of men announcing themselves as candidates for the Republican nomination for President. I have read with care and with interest the statements of principle which these men have given out in connection with their announcements, and I think I am not mistaken in saying that all who thus far have expressed themselves advocate a greater degree of preparedness than that contemplated in the President's message.

If I am not mistaken, you were associated with the Progressive Party in Kansas in the last campaign—a party which, whether one agrees with it or not, must be admitted to have embodied in its platform the finest and most comprehensive enunciation for the advancement of human rights and for the bringing about of modern reform along humanitarian lines that has ever been put forward by any political

party. The leaders of the Progressive Party in Kansas were Victor Murdock, its candidate for United States Senator; Henry Allen, its candidate for governor; and William Allen White, its national com-mitteeman. The strongest source of its support was the Kansas City

Murdock, its candidate for United States Senator; Henry Allen, its candidate for governor; and William Allen White, its national committeeman. The strongest source of its support was the Kansas Clry Star.

Let me direct your attention to the position taken by Murdock, Allen, and White and by the Kansas City Star upon the question of preparedness, and let me ask you if it isn't your candid judgment that their position, as well as that of the others above referred to, has been taken only after a most careful consideration of all that is involved, of what our country now has in the way of national defense and of what it needs to make that defense effective?

I am willing to admit that I may be mistaken. I pray that my fears may prove groundless. I trust that we may never have cause for further use of either Army or Navy. But if such should prove to be the case is it a serious matter that we take sensible steps toward preparation now when the future seems so uncertain? Will any damage accrue to us as a nation because of the expenditure of a few extra millions for a few years?

On the other hand, suppose that the policy of those against all preparedness should prevail; suppose that their predictions should proventistaken, and that we should become involved in war with a combination of powerful nations avaricious of our wealth and antagonistic to our institutions. Then the losses piled up in a year or a month or a single week might far exceed by multiplied billions all that is contemplated in expenditures for defense and make our policy of taking peacotor granted seem almost suicidal. Can we afford to take the risk?

The most pronounced opponents of the preparedness program say that if they are shown from what source our country is apt to be attacked they will flavor all that is now proposed and far more for the purposes of defense. Who among us is wise enough to foretal? But let us not overlook this fact: What seemed impossible has happened in Europe. Might not history repeat itself in reference to America?

Already

for the erection of its own munition factories, large enough and efficient enough to supply all munitions that may be required either now or hereafter.

There is no question that many of those who have manufactured armor plate and other accessories for both Navy and Army have made off the Government undue profits. The armor-plate exposure of several years ago was one of the really black spots in our history as a people. Let us get away from any possibility of graft, let us get away from any possibility of profit by private interests, and let us secure for the Government not only the best goods at the lowest price but also immunity from influences that might be exerted by private interests.

I have endeavored to review this whole proposition fully and frankly in answer to your message. I do not agree with many details of the President's program. I do not favor a continental army. I am opposed to any large standing army. I believe that our lati and Guard should be improved and enlarged. I believe that more officers should be educated and prepared to drill the National Guard. I believe that guns, equipment, and ammunition necessary to a large volunteer army should be provided and held in readiness for such need as may befall. I believe our Navy, already excellent, should be brought to a higher standard of efficiency, should be reasonably increased, should be supplemented with submarines, destroyers, scout cruisers, and other necessary accessories. I shall follow closely the hearings before the Committees on Naval and Military Affairs. In the light of the information there revealed I may change my mind. Otherwise I expect to vote as nearly as may be permitted in accordance with the above conclusions.

May I take advantage of this opportunity to assure you that I shall always welcome any suggestion which you may care to offer; that I shall always be glad to hear from you upon any natters of public interest; that I shall hope to prove of some real service in the great fight for national prohibition which is so near y

The appended letter may be of interest in this connection:

HEADQUARTERS B. F. LARNED POST, No. S, DEPARTMENT KANSAS, GRAND ARMY OF THE REPUBLIC, Larned, Kans., December 28, 1915.

Hon. Jouert Shouse,

Washington, D. C.

Dear Sir: At a meeting of our post the question of preparedness came up and seven to two were in favor of it and against Gov. Capper's position.

When the Second Michigan Infantry left Detroit for Washington, first three-year men, we had only 200 guns. When we got to Harrisburg Gov. Curtin furnished the other eight companies with guns, and being the first regiment through Baltimore after the riot we needed them.

Now, the old soldiers know if we had been drilled and armed the war would not have lasted four years.

I would like to see the young men in training camps for three months the first year, two months the second year, and one the third year. We would have better citizens and plenty of soldiers to support the old flag.

Sincerely, yours,

S. S. DICKINSON, Adjutant.

I also append three editorial clippings from recent issues of the Kansas City Star which answer arguments frequently advanced against preparedness.

[From the Kansas City Star, Dec. 3, 1915.]

PREPARE OR REPAIR?

The pacifists like to assert (and anybody can believe them who chooses) that they would be willing for the Nation to arm for defense if they could be informed from what quarter we are to be attacked.

It would, of course, be a great advantage if this information could be furnished. Also it would be a gentlemanly thing if burglars would mail us a card a day or so in advance and let us know the hour when they intend to call for the spoons. But, unfortunately, war and burglary are not conducted under those rules. Late Interpretations of international law, indeed, hold that even a declaration need not necessarily precede hostilities. Under modern conditions when so much depends upon the suddenness and effectiveness of the first blow war always comes as a surprise. Such was the Russo-Japanese War, such was the war now devastating Europe. He would have been a wise statesman who could have said as late as the spring of 1914 that before autumn the cannon would be roaring on the frontiers. He would have been a wiser statesman who could have said what the cause of the catastrophe would be. A pistol shot in Serbia, and lo! a German army launched at Paris!

Preparedness for national defense here in the United States does not mean that there is immediate and specific danger of attack from any quarter. It means that the United States, reading the lessons of the sudden and unexpected war in Europe, is not going to wait until some obscure fuse is lighted somewhere that may lead to a similar result on this continent, but is going to be ready before the event happens. The event may never happen. All the better. But it is better to prepare beforehand than to repair afterwards.

[From the Kansas City Star, Jan. 1, 1916.]

[From the Kansas City Star, Jan. 1, 1916.]

IS HE JUST " KIDDING "?

A subscriber at Lane, Kans., writes the Star to inquire if this paper doubts the ability of the country to raise an army of 1,000,000 men "overnight" for the purpose of defending the country.

No doubt the Lane, Kans., man was very indignant when he wrote the inquiry. The idea that anyone should be suspicious of the patrictism of the United States!

Of course the United States could not raise an army of 1,000,000 men overnight. It could not get ready within several weeks to raise the army. It would have no idea what to do with such an army if it had one, being as unprepared to handle an army as it is to use an army.

if had one, being as unprepared or army.

The United States took several weeks to move an army of a few thousand men in the Spanish-American War, and the failure it made of the handling of the troops then created a national scandal. Among those who tried to make the most of the scandal, at the time, for political effect are many who are now trying to prevent preparedness for preventing another discrace of the same kind in case it became necessary to move the troops. But maybe, after all, the Lane man is only "kidto move the troops.

[From the Kansas City Star, Dec. 30, 1915.] " WHAT SHALL WE SAY?'

"WHAT SHALL WE SAY?"

In 1913, Dr. David Starr Jordan published "War and Waste," in which he said: "What shall we say of the great war of Europe, ever threatening, ever impending, and which never comes? We shall say that it will never come. Humanly speaking, it is impossible. * * The bankers will not find the money for such a fight, the industries of Europe will not maintain it, the statesmen can not."

What shall we say of such a prediction—ever repeated, ever insisted upon, and which wasn't true? Humanly speaking, it was as wicked as it was false, because it tended to mislead this unprepared Nation into a blind belief that the days of war were over and that it was unnecessary for a peaceful people to be armed against aggression.

Mr. Speakow, there is one of the shace of this shall the which the shall be such that the shall we have the shall be shall be

Mr. Speaker, there is one other phase of this subject to which I desire to allude briefly at this time. In his recent message to the Congress, the President called attention to the necessity to adopt measures to obtain additional revenue to meet governmental expenses. Just before the holiday recess, Congress removed the time limit from the present war-revenue measure so that the taxes laid under it might continue after January 1, 1916, on the same basis as before. Consideration of the extension of this measure afforded opportunity for general debate upon governmental revenues. The members of the minority took full advantage of the occasion to attack the Underwood tariff law, but every argument they advanced was refuted through the full presentation of facts by the gentleman from North Carolina [Mr. Kitchin]. It was shown conclusively from the receipts of the Government that during the eight months of the operation of the Underwood law, from December 1, 1913, until August 1, 1914, the eight months immediately preceding the outbreak of the European war, more revenue was raised by the Underwood law with its income-tax provision than had been raised by the Payne-Aldrich tariff law during the corresponding period of the preceding fiscal year. The facts adduced by the gentleman from North Carolina were not and could not be refuted, although Republican speakers and Republican press continue and will continue to refer to the Underwood law as a failure despite the facts.

It was shown further in that debate that practically every neutral nation of the world, including Japan, had been forced, as a result of the European war, to adjust its revenues to conditions imposed by that war, although the gentlemen of the minority have contended that there is no necessity for a war tax in time of peace. The whole situation was summed up briefly, but forcefully by the gentleman from New York [Mr. London],

the only member of the Socialist Party on this floor, when he charged the Republican opposition with insincerity and stated his position in these words:

I intend to vote for the joint resolution. And I will do this notwith-standing that it contains a number of oppressive provisions which are burdensome to the people. This is an emergency act in the fullest sense of the word. We deal with an emergency which can not be con-trolled by the people of the United States. The peoples of Europe would-have been glad to change their sorrows and afflictions for the burdens imposed by the emergency act.

Now, Mr. Speaker, there will be the necessity for additional revenues to the Government as long as the European war lasts, regardless of the proposed program of national defense. proportion as that program is adopted the necessity for additional revenues will increase. I trust it may be possible for the present Congress to repeal within the next six months the warrevenue act now in force. And I believe that act can be repealed and that the amount necessary to provide a reasonable defense program can be raised without reverting to methods of taxation such as are involved in the present emergency act or such as were suggested by the President in his message to the Congress.

There is no form of taxation so troublesome, so annoying to the people, as a stamp tax. The present stamp tax affects only a limited portion of the people. But if a stamp tax were levied on checks, as was done at the instance of our Republican friends during the Spanish War, and as was suggested in the President's recent message, it would be a continual nuisance to the American people as long as it lasted. I am opposed also to the levying of a tax upon gasoline, because gasoline no longer is a luxury but has gotten to be a real necessity to a vast number of the farmers of the country.

Instead of such forms of taxation, which would raise at best but limited revenues, I hope to see this Government extend the provisions of the income tax so that the amount raised by that tax from the large incomes of the country may be greatly increased. I would not favor lowering the exemptions of the income tax so as to include within its scope those not now included, but I would increase very considerably the rate of taxation laid upon those whose incomes are large and who can best afford to bear it. A Government under the protection of which an income of one hundred thousand to a million dollars a year is made possible is entitled to most liberal and uncomplaining

support by the recipients of such incomes.

In addition to the suggested extensions of the income tax, I would lay a Federal inheritance tax. Such a tax is now in force in many States of the Union, but an additional tax for the benefit of the Federal Government, especially upon large legacies, could not properly be considered oppressive. Not only would a Federal inheritance tax provide the Government with a considerable sum, but it would prove the opening wedge to abating the menace of such gigantic fortunes as are now being handed down from one generation to another. When one contemplates a single fortune of a billion dollars, the income from which is estimated at fifty millions of dollars a year, while hundreds of thousands of worthy men throughout this country, try as they may, are not permitted to lay aside for their families as much as \$100 per year, it gives one pause, indeed, to reflect upon the growing danger to our future as a Nation that may

come from such vast accumulations of property.

The laying of taxes is unpopular. The paying of taxes is unpleasant. But all recognize that the Government must have revenue. Let us produce that revenue from sources best able to pay. Let us not do injustice to any citizen, but let us concern ourselves first for the great mass of the people whose resources are limited and whose burdens are heavy. Then shall we do

our duty as men and as legislators.

Clark's Tribute to California.

EXTENSION OF REMARKS OF

HON. WILLIAM KETTNER,

OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 6, 1916.

Mr. KETTNER. Mr. Speaker, I have recently had my attention called to so beautiful a tribute to my State, California, paid by our beloved Speaker, the Hon. Champ Clark, that I beg leave to have the same extended in the Congressional

My business partner and close friend at San Diego, Cal., Mr. Frank Salmons, was one of the delegates to the Democratic convention at Baltimore, and on his return home told me of the presentation of the California flag to the Speaker in his room at the Capitol after the convention was over. this token of our love and confidence in so fitting a manner, and spoke of the legacy which had been bequeathed him by the Golden State in so touching a way that there was not a dry

The people of my State love the Speaker and appreciate his friendship, and on their behalf I ask that the following tribute

to their land be placed in the RECORD.

CLARK'S TRIBUTE TO CALIFORNIA.

Speaker Champ Clark, in an address at Santa Rosa, Cal.,

paid the following tribute to that State:

"It is intensely pleasant for me to stand once more on the soil of California, for on a memorable occasion California was good to me-good as Kentucky where I was born, and as Missouri where I live, and which has heaped so many honors upon me. I know not how to put it stronger. I am profoundly grateful to the Californians for their friendship and their loyalty, freely bestowed, without money and without price. It never cost me as much as a one-dollar piece to sweep this magnificent Commonwealth from Oregon to Mexico and from Nevada to the sea. The consciousness of having such true and unselfish friends and of living in their hearts and memories is one of the sweetest and most precious things in life. If I ever forget them may my right hand forget her cunning and my tongue cleave to the roof of my mouth.

One of my most valued possessions is the handsome banner carried by the Californians to Baltimore, presented to me as a token of their love and affection by the delegates with hearts of gold sent to that convention by the Golden State. I will treasure it so long as life lasts and bequeath it as a rich legacy to my children who were eyewitnesses of the unshaken courage and perfect fidelity of the California delegates. May God's choicest and richest blessings rest upon them and the people whom they represented and upon their children and their children's children to the remotest generation.

"Consequently I rejoice with exceeding great joy in the fact that of all the rare and radiant sisterhood of States, California will perhaps profit most of all by the building of the Panama Canal. Certainly she will be in the front rank of those that

prosper most.

Coming from 'Imperial Missouri,' I am proud of the fact that Missourians contributed so much in laying deep and broad the foundations of this mighty Commonwealth so lavishly dowered by Nature in her most prodigal of moods. Macaulay said that he purposed to write a history of England which in popular interest would rival the latest novel. Most assuredly the story of California measures up to that high standard. It grips one like a tale out of the Arabian Nights. To the splendor of her future nobody can do justice except the greatest of the major To California is peculiarly applicable Lord Byron's prophets. exquisite lines:

"'It is a goodly sight to see
What Heaven bath done for this delicious land!
What fruits of fragrance blush on every tree!
What goodly prospects o'er the hills expand!'

"My countrymen, it is good to be a Californian; it is good to be a Missourian; the greatest blessing is to be an American.'

War-Revenue Tax Act.

EXTENSION OF REMARKS

HON. C. WILLIAM BEALES.

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 16, 1915.

Mr. BEALES. Mr. Speaker, I, for one, am opposed to burdening our people with a direct tax which I believe to be unnecessary and unwise. The people of the United States should not be made to pay what in effect is a war tax in time of peace. Why should the taxpayers of the country be called upon to pay extra taxes which have to be imposed in order to make up the deficit caused by the extravagant expenditures and unwise legislation of the Democratic majority?

There seems to be no doubt that owing to this Democratic extravagance additional revenue must be raised, but I think there is a much better way than by imposing internal duties

upon the people. The Republican Party has always adhered to the idea-and it is a right one-that it is far better to raise the great proportion of our revenues from foreign-made goods by means of a customhouse tax. By doing so we aid home industries and restrict foreign competition. This is a great advantage to the manufacturers of this country and at the same time gives abundant employment to the workingman. The increase of a few tariff schedules would obtain the funds necessary to meet this deficit, as it is not due to a decrease in the imports, but to the reduction of the duty on the goods which are imported. The foreign importer is the one who should be taxed, but we should not put the heavy load of taxes upon our own labor.

There is another way this deficit could be met, and a way which seems to me to be both good business and common sense. Why does not the administration use the proceeds of the Panama bonds, which are now in the Treasury to the amount of over \$220,000,000? There is nothing to prevent these bonds being issued and the proceeds applied to governmental needs.

Looking at this tax from any standpoint whatever, it seems to me to be one that is obnoxious in its provisions and an attempt on the part of the Democratic majority to compel the citizens of this country to pay for the needless and reckless expenditures of the Democratic Party, for instead of pruning these expenditures our Democratic friends have expended the public money to such an extent that the last Congress spent over \$150,000,000 more than the greatest amount spent by any Republican Congress

In addition to the request by the President for the reenactment of the present so-called war tax he also asks, among other things, for a tax on automobiles, internal explosive engines, gasoline, and stamps on checks. To all these I register my protest, the same as I have done and will against any direct tax

upon our people.

Automobiles are no longer a luxury but a necessity, especially in the rural communities. In my district, as in most of the congressional districts of the country, there are many farmers who own automobiles, not especially for the pleasure which they derive from their use but as a means of transportation for their produce to markets and railways. The explosive engine comes under the same head of a necessity, especially to the farmer, and the proposed tax of 50 cents per horsepower is not only an imposition but a direct internal tax upon labor. As gasoline is absolutely necessary to both automobiles and explosive engines, to my way of thinking, it also should not be taxed. It also is a thing of necessity, and the owners of automobiles or explosive engines should not have the added burden of being required to pay this additional tax upon the power which drives the motors which are so essential in the everyday agricultural and business life. This tax on both engines and the fuel really means a double tax on practically all the modern labor-saving devices on the farm.

As to stamps on checks. Aside from the annoying and needless expense to the individual, it is the greatest step which can be taken by our Government to discourage the depositing of money in our national banks for the purpose of paying by check. The success and life of our national banks depends upon the deposits they are able to secure. With the stamp requirement on checks, many people will again hold their money and make payments of obligations in actual cash, thereby robbing our banks of vast sums of deposits, the necessary food for their existence. It is a peculiar anomaly, indeed, with one branch of the Government shouting loudly about the great work it is doing for the national banks and the head of the administration at the same time advising a system of stamp tax which would deprive our banks of nameless sums in deposits, thereby reducing their resources and lessening their earning power.

I further oppose this war tax for the reason that I represent a district which is one of the largest cigar manufacturing districts in the United States, and this act imposed such an additional heavy tax on the cigar-making business that the manufacturers of the low-priced cigars were practically out of business and the same tax on the better grade of cigars has made that part of the business so nearly unprofitable as to demoralize this great and previously profitable industry in my district.

This whole act, the war-tax act, and the recommendations of the administration for additional taxes on the people is a pernicious imposition of needless expense upon our citizens and our industries. From every part of it there reaches out a hand holding the grim tax club threatening discouragement and destruction at every indication of success in labor or in industry.

Our people never have stood for direct taxes in time of peace, and I predict that a just and proper resentment of this one will be shown in November, 1916, by the triumphant election of a Republican President and Congress, guaranteeing a return of healthy prosperity and taxes on the competing goods of foreign manufacturers paying the expenses of our Government.

In order to show one of the effects of Schedule B, as applied to the retail drug trade, I insert in the Record a letter received by me from Mr. J. Leyden White, in charge of the Washington Bureau of the National Association of Retail Druggists.

WASHINGTON, D. C., December 29, 1915.

Hon. C. W. Beales. Washington.

Bureau of the National Association of Retail Druggists.

Hon. C. W. Beales,

Washington.

My Dear Congressman: While the unfairness of the stamp tax upon particular attention the fact, for it is a fact, that by such studying ton.

The various bills already introduced in the Sixty-fourth Congress to tax mail-order business; stop untruthful advertising; allow the making of contracts for the maintenance of resale prices; prevent frauduent use of the malis, and others, all of which seek to remedy the acknowledged ctil in unfair competition which is called "price cutting." The various bills already introduced in the Sixty-fourth Congress to tax mail-order business; stop untruthful advertising; allow the making of contracts for the maintenance of resale prices; prevent frauduent use of the malis, and others, all of which seek to remedy the acknowledged ctil in unfair competition which is called "price cutting." The Government standardizes, fixes a price for the purpose of collecting its own profits, revenue thereon, and at the same time refuses an equal right of price standardizes, fixes a price for the purpose of collecting its own profits, revenue thereon, and at the same time refuses an equal right of price standardizes of the fixes of

General Conditions Affecting Hawaii.

EXTENSION OF REMARKS

HON. RICHARD W. AUSTIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES, Thursday, January 6, 1916.

Mr. AUSTIN. Mr. Speaker, under the leave granted to me to extend my remarks on the general conditions affecting Hawaii I include a speech delivered by Judge Elbert H. Gary at a luncheon given in his honor by the Commercial Club and the Chamber of Commerce of Honolulu, Hawaii, July 26, 1915.

Judge Gary said:

"The Hawaiian Islands, with their equable climate, their topography of beautiful lines and shapes, a vegetation peculiar

to tropical conditions, seas and skies, combining the most brilliant colors, and, above everything else, an atmosphere of hospitality, abundant, charming, cordial, and natural, attract and fascinate the visitor beyond even the friendly descriptions which have been attempted by the most competent and eloquent writers. For rest and recreation and pleasure, on the land or the surrounding waters, every opportunity is offered; and for thrills and surprises, for the study of nature in its various forms and aspects, the student, curious and inquisitive or sincere in the effort to be of service to mankind, may here find permanent and satisfactory employment. An overruling Providence set the machinery of creation in motion for the purpose of establishing in the midst of the seas a foundation for the habitation of humankind, unique in many respects and susceptible of development and production far greater than the anticipation or the imagination of the most sanguine of the present generation.

"There are presented for consideration by the citizens of these

islands questions most important and difficult and of intense interest, moral, social, and political; and with the opportunity to secure individual advancement and success there is a corresponding responsibility that will weigh upon the minds of the most thoughtful and serious until the problems of life as they affect this favored and, by nature, isolated spot, are solved to the satisfaction of all concerned. One who comes here for the first time is soon impressed with the feeling that the most intelligent and reasonable consideration to the wants and necessities and obligations of all the inhabitants of the islands is being given by the citizens who are to be held responsible for their

future destiny.

ECONOMIC OPPORTUNITIES.

"Fundamental to the progress and prosperity of the residents of the islands are questions which are economic. The welfare of a people depends, first of all, upon opportunity to supply the actual necessities of life, although during recent years we have not infrequently been urged to believe that these were of secondariant times. ondary consideration.

'Those who are possessed of means to furnish for themselves food and raiment and shelter, whether they are private citizens or public officials in charge and control of legislation or administration, are sometimes quite indifferent to the distress and suf-

fering of others who are less fortunate.

With a persistent, intelligent, and determined effort to utilize all the advantages which nature has bestowed it seems apparent that the productive capacity of the islands can be greatly increased. With enlarged diversity of products and a wise conservation and use of resources, protection of that which is good and elimination of that which is bad, these lands, created from the bowels of the earth, by a guiding hand that controlled and directed the most destructive agencies of nature, will furnish increased and increasing quantities of the commodities which are essential to satisfy the necessities and tastes of multitudes who are able and anxious to buy. Soil which, by proper treatment, is cable of affording regularly a diversity of vegetation is necessary and useful, is a mine of continual and perpetual wealth that should insure uninterrupted prosperity. This character of soil you have and these results you are striving for.

CHANGE IN SENTIMENT TOWARD BUSINESS.

"Unfortunately there has been during the past few years in the controlling influences of the United States a spirit of indifference, if not antagonism, to the pecuniary interests of business activities. It is not necessary at this time to refer to facts which would tend to show that this attitude has been partly the fault of business men but still more the fault of others. It is sufficient now to say that there appears to be a perceptible change in sentiment throughout the country toward business, toward legitimate thrift and enterprise, a realization by the masses of the people, who control sooner or later the action and disposition of a nation, that in the main the people, as a whole, benefit or prosper; that to destroy or attack a single industry adversely affects other industries; that all enterprise and economic effort are in a sense connected; that unreasonable opposition to progress or effort to unreasonably progress are alike reprehensible.

"This changed and changing sentiment may not be as pro-nounced as some of us would like, but it seems to me noticeable and significant. There has been an improvement in private business methods by those in charge and also in treatment of business enterprise by governmental agencies. Neither will in-

tentionally disregard public sentiment.

GOVERNMENT SOMETIMES APATHETIC TOWARD ISLANDS.

"There has been a disposition of indifference manifested toward these islands by various branches of the United States Government. It is impossible to form a comprehensive and just conception of the requirements or claims of a people without opportunity of close contact, full information, and deep study; and the remoteness of the islands from the seat of National Government and the limited distribution of facts have made it impracticable in the past to fully realize what legislation or administration is necessary to adequately and properly protect the

interests of those who are directly connected.

But the representatives of the National Government and others are becoming acquainted with the facts; they realize that in many respects these islands are and will continue to be one of the most important of our possessions; and what sometimes seems difficult to comprehend, in the administration of public affairs, they realize that as the islands are protected and their prosperity increased to a corresponding degree the whole United States will be benefited.

"By the visits of congressional delegations and of numerous officials, of educational leaders, agricultural instructors, the maintenance of military headquarters and other governmental departments, there will hereafter be no lack of competent and fair-minded witnesses to testify to the value and the necessity of these islands as one of the Territories, and, in fact, let us

hope, one of the States of our Nation.

ADEQUATE ARMY AND NAVY NECESSARY.

"One of the subjects that commands the attention of the National Congress is the establishment and maintenance of an adequate military force. We have during the past few months been forced to a full realization of the necessity of being prepared to protect our country by force; that while we are, above everything else, in favor of peace and friendship and cordial, intimate relations with all other nations, we know these can not be maintained unless we are fully prepared to defend ourselves against unjust and unwarranted attack. With a high sense of justice and equity and moral obligation, with a disposition to accord to all others an equal opportunity with a disposition to accord to all others an equal opportunity with ourselves to reap the benefit of the world's advantages, we can not be certain in this age of human weakness, of selfishness, of greed and infirmities, of jealous suspicion, that we shall not be imposed upon and perhaps destroyed unless we are prepared with the argument of force in the last extremity. The Nation is aroused on this subject. Even the organizations for the promotion of peace, who have sometimes appeared to believe they held a monopoly of the principle, are now generally impressed with the notion that the United States should have a Navy, in size and equipment, as compared with other countries, in the same proportion that its wealth and resources bear to other nations, respectively. This means that we should establish and maintain the largest and best single Navy in the world. And it seems also to be the consensus of opinion that we should have an Army, if not continuously in the field and ready for war, yet easy of organization, complete preparation and mobilization, many times larger than our present Army.

"These will increase the amount of annual expenditures, but they are necessary and truly economical, for they compel

peace and they add to our material strength by the protection of our property and our commerce. Our public officials can and should save in many other directions sufficiently to more than equal the increased outlays for the Army and Navy.

"There is, perhaps, no other point where the maintenance of a strong and effective armed force is more necessary than the Hawaiian Islands. It must be strong enough to protect itself and the surrounding seas. It must act as a "buffer" for the whole western shores of the mainland of the United States. case of serious trouble with another nation, which God forbid. a sufficient army and navy located here would prove of incalculable value and benefit.

"The work that is being done here, the investigations that are being made, the declarations of those in authority all indicate that what has been said is in accord with the trend of events.

INTERNATIONAL COURT OF ARBITRATION.

"My utterances on this occasion are not intended to be in opposition to what I have heretofore urged in favor of an international court of arbitration, composed of all the nations, for the consideration and determination of all international questions and the enforcement of its decrees by the nations not directly interested in the particular question at issue. If any nation or two nations are to have the dominant power to control the seas of the earth, there is no need for such to have a court of arbitration; but we can not consent to such a condition. The international equilibrium must be maintained, and so long as one nation is possessed of potential physical power there must be lodged in other nations sufficient power to neutralize and to afford proper protection to all the nations. the possibilities suggested or some of them seem Utopian or too far ahead of the time, it is sufficient to say that in any event we should and we must be prepared on all occasions and

in every emergency to stand for the rights and the principles of our country. We will good-naturedly but persistently strive to succeed in every worthy cause. Americans will be selfish in seeking to obtain what they are entitled to, but they will be reasonable and just and conscientious.

TARIFF LAWS-ECONOMIC NOT POLITICAL.

"Perhaps the most important question that occupies the minds of the people of the Hawaiian Islands relates to the national tariff laws; and it is not confined to this locality. It is delicate, if not difficult, for there are conflicting views, and, as some believe and advocate, conflicting interests. tion is economic and not political, though different political parties have sought to make it a leading part of their platforms. Outside of the effort to produce revenue, which is a feature involving too many points for consideration in a brief discussion, the thing sought to be discovered and utilized by the good citizen is how to provide the greatest good to the greatest number. In case of difference in argument, on one side is the viewpoint of the producer and on the other side of the consumer. The first includes the capitalist who risks his fortune and devotes his time and skill and energy to a given enterprise and the laborer who gives his strength, physical and mental. One is entitled to a fair return on his investment, taking into consideration the interest rates for money and the risk assumed by reason of the vicissitudes of business and weather conditions, the wear and tear of buildings and machinery, and the rapid, sudden, and material changes in methods and instruments; and the other is entitled to fair and reasonable wages and treatment considering all the conditions which apply. Neither can satisfactorily succeed unless the other receives fair and honest treatment. If either one is harsh and unreasonable in his treatment of the other both suffer, and vice versa. Each of these interests is entitled to fair, full, adequate protection from the United States Government, taking into account cost of production, quality, certainty or uncertainty of regularity, climate, diversity or lack of diversity, markets and market conditions, means or lack of means and cost of trans-portation, and every other element that bears upon the question of competition by one producing locality with every other lo-cality in the contest for a share of the trade throughout the world. A tariff law that fails to recognize these principles, that furnishes less than protection to reasonable returns for capital and labor, that leaves the producers of a single location at a disadvantage in normal times and under normal conditions, in its competition with other localities, is unwise, unfair, and un-American. It is believed a large majority of the citizens of this country are firmly convinced of the soundness of these claims as they have been stated.

"The other side is that of the consumer. When protection goes beyond necessity, when the amount of the tariff is more than sufficient to enable producers to receive just and adequate returns, taking into consideration all the facts that have a bearing, then opportunity is given to oppress the consumer, to demand more than reasonable returns; and in that case some. and perhaps many, are influenced by motives of selfishness and cupidity. Consequently a feeling of dissatisfaction and antagonism is created. This leads to agitation for legislation that goes too far and brings about a commercial contest that is destructive, and then a depression and panic; and both producer and

consumer and all others suffer.

"We have seen both extremes in legislation and following alternating conditions of prosperity and adversity depending largely upon this question of tariff. It is not necessary to be specific nor to refer to periods. Those who are listening are familiar with the facts, and particularly with the varying con-ditions. Indeed, there are just at this time published many opinions in regard to the American tariff laws which tend to clarify many features that have sometimes been made to appear obscure and difficult of comprehension.

"It would seem plain that in order to secure from Congress a patient and exhaustive study and just decision of all questions presented by those who need and seek protection for the commodities they produce, as against similar products brought in from foreign countries, the producers of this country should be honest in their representations and reasonable in their requests. It is to be regretted that this is not always the case, and as a result the tariff schedules as finally adopted are inadequate and unjust. I have frequently been summoned before congressional committees, including the Ways and Means Committee of the House of Representatives and the Finance Committee of the Senate, and while in attendance have been surprised and chagrined to hear the testimony of witnesses who were so prejudiced by personal interests that they turned the investigation into a farce for the time being. It was apparent to everyone except the witness that the real interest of the

country, of all the people who might be affected by the decisions of the Congress, was entirely lost sight of by the witness; that what Hancock said, and was at the time sneered at for saying, when he characterized the tariff issue as purely local, was pertinent and justified. If the producers of Hawaii who need and seek a revision of the present tariff rates in order to have a fair and adequate protection as against foreign-produced commodities, so as to place this Territory on an even basis with all others, taking into account cost of production and delivery, will present their claims on the strict basis of fact and logic and will avoid unnecessary antagonism, treating the Members of Congress respectfully, it probably will be only a question of time when the necessary protection will be afforded, certainly under an administration and Congress that is wise and intends to represent the best interests of the whole country. Any other kind of administration should not and will not long continue

in power.
"As a member of a political party that believes in fair and adequate protection to American products and American labor, though not an active member, I urge upon all good citizens the propriety and the necessity of being reasonable in all the positions they may take concerning our business interests, expecting that in return we shall be accorded fair treatment by those who may have the power to pass upon our claims and who will be influenced by a general public sentiment that is generally right, when all the facts and circumstances are known and understood. The business interests I represent are the same as those many of you represent, so far as the question of tariff is concerned, and therefore I have deemed it appropriate to speak freely and frankly about this most important question of economics. The prosperity and progress of the United States, the richest of all countries, have, I believe, resulted largely from our policy of adequate protection. I also think that the policy would not have been materially changed—that is, modified below the point of adequate protection-except for the greedy dispositions of many who insisted upon rates much higher than neces-

sary.

"I hope to again visit this beautiful country and to again grasp the hands of a fair-minded and hospitable people, but whether this will be possible or not, I shall be interested in your country and the success of each of you and shall always entertain a grateful remembrance of this reception and of all your kindness."

War Claims.

EXTENSION OF REMARKS

HON. THETUS W. SIMS,

OF TENNESSEE, IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 6, 1916.

Mr. SIMS. Mr. Speaker, when the omnibus war claims bill was considered by the Senate in the closing days of the Sixtythird Congress an amendment was adopted by the Senate which became section 5 of the bill, and commonly called the Crawford

amendment, because it was offered by Senator Crawford.
On the 4th day of January, 1916, I introduced a bill, No. 6907, to repeal said amendment. But prior to introducing the bill I wrote a letter to the honorable chief justice of the Court of Claims asking for certain information. I now read a copy of my letter to the chief justice and his reply to same, and I also read following the letter of the chief justice the said bill, H. R. No. 6907, and following the reading of the said bill I read a memorandum of my own, explaining the provisions of the bill.

WASHINGTON, D. C., December 23, 1915.

Honorable CHIEF JUSTICE OF THE UNITED STATES COURT OF CLAIMS, Washington, D. C.

DEAR SIR: Having in mind the advisability of some legislation oc-casioned by the Crawford amendment to the war claims act of March 4, 1915, I am desirous of securing some definite information relating to certain phases of the matter, and address this inquiry to you for the purpose of securing the same if reasonably possible for you to give it to me

the purpose of securing the same it reasonably possible for you to give it to me.

1. I have been credibly informed that, shortly before March 4, 1915, a very considerable number of claimants' motions for new trial or for amendment of the findings of fact in congressional cases were overruled by the court, but with the understanding that claimants might renew or have their motions reinstated and considered by the court within some reasonable time—my impression is that I was informed that claimants were given till May 1 last within which to take such action, but that the enactment of the war claims act, including the Crawford amendment, precluded claimants from availing themselves

of that privilege or right, and that, under existing conditions, adverse findings or action now stand against them.

Am I correctly advised as to this?

2. Is it easily possible for you to inform me as to the approximate number of congressionally referred cases which have been dismissed by your court under the Crawford amendment? Further, if the data is at hand and will not necessitate laborious tabulation, is the number of so-called war claims so dismissed known?

It is needless to say that I do not desire to burden the court or clerks with any great amount of labor in giving me the information, but if it can be given without too much trouble I should like to have it, and as soon as possible, as a guide to action to be prepared for before the reconvening of Congress on January 4, 1916.

Very respectfully,

T. W. Sims.

T. W. SIMS.

Very respectfully,

T. W. Sims.

UNITED STATES COURT OF CLAIMS,

Washington, D. C., December 28, 1915.

My Dear Mr. Sims: Since talking with you this morning, I can answer your recent letter more satisfactorily. I explained to you that the first question you asked involved some motions for new trial or amendment of facts in cases which had been passed upon by the court, and the motions had lain here, most of them, for over four years, without being called to the court's attention for action. When we finally acted upon them we stated that, on account principally of the illness of one of the attorneys, motions could be made to set aside the overruling of the motions if made by the 1st of June. It was supposed that by this method only those cases which were thought to be meritorious would be again called to the attention of the court. Thereafter, the Crawford amendment being passed, the court lost jurisdiction. The number of cases affected, however, by this order was about 35.

I am sending you under separate cover a copy of a motion to dismiss congressional cases under the Crawford amendment, which covers 2,254 principal numbers; but, as you will see by examining it, a number of cases have subnumbers. To illustrate: Calender No. 134, commencing on page 20, the docket number being 11889, refers to a number of claims by "drafted men of Kentucky." Under this one number, which goes to page 58, there are approximately 1,900 cases. Each of these subnumbers is a distinct case so far as the rights of a particular claimant are concerned, and, therefore, you will note that the list of cases covered by this motion covers approximately 9,000 cases. All of these were not dismissed.

A hurried count of the cases dismissed under the Crawford amendment shows something over 7,500. Of these, strictly Civil War claims, 1,904. Other cases dismissed involved eight-hour public-building cases and other cases of various kinds which had been referred.

All of the cases dismissed involved eight-hour navy-yard cases, page 236; minimum-pay

Hon. T. W. Sims, House of Representatives.

A bill to repeal section 5 of the act entitled "An act making appropriation for payment of certain claims in accordance with findings of the Court of Claims, reported under the provisions of the acts approved March 3, 1883, and March 3, 1887, and commonly known as the Bowman and the Tucker Acts, and under the provisions of section 151 of the act approved March 3, 1911, commonly known as the Judicial Code," and for other purposes.

Be it enacted, etc., That section 5 of the act entitled "An act making appropriation for payment of certain claims in accordance with findings of the Court of Claims, reported under the provisions of the acts approved March 3, 1883, and March 3, 1887, and commonly known as the Bowman and the Tucker Acts, and under the provisions of section 151 of the act approved March 3, 1911, commonly known as the Judicial Code," be, and the same is hereby repealed.

SEC. 2. That the Court of Claims shall have and take jurisdiction of all claims which were pending before it on March 4, 1915, and whereof it would have had and would have continued to have jurisdiction but for the provisions of said repealed section, and also of all cases or claims wherein motions for new trial or for amendments of findings of fact, made by claimants, had been overruled pro forma prior to March 4, 1915, but with leave or right to renew said motions; that as to such of said claims as may have been heretofore dismissed by said court for want of jurisdiction by reason of the terms of said repealed section, said court shall reinstate the same upon motion in that behalf made by the claimant at any time within two years after the date of this cnactment, Sec. 3. That all evidence or depositions heretofore taken or submitted in said cases or claims, even though taken after March 4, 1915, but prior to the dismissal of said cases or claims by said court, shall be considered as having been legally taken or submitted, notwithstanding the provisions of said repealed section; and, where in any case testimony shall have been taken or

matter.

SEC. 4. That the Court of Claims shall have the power to enter judgment upon its findings of fact in the following classes of claims heretofore referred to said court under the provisions of the acts approved March 3, 1883, and March 3, 1887, commonly known as the Bowman and the Tucker Acts, or under the provisions of section 151 of the Judicial Code, and in all such claims of the following classes as may be

presented to said court by direct petition within two years from date of this enactment, namely:

First. In claims of religious, eleemosynary, educational, or fraternal organizations, for use and occupation of or injury to or destruction of buildings of such organizations, with their contents, and, where not situated at seat of war as heretofore defined by said court, of municipal or county organizations, for such use and occupation or for injury to real estate by the forces of the United States during or after the close of the Cvil War; in all such claims the judgment, if for the claimant, shall be for the reasonable value of such use and occupation and for injury to such property by reason of such use and occupation in excess of ordinary wear and tear: Provided, however, That judgment shall not be entered for any claimant in such case for the value of any unildings or other property wantonly destroyed, or for property damaged or destroyed as an incident to actual hostilities.

Second In claims of individuals, associations, or corporations for stores or supplies furnished to or taken by the military or naval forces of the United States during said war or after the close thereof, including boats seized and used otherwise than by the naval forces during said war, and for use and occupation of real estate by said forces during said war, or continuing after the close of hostilities incident to said war, and not embraced within the general class of claims described in the preceding paragraph; in all such cases the judgment, if for the claimant, shall be for the reasonable value of the stores or supplies so furnished or taken, at current market prices then being paid by the United States, or for the reasonable value of the stores or supplies so furnished or taken, at current market prices then being paid by the United States, or for the reasonable rental value of such use and occupation, including damages incidental thereto in excess of ordinary wear and tear: Provided, however, That in claims arising prior to the 1

The provisions of the bill I have introduced explained briefly

are as follows:

Section 1 repeals section 5 of the act of March 4, 1915, and thereby leaves it possible for either House of Congress to refer to the Court of Claims bills providing for payment of claims, under section 151 of the Judicial Code, which was enacted as a substitute for the terms of section 14 of the former Tucker Act.

Section 2. It is a matter of common knowledge that there are many kinds and classes of claims which have been referred to the Court of Claims by Congress for determination of facts. If there were no claims save Civil War claims, then section 2 of this bill would be unnecessary, but it is designed to restore to the Court of Claims jurisdiction to hear and make findings of fact on many claims of different kinds, which were pending before the court on March 4, 1915, and which have since been dismissed for want of jurisdiction, owing to the provisions of section 5 of the war claims appropriation act.

It will be noted, however, that claimants interested in such claims must move with reasonable promptness as they are given only two years to move the reinstatement of their claims be-

Section 3. It is a fact that, at date of enactment of the war claims appropriation act of March 4, 1915, various attorneys representing the United States were in the field, acting with local counsel for claimants, taking depositions to be filed in the Court of Claims in matter of then pending claims. Depositions continued to be so taken for a considerable period, under rules of the court, before it was ascertained that there was at least a serious question as to the continuance of the court's jurisdiction to entertain the claims. Thereafter taking of depositions was discontinued. In the meantime many depositions have been taken and filed and unless some provisions such as is suggested is made those depositions can not be considered, because they were taken after Congress had removed the cases from the court's jurisdiction. In short, while the depositions were regularly taken, under cross-examination, they will not be available, and as many witnesses were very old when examined it would probably be an impossibility to again secure

Section 4. This section gives the Court of Claims power to enter absolute judgments in what are commonly termed Civil War claims, of the general kinds or classes which have been heretofore paid by various omnibus claims acts.

These claims are divided into two general classes, i. e.:
1. Claims of churches, lodges, schools, and so forth.
2. Claims of individuals, associations, or corporations.

It will be noted that power to hear and determine these claims is given not only as to claims previously referred to the Court of Claims under the Bowman and Tucker Acts, or section 151 of the Judicial Code, and to be reinstated on motion, but also as to other claims of the same general character, in which direct petition is filed in the Court of Claims within one year from the proposed enactment

Undoubtedly a time limit should be now fixed for presentation of Civil War claims, and it is here proposed to make it two years from date of the enactment.

However, a claimant should not be compelled to depend upon the uncertain action of securing within that short time a reference of his claim by a House of Congress. If his right to be heard is to be cut off within a short time, then he should be given the right to present his claim in a manner which will entitle him to be heard, and not by mere petition to Congress, which petition might or might not be acted upon within the time limited.

Examination of this bill will show that the Civil War claims wherein judgment may be entered for claimants are the same kinds of Civil War claims which have been paid by Congress

repeatedly.

As to church, school, and lodge claims, none wherein claim is made for wanton destruction or for destruction in battle, and so forth, fall within the favored classes in which judgment may be entered for claimant. It is true that some such claims have been paid by Congress, but no provision is here made for them.

As to claims of individuals, associations, etc., it is to be noted: 1. Judgment can be entered in favor of a citizen only on condition that he shall have been found to have given no voluntary aid or comfort to the Confederate Government by bearing arms, serving as an official thereof or of any branch thereof by voting for secession, or by purchasing the securities of said government and thereby aiding its credit; this to be made a

matter of preliminary inquiry.

The reason for thus defining acts which shall preclude entering of judgment would seem plain. Without such general definition, and with the idea of passing on what is often called the "loyalty" of claimants, the Court of Claims is compelled to deal with a problem in psychology rather than with facts. It is therefore impossible for any claimant to know what facts will preclude collection of his claim. With such general rules laid down as here proposed, however, the court will have something definite into which to inquire, and claimants will know just what facts will preclude favorable action.

If a person living in the South did none of the acts mentioned and described, then it would seem that he or his heirs should be paid for his private property taken for Government use; otherwise, however, he can not fairly claim such com-

pensation.

It has often happened that claims have been presented by persons who were minors during the war, and who had no responsibility for the Civil War and had absolutely nothing to do with it, especially in such cases as young girls of 17 or 18 at the close of the war; also of very aged persons who had nothing whatever to do with the war, and yet, in both classes of cases, who are unable to prove any facts of affirmative loyalty to either side.

Under previous practice, under the Tucker Act, the court has had some discretion in reporting facts to Congress, and in some instances has made qualified findings on this point in order that Congress might use its legislative discretion in passing finally on the claim, but if the court is now to be made the final arbiter

that will be impossible.

2. The requirement as to proof of conduct applies only in cases arising prior to May 1, 1865. This date is suggested as a proper and fair one, as Gen. Lee surrendered April 9, 1865, and May 1, 1865, meant the practical end of hostilities by forces of the Confederacy. It is true that the extreme western army of the Confederacy, under Gen. Richard Taylor, in Texas, did not surrender until a short time thereafter, but the war to all practical intents ended by May 1.

3. In cases of aliens it is provided that only neutrality shall be demanded, which is all that has ever been required of them.

4. Where property belonged to an undivided estate of a decedent it has been the uniform practice of the Court of Claims, under the Tucker Act, to pass on the conduct of the actual beneficiaries of the estate, rather than upon that of an administrator or executor who happened to hold the naked legal title in trust. The proviso making this a rule hereunder is obviously a fair one and is necessary, as otherwise the court would be compelled to consider the conduct of the administrator

or executor who held the naked legal title.

The same rule is laid down in regard to cases where title was vested in the guardian of a minor. Obviously the recovery by the former ward should not be made to depend on the personal conduct of the guardian, over which the ward could not sup-

posedly have exercised control.

This general subject mentioned is treated in the case of Newman, administrator, v. United States (21 Ct. Cls., 205). In that case it appeared that Mr. Green died in 1858, leaving a widow and three small children; that a posthumous child was later born, who could not have been more than about 3 years of age when the war began. Under the Bowman Act, however, the claim was dismissed because there was an administrator on the estate who had been disloyal, regardless of the fact that the widow and four little children were the owners of the actual beneficial interest in property taken for public use.

The dissenting opinion of Justice Nott in that case shows the injustice following the application of such a rule. That same claim was later referred to the Court of Claims under the

Tucker Act, was tried and collected.

5. Further referring to minors, it is provided in this bill that a minor not over the age of 17 years at date of Gen. Lee's sur-render shall be presumed to have given no aid or comfort, in

absence of proof of any acts to the contrary.

6. Section 184 of the Judicial Code was taken bodily from the old Bowman Act approved March 3, 1883, which act was repealed by enactment of that code, and this part of said act should be repealed with the rest of it. Section 161 of the Judicial Code is also to be repealed by this bill, so far as inconsistent with the terms of this bill, in that both said actions 184 and 184. the terms of this bill, in that both said sections 184 and 161 make it necessary to show affirmative loyalty to the Union, in establishing the fact that a person gave no aid or comfort to the Confederacy, thus, as above suggested, making the question one of a mental attitude as much as one depending on facts which can be actually proven one way or the other.

Statement by Dr. Dernberg.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 6, 1916.

Mr. BORLAND. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a very remarkable statement by Dr. Dernberg, upholding the view of the United States on the question of the freedom of the same from submarine attack.

The statement is as follows:

DERNBURG UPHOLDS UNITED STATES VIEW OF RIGHTS AT SEA—ARTICLE
ADMITS NEED FOR DEALING WITH BERLIN FIRST—URGES GERMANY
TO AWAIT WITH CALMNESS WHILE PRESSURE IS BROUGHT TO MAKE
ENGLAND COME TO REASONABLE VIEW OF RIGHTS OF NEUTRALS—
REFERS TO NAVY PROGRAM AND SAYS IF AMERICAN SHIPPING IS
FORCED OFF THE SEAS UNITED STATES WILL NOT SUFFER IT WITHOUT

A STRUGGLE.

[NOTE.—On Nov. 13 the Journal published a synopsis that came to it by cable of an article in which Dr. Bernhard Dernburg, formerly Germany's minister of colonies, discussed in the Berliner Tageblatt the relations between Germany and the United States. In this cable message Dr. Dernburg, who spoke in Milwaukee less than a year ago, was quoted as using very friendly and sympathetic terms regarding America's diplomatic intercourse with Germany. He stated that the loss of American lives as a result of the operations of German submarines must be regarded by America as a more serious question than the seizure or confiscation by Great Britain of American merchandise at sea, and that naturally America's Government would defer settling the controversy with Great Britain until the more important issue with Germany was determined. Copies of this issue of the Berliner Tageblatt have just reached Milwaukee. Dr. Dernburg's article, which is entitled "The American note to England," has been translated by a member of the Journal's editorial staff and is herewith presented in full.]

(By Dr. Bernhard Dernburg.)

(By Dr. Bernhard Dernburg.)

The imperial chancellor in his last great speech has taken his stand for the "freedom of the seas." Sir Edward Grey has designated the deliberation of the matter as highly probable after the war. Both statesmen have more or less avoided any definite expression of theory. President Wilson has also proclaimed the freedom of the seas in his various recent notes and addresses and designated it as an inalienable right of the United States.

Quite clearly he has indicated what he wishes to be understood by the term—the maintenance, at least, of international sea law, as this is laid down in the Declaration of London. This declaration, to be sure, is not subscribed to by all the States taking part in the conference, but it has also not been opposed by them. Its purpose was, as its name indicates, to insure in declaratory form, with the cooperation of all nations, what shall in these days be the law of the seas. President Wilson declares that this codex is binding for the United States, and any change on the part of a belligerent—so far as it is not in agreement with the United States and the other neutrals—is not binding upon them.

With regard to the practice of these international sea laws, the United States has come into conflict with two belligerent nations, England and Germany. England has made all sorts of arbitrary changes by royal order, and has in other points been untroubled by the requirements of law on the high seas. Germany has been censured for the sinking of the Lusitania and for the conduct of her submarine war.

THE PRESIDENT DIFFERENTIATED.

The President declined a simultaneous treatment of the differences with England and with Germany, because he wished it clearly understood that the two cases dealt with separate varieties of American rights. The President did not admit that Germany could give up the submarine war if England kept within the laws of the seas and should be forced to do so by America.

The submarine war had first to be settled, because this act was not a question, as in Great Britain's commercial war with Germany, of replaceable wares or financial losses, but of the lives of American citizens. The difference with Great Britain, therefore, was postponed until a way had been cleared through Germany's wise giving in in the Arabic case.

HUMANITY MOVES GERMANY.

Apart from the fact that she shared America's considerations for humanity, Germany apparently gave in principally for the reason that a nation which wishes the freedom of the seas should not contribute to sharter the principles which hitherto had been maintained, even in an incomplete form, and that she had no right to expect the United States would hold Great Britain to an observance of maritime law without also following the same polley toward Germany.

A submarine campaign, defended on the ground of the modernity of the weapon, was, however, irreconcilable with the application of the London regulations.

After Germany bad yielded to the American standpoint the President finally sent a note to England and announced two more to come. It is not necessary here to go into the details of these notes. It is sufficient to recall that the United States declared a blockade of Germany and Austria as not legally allowable; that it declared unlawful the English practice of confiscating goods destined to neutral countries merely on suspicion that they might fall into the hands of the enemy; that it declared unjustifiable the demand that such goods be addressed not to order but to definite recipient—that is, to the overseas trust under English control; that it would not longer allow the removing of American or neutral ships to English harbors; and that it rejected the English prize courts because they were organized not according to general sea law but according to English orders in council.

MORE NOTES PROMISED.

MORE NOTES PROMISED.

These are the chief points. A note is promised which shall teject the latest English definition, according to which the status of a ship is determined by the nationality of the owner or an owner and not by its registry and flag; and, finally, perhaps the most important of all, another note in which the willful changes which England has made in the lists of absolute and conditional contraband shall be declared not binding for the United States.

Thus falls together the whole structure which England has so skillfully built up in 15 months, as much to starve Germany as to cut into America's trade.

The London declaration placed cotton under all circumstances on the free list. Grain and foodstuffs were contraband only so far as they were destined for the use of fighting troops or the provisioning of fortified harbors, and then only conditionally. The burden of proof the declaration places on the power that selzes these materials.

UNITED STATES FOR NEUTRAL RIGHTS.

UNITED STATES FOR NEUTRAL RIGHTS.

UNITED STATES FOR NEUTRAL RIGHTS.

The President says that he espouses the rights of all neutrals, and it can certainly be supposed that he does this only with an understanding with them. The German press has raised the question whether the United States would endeavor to force compliance with her demands. According to the diplomatic history of the United States—and the Lustiania case is a page in that history—there is every reason to believe this will be done at all costs.

It sometimes has taken rather long—the Alabama case took 15 years—but here interests are at stake which do not permit of delay; and, however unwilling the President is to make difficulties for Great Britain (or Germany either), he has, as has recently been said, a single-track mind in which there is neither turning out nor going back. That is all the more likely, as next year the presidential election will take place, and he will want to give to the Nation an account of the manner in which he has ordered its business, and on the 4th of December of this year Congress will again meet, thus giving a new emphasis to the demands of the President.

COULD FORCE ALLIES' HANDS.

COULD FORCE ALLIES' HANDS.

GOULD FORCE ALLIES' HANDS.

If the United States had little means of exerting pressure against Germany in the case of the submarine war because of complete severance of commercial relations, these means are very powerful in the case of the allies, especially England. Denial of credit, orders to national banks not to discount exchange for the allies, embargo on individual wares necessary to the allies, and, finally, prevention of the export of arms (which, indeed, Congress once ordered against Mexico in 1912).

It is true that pecuniary interests in the United States fill a greater part in the decisions of men than they usually do in other nations, and that through all these measures the pockets of Americans would be pinched; but one must not underestimate the self-consciousness and pride of the Nation as soon as it feels that its rights are being purposely and lightly trod upon.

ENGLAND FORESEES TROUBLE.

ENGLAND FORESRES TROUBLE.

England has a sort of premonition of this, and, because it knows it must give in, it seeks characteristically to cover itself in advance. Thus, the recent orders forbidding English ships from sailing to and between neutral harbors and the attempt to buy up neutral ships and to lay hold of American commerce.

But it can be taken for granted that this very attempt will make bad blood in the United States. Apart from its being a question of the limitation of American commerce and of an extraordinary increase in the cost of American merchandise (since the whole German merchant fleet, which has up to now cared for a large part of American commerce, has been interned) viewpoints here come into play which are particularly vital. The best war fleet is not in battle trim unless it is in possession of a great number of auxiliary vessels for the supply of coal and provisions and for the forwarding of troops; a great number

of patrol boats and cruisers for guarding the coast; and another great number of merchant vessels fitted out as auxiliary cruisers.

LOOKS FOR COUNTER MEASURES.

America is on the threshold of a naval program of great magnitude, a program that has the general support of the Nation. The European war has sharpened the responsibilities of the administration just as have the attacks of its opponents. If this attempt at depriving Americans of merchant vessels is continued it may be expected that Secretary of the Navy Daniels (who first emphasized the necessity of a merchant marine in time of war) will immediately seize upon counter measures. Last year, when the President wished to create a merchant marine with Government funds and proposed in addition the acquisition of neutral and interned ships Congress defeated the bill. At that time there was no talk of an enlarged fleet and of American defense. To-day the matter is entirely different, and it can easily happen that England by this move will bring about effects of which it has not the slightest suspicion. Thus the American note will lead to an era of discussion with England, paving the way at the same time to the fulfillment of the demand for the freedom of the seas—a discussion the outcome of which will beyond shadow of doubt be in favor of those who represent the right. We in Germany can aid in these discussions only by following them with calmness and dignity.

Rural-Credits Legislation.

When framing the Federal reserve act for the banking and commercial population, you bundled up the credit of the Government, neatly tied a blue ribbon around it, and placed it in pawn for the benefit of the bankers and commercialists. You sat them down at a feast of Federal reserve notes, prepared for them by the Government, in return for their assets and commercial paper. You gave them Government aid. Let us give the farmer the same aid. He is entitled to the same privilege at the Government Mint.

EXTENSION OF REMARKS

HON. ROBERT L. HENRY.

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 6, 1916.

Mr. HENRY. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I submit the following:

Monday, March 1, 1915.

The House in Committee of the Whole House on the state of the Union bad under consideration the bill (H. R. 20415) making appropriations for the Department of Agriculture for the fiscal year ending June 30.

Mr. HENRY. Mr. Chairman, it is my purpose to detain the committee for only a short while. We now have an opportunity to add an amendment to the Agricultural appropriation bill which will bring substantial relief to the farmers in the way of rural-credits legislation.

Mr. Chairman, we have before us to-day three concrete propositions: First, the McCumber amendment, which has come from the Senate, providing for direct loans to the farmers. Second, the Hollis bill, which was reported to the Senate on last Saturday. In my judgment, this last bill is a makeshift, an empty thing, a vacuous and spineless piece of legislation, and will wilt and crumble like a frogstool if Government aid is not placed behind it. [Applause.] Second, this Hollis bill set up an alleged rural-credits system separate and apart from any source of governmental aid. Governmental aid is the one essential thing to make rural-credits legislation a success in this country,

as it has proved to be successful in every other civilized country of the world where the Government has fostered and aided the Third, the Bulkley bill is before us, and with section 30 providing for governmental aid, the system is destined to be a success and will carry genuine relief to the American farmers.

And at this point permit me to call your attention to several salient and strong provisions of the Bulkley bill, which we have rewritten, that make it incomparably better than the Hollis makeshift just reported to this House by the Committee on Agriculture. First, it provides for a Federal farm-loan board, divorcing the system entirely from the Federal reserve act. It sets up a separate and distinct rural-credits system not subordinate in any respect to the Glass-Owen currency law recently enacted. Second, in it we provide that the interest rate shall in no event exceed 6 per cent per annum wherever loans are made to the farmers. And, third, in section 30, we specifically commit the Government of the United States to the aid of this system and provide for expending not exceeding \$50,000,000 annually out of the Treasury of the United States to guarantee And in pursuance of this principle we the success of the plan. expressly write into this law as a new amendment provision for the sale of Panama Canal bonds, the proceeds of which are to

be devoted to setting up our rural-credits system. Hence, we make it certain that the strong arm of the Government shall be placed under and around the rural-credits system for the farmers, just as we have placed it under the Federal reserve act in behalf of the commercial and banking interests. plause.

Mr. Chairman, it would be fatal and criminal to tender the American farmers a plan that would not sustain itself and prove a success. With this opportunity here presented, let us not fail to put our great Government back of legislation which we are now writing in behalf of the entire agricultural population of

the United States. [Applause.]

The Federal reserve act was proposed, the credit of the United States was bundled up, a blue ribbon was neatly tied around it, and the resources of a hundred millions of people, in the form of their credit, was mortgaged to the bankers and commercialists. And I am not willing to tender the farmers of this country legislation of any less strength. In the Federal reserve act we placed the Government in partnership with the banks as to capital stock and profits, and I now assert that we should place it in partnership with the farmers in a new rural-credits system. The principle is identical. They are entitled to the same treatment in accordance with all logic and by the parity of all reasoning. The farmer is here to-day to demand that he enjoy the same privileges at the Government mint as the bankers who are feasting on Federal reserve notes issued by that mint and under this new partnership arrangement with the banks. Nothing can deter me from insisting that any rural-credits legislation that we pass shall also be backed and reenforced by the credit of the United States Government upon the same principle written in the Federal reserve act. It would be a mockery and sham and a glaring fraud to do less for the agriculturists! We have come to the point where our people in these modern generations must necessarily be divided into three classes, to wit, the commercial, the industrial, and the agricultural. Currency legislation suited to the needs of commercial interests will not be sufficient for the agricultural and industrial classes. We must have a plan that authorizes long-time loans for the farmer; the commercial banking system will not avail. And I here predict that with the Federal reserve act in effect the time is not far distant when we will open the mint of the United States to the American farmer, so that he may place his securities, mortgages, and liens as collateral with the Government and receive Government issues of money from the mint, just as the bankers do under the Federal reserve act. And States, counties, municipalities, and localities will sooner or later be enabled to take their bonds and securities, based upon the wealth, property, and resources of the people, to the Government mint and deposit them as security and receive United States money issued for them upon the identical principle by which the Secretary of the Treasury is now preparing to issue \$500,000,000 of Federal reserve notes, coined as the people's money, to the banks of this country in exchange for their assets and commercial paper wares sent up through the Federal reserve banks to the mint of the United States. There is not one particle of difference in principle in these arguments which we here advance.

The papers have just contained a statement that the Secretary of the Treasury is preparing an issue of \$500,000,000 of Federal reserve notes, to be exchanged for the assets, notes, and paper securities of the banks, which they are hypothecating with the Federal reserve banks. These notes are issued from the people's mint, and the banking and commercial interests have no God-given right to monopolize this money and the credit of the Government and exclude the farmer and wage earner from the same privileges at the people's Treasury. If the merchants' and bankers' paper are good security for these Government obligations, the farmer's mortgage, at a fair valuation, on his rich farm lands, is a better guaranty. And if the merchants' paper, merchandise, and notes and the bankers' bills, drafts, and notes are good security, State, county, and municipal bonds, based upon the taxable wealth and resources of 100,000,000 people, are still better, even if the time for their redemption is somewhat longer. Hence it is mandatory that we must forever divorce and separate our agricultural banking system from the

commercial banking plan.

In the course of the proceedings I shall undertake by my vote to perfect the Hollis bill and establish a plan worth something to the farmers. If we can not do that, then, when the final rote comes between the two amendments on the motion to recommit, I shall vote for the McCumber amendment without any change, in order that my name shall go down in the permanent Record as one who stood for legislation bringing real relief to the farmers.

Ah, but we hear it whispered in these Halls that the President will veto the McCumber amendment, that he will veto the Bulkley amendment with section 30 in it, providing for Government aid, and that he will not veto the Hollis bill. As far as I am concerned, my resolution is fixed to do my duty here for the farmers to-day, and support legislation that means something—let others pursue whatever course they may. It makes not the slightest difference with me. [Applause.] And yet I do not believe the President will veto a genuine rural-credits bill, when we attach it to this Agricultural appropriation bill.

Gentlemen object to adding such a bill to the Agricultural appropriation measure. They say that legislation by the insertion of a rider on appropriation bills is not good. Permit me to say that some of the greatest reforms in legislative bodies for the benefit of the people have been brought about by attaching them to appropriation bills. And it seems to me that the hand of Providence can almost be observed in this proceeding, because it has given us the only opportunity available for establishing a rural-credits system before this session of Congress

has ended. [Applause.]

The Bulkley bill has been considered for nine months by a sub-committee of the Banking and Currency Committee, Democrats and Republicans, in a nonpartisan way, and they have agreed to it. Members of that committee who speak to-day will tell you that they have given the Bulkley bill nine months of deliberate study and can see no further way of improving it if they should work upon it many months longer. They are prepared to report it to the House. They are ready for action, and these Democrats and Republicans have placed their seal of approval upon it. Hence, I say, let us support and adopt it, and present both the amended Bulkley bill and the McCumber amendment to the House of Representatives in order that Members may exercise their choice of action.

The great and overshadowing principle of Government aid is contained in the Bulkley bill, the one great thing around which my bill has been written. And so if these propositions set out in my measure can be inserted here in the McCumber amendment or the Bulkley bill, I shall gladly support them and

waive all pride of authorship.

Mr. Chairman, allow me to say, in conclusion, that my resolution is fixed, and that during the remainder of my congressional career I shall fight for a rural-credits law builded and founded upon plans entirely apart from the Federal reserve act or any commercial banking system. The farmer must have a system that will afford him long-time loans. The necessities of his vocation imperatively demand it, and I shall continue to struggle for writing the same principles in all rural-credits legislation for extending direct Government aid to the tillers of the soil just as we have placed it in the hands of the banker and commercialist. There is no invidious distinction or criticism intended by me in making these arguments. Long since I have concluded that the three classes of our people-the commercial, industrial, and agricultural-must have their needs supplied through distinct banking and financial systems. The issue is raised here to-day and will not down. The fight will go on. and my prediction is that before many years have gone by this long-deferred relief for the American farmer and the industrial class will be accorded to them as Congress promptly afforded facilities to the commercial class of our people. It is a lamentable fact that, in this House and elsewhere, whenever a legislator raises his voice in behalf of the farmer, the wage earner, and the worker, he is charged with being a demagogue. But a Representative is weak and cowardly who has not the heart and spirit and resolution in the face of these affronts to fight on in behalf of those who till the soil, earn their bread by the sweat of their brow, and make this Republic prosperous and great. [Applause.]

Wednesday, March 3, 1915.

Mr. HENRY. Mr. Speaker, it is not my purpose to be captious about this conference report, but before agreeing to it there are several propositions that should be discussed.

On the 1st day of March this House had it in its power to enact a general system of rural-credits legislation. The Agricultural bill came over from the Senate with an amendment attached as a rider providing for a rural-credits system with one amendment added by that body. The McCumber bill was sufficient to meet the needs of the American farmer.

The mistake the House of Representatives made, in my opin-

The mistake the House of Representatives made, in my opinion, was in not agreeing to the McCumber amendment, just as it had been written, so that there would be no differences between the Senate and the House, and thus no opportunity given

for the Senate to recede.

The distinguished and able gentleman from Ohio, Mr. Bulkley, who has studied this question as much as any man in Congress, was chairman of the subcommittee that prepared the measure, and worked nine months on it. And he said on the floor of the House that if you were to give him nine months longer he did not see how he could improve on it.

longer he did not see how he could improve on it.

Its principles are good. The subcommittees of the Senate and House agreed to it, and yet the committees failed to report it. Whenever rural-credits legislation is written it will be along the line of this measure, which contains Government aid, and will stand as a monument to the strong young man from Ohio

who goes out of this Congress. [Applause.]

On Monday we placed the Bulkley bill in this Agricultural bill, and the Committee on Agriculture comes back to us and reports a substitute for a mere commission, still postponing this question.

Ah, gentlemen, that was not the way to deal with it. The mistake we made was in not voting for the motion to recommit, thus sending the McCumber amendment to the conferees, where

it could not be evaded or destroyed.

Mr. Speaker, the time has come when the American Congress should cease trifling with the farming population. There are many men who are afraid to raise their voices in this House and the Senate in behalf of the farmers for fear they will be denounced as demagogues. I am one who says that the farmer has been trifled with about this question, and we ought not to undertake to trifle longer with it. We should face the issue

and settle it. Now is the accepted time. [Applause.]

It makes little difference to me when charges of demagoguery are whispered around the corridors of this House. When the banking and commercial people wanted a new banking system—the Federal reserve act—you bundled up the credit of the Government, neatly tied a blue ribbon around it, and placed it in pawn for the benefit of the bankers and commercialists. You sat them down at a feast of Federal reserve notes, prepared for them by the Government in return for their assets and commercial paper. You gave them Government aid. Let us give the farmer the same aid. At the risk of again being called a demagogue, I assert that he is the equal of the merchant, the banker, the professional man, or any other citizen. He is entitled to the same privileges at the Government Mint as they are, and the credit of this Government—his Government, too—should be placed behind his banking system upon the same principle by which you have mortgaged it to the banking fraternity in the commercial world.

I predict to-pight that the day will come when we will put the strong arm of this Government under and around and about a banking system for the benefit of the farmers, and treat them just as we have the bankers and the commercialists. [Ap-

plause.]

Mr. Speaker, this matter should not be postponed. Let those who have brought in the report take the responsibility. Go home to your constituents and satisfy them if you can. Continue in this course, smother legislation in conference, and see whether or not the Democratic Party can keep the confidence of the American people when you do these things. All three of the parties promised in their platforms rural-credits legislation, and all have failed to redeem that promise.

I intend to keep the faith of the Baltimore platform.

My contract with my constituency and the American people shall be redeemed here to-night by my vote. We can send this bill to conference again, instruct our conferees, and demand legislation before the gavel falls. It will not imperil this bill. There is yet abundant time for reconsideration and action before we begin our journey home to meet our constituencies and render our account of stewardship. Let us trifle no longer, but redeeem our solemn platform pledges.

Friday, October 16, 1914.

FOR THE RELIEF OF THE COTTON GROWERS.

Mr. HENRY. Mr. Speaker, I have risen for the purpose of discussing in the brief time allotted to me the distressing cotton situation in the Southern States, and trust that I shall utter no word here to-day that shall not be deliberate and in exact accord with the facts. It is no exaggeration to say that the condition in the Southern States is absolutely distressing. On account of the war in Europe the market for cotton has been paralyzed, and we now have no market. In a little while the purchasing power and the debt-paying power of the Southern States will be gone. Cotton is the great staple of the South. It is the great export that we send to foreign countries for the purpose of bringing gold back to our shores, and to-day distress is widespread everywhere in the cotton-growing States. In a

little while the tonnage on the railroads will be so reduced that they will be embarrassed. Whenever cotton is not shipped. then the railroads immediately feel the effect, because necessarily their tonnage is greatly reduced and there will be but little commerce going out of the Southern States or coming in. While you gentlemen from the Northern and Eastern States do not yet feel the blighting effects of this prostration of the cotton market, in a short while you will understand and appreciate our dire distress. You will not be able to sell your manufactured articles to our people, for when they can not sell at least a part of this cotton crop of 1914, which is worth \$1,000,-000,000, then the manufacturers of Massachusetts, Ohio, Pennsylvania, and Connecticut and all of the other States of this Union will feel the result.

. Having said that much about the conditions, naturally the question arises, What is the remedy? Mr. Speaker, when I first realized the situation, I said that this great Government should come to the rescue of a third of the people of this Republic, of 30,000,000 citizens, who are a part of this Union, and lift them from this prostrate condition. The Secretary of the Treasury could have immediately deposited in the banks of the South the public moneys that were at his disposal or that could have been placed at his disposition by the passage of adequate legislation, and, Mr. Speaker, I shall not unjustly criticize the Secretary of the Treasury. I am making no war upon him, but in this crisis now upon our people I have a right to appeal to the cold facts of history and the truthfulness of the transac-

tions in the Treasury Department.

We asked the Secretary of the Treasury to deposit in the national banks, the fiscal agents of the Government, enough funds to be loaned to the producers of cotton to relieve them from their present embarrassment. We asked that those funds, the people's money, be put there upon terms and conditions that would make the money available to the men who produced the crops. Immediately the Secretary of the Treasury replied to me and said that he did not have the funds, that he did not have the power to deposit them there if he wished to do so. Let me do him exact justice. I appealed to him to deposit \$50,000,000 only in 15 Southern States. That would have been a great relief.

Mr. Speaker, I announce that if the Secretary had stood up boldly, courageously, and had said to the world, to the speculators, to the banks, and to the stock gamblers and those who despoil the producers, "You can not rob the southern producers of their cotton crop at 5 and 6 cents a pound, but this great Government will come to their rescue and save this crop already produced," the condition would be different. But he has not

I will state that I have gone to the Secretary of the Treasury, to the Federal Reserve Board, to the President, and laid those matters before them and appealed to them to save the South in its distress, and have also submitted these things in

Mr. Speaker, I am not making any criticism. I am simply discussing facts, and no living man can answer them. The President will do his duty as he sees it. But I am not through, Mr. Speaker. I want to say to the gentleman now what I intended to say a little later on, that this Congress ought not to adjourn until justice has been done to our people; and, as far as I am concerned, if I have the power to prevent it, we never shall adjourn until we have legislation on the cotton situation. [Applause.]

Now, Mr. Speaker, when the gentleman raises the issue that the Aldrich-Vreeland Act did the work, I wish to say it has proved to be a snare, a delusion and fraud upon the rights of the people. It is true that they did issue this Aldrich-Vreeland currency to banks, allowed them to secure it practically without limit, and it is true that a lot of that currency went in the Southern States; but instead of the banks using it to relieve the distress of the cotton producers they used it in their own business. They bundled it up and shipped it back to New York and to other money centers to pay their obligations. So I say that the Aldrich-Vreeland Act did not do the work. Furthermore, I say that if the Federal reserve act were in operation now-and I do not mean to criticize that act-we would have had the same result. These banks would hoard their funds; they would take the currency they are authorized to issue and would use it in their own business. They would ship it back to New York to pay their own obligations. You must find another way of getting these funds to the people. Mr. Speaker, here is

what ought to be done: The Secretary of the Treasury ought to put the public moneys at the disposal of the Southern States. He ought to establish every national bank a depositary, which he has authority to do under the law, and ought to put the public moneys there. He ought to forget the Aldrich-Vreeland Act. He ought to forget this Federal reserve act; and if he has not the public funds to relieve our distress should come to Congress and say, "Authorize me to issue United States notes as they did during the war, possessed of all the legal qualities with which those notes are now endowed, and let them go to the distressed people of the South." And if that authority is questionable, or if it is not sufficient, then let him sell the Panama Canal bonds and put the proceeds of those bonds in the banks of the South and relieve the situation.

tt. -

I say if the Secretary of the Treasury will come here and ask Congress to give him the public funds, we will pass a bill authorizing the issuance of \$250,000,000 of United States notes redeemable in gold, and we will put them in the banks of the South in less than one week, and, if that is not enough, we will authorize him to sell the Panama Canal bonds now in the Treasury, amounting to \$240,000,000, and will increase the interest from 2 and 3 per cent to 4 per cent, and then he can put the proceeds of the bonds in the banks.

Let me go back a little further and recount some more his-

tory. We had a little flurry that was a mere morning's breeze compared with the present awful condition in the South. I refer to the panic of 1907. You all remember it. pened? In that panic the banks of the South would not honor our checks when our money was on deposit in them. pened? Immediately the President of the United States instructed his Secretary of the Treasury to deposit in the banks public moneys to the extent of \$245,000,000, and by the 1st day of December, in 1907, we had in the States of this Union, and most of it in the agricultural States of the South and West, \$245,000,000 of money, public funds, taken out of the Treasury of the United States and put where it could relieve the embarrassment of the people.

But the President and the Secretary did not stop there. Let me read you from the Atlanta Constitution of November 18. 1907. The headlines are to this effect:

UNCLE SAM TO THE RESCUE-\$150,000,000-WITH HIS BONDS AND NOTES.

QUICK RELIEF WILL BE GIVEN BY GOVERNMENT.

Decision to End Money Pinch Follows Conference at White House. TO ISSUE CANAL BONDS AND TREASURY NOTES.

\$50,000,000 of Former and \$100,000,000 of Latter Necessary. The Government Will See that Money Gets to South and West, Where It Is Needed to Move Crops.

So, in addition to the \$245,000,000 that was taken from the Treasury and deposited in the banks, the Secretary of Treasury supplemented that with an order that \$150,000,000 more should go. And they issued circulars, one to sell the Panama Canal bonds, \$50,000,000, and another to sell \$100,-000,000 of certificates of indebtedness under the act of June 13, 1898. What happened? The minute the President and the Secretary said that these people must be relieved, it was not necessary to sell all the bonds and all the certificates of indebtedness bearing 3 per cent interest, but they only sold in the aggregate \$40,000,000. And the condition was relieved, and gentlemen in New York, who had manufactured and brought on this panic without any rhyme or reason, were thwarted in their will. And I say to-day, if there is a conspiracy to sacrifice this cotton and force it upon the market at to 6 cents a pound, at the price at which it is now selling in the South, this great Government should come to our rescue, as was done in 1907, and these funds should be put in the National and State banks, where the people who have produced the crop can secure them.

Ah, but some of our friends want to make this a banking proposition altogether. They say that you can not do business without the aid of the banks. I am willing to admit that banks are good institutions, that they are necessary to commerce, civilization, and business, and I undertake to say that if the Government can deposit its public funds in the vaults, to be loaned upon the terms and conditions which the banks may fix themselves, to relieve the stock market in New York, and to relieve similar conditions, this same Government has the power to pass this statute and to fix the terms and conditions upon which these fiscal agents shall advance this money to the distressed producers of the South.

Is there anything revolutionary in that? Mr. Speaker, I decline to arraign the patriotism of the banks as some gentlemen

do. I believe that those banks in the South that have already loaned their money as far as they could with safety, that have already advanced it on this crop, and for other purposes, to supply the needs of the people, would be glad to get the Government funds from Washington on any terms that the Government might fix in order that they could relieve the producers of cotton and tobacco, so that they might pay their debts and might pay the banks and the merchants, and those who had financed them in making this crop.

Now, that is the situation; and if the national banks were not willing to do it, the State banks would be glad to take this money and loan it on any terms. At first I suggested that if money and loan it on any terms. At first I suggested that if 10 cents a pound could be advanced, it would be all right, and we could get along. But they said, "You valorize the crop," and then I rewrote the bill, and said, "If you will advance the farmer \$30 a bale, 6 cents a pound, and give the Secretary of the Treasury plenary power to get these funds into the hands of the farmer, you can relieve the situation." But that has not

been done.

Now, what is confronting us in the South? October has come on. The crop has been produced. It has cost from 8 to 10 cents a pound to raise this crop. Our people are in awful distress. They owe these debts, incurred for making the crop. They must be met, but they can not sell their cotton for any price exceeding 6 cents a pound. And, gentlemen, it will go to 4 cents. It will go below that. It will go down and down to 4 cents. It will go below that. It will go down and down until there is absolutely no local market for it. It is a billion-dollar crop. Thirty millions of people are involved in this transaction, and yet there is no relief from this great Government. Must it be a banking transaction? They admit they have already issued over \$300,000,000 of emergency currency. It did not go where they wanted it to go. The Secretary of the Treasury boasts that under the Aldrich-Vreeland amendment a billion dollars of emergency currency could be issued. ment a billion dollars of emergency currency could be issued. But you can issue a billion or five billions of emergency currency and it would not reach the producers of cotton as the Secretary of the Treasury wants it to reach them, never under the present system.

So you must come quickly to our relief. Something must be done in the way of legislation. We must give the Secretary of the Treasury more power. We are suffering. Let me say to you gentlemen you all love the South. We are all citizens of this great Republic and love this Republic as much as you do. But let me tell you gentlemen on that side of the aisle that to-day tenants-and three-fourths of the crop in my State is raised by tenant farmers—those tenants have abandoned their own fields, have left their crops there, have left these great white fields of cotton unpicked because they could not sell it for anything. Their wives and children are in want for meat and bread. They have gone to the neighbors who had a little cash and received pay from them for picking cotton. As long as they had employment they have gotten from their neighbors meat and bread for their families. Gentlemen, help us, and let us not adjourn this Congress until we have relieved the South, as we would be ready to relieve any other State in this Union under other circumstances, [Applause on the Democratic

side.]

THE HENRY BILL.

THE HENRY BILL.

A bill (H. R. 19203) for the temporary relief of cotton and tobacco growers of the United States.

Be it enacted, etc., That the Secretary of the Treasury shall deposit in national banking associations and State banks situated in States producing cotton or tobacco, or both, \$250,000,000, or so much thereof as may be necessary to carry out the purposes and under the terms and conditions of this act, to be advanced to the producers of cotton and tobacco, or owners of lands upon which the same was produced upon cotton or tobacco produced during 1914, at a rate of interest not exceeding 4 per cent per annum. The deposits herein authorized shall be advanced upon the terms prescribed in this act and under rules to be prescribed by the Secretary of the Treasury. The deposits herein directed to be made shall be apportioned among the several States in accordance with the number of bales of cotton and pounds of tobacco produced therein during the year 1913, as ascertained by the Department of Agriculture.

SEC. 2. That the Secretary of the Treasury shall make and enforce rules and regulations not inconsistent herewith for carrying out the purposes of this act. Said Secretary of the Treasury may fix the compensation for the banks for their services in lending said sums of money.

Sec. 3. That the Secretary of the Treasury shall, in his discretion.

pensation for the banks for their services in lending said sains money.

SEC. 3. That the Secretary of the Treasury shall, in his discretion, either immediately cause to be prepared United States notes to the extent of \$250,000,000 to be used for the purpose of making the deposits in compliance with this act, which said notes shall have all the legal qualities of the United States notes now outstanding, and shall be of such denominations as the Secretary of the Treasury may prescribe; or he may sell not exceeding \$240,000,000 of Panama Canal bonds, here-tofore authorized by law, at a rate of interest not exceeding \$3 per cent per annum, and the act or acts heretofore passed authorizing the disposition of said bonds are hereby amended so as fully to authorize the disposition and use of such bonds as is herein prescribed; or, in his discretion, the Secretary of the Treasury may use both the proceeds

of the bonds and the notes in order to carry out the purposes of this act, not to exceed in the aggregate \$250,000,000: Provided, That such United States notes, should the Secretary of the Treasury conclude to issue them, deposited under this act and not used as prescribed herein shall be returned to the Secretary of the Treasury and shall be destroyed.

SEC. 4. That this act shall take effect and be in force upon its

passage. SEC, 5. That this act shall expire by limitation on the 31st day of December, 1915.

Such are the exact terms of the bill introduced by me and

upon which we make the fight in the House.

We ask nothing unusual, and I will say that my bill follows the precedents and well-marked lines that have been made for more than a century, and we will put the people's money where the producer of cotton can secure it and require these fiscal agents to loan it to the producer of cotton or tobacco in those Southern States. Is there anything unusual about that? We provide that it shall not exceed 4 per cent interest. Is there anything wrong about that? We provide that those banks shall be fiscal agents of the Government, and is there anything wrong about that? We have done it more than a hundred times. And then, in section 2 of this last bill, we give the Secretary of the Treasury colossal power. [Applause.]

Tuesday, October 20, 1914.

Mr. HENRY. Mr. Speaker, we have been undertaking to shape legislation on this question for two long months. Day and night, in season and out of season, individually I have been endeavoring to meet with my colleagues on both sides and see if we could not get on common ground in order to meet the great

emergency that has arisen in the South.

The bill is the best proposition that the Committee on Rules could bring before you gentlemen for consideration. It does bring that important question before the membership of this House in order that it may be discussed and considered. We say to you and to our people that it is right that we should debate it and vote upon it, and we want to say to you on that side of the House that we are now confronted with the greatest problem that has come before our people since the close of the Civil War. Many of our people—farmers, bankers, merchants, and our railroads as well, besides other interests—are facing bankruptcy, and we think it is necessary for this great Government to come to the rescue of the South and aid us in this crisis. When you do it you preserve the business interests not only of the Southern States but of every State in this Union and contribute to the welfare of all of our people. I hope this special rule will be adopted. I trust that these matters can be debated thoroughly in this House, and that we can record our votes. We have been ready to aid the people in the other parts of this country when they were in distress and needed the assistance of the Federal Government. When great fire swept from the face of the earth the town of Salem, Mass., those of us from the South stood ready to respond and go to the aid of those people. When San Francisco was stricken with the great earthquake and fire all of the Representatives from the Southern States were ready to vote to send aid and succor to those distressed people. When the great flood swept along the Ohio Valley and brought ruin and destruction to the people there, our fellow citizens of the United States, we of the South were ready to go to the aid of those people. Aye, more than 10 years ago, when the far West was asking that the credit of this Government be extended to them in order that they might make their arid lands irrigable and establish homes for the people in all those great Western States, we went to their rescue and extended the credit of this great Government to the amount of more than \$82,000,000, in order that they might have homes and firesides for their families. And to-day with this great crisis upon us, brought about by reason of the terrible struggle going on across the Atlantic Ocean, we must have aid, and must have it speedily, or ruin is facing the southern people.

I do not doubt the patriotism of any man on the floor of this House, whether he be Democrat or Republican. all Americans and love that flag over the Speaker's head and will pay it the homage to which it is entitled from all American citizens. Gentlemen, this is not a partisan or political It is nonpartisan, and if there ever has been an question. occasion since the bloody conflict that occurred between our brothers of the North and the South when we should lay aside partisan and sectional feeling it is now, and I believe when you gentlemen understand this question as our southern people understand it you will come to our rescue as promptly and speedily as we have gone to others and as we will go to you in the years that are to come. [Applause.]

Wednesday, October 21, 1914.

Mr. HENRY. Mr. Speaker, I desire briefly to refer to the amendment offered by the gentleman from Georgia [Mr. Hardwick]. That amendment is in strict accord with the Democratic traditions of more than 100 years. It provides for the issuance of United States notes. It provides for the issuance and sale of Panama Canal bonds. There have been two theories in this country about the issuance of currency-one that the banks should issue all the currency, and the other that the Government itself should issue it. When the Federal reserve act was passed we abandoned the theory that the banks should issue any of the currency, and that act, in section 16, provides that the United States notes hereafter to be issued shall be called "Federal reserve notes," and shall be the obligations of the Government of the United States, and shall be payable in gold. Therefore, Congress has said that hereafter all paper money shall be issued by the Government and not by corporations and banks, as heretofore.

What is the Democratic faith as expressed in their platforms on that question? Let me read this part of the platform of 1896, which was not only the fundamental faith of our party in that year, but has been the doctrine of the Democratic Party since the first platform on the subject was written in New

York in the early part of the century. It says:

Congress alone has the power to coin and issue money, and President Jackson declared that this power could not be delegated to corporations or individuals. We therefore denounce the issuance of notes intended to circulate as money by national banks as in derogation of the Constitution, and we demand that all paper which is made a legal tender for public and private debts, or which is exceivable for dues to the United States, shall be issued by the Government of the United States, and shall be redeemable in coin.

It is the sovereign function of this Government to coin gold aand silver and to Issue paper money redeemable in coin, or in

gold, if you please.

Therefore this bill proposed by the gentleman from Georgia is bottomed on that plank of the Democratic platform. It is founded on numerous platforms that our party has adopted. It proposes nothing new and untried, but travels the beaten paths a century old. Therefore we are within our rights when we call upon this Government to exercise its sovereign functions and issue \$250,000,000 of "United States notes with all the legal qualities of the United States notes now outstanding." and to deposit those notes-the currency of the people-in the National and State banks of States in order that they may be loaned to the distressed growers of cotton and tobacco on terms fixed by this Government.

Gentlemen, is there any objection to a proposition of that sort? It can be defended anywhere. If I had the time I could elaborate on those propositions, but it is not necessary. I say to this House that the Aldrich-Vreeland Act, having utterly failed to get the currency to the American people, and the Federal Reserve Board, which is being most tardily organized, having failed to respond to the needs of the people, it is the duty of the Representatives in Congress to supply an adequate amount of currency as provided in this bill. [Applause,]

River Improvement.

EXTENSION OF REMARKS

HON. CHARLES G. EDWARDS. OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 7, 1916.

Mr. EDWARDS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include some resolutions adopted by our State legislature.

The resolutions are as follows:

A resolution.

A resolution.

Whereas we believe the people of the United States should never become a war-like people; yet John Hay was right when he said, "No chip on the shoulder, no swaggering before the world, but a firm stand, and deeds when deeds are necessary"; Whereas we feel a national pride in that wisdom and patriotism which have so marked President Woodrow Wilson as one of the greatest and safest statesmen in the history of our country; Whereas in the country's plans of preparedness for national defense as stated by President Wilson, "we can and should profit in all that we do by the experience and example that have been made obvious to us by the military and naval events of the actual present," especially in the country of Germany; and

Whereas Germany has so notably employed her natural resources for national defense, and especially in the example of her taking the nitrogen from the atmosphere, not only to manufacture her needed explosives, but also for the fertilization of her food crops, thus making her independent of her former supply of nitrates from Chile: Therefore by this joint resolution be it

making her independent of her former supply of nitrates from Chile: Therefore by this joint resolution be it

Resolved by the Legislature of the State of Georgia:

(1) That we strongly approve and piedge ourselves to support those ideals and principles for practical and adequate preparedness so patriotically and wisely enunciated by President Wilson in his late speech before the Manhetlan Club of New York City.

(2) That any plans of preparedness for national defense which Congress may consider and finally adopt should include, so far as possible, the economic development of those natural resources of our country which will not only contribute to national defense in times of war but to the Nation's prosperity and wealth in times of peace.

(3) Therefore we especially urge upon the Senators and Members of the Lower House of Congress from the State of Georgia that they press upon the attention of President Wilson and Secretaries of War and Agricultural committee of both Houses of Congress, the serious consideration of the great water powers in the Chattahoochee River, the Coosa River, the Savannab and Ocmulgee Rivers, the Tallapoosa River, and notably at Mussel Shoals in the Tennessee River, which can be developed by the building of locks and dams, and not only improve the navigation of these streams, so long neglected and greatly needed, but also with these cheap water powers provide the Nation with its needed nitrates for explosives in times of war and provide the farmers with their needed nitrogen for the fertilization of their crops in times of peace.

(4) The economic importance of considering the utilization of these

their needed nitrogen for the fertilization of their crops in times of peace.

(4) The economic importance of considering the utilization of these water powers in connection with the Nation's plans for national defense is measured by the important fact that this country has imported Chilean nitrates since the year 1867, to include 11 menths of the fiscal year 1915, amounting in value to \$261,990,054.86, and on these importations the manufacturing and farming interests of the United States, for the same period, paid an export duty to the country of Chile of approximately \$90,000,000.

(5) That our armor-making plants; that our shipbuilding concerns; that our gunmaking plants and our powder-making factories, especially the production of nitrogen for powder making, should not be all closely concentrated in a narrow strip of country from 200 to 300 miles in length and extending on an average less than 100 miles in the interior of the country from the coast, as is now the case, from Connecticut to Virginia, and the Legislature of the State of Georgia respectfully declares that it is the duty of Congress, in adopting any plan of preparedness for national defense, to consider the economic development in other sections of the country, and especially in the South, where, in her navigable streams, are to be found water powers of the magnitude and cheapness that when developed will permit the largest use and scientific application of electricity through the electric furance, which has contributed so wonderfully to Germany's national defense.

(6) That the governor of this State is hereby requested to select and name 15 representative citizens from the State of Georgia to visit Washington during the coming session of Congress and advocate the usefulness and efficiency of this State is hereby requested to select and name 15 representative citizens from the State of Georgia to visit Washington during the coming session of Congress and advocate the usefulness and efficiency of this joint resolution passed by the legislature o

THE CEORGIA COMMITTEE.

In accordance with the attached resolution, Gov. Harris has appointed the following committee to carry out the purposes thereof: Chas. S. Barrett, Union City, president National Farmers' Union, chairman; John D. Walker, Sparta, banker, State senator from the twentieth district; S. M. Jackson, Savannah, labor leader, representative from Chatham County; S. T. Blalock, Fayetteville, banker; J. J. Brown, Bowman, farmer, president Georgia Farmers' Union; John A. Brice, Atlanta, secretary and treasurer Atlanta Journal Publishing Co.; Hellins N. Randolph, Atlanta, attorney at law; J. N. King, Rome, president Coosa River Association; T. P. Johnson, Jefferson, farmer; J. D. Price, Farmington, farmer and commissioner of agriculture; F. S. Etheridge, Jackson, banker, president Georgia Bankers' Association; Rev. R. D. Gray, D. D. Li, D., Atlanta, corresponding secretary Baptist Home Mission Board; Mell R. Wilkinson, Atlanta, business man, retiring president Atlanta Chamber of Commerce; R. L. Carithers, Winder, banker; J. Rice Smith, Augusta, president Georgia Chemical Works.

Cotton.

EXTENSION OF REMARKS

HON. SAM RAYBURN. OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 6, 1916.

Mr. RAYBURN. Mr. Speaker, under leave to print, I present an article written by Mr. W. B. Yeary, of Farmersville, Tex., on the subject of "Cotton—the South's greatest asset." This is an article of much thought on the subject, and it is a question that is vital to our section of the Union, and calls for the best thought of our most eminent writers and statesmen. I do not agree in toto with everything said in this article, but, taken as

a whole, it is the most comprehensive presentation of the matter that I have seen. The article is as follows:

COTTON-THE SOUTH'S GREATEST ASSET. (By W. B. Yeary.) ITS TROUBLES AND THEIR REMEDIES. CHAPTER I.

CHAPTER I.

The United States is mainly an agricultural country, agriculture being its foundation. Like a building, if the foundation becomes weak or impaired the whole structure becomes endangered. A door may first refuse to swing clear, a window let in the wind and rain, causing the plaster to crack. They may be patched and repaired for a time, but it will continue to get worse until the foundation is made strong and secure. The United States has been having internal troubles of a serious nature for a quarter of a century or more. Labor has been arrayed against capital, employee against employer, and tenant against landlord. Strikes and dissensions are almost daily occurrences in all portions of the country.

The foundation of this great structure, agriculture, is weak; it is giving way to pressure it is supporting, which can be plainly shown. Labor is deserting the farm and is crowding out labor in the cities, causing an army of unemployed. People do not leave the farm because they dislike farm life—they like it—but because it is all work and no pay.

giving way to pressure it is supporting, which can be plainly shown. Labor is deserting the farm and is crowding out labor in the cities, causing an army of unemployed. People do not leave the farm because they dislike farm life—they like it—but because it is all work and no pay.

They do not leave the farm because there is no work to be done. There is work for all and more, too. There are ditching and terracing, building and repairing, and dozens of other things to be done, but the owner of the land is not getting enough returns from his land in rents or otherwise to live and have the work done.

When the land is made to pay what it should then the "back to the farm" movement will be a part of the late of the farm who were the late of the farm who were the control of the late of the farm who were the late of the farm who were the late of the control of the late of the control of the late of the control of the late of late of the late of the late of the late of late of the late of late of late of the late of late o

ment.

Scientific agriculture will never be applied so long as only a few can receive it and they retained in the school room. Educated farmers must find farming remunerative enough to cause them to remain on the farm and be prosperous enough to enable them to make experiments, add conveniences and necessities to the farm, breed and develop new and better varieties of plants and stock. But they are barred from an education simply to foster and protect an antiquated system of robbery, plunder, and gambling.

Think of the wonders worked out and developed by Burbank, the plant-life wizard. His work has been on the farm, not in the schoolroom. He has been able to maintain himself on the farm and be worth hundreds of millions to the world. There are thousands of Burbanks lying dormant on the farms awaiting an opportunity to be developed.

Our agricultural colleges ought to be quadrupled over and over again in number and their attendance multiplied a hundred times, which would be if our farmers could spare the services of their boys and the means with which to send them to school.

This defect in our economic system is causing the United States the heaviest waste of any other feature of her system. In the sale of cotton alone there is a loss of at least \$500,000,000 annually from a conservative standpoint. This is only a small portion of the loss as compared

with the washing and wear of the land which would be prevented by the tiller of the land if the loss in the sale of his cotton were prevented.

It would permit him to diversify his crops, ditch and drain his farm, and spend some money taking care of the farm, where, as it now is, he must use all he makes to exist. Thus this great national waste would be prevented and the foundation for permanent development and prosperity would be laid.

The cause for these troubles is plain, easily understood and remedied when once thought out. They are briefly as follows: The farm as a whole has furnished a great deal of hard work but very little pleasure and profit, two essentials to the civilized human being. Pleasures as meant here consist of comfortable homes well-equipped, good schools, churches, and roads, and leisure to enjoy them.

To acquire these there must be some profit in farming. This being deficient, the others are impossible. The reason there is no profit in farming is because there has been no system of sale of farm products at all resembling a commercial system. The next chapter will give some fundamental reasons why there has been no business system adopted for the sale of these great basic products and why it is now imperative that one should be instituted.

CHAPTER II.

CHAPTER II.

WHY FARM PRODUCTS ARE NOT MARKETED AS OTHER COMMERCIAL PROD-UCTS OR AS THOSE OF THE MINES AND FACTORIES.

UCTS OR AS THOSE OF THE MINES AND FACTORIES.

Because farm products have not been marketed like the products of the mines, factories, and other commercial products, many people have the impression they can not be or should not thus be sold.

The reason they have not been so marketed is because there was a time when they were not commercial products, were not even for sale. They were for home consumption, to supply home needs. There were other things that furnished the means with which to buy the things which could not be produced at home.

The changing of farm products from that of supplying the home to that of products of commerce has been so slow and gradual the people have not realized the change. This change has, however, taken place in every civilized agricultural country of the world. It does not mean that every one has taken the steps he ought to have taken in the sale of his products that he should have done. This we will leave for the present and deal with the conditions that exist and have existed in the United States.

In the settling of the United States the new inhabitants found a

of his products that he should have done. This we will leave for the present and deal with the conditions that exist and have existed in the United States.

In the settling of the United States the new inhabitants found a country abounding in natural wealth and resources. The soil was virgin and a fine meadow of hay and parture covered the entire surface. The streams were full of fish, while on their banks stood the finest building timber in the world. Covering these broad prairies and expanding forests were found an abundance of wild game, animals and fowls, that furnished the finest meat in the world, besides among them was an oversupply of fur animals. Men wore hunting clothes every day made from the skins of fur animals that would be a luxury to-day for the millionaire's wife or daughter. Venison, turkey, buffalo, and bear meat was an everyday ration. Wild honey furnished the sweetening. Wheat and corn were only needed for bread, they were not produced for sale.

Cotton was raised in small patches, the seed picked out by hand, carded, spun, and woven into cloth by hand to supply the clothes of the family. It too was for home consumption and not for sale. Gradually the natural products have been consumed, wasted, and frequently burned.

As the wild animals gave way, the grass was used for feeding and grazing farm animals and raising domestic animals. The timber has been used wastefully in building, selling at home, and exporting. Gradually the natural products passed away and then the once home supply products took their place as commercial products. First, in the East, where the natural products gave way first.

Gradually westward this condition spread, consuming the natural products like a wild prairie fire, in many instances, almost as wasteful. During all these years the sale of the farm products has been by a wasteful system of auction. No one knew the cost of production. There was no need to know, only to see the loss as there was no remedy in sight.

The farmers in the newly settled section had the na

economize and compete with them the best they could at the auction block.

About a quarter of a century ago, the remaining natural products of the United States began to melt away very rapidly under the tide of both foreign and domestic limilgration westward. Soon there were no more free natural products and our farm products were compelled to stand the strain that both they and the natural products had been caring for, which is more than they can stand and meet the demands of the present times, under this wasteful system of sale.

The first section of the United States that adopted a business or commercial system of marketing its farm products was the Pacific slope country. They produce perishable products, which are more difficult to properly market than nonperishable ones. They depended upon commission houses to handle their products and had become practically bankrupt. They got together and organized "The California Fruit Growers' Exchange," which is a producer's exchange. It simply acts as a selling agency for the producers, the thing the producers of cotton must do in some form.

The managers study the best way to pack and prepare their fruits for market that will best suit the trade. Their system has made them the most prosperous of any section of the United States. If this kind of a plan will succeed with perishable fruits which have competitors all over the world, what can be done with cotton, a nonperishable product and one that we can not or have not been able to produce a surplus of?

The methods used for the sale of the products of the mines and factories, and all commercial or business producers, is to store or warehouse their products, set a price on them and sell only what the consumers require at such price. If necessary they borrow money on them. As the people who produce farm products come to realize their products are commercial products, they discover they must adopt such a system of sale. Their only trouble is to study how to educate the people to the necessity of cooperating and how to ar

done with all nonperishable products. It must be done by cooperation; there is no question about it. The number of sellers must be reduced, and to one if possible. There have never been a mass of men who made a success, were prosperous, or fulfilled their aims except by cooperation. The nations of the world have their rules and laws to be governed by, which are only rules for enforced cooperation. The same may be said of our States, counties, cities, and towns. They all have their laws binding all to cooperate for their mutual good. The same is true of our churches, schools, armies, societies, and so on. The closer they cooperate the more complete their success.

Some hesitate at trying to get the farmers of any section to cooperate. They realize that those engaged in handling any of these products will try to prevent the people from organizing, knowing that organization is injurious to their business. Many of them doubt the ability of an association to withstand their attack unless the National or State Government will cooperate with the association, thinking the National and State officials are largely guided by the opposition.

This was the opinion of many in California with reference to the commission men of the whole United States, who were the beneficiaries and profit takers in marketing their fruits before their exchange was established, but their opposition was overcome and success followed. In the matter of cotton, several of the States are freely cooperating with the people in marketing; among them can be mentioned Texas, which has passed a warehouse and marketing law. It is not perfect, but shows the State realizes something should be done along this line.

While it is thought to be a big undertaking by many, it will be seen that it is not a big one, but a very important one, Cotton being nonperishable and so little surplus, makes it the easiest of any product. If it be necessary for the National or any State Government to assist the people in extricating themselves from the ravages of a plundering s

and must be met and treated as such in marketing as well as in producing.

No longer can we listen to how our neighbor, father, or grandfather made money and paid for a home in past years. Their opportunity is not the present man's opportunity; we should be thankful for all of the good things of the past, but they are gone, and the present must be met and dealth with as it is.

CHAPTER III.

GOOD FARMING ESSENTIAL, BUT NOT ALL.

Rural conditions grow worse in the South as the country becomes settled. This applies to any new section that must grow and sell cotton under past and present conditions. Better farming has been urged; economy has been talked and practiced by force of circumstances; diversification has been preached, work harder, and more of it advocated; better seed and implements given as the panacea. All have been tried out so far as practical. The actual farmer realizes many good suggestions are often given him by well-meaning men and would have been in practice long before these good-meaning men gave them, if it were possible. The farmer knows that these good suggestions cost money to put in practice, and he already has more debt than he can pay; he also knows many of the suggestions are not what they appear to be. That many of them are not dependable and that cotton is dependable, and his creditors also know it. Both know that until something more substantial in the way of prices for cotton is had that new things and methods can not be gone into too deeply. Every community has seen men adopt new ideas that ended in failures. All realize good farming is essential, but it is not all that is needed on the farm. It is just as important for a farmer to sell his products for a profit as it is anyone else. Not to do so is just as sure to lead him to bankruptey as the same practice would a manufacturer or merchant.

In another chapter will be seen the cost of cotton and that it has

on the farm. It is just as important for a farmer to sell his products for a profit as it is anyone clse. Not to do so is just as sure to lead him to bankruptcy as the same practice would a manufacturer or merchant.

In another chapter will be seen the cost of cotton and that it has been sold far below cost for many years, and the producer has existed only by the free labor of his children and women folks and practicing the most rigid economy in living and work.

Who has been benefited by the sacrifices made by the cotton producer forced on him by low prices? Certainly not the country merchant who sold him goods he could not pay for, nor the one who would not sell him fearing he would not make enough to pay for them, nor was it the wholesale house whom the retailer could not pay, or the one who kept his goods on his shelf when millions of consumers needed them. Neither was it the manufacturers in the far North and East who make everything the cotton producer requires, who has had to run on short time or close down for a time because the producer of cotton could not buy and pay for his products. Nor was it the laborers who worked in such factories who were thrown out of employment while the factories were closed. The business in the northern and eastern cities which depended upon these factory hands was not even benefited.

The railroads, whose palace cars have vacant seats, would like to be filled with the cotton producer and his family occasionally and which haul the freight he would like to buy, have lost the income of such travel and traffic, and have received in its stead abuses from the cotton producers, nourished by demagogic politicians for their votes. Being hard pressed and like a drowning man grabbing at a straw, they frequently follow a bad leader. It can not be said that the carpenter without work, while the farmer was living in a house that would not turn sunshine, winter's blasts, rain or snow, was the beneficiary, nor was it the lumber dealer, sawmill man, or the day laborer who was cutting the s

to have brought. The system is at fault and it is the business of the producers and their friends to make a change in their own interest.

The productive end of farming has received its share of attention until the business end has had some attention. Then better farming will make rapid strides, the land will be built up, homes improved, and general progress will be seen. Then business will be on a safe basis and will know what to depend upon. Business can not be any safer than its customers' business.

CHAPTER IV. DIVERSIFICATION.

CHAPTER IV.

DIVERSIFICATION.

Of all the means of relieving the cotton producer, there is possibly more talk about the necessity of diversification than anything else. That diversification is necessary to the upbuilding of the soil or keeping it from washing and becoming impoverished, all are aware. The soil must have rest, a change of crops, recreation. It should be treated as a horse or human. Hard work, no rest, and eating one diet all the time will exhaust either; they will become weak and unfit for service. How is a man, woman, or horse to get rest, recreation, and a change of diet, and, like a slave, be compelled to work every day and eat one diet? The large majority of the land is like a slave; it must do service every year, service that will remunerate the owner or tiller for his services of cultivation. When a man or woman goes to the seaside or mountains in the summer for a vacation, he must have some money to pay expenses, and his work must be carried on by some one else while he is away. Their pay must be enough to justify the expense and the employment of help while they are on their vacation. If a horse is given the run of a pasture during summer and allowed to rest, his work must show up pay enough that the owner can afford it. If the land is given a rest, we must remember it is very seldom it can be done without an expense to the owner or tiller, and not at a profit. Renovating crops are seldom paying crops, to the contrary they are an expense. Like the human or horse, it must pay enough while producing its best adapted paying crop to allow it to rest and spend some money on it. If it does not do this, then, like a slave, it must work without rest. The South must have enough out of its money crop, cotton, to allow at least one-fourth of the land to rest and be renovated each year or the business of the country, as well as the producers, will soon regret their lack of giving cotton their active at tention.

There is not a practical farmer in the South who will top verify this statement. There is

cotton, to allow at least one-courts of the country, as well as the producers, will soon regret their lack of giving cotton their active attention.

There is not a practical farmer in the South who will agt verify this statement. There is not one in a thousand who does not know he is doing his land an injustice by running it in cotton too much. Not his land alone, but future generations are being badly injured. It is his linability for not stopping it, and not his lack of better judgment.

Very frequently we hear men from universities and colleges, editors of papers, and Government officials, as well as many others who are oversupplied with free advice, advising the producers to do this, that, and the other thing to build up the land and increase its production and thus relieve his condition. They may mean well—some do—but there are grave doubts about others. Many times, most times, these men have the means at their command, more than likely taxed from the producers, to do anything they think best, and in giving the advice they seem to think the producer has plenty left. So they, not being acquainted with the producer's financial condition, think him dull and finorant because he does not fall over himself following their advice. If the producer should have the nerve to suggest to such men that his trouble was in not being able to sell his products for their value, that the system of selling cotton was not a decent makeshift for an uncivilized people, the chances are that this friend would paw the air and defend speculation equal to the speculator, although he could not give a single idea of the working of the system that is robbing the producer. He seems to have been trained to production, to study nothing but production, and to call on the legislature for money to continue the expense of talking production. The means having been appropriated and not earned, he has lost sight of the business end of farming and is frequently the productor, so have been trained to production, to study nothing but production, and

Farms are not all alike; some have abundance of water for stock raising; some can not have. Some have one kind of soil, some another. Some will produce one kind of diversified crop and some another. As stated, the ability to get away from the one crop is the main trouble. Price, a marketing system, will do it quicker than any or all others. Let us talk diversification, let us preach diversification, but let us talk and preach the stumblingblock out of the way of diversification

CHAPTER V.

CONTRIBUTIONS FROM T. F. GILLEY, CALDWELL, TEX., A LARGE COUNTRY MERCHANT OF LONG EXPERIENCE.

Dear Mr. Yeary: When fat cattle roamed a free range and browsed undisturbed on the luxuriant mesquite and other native grasses that covered a thousand hills; when native hogs grew to killing size on lands and in forests that knew no owner; when our many streams of sparkling water were alive with silver-side perch; when deer, the wild turkey, the prairie hen, and other game, both large and small, were found unsought and bagged with ease; when our lands were fresh and vigorous, with a yield of much more cotton and corn than it gives to-day,

in those days it was not so necessary to practice rigid economy and our business was done in a more or less haphazard sort of a way, and it was then that the present system was put in practice.

We then had those natural resources of the country that we could use without money and without price. If we did not get a fair price for our cotton, we could better afford to sell it for less. On account of our easy, careless life we drifted into an easy, careless method of selling.

Now it is very different: the dawn of another day is fully upon us.

of our easy, careless life we drifted into an easy, careless method of selling.

Now it is very different: the dawn of another day is fully upon us. We find that the system that was satisfactory yesterday is dragging us down to poverty to-day.

The natural resources of the country are entirely exhausted; we must depend wholly upon our cotton for support.

No more fat beeves that cost not one penny except the trouble of marking and branding to slay and eat. No more fat hogs to be slaughtered on the range, wherever found, with the spareribs, the hams, the jowis, the backbone, and all to be divided among the neighbors without thought, comment, or account. No more fleet-footed deer to race o'er hill and dale. No more fresh virgin soil to yield abundant crops without expensive and systematic cultivation.

To-day our crops are more expensive to raise and not so certain, because of the weakened condition of the land, which requires more skilled cultivation.

The time has come when much of our land should be invigorated—the soil renewed by turning under green crops, alternated with cotton, and otherwise restoring it to its original fertility as nearly as possible.

As the exhausted condition of the land causes each year a gradual decrease in yield, so in inverse proportion is the cost of production increased.

The changed conditions confronting us are forcing us to a more

and otherwise restoring it to its original fertility as nearly as possible. As the exhausted condition of the land causes each year a gradual decrease in yield, so in inverse proportion is the cost of production increased.

The changed conditions confronting us are forcing us to a more economical method of marketing, and unless we establish a system by which we can control the price of our cotton and maintain a price equal to or above the cost of production our financial condition will certainly become more alarming.

A system of selling cotton on the same basis as any other commercial commodity is sold—that is, to fix a price at the cost of production plus a reasonable margin of profit—can be established and maintained. The seller of cotton has the same right to price his goods as the seller of any other commodity has, and he can more easily do it, for the South owns absolutely all of the American cotton. He holds a monopoly in a world-wide necessity, and his opportunities for profit are beyond his wildest dreams.

But why should we write or talk more without definite action? Every substantial thinking man in the South knows what must be done to give justice to every line of business. Everyone knows that under the present system no business in the South can attain a satisfactory degree of permanent prosperity. Everyone knows we have a monopoly on cotton that should be used to give us a profit instead of being sold on an average at an actual loss. We all know that, while other parts of the world produce some cotton, the American cotton stands in a class to itself and none other is really a competitor. We now have the business integrity and efficiency, and public sentiment is fast crystallizing in favor of a more sensible system of selling. The one thing needful now is unified cooperate in this movement, and there by greatly increase the profits of each.

T. F. Gilley.

GILLEY'S GRAPPLINGS.

The profits of each.

GILLEY'S GRAPPLINGS.

I have many lines of goods for sale. When I decide to advance the price of any line, I do not ask the aid of the Government in doing it. I never stop and ask myself the question. Can it be done; can I get a higher price? I just simply place a higher price on the goods and inform the buyers that they can get the goods for no less. During 32 years of experience I do not think I have failed in a single instance of getting the advanced price, and after the first few days the buyers paid the higher price just as willingly as they had paid the lower price. I do not own all of the goods in my lines, but have many competitors who have goods similar to mine.

The southern cotton growers have a much better opportunity of advancing the price of their cotton, for they own absolutely the world's supply of American cotton, and there is no one on earth to cut the price and supply the buyers at a lower price. The American cotton grower has a world monopoly on his line of goods.

Objection has been raised to the cotton grower fixing the price on his cotton on the ground "that it would be marketing the cotton through unnatural channels," and the price of cotton "should seek its level like water running downhill." The owner fixing the price is not an unnatural method, for every commercial commodity except cotton is so sold. It is not forcing it through "unnatural channels" for the South to put it on the market as the market can absorb it; that is, as the world needs it for actual consumption. But it has heretofore been forced through unnatural channels by forcing a year's supply on the market in market here or four months. If the flour millers of this country were to grind the whole crop and force it on the market between September I and January I, regardless of the needs of the people and at any price the people would offer for it, do you think the millers would make much money? Do you think they would really much "dough" from the sale of their flour? If they should practice such metho

reaks out and every particle of damage that beaks is add to the burden of the grower and cuts a little out to the price the buyer devices to pay him, regardless of some individuals' statements to the contrary.

The ginners in this town (Caldwell, Tex.) have for many years past sampled the cotton, and the ginners in very many other towns do they out a word. Then why raise such "a bue and cry" about buying in the future from the ginners' simples?

Those who object to any and every improvement in our marketing simple of the cotton of the sampling as the great "burgaboo," but that is not read to the cotton of the read objection, for that law goes a lot further than that. That has goes on and proceeds to say that the warehousemen must do they could be contrary. The country of the read objection, for the buyer's hands: Why, that is called the country from him just one-half of his authority; heretofore he not only priced your cotton taken out of the buyer's hands: Why, that is called in the hands of the warehouseman, a dicinterested party, who is under privileged to class your cotton a whole grade below its real class and price it accordingly, but the seller will tell the buyer the class of his cotton, and the seller will know by his delity puper the price of that exists and the seller may know whether he is getting full value for his cotton, and the seller may know whether he is getting full value for his cotton, and the seller may know whether he is getting full value for his cotton or not. by the warehousemen, a disherenced, ended man, and the class in the price of the cotton will be controlled to the seller may know whether he is getting full value for his cotton or not. by the warehousene segging uncert. and then have your warehousemen class your cotton, and you will have taken a long step toward getting a better price for your cotton. Leading the beging uncert.

The classing by the warehousemen a displayed the proposed warehousemen class your cotton, and you will have taken a long step toward getting a better pr

CHAPTER VI.

RURAL CREDITS.

Rural credits is receiving its share of attention all over the Nation. Whether the movement took its start from sympathy for the rural districts, seeing they needed relief, or whether, as some think, that certain moneyed interests saw the rural needs and devised a plan of help for themselves, hoping to get it through by appealing to the sympathies of the people for the rural districts, does not change the conditions in the rural districts nor minimize the needs of the people.

The tendency seems to be to have a rural credits system based upon land or nothing but land as security for loans. A system of this kind would serve less than half of the people in the South, that half which has land or money enough to half pay for a home, the class which needs help least. The other half would not be benefited at all by such a system if it stopped there. The landless man would, more than likely, be in a worse fix. In Texas we recall several instances in which certain

interests have made repeated efforts to have the homestead law changed or practically set aside so the homestead could be mortgaged. Whether there is anything behind this movement of this kind or not might be conjecture, but it might be well to keep schemes of this kind in mind. The system of allowing farmers with small amounts of money to chip in and organize a bank to loan money to farmers to improve or buy homes at a very low rate of interest does not look practical or adapted to any section I have visited or any people I have been acquainted with. But if there was a law made laying aside our homestead law, I can see where others would make a rush to loan money on it. The farmers not being able to repay the loan would soon increase the number of landless men.

From my observations in the South the graph condite that the content of the second conditions and the second conditions and the second conditions are set of the second conditions and the second conditions are set of the second conditions and the second conditions are set of the second conditions are set of the second conditions and the second conditions are set of the second conditions as the second conditions are set of the second conditions are set of the second conditions and the second conditions are set of the second conditions are sea

not being able to repay the loan would soon increase the number of landless men.

From my observations in the South the rural credits that is most needed is a system based upon personal property to prevent such property from being forced upon the market and sacrificed. This would help not only the man who owned land or had money enough to pay half on a home but would help the man who had neither to get out of the landless man class. If such a system can be devised, and some of our Congressmen were working on that line, it would certainly be preferable to one based upon land alone.

If there be a need for a rural credits system in the United States, why not ask ourselves the question, What produced that necessity? If this question can be answered, then why not remove the cause and let the trouble correct itself like any other disease or trouble. If a doctor is called to see a patient, he diagnoses the case and goes to work to remove the cause; as soon as this is done the patient begins to improve and is soon well. Why are there so many homeless men in the United States and especially in the cotton States? Some doctors say they do not know how to farm. It has been tested, and when placed side by side with experts they come out ahead. The average farmer has as much good, hard horse sense as any class of people that can be found. Then this would not appear to be the correct diagnosis of the trouble. Some say they produce more than the world needs. If this be the correct diagnosis, then where is the surplus of the last 50 years? Some doctors insist that cotton has been sold for much less than it actually costs to produce it for the last 25 years. Many farmers and experts say and have proven this to be the case. Conditions all over the South prove this diagnosis to be correct. All economists, business men, wise men, and even fools will swear that if anyone continues to sell his merchandise, wares, labor, or fruits of his labor for less than they cost or less than it costs to produce them he will get in a bad fix, fai

Then why not remove the cause and let them get well? Let us see what kind of a rural credits bill the National Government could establish and remove this cause.

We know that if the people were organized and enabled to hold and warehouse their cotton cheaply and would set a price on it, sanctioned by the National Government, and the Government giving the organization its encouragement and assistance cotton would readily bring the price set. At least all that the world needed would bring the price. We have now the reserve banking system. It is run according to the law of the National Government. The law says the country banks and others that take stock in them. The reserve banks can only make loans to member banks, meaning the country banks and others that take stock in them. The reserve banks will accept the member bank's note, with the farmer's note or other notes attached to it as collateral, and loan the member bank money at a low rate of interest. If the member banks care to, they can accept the farmer's cotton warehouse ticket and loan him money, attaching the first to his note as collateral. The farmer paying the country bank making from 5 to 6 per cent in the transaction for guaranteeing to the reserve bank that the note will be paid. This may not be too much interest for the country bank to have for the trouble and risk of guaranteeing the payment of the note, but it is too much for the farmer to be forced to pay for the good of all. The farmer is furnishing the security. There is no better. The bank will only loan him three-fourths of the value of the cotton. To prove that it is first-class collateral the same no property or commercial rating. In many cases the bank would not lend the buyer \$25 on his personal note at all. This shows the value of the cotton as a collateral and that the farmer's cotton is what is securing the reserve bank and at three-fourths of the market value the reserve bank considers it first-class security. Now, why not have the Government the same as the banks and make the loan f

at present land mortgages are taken and money loaned on them for from 40 to 60 per cent of a conservative cash value of the land. The land in the cotton belt only pays, on an average, about 2½ per cent interest on the value of the land; then there is good reason why a loan of about 50 per cent is all that lenders are willing to make. If the land was paying a good dividend, sufficient to keep it up in good repair and the loan or mortgage was certain to be paid at maturity, the loaning value would be 80 or 90 per cent and tenants and the landless class could more easily acquire homes. The safer the collateral, the cheaper the rate of interest and a greater amount will be loaned on the collateral. Risks make high rates. Long time and low rates of interest do not do the man who is working at a wage scale that barely allows him to live any good. He can not take advantage of the opportunities offered him. The thing he needs is a raise in wages, which can only be done in the case of the cotton producer by increasing the price of cotton and stabilizing the price to supply and demand of actual cotton, and not to gambling contracts.

The object of the rural-credits advocates, or many of them, seems gambling contracts.

The object of the rural-credits advocates, or many of them, seems to be to furnish the rural settlers some way to borrow money. The

thing they mostly need is some arrangements whereby they will not need to borrow. Debt is what they want to get rid of, and not deeper in. If such an arrangement is made it will create enough local money, supplemented with easy money from other sources, to satisfy the borrowers and increasing the supply will reduce the rate of interest within the reach of all.

The writer has traveled pretty well over the South in recent years studying rural conditions, and the above ideas of rural relief will fill the needs of practically every inhabitant in the South, according to his understanding of the conditions of the people.

CHAPTER VII.

THE COST OF GROWING COTTON.

the needs of practically every inhabitant in the South, according to his understanding of the conditions of the people.

THE COST OF GROWING COTTON.

TOSSIGNY there is no product of the sell that is of as mich importance to commerce and the cost of production so little known as that of cotton. The entire business of the South depends upon it, and always will, and the manufacturing business of the North and East depend largaly upon the South. The world looks to it with intense interest. Then there is no reason why all soll to the control of the control of

of the soil and cultivates his crops sufficiently to produce a maximum yield.

"On four farms, varying from 1,000 to 1,800 acres, in the year 1912, the total expense of growing cotton per acre on each farm was \$22.19, \$21.48, and \$23, respectively. These charges included all of the charges of growing the crop, harvesting and hauling it to market, also interest on the stock and equipment, but does not include any interest charge on the investment and buildings or rent on the land.

"The first farm mentioned was a farm of 1,080 acres, operated by one boss, and employing Mexican labor at \$1 per day. The itemized expenses, including the picking, were:

The constitution of the contract of the contract of the ${f r}$	er acre.
Labor Feed for mules, in addition to that grown on farm Supplies and repairs Poison Fertilizer Depreciation on stock and equipment Overhead expenses, taxes, supervision, etc.	\$12. 87 4. 15 .68 .74 .15 1. 90 1. 50 .20
Total	22. 19

"If we add to this a rental charge of \$5 per acre, it would make an acre of cotton cost about \$27.19. This particular farm produced that year 650 bales on the 1,080 acres. Granting the cost per bale of picking and hauling to the gin average \$10, the total cost of picking and hauling would be \$6,500, or about \$6 per acre. Deducting this from the \$27.19 we find the actual cost of growing the cotton to be \$21.19. From these figures I submit the following estimate based upon varying yields:

	Pounds.	Pounds.	Pounds.	Pounds.	Pounds.
Yield of seed cotton, per acre	300	600	900	1,200	1,500
Yield of lint cotton, per acre	100	200	300	400	500
Cost of growing cotton, per acre.	\$21.19	\$21.19	\$21.19	\$21.19	\$21.19
Cost of harvesting, per acre	2.00	4.00	6.00	8.00	10.00
Cost of ginning, per acre	.70	1.40	2.10	2.80	3.50
Total cost, per acre Value of seed, per acre Cost of lint, per acre Cost of lint, per pound	23.89	26.59	29. 29.	31, 99	34.69
	1.50	3.00	4. 50	6, 00	7.50
	21.39	23.59	24. 79	25, 99	27.19
	.213	.117	. 082	. 065	.054

"Average production in United States is less than 200 pounds of lint, "Average cost of lint, per pound, must be more than 11.7 cents, "Average cost of lint per pound where one-half bale is made, approximately 10 cents,
"Of course, it is true that it costs more to grow cotton in the bottoms than it does on the prairies or hill land, but the yield is usually more. Our land is a black prairie soil, perfectly level, and reasonably casy to work. more. Our leasy to work.

""Of course, it is true that it costs more to grow cotton in the bottoms than it does on the prairies or hill land, but the yield is usually more. Our land is a black prairie soil, perfectly level, and reasonably easy to work.

"C. H. ALVORD, "Suporthectedent of Farms."

No better authority can be found on farming or farm management than C. H. Alvord, and no better place in the South to demonstrate his ability. If it costs the Taft ranch, well equipped as it is, 113 cents per pound to produce 200 pounds of cotton, it would cost 124 cents to produce the average of the United States, 190 pounds. If it costs 113 cents, cultivating 50 cents to the hand, it would cost the farmer who could only cultivate 40 acres 15½ cents per pound and the one cultivating only 30 acres 20.7 cents. As the average production is about 190 pounds and the average number of acres that one hand can cultivate is about 35 acres, the average cost for the United States is about 172 cents per pound, not counting fertilizer, so largely used in the Eastern States.

There are a few points in Mr. Alvord's statement that should have some further thought. His picking costs him from 40 to 60 cents per hundred pounds of seed cotton—most other sections cost from 60 cents to \$1—making the picking costs him from 40 to 60 cents per hundred pounds of seed cotton—most other sections cost from 60 cents to \$1—making the picking on much the cost of feeding the mules was depends upon how much feed they raise on the farm. It will also be noticed that he does not make any charge for the teams or implements, but charges \$1.90 per acre instead for depreciation of teams and equipment. This is what has been found to be the true value of them. It might be suggested that if the producers of the South would practice better cultural methods they could produce more per acre, and thereby reduce the cost per pound. It is possible to increase the yield per acre, but not so much by better cultural methods as by planting a part of the land in renovating crops and building the s

can do a man's work, are receiving the same. If he sells at 9 cents, he is receiving 50 cents per day, and at 50 cents it is possible to exist and stay out of debt for a time. His wages are in proportion to the price of cotton. The financial condition of the cotton producers and those depending upon them for trade are pretty good evidence that the above figures are not far from correct. By examining the county records of the older cotton counties of Texas—and I suppose the same is true in other States—there will be found from 3 to 10 chattel mortgages to each voter in the county. These mortgages are given for past debts and for present supplies, and have been on the increase for the past 25 years. The conditions described in other articles give further proof that the cost or value of cotton is somewhere above past prices. I am sure the Taft ranch prices are the minimum' cost of producing cotton, and nothing lower than these prices with a fair profit will ever permit the South to become prosperous.

The following letter from T. F. Gilley, a large general merchant of Caldwell, Tex., and not written for publication, bears on this subject and is self-explanatory:

Caldwell, Tex., June 16, 1915.

CALDWELL, TEX., June 16, 1915.

Mr. NATHAN ADAMS. Cashier American Exchange National Bank, Dallas, Tex.

Mr. NATHAN ADAMS.

Cashier American Exchange National Bank, Dallas, Tex.

Dam Sir: News item in Fort Worth Record to-day quotes you as giving utterance to some very important facts at the bankers' consequence of that the manner of marketing cotton is by far the most important subject before the American people to-day. I find the fewest number have the slightest conception of the average cost of producing cotton. The price of cotton—that is, the price the grower receives—affects the prosperity or adversity of more people than any other commodity, barring none, not even wheat. The prosperity of the entire South and almost every individual in the North and East is affected, not so much by the yield per acre as by the price the grower receives—History shows that in every period of depressed price of cotton, although there might be a large crop, yet the entire South is reduced to an impoverished condition, and the same is felt, more or less, throughout the North and East.

You are quoted as saying: "When you get the full value out of cotton you will not see women going to the fields to pick cotton."

Neither will you see little children and grown-up boys and girls kept out of school and robbed of the education so necessary to their becoming useful and honorable citizens of this country, in order to make and gather a cotton crop. The antiquated, haphazard, slipshod system of marketing the cotton crop heretofore employed is the cause of more liftle racy in the South than all other causes combined. I have seen girls, young ladies, from 14 to 20 years old, soaking wet to their knees and their arms wet to their shoulders with the cold dew picking cotton. I have seen them bending over the cotton row drawing a Goin. They could not be spared from the cotton fields to attention. Many of them were never advanced higher than the third, fourth, or iffth grade of their common country school, yet many of these young ladies have just as a bright minds and just as capable of receiving a finished education and becoming polished and

HOW THE PRICE OF COTTON IS MADE.

CHAPTER VIII.

How the frice of cotton is made.

Comparatively few people understand how the price of cotton, the chief product of that portion of the United States known as the Southern States, is made. If it were generally known it is impossible to think that the system would be allowed to exist and control our welfare or rather bring us to ruin. The present system originated at a time when the South was destitute and without the means of securing credit except through raising cotton. The first crop made on credit was that of 1865; it was mortgaged before it was produced, to pay for its cost, and if anything was left it was to go on past-due debts. Cotton was then, and is now, the only hope of happiness and wealth for the South, and yet it is the curse of that section, because its people will not unite in forming a marketing system to conserve its wealth.

From 1865 to 1875 the production of cotton brought into existence a million or two bales more than the annual needs of the consumers. It was bought and taken charge of by the users and has since then been called a surplus, aithough had any one crop been a failure the supply would have been only enough for two months' use.

The credit system which has existed for 50 years and still exists, makes it necessary for the farmer to sell his cotton as fast as gathered, and the users having the surplus in their possession can and do not only stay out of the market in the fail months, except at lower prices, but actually assist in making lower prices by selling future contracts against cotton they own or control, and also contracts which they do not expect to deliver, but will repurchase when the price has been beaten down to a satisfactory basis to themselves. This can always be done, because the producers are not organized and the other side is organized.

Go back over the last 40 years and you will see there are two prices for cotton—the low one in the fall, or when the farmer has it in his

hands, and the other in the spring, when the user or speculator has it in his hands.

Exchanges were originally intended to be run honestly in the interest of the people who bought and who sold. Naturally when markets, on account of but few railroads, were separated by long distances from producers, the purchaser became the dominant or ruling power, and the rules and regulations began to favor the ruling power until the producers were lost sight of.

The Government has recently begun to take notice of the conditions, and laws may change them, but not unless the producers organize for their protection and use their power.

There are several exchanges which deal in cotton, both spot and future, but there are two which seem to control, New York and Liverpool. While these exchanges answer their purposes almost perfectly, it must be remembered that their purpose is not to serve the producers interest, who rarely, if ever, use them. The purpose of the exchange is twofold, one is to furnish the public a place and means for speculation in the future price of cotton. The results of such speculation determine the price of spot cotton. The next use for them is that if a dealer in spot cotton, a cotton buyer or consumer, buys actual cotton to-day, he can sell future contracts against it, and in this way protect himself against a possible loss by a decline in price, or if he should sell or agree to deliver a certain number of bales at some future date, he could buy future contracts are called hedging. Like all other future contracts.

against a possible loss by a decline in price, or if he should sell or agree to deliver a certain number of hales at some future date, he could buy future contracts and protect himself against loss in case of advance in price of the countracts are called hedging. Like all other future contracts, the countracts are called hedging. Like all other future contracts, these hedging contracts must pay a brokerage fee of \$20 for every 100-bale contract. The purchaser or seller of a contract must make a deposit to guarantee his good faith and to maintain this deposit at the same relative value as when the purchaser or sale was made.

These exchanges may be truitfully called purchasers occanages and the same relative value as when the purchaser or sale was made.

These exchanges may be truitfully called purchasers occanages of production; that is, if it should cost 12 cents per pound to produce oction, and the spinners were willing to pay 16 cents for it, if the producers were compelled to throw it on the market faster than the consumers could or would take it, speculation would be governed more by supply and demand of the actual cotton hereafter.

Nother the producer's interest, nor the value of cotton, based upon cost, is considered. It will be seen they are a makeshift for the producer's interest nor the value of cotton, based upon cost, is considered. It will be seen they are a makeshift for the producer's interest near the producer's exchange; when the absence of a better arrangement or a producer's exchange, in proportion to the amount of cotton placed with it for sale. This has been proven in the case of ban Suly in 1903; Haynes, Brown, Scales, in proportion to the amount of cotton placed with it for sale. This has been proven in the case of ban Suly in 1903; Haynes, Brown, Scales, in proportion to the amount of cotton placed with it for sale. This has been proven in the case of ban Suly in 1903; Haynes, Brown, Scales, in proportion to the amount of cotton placed with it for sale. This has been proven in the case

only recent occurrences is the reason they are given; similar ones are frequent. Many "lambs" were sheared of their last vestige of wool (money) in this manipulated decline, and some "bear" went home with a full belly. Such shameful transactions mean, for every \$5-decline, \$75,000,000 loss to an average cotton crop.

The cotton farmer and those dependent upon him are depending upon this kind of machinery for their support. Will they continue to depend upon it or will they act like business men and establish a producer's exchange and support and insure the success of their business? It may be argued that speculation is as liable to rush to the "buil" side and make abnormal high prices as it is to go to the "bear" side and make prices low. There is quite a difference; men who buy things for speculation feel much safer in buying them below their value than at or near their real value. Some 'buil' speculators may feel safe in risking some money on higher prices, but the higher the price goes, or the nearer the price gets to real values, the fewer there will be found who are willing to risk their money and keep on buying, unless they have support by the producer in holding his cotton off the market. If this is not done the "buil" speculator will unload and jump from under the market and let it decline, taking his profit when he sees danger. The cotton producer and his friends must do their duty and relieve themselves if they want relief.

Another aid the "bear" has over the "buil" is that each consumer or buyer is trying to buy as cheap as possible and doing all in his power to reduce prices, and the producer being in debt, not organized, is forced to place his cotton on the market faster than the consumer can take it and in his way depressing the price and aiding the "bear forced to place his cotton on the market faster than the consumer can take it and in his way depressing the price and aiding the "bear forced to place his cotton on the market faster than the consumer can take it and in his way depressing the pri

CHAPTER IX.

THE EFFECT OF ORGANIZATION ON THE PRICE OF COTTON.

The effect of organization, or systematic marketing on the price of cetton, will no doubt be very surprising to one who has not given it close study. This article will, no doubt, be next to alarming to the reader who has not been a student of these efforts and noticed the

cetton, will no doubt be very surprising to one who has not given it close study. This article will, no doubt, be next to alarming to the reader who has not been a student of these efforts and noticed the effect.

When one reads the chapter, "How the price of cotton is made," and realizes the effects on the market of trifling and insignificant reports and incidents, then he will not be so much surprised at the effects of such efforts. When he realizes that one big dealer can enter the market and attract the following of hundreds of small speculators to his side like flies to a carcass, then it is that he can see why they would naturally flock to the side of an organized effort of the producers and their friends to market the cotton in a business way, which would be a thousand times stronger than any individual speculator or a combination of them, for such an organization would not only be taking large quantities of real cotton, not contracts, off the market, but it would be causing others to hold their spot cotton off the market who could not be persuaded to cooperate with the organization. Naturally any speculator would be afraid of such an organization and would get on its side. The consuming world would not feel like staying out of the market, fearing they would have to pay higher prices, and would buy more freely and thus assist the organization along. The natural tendency is that when the producer starts to help himself in a business way all aid, except the real enemy, gets in the boat with him, and if he pushes his efforts as he should, the enemy will get out of the way of price making and enter the ring of mud slinging to discourage and frighten the producer. Speculation in cotton dwells in a glass house and can not stand the stones of a business system of marketing. One of the most important reasons why speculation is so easily frightened is because that, while cotton is good for 50 years if kept dry, the supply has not been more than the demand for half a century and nearly every year is short, and thi

year. The price the farmer received must have been from 1 to 2 cents per pound less than these prices, but they are the best guide available.

Year.	Acreage.	Yield.	Price.	Who made the price.

people have but little respect for the union and some of its leaders, its work during these three years was worth at least \$500,000,000 to the

people have but little respect for the union and some of its leaders, its work during these three years was worth at least \$500,000,000 to the South.

The price dropping so low in 1908 aroused the patriotism and sympathy for the South, coupled with an opportunity, possibly, to make some money, of Haynes, Brown, Scales, and others, who decided to get in control of the temporary surplus cotton (there being no surplus but temporary) and hold the price up to something near its real value. They began in 1909 and worked vigorously through that year and 1910. Their efforts were crowned with success, making the price for 1908 14.3 cents and 1910, 14.7 cents, an average for the two years of 14½ cents. Remember, the price for 1908 was 9.2 cents, and for 1911 was 9.7 cents, an average for the two years of less than 9½ cents, a difference of 5 cents per pound, or \$25 per bale. They were indicted in the winter of 1910 for violating the Sherman antitrust law, for advancing the price of cotton, which it was claimed restrained trade. In this case the Government, through its Federal court, admitted that they did put the price of cotton up and fined them for it and made them quit.

If they did not have an effect on the price, as will be argued by the enemies of the cotton producers, then the Government was mistaken or erred, and their money should be returned to them; but they put the price up; they did not deny it, nor did their accusers; but to the contrary they swore they put it up. This shows what a strong, compact organization will do for the price and can not be denied. The bear "speculators whom they were forcing to the wall, and no doubt who caused their indictment, believed it. There was no other cause under heaven for it to advance. Then let us see how much cotton they took off the market and the benefit they did the cotton farmer. The price the year before was 9.7 cents, an average of about 9½ cents for the two years. The average price at New Orleans for the two years for their populations what have a superserved the

He knew he could produce it much cheaper than the average cotton producer was an expert at production, and his relief had to come at the marketing end of his business.

So this man decided to do his duty toward relieving the distress, misery, and want in the South by organizing and putting in operation a producers' cotton exchange. An exchange or selling agency by and for the producers. He started the organization in September, 1911. He had seen the two crops of 1909 and 1910 bring the average producer from 9 to 15 cents, or an average of cost of production. It was announced that the crop of 1911 would be 16,000,000 bales, which would just about meet the needs of the world for clothing. Speculation promptly seized the opportunity which arose from there being no intelligent marketing system for cotton and immediately forced the price of cotton down to 7 and 8 cents and lower in the South, while the crop was in the hands of the producer. The growers having grown it under mortgage, were compelled to sacrifice their property. He, as a southern man, born and bred in the South, conceived it his duty to try and show the cotton growers of the South how they could save themselves. With an eye solely to help and no thought of profiting otherwise than as everyone would have, he devised a plan and called it the Southern States Cotton Corporation, which was simply to organize a corporation to take over the cotton raised, palying three-fourths of its market value in cash and the remainder of 15 cents plus the carrying charges from the time the cotton was bought until sold in the corporation's note. There were no reserve banks in the United States then, no place to borrow money on stored cotton. The three-fourths cash paid the farmer had to be borrowed on the cotton. It had to be shipped and warehoused in Europe, where preparations for so doing were already established. The movement began in Georgia under the guidance of Mr. Wadley. It rapidly spread to Texas and the other cotton States. The balance of 1911 and all of 1912 wa

that of 1911, since it was as high that year as the average in the past when there was no aid to the market and speculation had its way. The price was 9.7 cents, against an average of 12½ cents for 1912 and 1913, making an advance in price of about 3 cents, or, if the average of the past 20 years that speculation had its way, which is 7.8 cents, the advance would be nearly 5 cents, but we will calculate a little on the advance of 3 cents above 1911. There were made these two years 28,704,863 baies, at \$15 per bale would be \$430,572,945, which the Southern States Cotton Corporation made the producers of cotton, a pretty nice sum that should be placed to the credit of the corporation. It will be noticed that the corporation began in 1912, following the largest crop of history, that of 1911, and that both years it worked was the next largest. Under unmolested conditions the South may have reasonably expected 7-cent or 8-cent cotton during 1912 and 1913 under the weight of these enormous crops. The corporation only received 84,000 bales during the entire two years. Think of it, 84,000 bales at their price, 15 cents, would cost \$6,300,000, and that small amount of cooperation by a few people made the whole people \$430,572,945. The cotton producers could pay the expenses of such an organization every two years, buy \$4,000 bales and burn it up and have \$425,000,000 left as profit. A tax of 25 cents per bale on the two crops would buy the 84,000 bales, burn them up, and have a profit of \$14.75 for every 25 cents of taxes paid.

Many banks and business men of the South did not lend it their support, but more than 15,000 farmers did join in the struggle for relief, and had they remained steadfast the victory would have been theirs and cotton would have attained its value. The price rose from 9 cents to 14½ cents under this work and the goal of the Southern States Cotton Corporation seemed in sight when ridicule, compulsion, foolish and false statements by the enemies of the movement weaned the supporters of the work away

came.

Even with these conditions the case was not hopeless, and it remained for treachery and malice to cause the downfall of the work and the public condemnation of its leaders, not one of whom profited in any way by it, but one and all came out very much worse than when it began. It is not yet too late to organize for this work conforming to the law, if anyone knows what that is, and compel a fair price of cotton.

cotton.

Suppose the Southern States Cotton Corporation had been supported and in working order in 1914. Does anyone believe that cotton would have been given away or taken from the people of the South in the fall of that year? Are they never to learn a lesson? Shall the southern farmer forever be the slave of every one of those who choose to exploit him? The \$4,000 bales did not make the price, but the organization diverted speculation from the "bear" to the "bull" side, which did do it, the same as in the case of Sully in 1903, and Brown, Scales, and others in 1909 and 1910.

In this little book the writer has striven to make the way out of bondage so clear none may fail to see the route of his deliverance. The marketing of the cotton crop is a matter of educating the people to know their opportunity. It is hoped that this will not be an excuse in the future, and to bring this about as soon as possible it is hoped that each reader will see that as many others read it as possible and hasten the day of southern prosperity and Independence.

Chapter X.

CHAPTER X.

SURPLUS OR SUPPLY AND DEMAND.

SURPLUS OR SUPPLY AND DEMAND.

While the Government prepares a great deal of statistical information on production and consumption, supply and demand, and other information, but very little of it gets to the reading public or masses of the people. The surplus is talked about and described as a great mountain and a tremendous burden in the way of handling and controlling the crop, until it is dreaded and feared more than any enemy that could possibly confront the people.

For instance, if we learn that there are 2.000,000 bales in spinners' hands and other warehouses August 1 of any year, it is looked upon as a great deal of surplus cotton; but we should remember that the world produces about 24,000,000 bales a year, and the consumers consume the same amount; they consume all that is made. If there is a little left over one year, the crop is usually short the next and it is consumed. If the mills use 24,000,000 bales annually, it is equal to 2,000,000 bales per month; then 2,000,000 bales August 1 is no surplus, because we begin to pick in August, and it takes from 30 to 90 days to get cotton to the consumers. Then a 2,000,000 lot on hand August 1 would barely be stock for working purposes until the new crop could reach them, instead of being a surplus.

It will be interesting to give some Government figures on production, amount consumed at home in the United States, and the amount exported, and see what the amount is that is left over each year as a surplus for the past 15 years and the years that there was more consumed than was made.

Year.	Consumed in the United States.	Exported.	Total exported and con- sumed.	Total produced.
1914 1913 1912 1911 1910 1909 1908 1907 1907 1906 1905 1904 1903 1904 1903 1904 1909 1909 1909 1909 1909 1909	5, 630, 835 5, 181, 826 4, 516, 779 4, 559, 002 5, 198, 963 4, 496, 028 4, 974, 199 4, 877, 465 4, 523, 208 3, 980, 567 4, 187, 076	9, 256, 028 9, 199, 093 10, 681, 332 8, 225, 991 6, 491, 843 8, 889, 724 7, 779, 508 8, 825, 236 6, 975, 494 9, 057, 397 6, 233, 682 6, 870, 313 6, 806, 572 6, 167, 623	14, 958, 667 14, 829, 928 15, 963, 158 12, 542, 770 11, 050, 845 14, 088, 687 12, 275, 536 13, 799, 435 11, 872, 959 10, 214, 249 11, 100, 582 10, 950, 000 10, 410, 088 9, 854, 876	16, 645, 000 14, 614, 000 14, 313, 015 16, 250, 276 12, 005, 688 10, 315, 382 13, 587, 306 11, 375, 461 13, 595, 498 10, 894, 556 13, 679, 954 10, 945, 615 10, 927, 168 9, 673, 771 10, 266, 527 9, 499, 935

While all of each crop may not have been used during that particular year, the production has certainly not been more than consumption for any short period of years.

Just how much more raw cotton could or would have been consumed if it could have been produced is a question hard to answer, unless the production was large enough to begin to pile up a permanent surplus.

Surplus.

There are a great many idle spindles each year. We can hear of idle mills in the Far East that pay high prices for cotton and frequently can not get what they need.

The talk about overproduction may not seem so much of a bugaboo after reading these figures. And the dread of a surplus is like the fear of a ghost—and we ask to be shown.

You will notice that during the years reported in the figures above many times we had to import cotton to supply a deficiency caused by home demand.

Only there of the above were 1911, 1907, and 1999.

Only three of the above years—1911, 1907, and 1899—was there any surplus produced, and it very small.

CHAPTER XI.

THE REMEDY.

After reading the preceding chapters no doubt the reader will be able to see very clearly what must be done with cotton and how to do it. He will likely see that the size of the job is nothing in comparison with its importance. If those interested in the welfare of the South could only know their opportunity, conditions would change very rapidly; but because they have not known it is why past efforts have not been supported as they should have been and bad conditions relieved long ago.

The power of spot cotton, when concentrated into one hand, has been clearly shown; the lack of support has also clearly shown that the people do not realize its power.

The writer has not gone into the details of an organization which appeals to him as most practical because of the length of such details and explanations and for the further reason that much depends upon financial arrangements for financing to hold otton off the market. These latter conditions will change as the banking interests become informed as to the necessity of their assistance and become acquainted with what is practical with the farmer, country merchant, and country bank.

An organization should be formed, not of producers alone but of all

bank.

An organization should be formed, not of producers alone, but of all classes who are interested in fair prices for cotton and a stable market, founded upon strictly commercial lines. This would include the grower, country merchant, country bank, and wholesale merchant and manufacturer, both North and South. The grower can not be depended upon, because he is not a free man; the same may be said of the country merchant and country bank. They owe the wholesaler, manufacturer, and the city bank, whose cooperation and assistance are necessary to make the undertaking easy, but not necessarily imperative to have the help of all of them to make it possible or even certain. All of the producers can not be reached, neither will all of the others cooperate; many are financially interested in not seeing such conditions exist, while others will not.

If the retailers had the consent and advice of the wholesaler to huy

many are financially interested in not seeing such conditions exist, while others will not.

If the retailers had the consent and advice of the wholesaler to buy cotton from their customers and place it in storage and hold the receipt or turn it over to the wholesaler, or, in place of buying, if the producer was encouraged to place his cotton in warehouses and turn the certificates over to his merchant or bank as collateral and they to their creditors, it would serve the same purpose and the producer would get the advantage of the advance in price. Unless the retail merchant has the free consent or advice from the wholesaler to do this it will be impossible to get his cooperation, for the simple reason that the retailer knows he owes debts that are due, and he will not ask extensions; they should come to him voluntarily. When this is done the greatest power in the South will be at work.

There should be a committee of producers and their friends, selected to secure the cooperation of the producers in placing their cotton in its hands to price and sell, thus allowing the producers to price the crop. This committee should have full power to act as agent of the producers or owner of cotton placed in their hands for sale. The producers have as much right to price their products as the producers of any of the products of the mines or factories. As all others depend upon agriculture, it is the business duty of all to see that the producers of agricultural products are accorded this privilege.

For the producers of agricultural products to price their products they must act together. They must cooperate logether and have one selling head, to which all must look for prices, whether it be those cooperating or not.

Congress should permit, encourage, and assist in establishing such cooperation, which when established would be a producers' exchange. There would be no objections to Congress appointing a commission or giving the Agricultural Department the power to prevent such producers' exchange. There would be no objecti

With such work firmly established, speculation would be encouraged to the "bull" side and prices would be easily maintained. Speculation would soon begin to direct its attention to spot cotton in place of future

It must be remembered that there has not been a crop produced in 50 years that 10 per cent of the crop would not have completely controlled the price of the whole crop if handled as above outlined, and but few that would have required as much as 5 per cent.

Thus it will be seen that any considerable number of producers or of large merchants or manufacturers depending upon the producers can easily establish a producers' exchange and make the price of cotton a remunerative one.

easily establish a producers' exchange and make the price of cotton a remunerative one.

The price at present is made by speculation in future contracts, Supply and demand guides speculation to a great extent, as much as could be expected by the method used by the producers in feeding the demand; but speculation is guided more by the system of distribution than anything else, as is seen by past efforts of organization or controlling distribution. Properly distributing the crop is the keynote to pricing it by the producer.

A portion of the crop must be held off the market, and some means besides the banks should be devised to make loans on cotton for this purpose. All expenses, including warehouse charges, interest, and insurance should be reduced to the minimum.

If the warehouse is owned by a few, they expect a good dividend on the bank must not be expected to reduce their regular rate of interest, and will not do it.

The warehouseman, it seems to me, should be under such control that he could act as agent of the reserve banks and through the warehouse loans made on cotton. This class of loans should not be restricted to producers alone, but to any who would cooperate with the movement.

This would allow merchants, wholesale and retail, to assist in marketing the crop slowly.

Fundamentally speaking, supply and demand makes the price of everything; but the method of supplying the demand and the method of speculation, whether in the real article or in future contracts, must be considered. This can be easily explained by an illustration of a factory using the methods of the cotton producers.

Suppose one of our automobile factories had an annual sale of 12,000 cars, at \$1,000 each, pricing and selling under their regular commercial system, such as are adopted by all commercial articles, selling 1,000 per month.

system, such as are adopted by all commercial articles, selling 1,000 per month.

Under this system supply and demand fixes the price at \$1,000.

Now, suppose that factory should decide to make the 12,000 cars and send them to their distributing agents, all in three or four months, with instructions to sell them for all the consumer would give for them. Supply and demand would fix the price, but where would if fix it? Most likely it would hover around \$250 in place of \$1,000. Then again suppose that factory shipped 1,000 cars per month, the number it had been selling, but said to its agents, sell them for all the consumers would pay. Supply and demand would again fix the price. But where? Likely in this case it would be \$500 in place of \$1,000.

The former system is the one the cotton crop is marketed under—that which throws all of the crop on the market in three or four months. The next is the system urged by many, most of whom I find to be enemies to cotton. Where is the factory of any kind that would think for a moment of adopting the method of selling their products that is used by the producers of cotton? Not one in the world. Still those of the United States depend upon this method by their customers for their trade. The cotton producers must adopt the same business system of price making that the automobile factory now uses. The producers are too much in debt to do it alone; they must have help.

CHAPTER XII.

IF PAIR PRICES WERE PAID FOR COTTON.

The farmer would buy what he needs, which is 50 per cent more than does. Some one would have to manufacture it; some one would have he does. Some one would have to manufacture it; some one would have to sell it.

The farmer that can not raise fruits would buy them from some one

The section of the South which is adapted to raising fruits would raise them, because the sections that were not could buy them.

The sections that by special advantage can raise early vegetables would raise more of them, because the sections that can not could buy

the sections that by special auvantage tan large carry vegetables would raise more of them, because the sections that can not could buy them.

The labor organizations in the cities that are overcrowded by men from the farms would have plenty of room.

Boys and girls who are rushing to the cities for jobs, debauching themselves and others by force of circumstances, would stay at home on the farm, marry, and be happy.

Railroads that haul empty passenger and freight cars would have them full and there would be no need for the cry for higher rates.

The South would not be ridiculed for her shacks as farm homes, her dilapidated schoolhouses, and ramshackled fences.

Statistics would look quite different in a few years when looking at the percentages of illiteracy, tenantry, and bad roads.

Hunting for some new thing to tax to raise the needed revenue of the country would cease, because \$500,000,000 added to the wealth of the country annually would lodge and produce revenues.

The acreage of cotton would be materially decreased, because Bob and John, Sally and Mary of each family would be found in the schoolhouse eight months instead of four—the price would permit it.

One-fourth of the cotton acreage on most farms would go into diversified farming to build up the land, not for profit in the crop.

Business failures would only occur where carelessness or rascality was the cause.

Cotton bolls would be improved until they would be doubled in size,

the cause.

Cotton bolls would be improved until they would be doubled in size.

Noxious grasses, weeds, and deteriorating washes in the fields would

disappear. Sappear.

Demagogic laws would cease to be placed on our statute books,
Socialism would starve to death; poverty, its food, would be gone.

Let us have the change; "turn the South loose."

Prosperity begins and ends with agriculture.

The Treatment of Tuberculosis.

EXTENSION OF REMARKS

HON. WILLIAM KENT.

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 7, 1916.

Mr. KENT. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I submit a letter concerning a bill which I introduced yesterday looking toward the standardization of the treatment of tuberculosis and toward the elimination of the great evil of the assisted migration of indigent tuberculous patients.

The letter is as follows:

WASHINGTON, D. C., January 8, 1916.

To the medical profession of the United States:

Herewith I inclose a bill practically identical with that which Senator Norms, of Nebraska, introduced in the United States Senate on January 6, 1916, and which I introduced in the House of Representatives.

This bill is the result of careful study and consultation, not only with leading medical men, but also with the Secretary of the Treasury and the Surgeon General, Dr. Rupert Blue. The provisions are simple and obvious. One object of the bill is to standardize the treatment of tuberculosis by means of Federal assistance with the voluntary cooperation of the States. No one in the medical profession can doubt the wisdom of preventing the migration of indigent victims of tuberculosis, another object worthy of accomplishment. This migration is a hideous cruelty and is contrary to all recent developments of medical science

as applied to this disease. It is universally recognized that, granted good outdoor air, rest, suitable nourishment, and cheerful surroundings, there is little choice in the matter of climate.

The theory that climate, unaided by nutrition, rest, and calmness of spirit, will cure this disease causes a continuing migration of physical and financial wrecks to regions where they are friendless and without possibility of employment or support, so that they become stranded under conditions that must necessarily lead to neglect, depression, and resultant death. Moreover, these victims are frequently placed in public institutions which are unable to give proper treatment.

Wherever such neglected cases are found, there are present most dangerous sources of infection. We do not permit the transportation of victims of smallpox, except under most careful conditions, and yet we have been oblivious of our duty to prevent the dissemination of this commonest and most serious of all human maladies.

The Federal Government can well afford to make the small contribution suggested toward the relief of the great class of citizens who would be benefited by this bill, for it is now recognized that tuberculosis is peculiarly a disease of poverty and malnutrition, the control and cradication of which is in the province of the Federal Health Service. You will note that by the terms of the bill it is optional whether the States accept the law and cooperate with the Federal Government, which obviates any criticism based on supposed Federal interference with the functions or rights of the States. You will also note that the States may pay, or cause to be paid, an amount at least equal to that to be contributed by the Federal Government. This means that any State tendering its cooperation can pay its proportion either directly from the State treasury or from any other source that it may levy upon, and that the State shall be responsible for the payment of the fund to any agency which it may authorize, whether State, county, municipality,

in Congress, Yours, truly,

Yours, truly,

P. S.—Out of hundreds of letters indorsing the proposition I beg
to quote from a number of letters received by Dr. Philip King Brown,
of San Francisco, with whose cooperation the bill has been drawn, and
the clear indorsement of the able and forward-looking Secretary of the
Treasury. Among these letters you will note one from Mr. Lawrence
F. Flick, who is the adviser in such matters of Mr. Henry Phipps, the
great steel manufacturer. Mr. Phipps is spending millions in the battle
against tuberculosis, and his cooperation means a great deal for the
crusade that will be given the greatest possible impetus by the enactment of the legislation proposed and submitted to you.

A bill (H. R. 8027) to standardize the treatment of tuberculosis in the United States, to provide Federal aid in caring for indigent tuberculous persons, and for other purposes.

A bill (H. K. 8027) to standardize the freatment of tuberculosis in the United States, to provide Federal aid in caring for indigent tuberculous persons, and for other purposes.

Be it enacted, ctc., That within the appropriations made from time to time for such purposes the Secretary of the Treasury is hereby authorized to ald State authorities in providing care and treatment for indigent tuberculous persons who are citizens of the United States but not legal residents of the States in which they are temporarily located, and for this purpose may designate such public or private hospitals and sanatoria as may be necessary. Prior to being designated to receive patients, and from time to time, said institutions shall be subject to inspection by officers of the Public Health Service, in order to determine the facilities and methods available and in use for care and treatment of patients, and the Secretary of the Treasury is further authorized to patients, and the Secretary of the Treasury is further authorized to obtain the benefits of this act.

SEC. 2. That hospitals and sanatoria designated in accordance with the provisions of this act shall be entitled to and may receive from the Federal Treasury a subvention fixed annually by the Secretary of the Treasury, but not exceeding 75 cents per diem for each indigent patient admitted with the approval of the Secretary of the Treasury: Provided, That the State in which said indigent tuberculous patient is admitted to a hospital or sanatorium for treatment shall pay or cause to be paid a subvention not less than paid by the Federal Government toward the cost of caring for such patient in said hospital or sanatorium. Subventions under this law will be granted only in the case of indigent patients who have submitted satisfactory evidence that they were not assisted by any person or institution to leave their legal residence or did not themselves leave in order to receive benefits under this act.

SEC. 3. That the Secretary of the Treasury is authorized to issue regulatio

Secretary of the Treasury, telegram, December 22, 1915:

Secretary of the Treasury, telegram, December 22, 1913:

"Hon. WILLIAM Kent, Kentfleld, Cal.:

"On broad humanitarian grounds and as a means of cooperating with State and local authorities in preventing the spread of tuberculosis, department is in sympathy with proposed measure to provide Federal assistance in caring for indigent tuberculous persons in interstate traffic. State should also share expense."

Mr. Lawrence F. Flick, Philadelphia, December 27, 1915:

"Dr. Philip King Brown:

"I am much obliged to you for sending me a copy of the proposed bill to be introduced into the United States Senate and House of Representatives for the treatment of tuberculous individuals who have strayed away from home and have become stranded. I note the amendment, which I think is worth while. I am cordially in favor of the enactment of this bill into law, and I shall be very glad to give whatever help I can at the proper time."

Dr. Alexander Lambert, New York, October 19, 1915:

"I am much interested in your letter of October 9 about the Federal law trying to make the United States pay for their wandering cases of taberculosis. I think New York should come in for a large hunk of taberculosis. I think New York should come in for a large hunk of that money, more than people give it credit for."

Dr. H. R. M. Landis, Philadelphia, October 19, 1915:

"I am heartily in favor of what you are trying to do and sincerely hope that you will be able to bring it to pass."

Dr. Henry B. Favill, Chicago, October 16, 1915:

"As to your tuberculosis bill, the more I see it the more merit I discover there is in it."

Dr. Frank Billings, Chicago, October 11, 1915:

"Your letter of September 30 came to-day. I have read your letter very carefully and appreciate all the good things you have in mind in the idea of securing a Federal subsidy for the care of tuberculous individuals who wander from State to State and who have no legal residence where they come under treatment."

Dr. Edwin A. Locke, Boston, Mass., October 20, 1915:

"I am in recelpt of your letter of October 9 regarding the introduction in Congress of a bill for a Federal subsidy, etc., and am very much interested in what you say regarding it. It seems to me at first thought a very desirable piece of legislation. As far as my knowledge goes, State subsidy has worked admirably; certainly such is the case here in Massachusetts."

Dr. George Dock, St. Louis, October 25, 1915:

"Yours of the 9th received. I am very much interested in the plan you propose because it seems to offer means of alding what is now a very unfortunate situation, and it also should be a factor in the education regarding tuberculosis."

Dr. Richard C. Cabot, Boston, Mass., October 26, 1915:

"I am very much interested in your letter about the Federal subsidy for hospitals receiving patients who have no State settlement. As far as I can see, you are entirely right."

Postal Savings Banks-Rural Credits-Prosperity for the Little Fellow.

EXTENSION OF REMARKS

HON. WILLIAM J. CARY. OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 6, 1916.

Mr. CARY. Mr. Speaker, it is with profound pleasure that I cast my vote for this measure authorizing the Postmaster General to accept deposits from a postal savings bank depositor until his balance amounts to \$1,000 exclusive of interest and also permits an additional deposit of \$1,000 which shall be nonin-This will doubtless encourage such depositors terest bearing. to invest in United States bonds when they have accumulated such a sum and I doubt whether any one thing would be better for the continued prosperity of this country than any measure which will be apt to place the Federal Government bonds in the hands of a large number of small investors.

I voted against the amendment to make the amount to be deposited unlimited, as, in my judgment, this might tend to disturb banking conditions in many sections of the country and possibly cause unwarranted runs on savings banks, and as the greater part of the money so far invested or deposited in the postal savings banks comes from the small depositor who has usually heretofore hoarded his money, I think the limitations which this bill places will work no hardship, as I doubt very much whether any of the small tradesmen, mechanics, and farmers who use the postal banks ever have more than \$2,000

hidden away anywhere.

The postal savings bank system has been from its very beginning one of the most perfect demonstrations of the present tendency to sane and practical humanitarian legislation. Even under the serious handicaps resulting from the limitations in the original law which have to-day been eliminated, it has had a most marvelous growth. When the law was first proposed many banks and also many citizens of the country were under an ap-prehension that the Government would interfere in the legitimate domain of private enterprise and that money which would ordinarily be placed in private banks would be diverted to the detriment of such banks and the impairment of the financial balance in the banking system of the country. The testimony of the Third Assistant Postmaster General, in a recent hearing on personal rural credits on this point, is illuminating. He states as follows:

They (the banks) have been undeceived and are friendly now, because it is obvious that by doing that the Postal Savings System has invaded the domain of hidden money—has brought money from stockings and tin cans and other hiding places, and through the medium of the banks, has restored it to the channels of active trade and commerce. That has been the effect of the operation of the system.

This is to my mind one of the most important phases of this legislation and has a bearing on many other proposed reforms in

opposition from high financial sources as this bill did at first from banking influences.

I believe, Mr. Speaker, that this country is fully able to solve every difficult problem before us, if we will only escape from the hysteria that afflicts big capital whenever any new financial or

industrial proposition is suggested.

The question of rural credits is going to be one of the most important for this Congress to consider, and while I am by no means in favor of any hasty or ill-considered legislation on this or any other subject, I certainly hope and trust that before we adjourn we will have adopted some measure of relief for the thousands of farmers all over this country who need relief so badly.

I think it is a perfectly safe proposition to make when I state that the backbone of the country is the agricultural class. Certainly we could not exist for one month, nay not for a week or a day, if the men who produce the food we eat, the textiles wherewith we are clothed, were to quit work. They give us our daily bread, our very life in times of peace, they furnish us with brave sons in time of war, and neither this country nor any other can be permanently prosperous or successful unless its rural population is prosperous and contented. It has long been an established saying that the only contented and finally prosperous farmers are those who till the farms they own them-No system of tenant farming has ever been devised or ever will be devised in any country that will take the place of a farming population that is also a land-owning population, and this has been so well recognized abroad that the most progressive countries on the other side have made the most careful provision and given the most earnest attention to the financial needs of the tillers of the soil.

In Germany and Denmark, probably the most successful of the European agricultural countries, systems of rural credit have been so carefully worked out that sections of both countries where the land is practically barren, where nature has done but little to help man, are to-day fertile and productive areas, owned and cultivated by contented, prosperous, and successful farmers who in time of need are a very mainstay of

strength to their countries.

We have every advantage that nature can give us. Fertile soil, intelligent, thrifty, and virile communities, and resources of every kind that have hardly been touched as yet with the magic wand of modern American agricultural genius.

We certainly have the experience and the wisdom of the rest of the world to guide us, and surely we have that American spirit of initiative that will enable us to devise and perfect a system of rural credits to supplement our magnificently sucsystem of rural credits to supplement our magnificently suc-cessful Postal Savings System and broaden opportunity to the farmer and the worker, the small trader and manufacturer, and make our prosperity not a matter of Treasury balances, trust dividends, and millionaires' advertised extravagances, but a prosperity that means happy homes by the million, men and women and children that can say and feel and prove that this country is the best country in the world to live in, where opportunity will meet an honest desire halfway, where poverty will be unknown, caste feeling impossible, and brotherhood, equality, and liberty an absolute and established principle.

Old-Age Pensions.

EXTENSION OF REMARKS

HON. ISAAC R. SHERWOOD, OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 10, 1916.

Mr. SHERWOOD. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include an editorial from the Toledo Times, entitled "A worthy bill," on the subject of old-age pensions.

The editorial is as follows:

A WORTHY BILL.

If Gen. Sherwood succeeds in securing the enactment of his old-age pension bill, it will be the crowning event of his career in the National Legislature. The measure is not an extreme one. Within its provisions are embraced only those who can show a record of 35 years' toil and have reached the age of 65. The amount to be paid is a modest one, but sufficient to prove a blessing on the aged dependents who have faithfully perthis country, which are also receiving the same unintelligent | formed their allotted tasks in the industrial life of the country.

The general is as enthusiastic over this as he was over his dollar-a-day pension bill. He has drafted the measure with care and is prepared to make a systematic fight. Unless the present session becomes too engrossed in matters growing out of the European war it will surprise no one if the measure becomes a law.

At this time, when all the world is taking stock of German efficiency, there is a disposition manifested to adopt many of the commendable features of the German system. Old-age pensions have been paid in Germany for several years and have proved their worth. They have done much to bring about a closer bond of sympathy between the German Government and the laboring classes, and it has been shown conclusively during the last few months that such a bond is invaluable to a country in time of stress.

Gen. Sherwood's bill may be opposed by many who do not believe in paternalism, but here is a paternalism that is justified, for all Christian governments recognize a certain obligation toward its infirm and helpless. Only in the world's blundering way this obligation in most cases has been made in the name of charity. It has remained for Germany to practice a loftier conception of it.

The Grain Gamblers and the Farmers.

EXTENSION OF REMARKS

HON. CHARLES H. DILLON.

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 11, 1916.

Mr. DILLON. Mr. Speaker, I am presenting an article written by Hon. J. E. Kelley, of Pierre, S. Dak., entitled "The Grain Gamblers and the Farmers." Mr. Kelley was a Member of the Fifty-fifth Congress, and has given years of study to the effect of gambling in futures on the price of grain.

Mr. Speaker, on August 6, 1914, I analyzed the rules and regulations of the Chamber of Commerce of Minneapolis and attempted to show that its activities were in violation of the antitrust laws. In 1912 the entire amount of wheat shipped into Chicago amounted to only 35,914,000 bushels, yet in a single day frequently more than 100,000,000 bushels of wheat are sold. It seems to me that every fair-minded man must admit that the sale of phantom grain on boards of trade is affecting the price of grain.

The article is as follows:

THE GRAIN GAMBLERS AND THE FARMERS. [By J. E. Kelley.]

In its issue of September 13 the following appeared in the Sioux Falls Argus-Leader:
"With 80,000,000 bushels of corn, 56,000,000 bushels of wheat, 60,000,000 bushels of oats, 23,000,000 bushels of barley, * * * South Dakota would appear this year to be in line for some pretty fat

South Dakota would appear this year to be in line for some pretty fat times."

Sure enough, this speaks volumes for the energy and industry of the farmers of South Dakota; also, for the fertility of her soil and the favor of her climate. But let us stop and consider for a few minutes as to who gets the fat produced by South Dakota's industry. With the European war on, without a rift in the dark clouds, without a dent in the Dardanelles that would indicate the coming of a bushel of grain from the Russian fields, with every condition existing that ever did exist, past or present, to hold prices up to a level that would give the farmers of this State a fair reward for their industry, prices of wheat, oats, and barley have sunk to a level that scarcely covers the cost of production; and the "fat time" that South Dakota has honestly and fairly won shall not be hers; but instead it will swell the proud purses of the Armours, the Pattons, the Ryans, the Leiters, the Van Deuzens, who, with their compatriots, constitute the mighty combine that controls the grain markets of the United States.

Ten million bushels of oats are being shipped each week from this country to Europe, mostly to Liverpool, and 8,000,000 bushels of wheat are being shipped abroad, mostly to Liverpool. The great speculators and market raiders, who make prices what they will, are buying oats from the farmers in this State at this time at about an average of 25 cents a bushel, hard wheat running, on an average over the State, from 76 cents to 80 cents a bushel, barely covering the cost of production where the yield is good when the high cost of living is considered in connection with the high price of labor. What is this grain worth in Liverpool, where most of it goes? Here are the figures; read them and study them. They will be a revelation to those who believed that South Dakota's farmers were revelling in the fat of the land when they raised big crops:

American wheat, No. 1 northern, Duluth, in Liverpool_

This reduced to our money means that 100 pounds is worth_____ No. 1 northern, Duluth, Sept. 10, same date, per hundred pounds_____ \$2, 70 1. 56

Spread between Duluth and Liverpool______Every known cost of handling, including 2 cents commission___

Clear gouge over all cost of handling and commission, per hundredweight, 62 cents, or 37 cents a bushel, or 46 per cent of the selling price the farmer gets. Oats, American, Liverpool, Sept. 10, 45 pounds

4s. 5d. Reduced to our money, this makes 75 cents per bushel of 32 pounds, or for 100 pounds, Liverpool.

Oats, Duluth, Sept. 10, 34 cents a bushel, or for 100 pounds... \$2.35

Spread between Duluth and Liverpool on oats______ Every legitimate cost of handling, with 2 cents commission____ Clear gouge over all costs and commission, per 100 pounds, 77

Thus, for each bushel of oats the South Dakota farmer gets 26 cents and the market raiders 24 cents, or 92 per cent of the price the farmer gets, over all costs and commissions.

Selling 40,000,000 bushels of wheat on this basis, the loss will be to the farmers of the State_____ \$14,400,000 13,000,000 5,750,000 On barley (the drop has been 25 cents)_____

Or a total of 32, 150, 000

Every dollar of this money should be of right in the pockets of the farmers of this State. It would enable them to pay their bills, build new homes, educate their children, buy more automobiles and planos, improve their farms with better buildings, and enable them to enjoy some of the luxuries of life of which they are now denied.

The remedy for this condition must bring about the erection of great terminal elevators, where part of the grain coming onto the market at this time may be stored and cash drawn against elevator receipts. This would prevent market flooding and bring about steady prices. It would likewise prevent the boosting of prices and cinching of consumers when the bulk of the grain gets in the hands of speculators.

of constant's what is the constant of the Canadian Government can build elevators for its farmers (though it has not gone far enough yet), surely this Government can. If this Government can build warehouses for the makers of whisky, it can do it for the grain raisers, and thereby help nearly all of the

it can do it for the grain raisers, and people.

Every market in the United States is in the grasp of those manipulators, whose organization is perfect, whose combine is complete in its monopoly. They control many of the great newspapers of the country, and their sway is absolute over all trade journals, whose part in the transaction usually is to get their cash from the market manipulators through advertising; get their readers among the farmers whom they strive to chloroform while the skinning process is going on.

"OATS TOO HIGH." "OATS TOO HIGH."

Note the reply of the American Cooperative Journal, in its issue of September, to Mr. Beckwith, the manager of a farmers' elevator at Gowrie, Iowa, who complains of 20 cents drop in oats just as the farmers began marketing. The journal tells the complaining manager that there is no combine, but that oats were too high, because shorts had to cover, and that a slump was inevitable.

The mighty combine is now more powerful, more absolute in its sway, more anmindful of the rights of both consumer and producer alike, than at any other time in the history of its record-making career. Only the record of the transactions of wheat and oats is given here, as barley prices are not quoted on foreign markets, but everybody knows that as the selling season approached the raiders knocked the price of barley 25 cents per bushel. As to corn prices, the far South will soon begin selling new corn. The high price a short time ago was above 80 cents per bushel in Chicago, but wait till the great Northwest begins marketing, and then compare the price with even the price that prevails now.

STORE WHISKY, WHY NOT WHEAT?

The United States Government for nearly half a century furnished warehouses to accommodate all of the whisky produced in the country. Why not furnish warehouses for a very small part of the grain produced? It is believed such would largely remedy the evils complained of. Dealing in phantom grain should also be prohibited by law. The practice is much more pernicious in its results than was the operation of the Louisiana lottery.

In closing, it may be said that the beating down of the markets when farmers are marketing heavily is not necessarily chargeable to the ordinary commission merchant, who simply handles consigned grain. Rather it is the great millionaire manipulators and speculators, who constitute the Elevator Trust and act in combination and coliusion. The octopus controls all boards of trade and chambers of commerce, however.

Resolutions Adopted by the Local Union of Mine Workers of America.

EXTENSION OF REMARKS

HON. BEN JOHNSON, OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 10, 1916.

Mr. JOHNSON of Kentucky. Mr. Speaker, under the leave granted to me to extend my remarks in the Recond I include a set of resolutions adopted by the local union of Mine Workers of America, together with the letter transmitting the same to me. The resolution and letter are as follows:

McHenny, Ky., January -, 1916.

Hon. BEN JOHNSON,

1.14

Member of Congress, Washington, D. C.

Dear Sin: The members of Local Union 809, United Mine Workers of America, do respectfully ask you to place the inclosed resolutions as best you can so as to reach as many Members of the Congress as possi-

ble. Judging from your past record, we feel assured that you will stand for the rights of all the people. So believing, we are sending the resolution through you to as many Members of Congress as can be reached. We also request that you have 235 copies mailed to our secretary. secretary. Respectfully,

L. S. BENNETT, President. M. J. Shropshire, Secretary, McHenry, Ky., January 8, 1916.

To the Members of the Sixty-fourth Congress of the United States, Washington, D. C.

Honorable Gentlemen: At a regular meeting of Local Union 809, United Mine Workers of America, the following preamble and resolutions were presented and unahlmously adopted:

"Whereas we are informed that an effort is to be made to induce Members of Congress to favor a suppression of the report of the Commission on Industrial Relations, which will be submitted to the Congress at the present session; and

"Whereas we are forced to the conclusion that a crisis is at hand in the long-continued disturbed conditions between the employers and employees in the industries of the country; and

"Whereas we believe that a large majority of the working people want peace, but will demand that any peace secured must be founded on justice to all the people and not by the subjugation of a part of the people: Therefore be it

"Resolved. That we will consider any Member of Congress who

people: Therefore be it

"Resolved, That we will consider any Member of Congress who
favors, by voice or vote, a suppression of any part of the report of the
Commission on Industrial Relations as not being friendly toward the
cause of the working people, and as not being actuated by a desire to
legislate in the interest of all the people; and be it further

"Resolved, That we insist that the Congress provide for the printing
of a sufficient number of copies of the report of the commission that all
persons desiring a copy may be supplied, and we will consider a failure
in this respect as a great wrong done the people of this country, except
the few whose interests cause them to oppose any efforts made to better
the condition of the working people."

Respectfully,

L. S. Bennett, President.

L. S. BENNETT, President. M. J. Shropshire, Secretary.

Mr. Lansing's Last Note to Great Britain on the Blockade.

EXTENSION OF REMARKS

HON. S. D. FESS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 12, 1916.

Mr. FESS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include Mr. Lansing's last note to Great Britain on the blockade.

The note is as follows:

THE SECRETARY OF STATE TO AMBASSADOR W. H. PAGE.

DEPARTMENT OF STATE, Washington, October 21, 1915.

SIR: I desire that you present a note to Sir Edward Grey

in the sense of the following:

(1) The Government of the United States has given careful consideration to your excellency's notes of January 7, February 10, June 22, July 23, July 31 (2), August 13, and to a note verbale of the British Embassy of August 6, relating to restrictions upon American commerce by certain measures adopted by the British Government during the present war. This Government has delayed answering the earlier of these notes in the hope that the announced purpose of His Majesty's Government "to exercise their belligerent rights with every possible consideration for the interest of neutrals" and their intention of "removing all causes of avoidable delay in dealing with American cargoes" and of causing "the least possible amount of inconvenience to persons engaged in legitimate trade," as well as their "assurances to the United States Government that they would make it their first aim to minimize the inconveniences" resulting from the "measures taken by the allied Governments," would in practice not unjustifiably infringe upon the neutral rights of American citizens engaged in trade and commerce. It is therefore a matter of regret that this hope has not been realized but that, on the contrary, interferences with American ships and cargoes destined in good faith to neutral ports and lawfully entitled to proceed have become increasingly vexatious, causing American shipowners and American merchants to complain to this Government of the failure to take steps to prevent an exercise of belligerent power in contravention of their just rights. As the measures complained of proceed directly from orders issued by the British Government, are executed by British authorities, and arouse a reasonable apprehension that if not resisted they may be carried to an extent even more injurious to American interests, this Government directs the attention of His Majesty's Government to the following considerations:

(2) Without commenting upon the statistics presented by His Majesty's Government to show that the export trade of the United States has increased in volume since the war began further than to point out that the comparative values fail to take into account the increased price of commodities resulting from a state of war or to make any allowance for the diminution in the volume of trade which the neutral countries in Europe previously had with the nations at war, a diminution which compelled them to buy in other markets, I will pass directly to the matters which constitute the specific complaints of this Government.

(3) First. The detentions of American vessels and cargoes which have taken place since the opening of hostilities have, it is presumed, been pursuant to the enforcement of the orders in council, which were issued on August 20 and October 29, 1914, and March 11, 1915, and relate to contraband traffic and to the interception of trade to and from Germany and Austria-Hungary. In practice these detentions have not been uniformly based on proofs obtained at the time of seizure, but many vessels have been detained while search was made for evidence of the contraband character of cargoes or of an intention to evade the nonintercourse measures of Great Britain. The question, consequently, has been one of evidence to support a belief of-in many cases a bare suspicion of-enemy destination, or occasionally of enemy origin of the goods involved. Whether this evidence should be obtained by search at sea before the vessel or cargo is taken into port, and what the character of the evidence should be, which is necessary to justify the detention, are the points to which I direct your excellency's attention.

(4) In regard to search at sea an examination of the instructions issued to naval commanders of the United States, Great Britain, Russia, Japan, Spain, Germany, and France from 1888 to the beginning of the present war shows that search in port was not contemplated by the Government of any of these coun-On the contrary, the context of the respective instructions shows that search at sea was the procedure expected to be followed by the commanders. All of these instructions impress upon the naval officers the necessity of acting with the utmost moderation—and in some cases commanders are specifically instructed-in exercising the right of visit and search, to avoid undue deviation of the vessel from her course.

(5) An examination of the opinions of the most eminent text writers on the laws of nations shows that they give practically no consideration to the question of search in port, outside of examination in the course of regular prize court proceedings.

(6) The assertion by His Majesty's Government that the position of the United States in relation to search at sea is inconsistent with its practice during the American Civil War is based upon a misconception. Irregularities there may have been at the beginning of that war, but a careful search of the records of this Government as to the practice of its commanders shows conclusively that there were no instances when vessels were brought into port for search prior to instituting prize court proceedings, or that captures were made upon other grounds than in the words of the American note of November 7, 1914, "evidence found on the ship under investigation and not upon circumstances ascertained from external sources." A copy of the instruction issued to American naval officers on August 18, 1862, for their guidance during the Civil War, is appended.

(7) The British contention that "modern conditions" justify bringing vessels into port for search is based upon the size and seaworthiness of modern carriers of commerce and the difficulty of uncovering the real transaction in the intricate trade operations of the present day. It is believed that commercial transactions of the present time, hampered as they are by cen-sorship of telegraph and postal communication on the part of belligerents, are essentially no more complex and disguised than in the wars of recent years, during which the practice of obtaining evidence in port to determine whether a vessel should be held for prize proceedings was not adopted. The effect of the size and seaworthiness of merchant vessels upon their search at sea has been submitted to a board of naval experts, which reports that-

"At no period in history has it been considered necessary to remove every package of a ship's cargo to establish the character and nature of her trade or the service on which she is

bound, nor is such removal necessary. * * *
"The facilities for boarding and inspection of modern ships are in fact greater than in former times, and no difference, so far as the necessities of the case are concerned, can be seen between the search of a ship of 1,000 tons and one of 20,000 tons—except possibly a difference in time—for the purpose of establishing fully the character of her cargo and the rature of her service and destination. * * * This method would be a direct aid to the belligerents concerned in that it would release a belligerent vessel overhauling the neutral from its duty of search and set it free for further belligerent operations.

(8) Turning to the character and sufficiency of the evidence of the contraband nature of shipments to warrant the detention of a suspected vessel or cargo for prize proceedings, it will be recalled that when a vessel is brought in for adjudication courts of prize have heretofore been bound by well-established and long-settled practice to consider at the first hearing only the ship's papers and documents, and the goods found on board, together with the written replies of the officers and seamen to standing interrogatories taken under oath, alone and separately, as soon as possible and without communication with or instruction by counsel, in order to avoid possibility of cor-

ruption and fraud.

(9) Additional evidence was not allowed to be introduced except upon an order of the court for "further proof," and then only after the cause had been fully heard upon the facts already in evidence or when this evidence furnished a ground for prosecuting the injury further. This was the practice of the United States courts during the War of 1812, the American Civil War, and the Spanish-American War, as is evidenced by the reported decisions of those courts, and has been the practice of the British prize courts for over a century. This practice has been changed by the British prize court rules adopted for the present war by the order in council of August 5. Under these new rules there is no longer a "first hearing" on the evidence derived from the ship, and the prize court is no longer precluded from receiving extrinsic evidence for which a suggestion has not been laid in the preparatory evidence. The result is, as pointed out above, that innocent vessels or cargoes are now seized and detained on mere suspicion while efforts are made to obtain evidence from extraneous sources to justify the detention and the commencement of prize proceedings. The effect of this new procedure is to subject traders to risk of loss, delay, and expense so great and so burdensome as practically to destroy much of the export trade of the United States to neutral countries of Europe.

(10) In order to place the responsibility for the delays of vessels and cargoes upon American claimants, the order in council of October 29, 1914, as pointed out in the British note of February 10, seeks to place the burden of proof as to the noncontraband character of the goods upon the claimant in cases where the goods are consigned "to order" or the consignee is not named or the consignee is within enemy territory. Without admitting that the onus probandi can rightfully be made to rest upon the claimant in these cases, it is sufficient for the purposes of this note to point out that the three classes of cases indicated in the order in council of October 29 apply to only a few of the many seizures or detentions which have actually been

made by British authorities.

(11) The British contention that in the American Civil War the captor was allowed to establish enemy destination by "all the evidence at his disposal," citing the *Bermuda* case (3 Wall, 515), is not borne out by the facts of that case. The case of the *Bermuda* was one of "further proof," a proceeding not to determine whether the vessel should be detained and placed in a prize court, but whether the vessel, having been placed in prize court, should be restored or condemned. The same ruling was made in the case of the Sir William Peel (5 Wall., 517). These cases, therefore, can not be properly cited as supporting the course of a British captor in taking a vessel into port, there to obtain extrinsic evidence to justify him in detaining the vessel

for prize proceedings.

(12) The further contention that the greatly increased imports of neutral countries, adjoining Great Britain's enemies, raise a presumption that certain commodities, such as cotton, rubber, and others more or less useful for military purposes. though destined for those countries, are intended for reexportation to the belligerents who can not import them directly, and that this fact justifies the detention for the purpose of examination of all vessels bound for the ports of those neutral countries, notwithstanding the fact that most of the articles of trade have been placed on the embargo lists of those countries, can not be accepted as laying down a just or legal rule of evi-Such a presumption is too remote from the facts and offers too great opportunity for abuse by the belligerent, who could, if the rule were adopted, entirely ignore neutral rights on the high seas and prey with impunity upon neutral commerce. To such a rule of legal presumption this Government can not accede, as it is opposed to those fundamental principles of justice which are the foundation of the jurisprudence of the United States and Great Britain.

(13) Before passing from the discussion of this contention as

countries, this Government directs attention to the fact that His Majesty's Government admit that the British exports to those countries have also materially increased since the present war began. Thus Great Britain concededly shares in creating a condition which is relied upon as a sufficient ground to justify the interception of American goods destined to neutral European ports. If British exports to those ports should be still further increased, it is obvious that, under the rule of evidence contended for by the British Government, the presumption of enemy destination could be applied to a greater number of American cargoes, and American trade would suffer to the extent that British trade benefited by the increase. Great Britain can not expect the United States to submit to such manifest injustice or to permit the rights of its citizens to be so seriously impaired.

- (14) When goods are clearly intended to become incorporated in the mass of merchandise for sale in a neutral country, it is an unwarranted and inquisitorial proceeding to detain shipments for examination as to whether those goods are ultimately destined for the enemy's country or use. Whatever may be the conjectural conclusions to be drawn from trade statistics, which, when stated by value, are of uncertain evidence as to quantity, the United States maintains the right to sell goods into the general stock of a neutral country, and denounces as illegal and unjustifiable any attempt of a belligerent to interfere with that right on the ground that it suspects that the previous supply of such goods in the neutral country, which the imports renew or replace, has been sold to an enemy. That is a matter with which replace, has been sold to an enemy, the neutral vendor has no concern and which can in no way affect his rights of trade. Moreover, even if goods listed as conditional contraband are destined to an enemy country through a neutral country, that fact is not in itself sufficient to justify their seizure.
- (15) In view of these considerations, the United States, reiterating its position in this matter, has no other course but to contest seizures of vessels at sea upon conjectural suspicion and the practice of bringing them into port for the purpose, by search or otherwise, of obtaining evidence, for the purpose of justifying prize proceedings, of the carriage of contraband, or of breaches of the order in council of March 11. Relying upon the regard of the British Government for the principles of justice so frequently and uniformly manifested prior to the present war, this Government anticipates that the British Government will instruct their officers to refrain from these vexatious and illegal
- (16) Second. The Government of the United States further desires to direct particular attention to the so-called "blockade" measures imposed by the order in council of March 11. British note of July 23, 1915, appears to confirm the intention indicated in the note of March 15, 1915, to establish a blockade so extensive as to prohibit trade with Germany or Austria-Hungary, even through the ports of neutral countries adjacent to them. Great Britain, however, admits that it should not, and gives assurances that it will not, interfere with trade with the countries contiguous to the territories of the enemies of Great Britain. Nevertheless, after over six months' application of the blockade" order, the experience of American citizens has convinced the Government of the United States that Great Britain has been unsuccessful in her efforts to distinguish between enemy and neutral trade. Arrangements have been made to create in these neutral countries special consignees, or consignment corporations, with power to refuse shipments and to determine when the state of the country's resources requires the importation of new commodities. American commercial interests are hampered by the intricacies of these arrangements, and many American citizens justly complain that their bona fide trade with neutral countries is greatly reduced as a consequence, while others assert that their neutral trade, which amounted annually to a large sum, has been entirely interrupted.

(17) It makes this practice even more harassing to neutral traders that the British authorities require a consignor to prove that his shipments are not bound to an enemy of Great Britain, even when the articles are on the embargo list of the neutral country to which they are destined, and that notwithstanding the assertion in the last British note that interference with such trade by a belligerent can only take place "provided, of course, that he (the belligerent) can establish" that the commerce is with the enemy.

(18) While the United States Government was at first inclined to view with leniency the British measures which were termed in the correspondence but not in the order in council of March 11 a "blockade," because of the assurances of the British Government that inconvenience to neutral trade would be minito the presumption raised by increased importations to neutral | mized by the discretion left to the courts in the application of

the order in council and by the instructions which it was said would be issued to the administrative and other authorities having to do with the execution of the so-called "blockade" measures, this Government is now forced to the realization that its expectations, which were fully set forth in its note of March were based on a misconception of the intentions of the British Government. Desiring to avoid controversy and in the expectation that the administration of the order in council would conform to the established rules of international law, this Government has until now reserved the question of the actual validity of the order in council of March 11, in so far as it is considered by the Government of Great Britain to establish a blockade within the meaning of that term as understood in the law and the practice of nations; but in the circumstances now developed it feels that it can no longer permit the validity of the alleged blockade to remain unchallenged.

(19) The declaration of Paris in 1856, which has been universally recognized as correctly stating the rule of international law as to blockade, expressly declares that "blockades, in order to be binding, must be effective; that is to say, maintained by force sufficient really to prevent access to the coast of the The effectiveness of a blockade is manifestly a question It is common knowledge that the German coasts are open to trade with the Scandinavian countries and that German naval vessels cruise both in the North Sea and the Baltic and seize and bring into German ports neutral vessels bound for Scandinavian and Danish ports. Furthermore, from the recent placing of cotton on the British list of contraband of war, it ap-pears that the British Government have themselves been forced to the conclusion that the blockade is ineffective to prevent shipments of cotton from reaching their enemies, or else that they are doubtful as to the legality of the form of blockade which they have sought to maintain.

(20) Moreover, it is an essential principle which has been universally accepted that a blockade must apply impartially to the ships of all nations. This was set forth in the declaration of London, is found in the prize rules of Germany, France, and Japan, and has long been admitted as a basic principle of the law of blockade. This principle, however, is not applied in the present British "blockade," for, as above indicated, German ports are notoriously open to traffic with the ports of Denmark, Norway, and Sweden. So strictly has this principle been enforced in the past that in the Crimean War the judicial committee of the 1-rivy council on appeal laid down that if belligerents themselves trade with blockaded ports they can not be regarded as effectively blockaded. (The Franciska, Moore P. C., 56.) This decision has special significance at the present time, since it is a matter of common knowledge that Great Britain exports and reexports large quantities of merchandise to Norway, Sweden, Denmark, and Holland, whose ports, so far as American commerce is concerned, she regards as blockaded. In fact, the British note of August 13 itself indicates that the British exports of many articles, such as cotton, lubricating oil, tobacco, cocoa, coffee, rice, wheat flour, barley, spices, tea, copra, etc., to these countries have greatly exceeded the British exports of the same articles for the corresponding period The note also shows that there has been an important British trade with these countries in many other articles, such as machinery, beef, butter, cotton waste, etc.

(21) Finally, there is no better settled principle of the law of nations than that which forbids the blockade of neutral ports in time of war. The declaration of London, though not regarded as binding upon the signatories because not ratified by them, has been expressly adopted by the British Government without modification as to blockade in the British order in council of October 29, 1914. Article 18 of the declaration declares specifically that "the blockading forces must not bar access to neutral ports or coasts." This is, in the opinion of this Government, a correct statement of the universally accepted law as it exists to-day and as it existed prior to the declaration of London. The meaning of this statement is elucidated by Mr. Renault in the report of the drafting committee upon the convention, in which he states:

"This rule has been thought necessary the better to protect the commercial interests of neutral countries; it completes article 1, according to which a blockade must not extend beyond the ports and coasts of the enemy, which implies that as it is an operation of war it must not be directed against a neutral port, in spite of the importance to a belligerent of the part played by that port in supplying his adversary."

As the conference assembled at London upon the invitation of the British Government, it is important to recall the instruc-tion of Sir Edward Grey to the British delegates, "setting out the views of His Majesty's Government, founded on the decisions of the British courts," in which he says:

"A blockade must be confined to the ports and coast of the enemy, but it may be instituted of one port or of several ports or of the whole of the seaboard of the enemy. It may be instituted to prevent the ingress only or egress only, or both.'

He added:
"Where the ship does not intend to proceed to the blockaded port the fact that goods on board are to be sent on by sea or

by inland transport is no ground for condemnation.

In support of this announcement Sir Edward Grey referred to several decisions of British prize courts, among which an early one of 1801 held that goods shipped from London to Emden, thence inland or by canal to Amsterdam, then blockaded by sea, were not subject to condemnation for breach of blockade, (Jonge Pieter, 4 C. R., 79.) This has been the rule for a century, so that it is scarcely necessary to recall that the Matamoras cases, well known to the British Government, support the same rule, that neutral ports may not be blockaded, though "trade with unrestricted inland commerce between such a port and the enemy's territory impairs undoubtedly, and very seriously impairs, the value of a blockade of the enemy's coast.

(22) Without mentioning the other customary elements of a regularly imposed blockade, such as notification of the particular coast line invested, the imposition of the penalty of confiscation, etc., which are lacking in the present British "blockade" policy, it need only be pointed out that, measured by the three universally conceded tests above set forth, the present British measures can not be regarded as constituting a blockade in law,

in practice, or in effect.

(23) It is incumbent upon the United States Government, therefore, to give the British Government notice that the blockade, which they claim to have instituted under the order in council of March 11, can not be recognized as a legal blockade by the United States.

(24) Since the Government of Great Britain has laid much emphasis on the ruling of the Supreme Court of the United States in the Springbok case, that goods of contraband character seized while going to the neutral port of Nassau, though actually bound for the blockaded ports of the South, were subject to condemnation, it is not inappropriate to direct attention to the British view of this case in England prior to the present war, as expressed by Sir Edward Grey in his instructions to the British delegates to the London Conference in 1908

"It is exceedingly doubtful whether the decision of the Supreme Court was in reality meant to cover a case of blockade running in which no question of contraband arose. Certainly if such was the intention the decision would pro tanto be in conflict with the practice of the British courts. His Majesty's Government sees no reason for departing from that practice, and you should endeaver to obtain general recognition of its

It may be pointed out also that the circumstances surrounding the Springbok case were essentially different from those of the present day to which the rule laid down in that case is sought to be applied. When the Springhok case arose the ports of the Confederate States were effectively blockaded by the naval forces of the United States, though no neutral ports were closed, and a continuous voyage through a neutral port required an all-sea voyage terminating in an attempt to pass the blockading squadron.

(25) Third. It appears to be the position of Great Britain that if, as the United States alleges, American citizens or American interests are directly and adversely affected by the British policies of contraband and nonintercourse, resulting in interference with ships and cargoes, they should seek redress in the prize courts which the British Government have established, and that, pending the exhaustion of such legal remedies with the result of a denial of justice, the British Government "can not continue to deal through the diplomatic channels with the individual cases."

(26) It is declared that this was the course followed by the United States during the American Civil War and the Spanish War, and that both countries have supported the practice by allowing their prize-court decisions, when shown to be unjust or inadequate, to be reviewed by an international tribunal, as was done under the treaties of 1794 and 1871. The ground upon which this contention is put forth, and the results which would follow, if the course of procedure suggested were accepted, give the impression that His Majesty's Government do not rely upon its soundness or strength. Nevertheless, since it has been advanced, I can not refrain from presenting certain considerations which will show that the proposed course embodies the form rather than the substance of redress. The cases which the British Government would have claimants present to their prize courts are essentially different from cases arising wholly within the jurisdiction of a foreign country.

They result from acts committed by the British naval authorities upon the high seas, where the jurisdiction over neutral vessels is acquired solely by international law. Vessels of foreign nationality, flying a neutral flag and finding their protection in the country of that flag, are seized without facts warranting a reasonable suspicion that they are destined to blockaded ports of the enemy or that their cargoes are contraband, although the possession of such facts is, by international law, essential to render a seizure legal. The officers appear to find their justification in the orders in council and regulations of the British Government, in spite of the fact that in many of the present cases the orders in council and the regulations for their enforcement are themselves complained of by claimants as contrary to international law. Yet the very courts which, it is said, are to dispense justice to dissatisfied claimants, are bound by the orders in council. This is unmistakably indicated to be the case in the British note of July 31, which states that

"British prize courts 'according to the ancient form of commission under which they sit are to determine cases according to the course of admiralty and the law of nations and the statutes, rules, and regulations for the time being in force in that behalf."

This principle, the note adds, has recently been announced and adhered to by the British prize court in the case of the Zamora. It is manifest, therefore, that if prize courts are bound by the laws and regulations under which seizures and detentions are made, and which claimants allege are in contravention of the law of nations, those courts are powerless to pass upon the real ground of complaint or to give redress to pass upon the real ground of complaint or to give redress for wrongs of this nature. Nevertheless, it is seriously suggested that claimants are free to request the prize court to rule upon a claim of conflict between an order in council and a rule of international law. How can a tribunal, fettered in its jurisdiction and procedure by municipal enactments, declare itself emancipated from their verticions and at liberty to apply the subsections and stillness are trivial to the subsections. restrictions and at liberty to apply the rules of international law with freedom? The very laws and regulations which bind the court are now matters of dispute between the Government of the United States and that of His Britannic Majesty. If Great Britain followed, as she declares that she did, the course of first referring claimants to local remedies in cases arising out of American wars, it is presumed that she did so because of her knowledge or understanding that the United States had not sought to limit the jurisdiction of its courts of prize by instructions and regulations violative of the law and practice of nations, or open to such objection.

(27) The British note of February 10 states that the British

Government during the American Civil War, "in spite of remonstrances from many quarters, placed full reliance on the American pulsa country to ican prize courts to grant redress to the parties interested in cases of alleged wrongful capture by American ships of war and put forward no claim until the opportunity for redress in those courts had been exhausted."

The Government of the United States recalls that during the progress of that war Great Britain, in several instances, demanded through diplomatic channels damages for seizures and detentions of British ships alleged to have been made without legal justification. Among these may be mentioned the cases of the *Magicienne*, the *Don Jose*, the *Labuan*, and the *Sazon*. Two of these cases were, at the time the demands were made, before American prize courts for adjudication. It is understood also that during the Boer War, when British authorities seized the German vessels, the Hertzog, The General, and The Bundesrath, and released them without prize proceedings, com-pensation for damages suffered was arranged through diplomatic channels.

(28) There is, furthermore, a real and far-reaching injury for which prize courts offer no means of reparation. It is the disastrous effect of the methods of the allied Governments upon the general right of the United States to enjoy its international trade free from unusual and arbitrary limitations imposed by belligerent nations. Unwarranted delay and expense in bringing vessels into port for search and investigation upon mere suspicion has a deterrent effect upon trade ventures, however lawful they may be, which can not be adequately measured in damages. The menace of interference with legal commerce causes vessels to be withdrawn from their usual trade routes and insurance on vessels and cargoes to be refused, while exporters for the same reason are unable or unwilling to send their goods to foreign markets, and importers dare not buy commodities abroad because of fear of their illegal seizure or because they are unable to procure transportation. For such injuries there can be no remedy through the medium of courts established to adjust claims for goods detained or condemned. For specific injuries suffered by private interests prize courts, if they are free to apply the law of nations, might mete out an adequate

indemnity, but for the injury to the trade of a nation by the menace of unwarranted interference with its lawful and established pursuit there can manifestly be found no remedy in the prize courts of Great Britain, to which United States citizens are referred for redress

(29) There is another ground why American citizens can not submit their wrongs arising out of undue detentions and seizures to British prize courts for reparation which I can not pass over unnoticed. It is the manner in which British courts obtain jurisdiction of such cases. The jurisdiction over merchant vessels on the high seas is that of the nation whose flag it rightfully files. This is a principle of the law and practice of nations fundamental to the freedom of the high sens. Municipal enactments of a belligerent power can not confer jurisdiction over or establish rules of evidence governing the legality of seizures of vessels of neutral nationality on the high seas. International law alone controls the exercise of the belligerent right to seize and detain such vessels. Municipal laws and regulations in violation of the international rights of another nation can not be extended to the vessels of the latter on the high seas so as to justify a belligerent nation bringing them into its ports, and, having illegally brought them within its territorial jurisdiction, compelling them to submit to the domestic laws and regulations of that nation. Jurisdiction obtained in such a manner is contrary to those principles of justice and equity which all nations should respect. Such practice should invalidate any disposition by a municipal court of property thus brought before it. The Government of the United States has, therefore, viewed with surprise and concern the attempt of His Majesty's Government to confer upon the British prize courts jurisdiction by this illegal exercise of force in order that these courts may apply to vessels and cargoes of neutral nationalties, seized on the high seas, municipal laws and orders which can only rightfully be enforceable within the territorial waters of Great Britain or against vessels of British nationality when on the high seas.

(30) In these circumstances the United States Government feels that it can not reasonably be expected to advise its citizens to seek redress before tribunals which are, in its opinion, unauthorized by the unrestricted application of international law to grant reparation, nor to refrain from presenting their claims directly to the British Government through diplomatic channels.

(31) This Government is advised that vessels and cargoes brought in for examination prior to prize proceedings are released only upon condition that costs and expenses incurred in the course of such unwarranted procedure, such as pilotage, wharfage, demurrage, harbor dues, warehousage, unlading costs, etc., be paid by the claimants or on condition that they sign a waiver of right to bring subsequent claims against the British Government for these exactions. This Government is loath to believe that such ungenerous treatment will continue to be accorded American citizens by the Government of His Britannic Majesty; but in order that the position of the United States Government may be clearly understood, I take this opportunity to inform your excellency that this Government denies that the charges incident to such detentions are rightfully imposed upon innocent trade or that any waiver of indemnity exacted from American citizens under such conditions of duress can preclude them from obtaining redress through diplomatic channels or by whatever other means may be open to them.

(32) Before closing this note, in which frequent reference is made to contraband traffic and contraband articles, it is necessary, in order to avoid possible misconstruction, that it should be clearly understood by His Majesty's Government that there is no intention in this discussion to commit the Government of the United States to a policy of waiving any objections which it may entertain as to the propriety and right of the British Government to include in their list of contraband of war certain articles which have been so included. The United States Government reserves the right to make this matter the subject of a communication to His Majesty's Government at a later day.

(33) I believe it has been conclusively shown that the methods sought to be employed by Great Britain to obtain and use evidence of enemy destination of cargoes bound for neutral ports and to impose a contraband character upon such cargoes are without justification; that the blockade, upon which such methods are partly founded, is ineffective, illegal, and indefensible; that the judicial procedure offered as a means of reparation for an international injury is inherently defective for the purpose; and that in many cases jurisdiction is asserted in violation of the law of nations. The United States, there-fore, can not submit to the curtailment of its neutral rights by these measures, which are admittedly retaliatory, and therefore illegal, in conception and in nature, and intended to punish the enemies of Great Britain for alleged illegalities on their

part. The United States might not be in a position to object to them if its interests and the interests of all neutrals were unaffected by them, but, being affected, it can not with complacence suffer further subordination of its rights and interests to the plea that the exceptional geographic position of the enemies of Great Britain require or justify oppressive and

illegal practices.

(34) The Government of the United States desires, therefore, to impress most earnestly upon His Majesty's Government that it must insist that the relations between it and His Majesty's Government be governed, not by a policy of expediency, but by those established rules of international conduct upon which Great Britain in the past has held the United States to account when the latter nation was a belligerent engaged in a struggle for national existence. It is of the highest importance to neutrals not only of the present day but of the future that the principles of international right be maintained unimpaired.

(35) This task of championing the integrity of neutral rights, which have received the sanction of the civilized world against the lawless conduct of belligerents arising out of the bitterness of the great conflict which is now wasting the countries of Europe, the United States unhesitatingly assumes, and to the accomplishment of that task it will devote its energies, exercising always that impartiality which from the outbreak of the war it has sought to exercise in its relations with the warring na-

tions.

I inclose as supplements to this instruction the United States Navy order of August 18, 1862, and a statement regarding vessels detained by British authorities. These two documents should be transmitted as inclosures in your note to Sir Edward Grey.

I am, etc., .

ROBERT LANSING.

Exposes Errors of Aliens, Pacifists, and Reosevelt's Fellowers Opposing Wilson.

EXTENSION OF REMARKS

HON. MICHAEL E. BURKE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 14, 1916.

Mr. BURKE. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include a speech delivered by Hon. James A. Reed, United States Senator from Missouri, at Milwankee recently upon the subject of violation of international law and American neutrality by the belligerent nations. The speech is as follows:

SENATOR REED UPHOLDS COURSE OF UNITED STATES IN WAR—EXPOSES ERRORS OF ALIENS, PACIFISTS, AND ROOSEVELT'S FOLLOWERS OPPOSING WILSON—FOREIGN RELATIONS GREAT QUESTION.

The great question now occupying public attention is our relation to other world powers. Intimately connected with the foregoing problem is that of military preparedness. A calm survey of the facts is essential to the solution of either difficulty.

For more than 100 years we have clung to the doctrine of a small Army and Navy. More recently we have been taught that the disputes of the future would be settled by peaceful arbitration. It was thought by many we were approaching disarmament. We are now confronted with a demand that all our policies and traditions shall be reversed or at least greatly modified.

It is the duty of the American people to look the situation squarely in the face. The facts can not be obliterated by denial. Wise men do not cling to a policy merely because it is old. A conclusion based upon a delusion is invariably false.

HAD BELIEVED IN PEACE.

For many years we have been led to believe that the gentle spirit of Christianity had softened the barbaric instincts of civilized men. We were taught that Europe would never again engage in a general war; that armaments were being created merely for the purpose of defense; that solemn treaties were guaranties of peace; that the capitalists of the world would prevent any great struggle; that trade relations were so intimate and the dissemination of literature, the intermingling of peoples by travel so general that the prejudices and hatreds of the past had been dissipated.

We were also led to believe that because of our remoteness from Europe, our policy of avoiding entangling alliances, our disposition to stay at home and attend to our own affairs, our refusal to make wars of conquest, we were but in slight danger of molestation.

We were furthermore told that even in the event European nations did go to war the conflict would be of but a few days' duration, and that our interests could not be seriously affected.

THE GENERAL CONFLAGRATION.

The cold facts now confronting us compel a readjustment of former opinions. The truth is that for years Europe has been upon the verge of a general conflagration. The killing of a single man was sufficient to start the fires which are raging in nearly all of Europe and in large portions of Asia. Treaties have been proved to be but scraps of paper. Ties of blood and religion are disregarded and the rights of nations trampled under foot. The war which it was predicted could last but a few days has gone on for nearly a year and a half.

Instead of a speedy conquest by one side or the other, the nations are practically deadlocked, and the conflict promises to be one of exhaustion. The barbarities and atrocities committed equal, and perhaps surpass, those of any modern war. They challenge comparison with the brutalities of the Goths and

Vandals

BATTLES OF MACHINERY.

We have learned that modern wars are not won merely by the courage or the intelligence of the combatants. The battle is one of machinery more than of men. The man with a machine gun is frequently equal to a company with rifles. Cannon which burl their missiles 20 miles and destroy all modern fortifications have been invented. Ships have become vast floating fortresses. The assassin of the seas—the submarine—capable of sailing 3.500 miles before returning to its base, has been created. Flying machines have annihilated distance, bombarded fortresses and cities from the air, and constituted the eyes and ears of mighty armies.

We have learned that more ammunition can be consumed by modern artillery in one day than by the Confederate and Federal armies during the entire four years of the Civil War.

Swift vessels cross the Atlantic in four and a half days' time. To that extent we know that our ocean barrier has been removed.

OUR CITIZENS SLAIM.

Instead of being able to stand aside uninjured and watch the conflict, we have beheld the ghastly spectacle of hundreds of our own citizens traveling strictly within their rights being sent to their deaths without warning and in defiance of international law and the sovereignty of this Republic; our ships seized in neutral waters, their cargoes confiscated or held for trial before prejudiced prize courts; our citizens have been captured upon the high seas in disregard of those rights for which we waged the War of 1812. These events challenge the thought of all patriotic Americans.

I believe we should approach their consideration calmly, dispassionately, deliberately. There is not the slightest occasion for national hysteria. There is no cause for that haste which is begotten of fear. Even if we were confronted by a great danger impending and about to fall, only cool and deliberate action could avert disaster. Whatever dangers may beset, only those who are controlled by imagination rather than judgment believe them to be immediate. I am opposed to stampedes,

either among cattle or men.

NO CAUSE FOR PANIC.

There is no occasion for panic. In the whole course of her history the United States has not been in as secure a position as she is at this present hour. I make the assertion boldly, because for the first time in the past century every power capable of seriously menacing the United States is engaged in a life-and-death struggle which demands the employment in its own defense of every dollar, man, gun, and ship it can command. Not one of these nations can attack us.

The central powers can not get to us because the allies have enneshed them in a net of steel. The allies dare not withdraw a single army corps lest the great Teutonic legions break their lines of defense. Neither can the allies withdraw their fleets, for in that event Germany's warships would swarm upon the ocean, destroy their commerce, ravish their coasts, burn their cities, sink their transports, and cut their lines of communication. The central powers would likewise inevitably join with our fleets in a war of extermination. The allies could not live for 90 days if the supply of American grains were cut off.

Japan could not land an army here. Her fleet is inferior to that of the United States. The task of protecting transports under such circumstances is impossible. Transports and war navy alike would find a grave in the Pacific.

NATION A MIGHTY WORLD FORCE.

Besides, all of these nations know that if the United States were to throw her wealth, population, and power into the present conflict it would settle the issue. These nations know, if some American citizens do not, that even though the United States were without a ship upon the ocean or a soldier upon the land she would yet be a mighty world force not to be disregarded. They know that if we are not ready we can get ready; that our incalculable wealth, our immeasurable resources, our vast factories would furnish equipment for armies in a miraculously short space of time; that this proud and puissant people would ultimately hurl back into the ocean all of the soldiers that all the transports of the seas could bear to our shores. They know that a day of fearful reckoning would inevitably

The European conflict will not cease until one side or the other has been crushed or until exhaustion ends the struggle in a draw. In either case all parties will be incapable of further immediate great exertion.

It may be safely assumed that the present European struggle will leave the nations involved prostrate, crippled, and bleeding

It follows that for the present and for some considerable period of the future it is impossible that the United States can be successfully invaded by any nation.

There is another consideration. Great wars are not entered upon for slight reasons. There is no sufficient reason conceivable for a European nation to suddenly attack the United States.

DARE NOT ATTACK US.

Furthermore, I think it safe to say none of them dare immediately after the close of the present war assail us. If Germany were to conquer the allies and then engage in war with the United States, her fleet would scarcely have started for our shores until she would be invaded by the countries she had overcome. On the other hand, if the allies were to conquer Germany and in turn attack us, their troops would no sooner have embarked than they would once more hear behind them the tramp of advancing German legions and the salvos of Krupp artillery. To assume anything else is to deny the history of Europe for 500 years, is to entertain the idea that human nature has changed and that great nations and proud peoples suffering the sting of defeat will not seize the first opportunity for vengeance.

But I desire to put the argument upon a higher basis. I do not believe that the people of Europe are barbarous, or even that the governing classes are highwaymen and pirates. therefore do not think they will without cause or excuse attack this country. There must be some great cause, and the cause is not now apparent.

PAPERS DECEIVE PEOPLE.

I make these observations because at least a portion of our press, manufacturers of war supplies, and magazine writers, including ambitious gentlemen hungry for political favor, have sought to excite the fears of our people, until to-day some nerv-ous individuals are in such a state of consternation that the backfire of a Ford automobile sounds to their oversensitive ears like the roar of German cannon.

Nearly all of these excited individuals assume that at least some great nation in Europe is inhabited by barbarous hordes bent upon plunder, rapine, and murder.

The performances of these propagandists are shameless, be-

cause the authors know better.

Recently I have read a widely circulated book by the editor of the Scientific American, entitled "America Fallen." author proceeds in this wise: He assumes that Germany is overcome by the allies and compelled to pay a war indemnity of \$20,000,000,000. That thereupon the Kaiser secretly rendezvouses transports and warships close to our coasts. He sends submarines into our harbors, sinks our ships, and lands an army without this country knowing it is to be attacked until it has already been substantially conquered. It is to be a sort of confidential war. The author proceeds upon the idea that the Germans are assassins; that our people are sound asleep; that the argus-eyed newspaper men of the world have suddenly become blind; that the telegraph, telephone, and cables are put out of business, so that no one knows we are to be attacked until in our dull ears comes the cry, "The Philistines are upon you!" The whole story is a sort of military pipe dream. Its improbabilities eclipse the imaginings of Jules Verne. Its monstrous disregard of facts would arouse the envy of our lamented friend, Baron von Munchausen.

But the greatest absurdity, the most grotesque conception, the most slanderous assumption of this gentleman who presumes

to lecture the American people and satirize Congress, is that the German Government and German people are organized banditti, unrestrained by conscience, unimpeded by honor, unsurpassed in atrocity, unimpeachable as villains, and that they are awaiting an opportunity to rob and murder us in our beds. If such a race of men existed on this earth, it would be our duty to join with civilized nations in its extermination, because the world would not be safe while it existed.

GEMANY HAS BEEN OUR FRIEND.

But what are the facts? We have always been at peace with Germany. We have seen it in the pride of its power, unembarrassed by any war, remain steadfastly our friend. It maintained that attitude even when our own land was engaged in an internecine struggle which for four years taxed every energy of the Federal Government. If there was in the heart of Germany a diabolical desire to destroy the American Government, if it was a nation of cutthroats, if its inhabitants were pirates upon the seas and robbers upon land, surely it would have pounced upon and devoured us when we were sorely stricken and wounded. It did nothing of the kind. man people have not changed for the worse since that time.

What are the facts regarding Germany? So much do her people love learning that in point of literacy they are far above even the native born of our population. In music her masters are our teachers. In painting her artists conduct the schools to which the genius of our land flocks for instruction. In sculpture her marbles and bronzes rival the best products of the age of Grecian glory and Roman culture. In science she leads the world. In philosophy her savants are the instructors of mankind. Her poets and dramatists have given to the German language a dignity and majesty that commands the attention of the world. Her people are lovers of law and order and peace. They do not fight from mere love of brawling. They do not they labor. They do not steal from others, they do not steal f and he would build a home, marry a wife, rear a family, and in the light and shadow of the fireplace will sing to them songs of patriotism and hymns of religion. He will tell them beautiful stories of patriots, martyrs, and saints. On the Sabbath Day you will find him leading his flock to church or cathedral, where with reverence as deep and devotion as exalted as ever thrilled the human heart he will bow before the same God you worship.

These people are not assassins, and no King, Kaiser, or power could ever force the German people into a mere marauding ex-

pedition having for its object national loot.
You may cry, "Belgium!" Was Belgium not invaded? answer, Yes; but Belgium was not invaded for robbery; she was overrun because she lay in the path Germany believed she must tread if she succeeded in the mighty contest she was waging with France.

NO EXCUSE FOR MALIGNING.

General assault upon a race or nation betokens prejudice rather than knowledge. I am justified in speaking as I have of the great Teutonic people by their representatives in this coun-try. We have an enormous German and Austrian population. There is scarcely a community in the land where some of these people do not reside. Are they not law-abiding, God-fearing, industrious, frugal, and patriotic? Wholesale aspersions upon them are without justification or excuse.

I frankly say there have been individuals who have given expression to sentiments non-American and unworthy. wise, we hear extreme and foolish statements occasionally from the lips of our native born. But I utterly repudiate the idea that the occasional utterance of an extremist should be taken as characteristic of the sentiments of the great mass. I affirm it to be true that our Teutonic population, whether of the first or second generation, are among the best of our citizenry.

Books of the character I have described, pamphlets, magazines, and newspapers seeking to inflame this American people with ideas so false, so dangerous, so infamous, are little less than criminal, and ought to meet with that public condemnation which is generally visited upon those who willfully seek to perpetrate a wrong against civilization.

HAVE PLENTY OF TIME.

This brings me to what I consider the proper point from which all our bearings should be taken. We here arrive at a conclusion of fact as reliable as anything human can be. That conclusion is that we have abundance of time in which to develop a plan under which this Government can achieve a position so powerful as to withstand all assaults.

It must be conceded that our national existence may sometime be menaced. It may, for argument's sake, be further assumed that the hour of danger will arrive as soon as European nations have recovered from the frightful ravages of the present war.

The chance that we will then have to go to war with any great European power is, in my opinion, as 1 to 10,000; but I freely concede, nay, I insist, that the one chance should not be taken.

The question, however, is, What sort of preparation should we make to meet the chance, however remote?

make to meet the chance, however remote?

CITIZENS MUST DEFEND LAND.

There are but two plans possible. The first is the creation of a great standing army and mighty navy. The second, the maintenance of a standing army only as a framework upon which to build the structure of a great citizen soldiery, together with a

sufficient navy to constitute a first line of defense.

So far as I am concerned, I am clearly of the opinion that

this country must depend upon the ability of its citizens to defend themselves, rather than upon a professional military class. In support of this conclusion I offer the following observations:

For a hundred years we have been free from attack by any first-class power. During that period we have made the most wonderful progress ever achieved by any race of men since first

the morning stars sang the chorus of creation.

In all our history our shores have been invaded but once, and our visitors did not then remain long, did not take much away, and did not profit by the venture. The last answer to that invasion was given when Jackson's frontiersmen back of the cotton-baled barricades shattered the veterans of Wellington's army.

CAPTURE OF WASHINGTON.

The circumstance of the capture of Washington in 1812 can not be justly used as evidence of the danger of repetition. We were yet scarcely welded together as a nation. We had neither railroads to transport our troops, money in our Treasury, nor telegraph and telephone to advise us of the approach of an enemy.

Notwithstanding the foregoing considerations, we must recognize the fact that the business of war has been revolutionized and that our people are, perhaps, not as well qualified to take the field as were the frontiersmen of 1776 and 1812. The training of the forest and field was then the equivalent of the discipline of the camp. The courage of the patriot defending his home rose superior to the dogged obedience of the professional fighter. It is a serious question whether our people still retain the same degree of native efficiency. We must remember, too, as I have already said, that the ocean has been narrowed by modern transportation; that human courage can not withstand the power of vast machinery; that we can not stop 16-inch shells with hot air.

We must not fail to remember that the contest is no longer between men, but machinery; that war to-day is not so much a test of valor as of organization; not so much a test of the power to mobilize men as to mobilize machinery, supplies, and instruments of destruction.

Against an army equipped with modern instrumentalities the valor of a man with a rifle is almost as ineffective as the courage of the red Indian armed with bow and arrow when confronted by soldiers equipped with firearms and batteries of cannon.

We have no right, therefore, to rely for our security upon our unarmed, unequipped, and untrained citizenry. Even if at the end of a great war we should, because of our resources, be assured of victory, nevertheless we have no right to send forth our sons to useless slaughter. We are not justified in filling American homes with the vacant chairs of those who were slaughtered because they were required to pit their unprotected bodies against a machinery of destruction so diabolical as to almost stagger one's confidence in the existence of a beneficent Deity.

The question, therefore, is, How can we place our citizenry in such condition that they can meet on fairly equal terms the pro-

fessional soldiers of Europe?

1. It must be agreed that there should be on hand a sufficient number of machine guns and enough field artillery to supply every immediate necessity of an army suddenly called into the field.

2. That our ports must be protected by cannon as powerful

as are possessed by any nation of the world.

3. That some means must be devised whereby great numbers of our citizens will be given a sufficient military training to measurably fit them for service upon short notice.

4. A sufficient number of men must be educated to properly officer an army when called into the field.

5. Factories and munition plants of our country must be located in the interior at points remote from possible attack.

6. A great plan for the mobilization of our industries and transportation facilities must be entered upon and finally brought

to such a state of perfection that troops may be rapidly moved from one portion of the country to the other, supplies procured, and all the vast equipment for an army sufficiently obtained.

7. The Navy must be great enough to constitute a first line of defense.

REQUIRES YEARS OF WORK.

The question is, How can a plan of this magnitude be carried out? Certainly it will require for its consummation years of work, patience, and toil. Just as certainly it should not be entered upon until the plan has been reasonably perfected, else we shall find ourselves building only that we may again tear down.

Perhaps the most difficult of all the tasks referred to is the one of creating a citizen soldiery properly officered. I maintain that such a plan can be evolved and carried to successful consummation. It is possible to have an armed democracy.

I further insist that a plan which will result in a large part of our people possessing sufficient military training to equip them to be speedily fitted for active service is one containing a thousand elements of national strength where the creation of a great professional soldiery presents one.

Indeed, all must admit that in a great war, in the last grip of the struggle, reliance must be put in the sturdy character of the men of the country. If we only train a professional army, we will train only a small part of our population. If we develop a proper plan for fitting our people generally for service, we will gain that strength and power which is essential in the throes of a great life-and-death struggle.

TRAINING THE CITIZENRY.

How shall we give to our people that military training essential? In my humble judgment much can be accomplished by properly sustaining the National Guard. We are told that the National Guard has never proven a success. I answer it has never been given the opportunity to make a success. Its members have received no stipend. Until recently they were armed only with rifles which had been for years discarded by every first-class nation. They were practically without ammunition. They were expected to furnish their own armories and to devote their time without compensation. To say that the organization has not been a great success under these difficulties is to argue nothing. Instead of spending vast sums upon a large standing army, let us furnish arms, equipment, and reasonable pay to the members of this great volunteer army.

If we do so, I predict that it will be but a short time until its membership will have increased to a point in numbers and efficiency so that we can rely upon it as a great power for defense.

I have but little confidence in any scheme that proposes to build up an army upon the theory of its membership quitting their work once in each year for a period of six or eight weeks. The practical application of such a plan will, in my judgment, prove its defects.

TEACHING IN SCHOOLS.

I believe also that a plan can be developed to encourage the public schools and nearly all of the universities and colleges of the land to teach military science as a part of the school curriculum. Thus we will reach nearly all of the youth of the land at a time when their habits of mind and thought are being formed; when they learn with alacrity; and when they have time to devote to military service. But the working out of such a plan will require time and study. I repeat, we ought to take the necessary time.

Upon one point nearly all the people are agreed, namely, that there should be an immediate increase in the strength of our Navy. But I do not believe we are prepared to undertake the erection of the greatest navy upon the seas. If we embark upon such a plan it will inevitably follow that Great Britain will enlarge her fleet and that we will be simply engaged in a race with that great power, the end of which no man can foresee.

NEED OF OFFICERS.

I believe we ought to enlarge our military schools at Annapolis and West Point, open them more generously for students, or that we should establish military and naval academies throughout the country at which every boy physically and mentally fit would receive a liberal education without cost. Such a plan would furnish us with an abundance of qualified officers.

But yet these plans should be carefully thought out. We

should not undertake their accomplishment in a day.

I am opposed to the establishment of a great standing army. General military training is not dangerous, because those who are thus trained are part of the general population of the land. They are engaged in civil employment. Their ambitions and hopes must be realized through success in civil life. They live with the people and are of the people.

DANGER OF A PROFESSIONAL ARMY.

On the contrary, the professional soldier is in a class by himself. His hopes and aspirations are to be realized by the advancement of that particular class. He makes the study of war his business

He is too likely to come to regard the country as existing for the military instead of the military existing for the country. The professional soldier creates no wealth-he is a consumer. His success depends upon the amount he can draw from the public and the advancement he may attain in rank. This Nation has not hitherto been militarized. It will not now be transformed into an armed camp.

OUR RIGHTS UPON THE SEA.

Candor compels me to admit that many times during the past 18 months I have fervently wished our Navy more power-Had such been the case I am confident our rights would have been better respected. Deny it as we may, nations, like men, hesitate to trample upon the rights of the powerful. So that it happens that aggravating conditions, which may even force a nation into war, may be the direct result of the nation's unfitness to defend its rights. The power to defend frequently makes defense unnecessary.

AMERICAN NEUTRALITY.

I insist that our Government has maintained a strict neutrality. I know there are those in this audience who entertain a contrary opinion. I shall, however, undertake to demonstrate that we have not only maintained strict neutrality but that we have, under trying and exasperating conditions, exercised a remarkable degree of patience. Indeed, a review of the infringements upon our rights by both sides of the European controversy is calculated to stir the blood of every American patriot. It is not too much to say that sufficient cause has been afforded by both sides of the European conflict to have justified a declaration of war. Those, therefore, who are inclined to criticize this Government for having been guilty of unneutral conduct would do well to examine the indisputable facts.

Our Government has, however, from the first maintained a consistent policy looking toward the maintenance of peace. It has been constrained to regard the manifold outrages perpetrated against our rights upon the high seas as having been occasioned by the stress of a great conflict rather than by a deliberate purpose on the part of European powers to injure this

Acts, therefore, which, if they stood out by themselves and were not ameliorated by the considerations referred to would have demanded not only the severance of diplomatic relations but a positive declaration of war, have been made the subject of negotiation.

RELATIONS WITH GERMANY.

There are those in this audience, I doubt not, who have been led to believe that the United States has taken advantage of the necessities of the Teutonic powers and pursued a policy against them harsh and unjustifiable. I shall, however, demonstrate to every candid man here that such an idea is based upon a misconception both of law and fact. I shall do this not by any argument of mine, but by the solemn admissions of the German and Austrian Governments. I shall be able to make the same demonstration against the entente allies. Let me lay down a few fundamental principles:

First. The right of our citizens and our commerce to pass unmolested over the high seas and to enter any port of the world is not only guaranteed by international law, but it is a very

essential attribute of sovereignty.

The sole qualifications of this right is that belligerent nations have the privilege of blockading the ports of their antagonists. The blockade, however, is confined to the ports and not to the high seas, and must be actually maintained. Belligerents also have the right in certain cases to take contraband of war.

For more than a year both parties to the European conflict have violated our rights as thus defined.

March 11, 1915, England set the example. On that date she issued an order in council that she would not thereafter permit commodities of any kind to reach or leave Germany. She undertook to close the entire Baltic and North Seas, an act unjustifiable by any principle of international law. February 4, 1915, Germany declared the waters around Great

Britain and Ireland, including the whole English Channel, a war zone from and after February 15. This act was in violation of

Under these two orders England and Germany set up the pretense of a right to seize vessels, destroy shipping, and Germany

has sent hundreds of people to their death.

Time forbids reading even a list of the vessels sunk or captured. Let it be noted, however, that there has been a radical difference between the acts of the allies and the central powers.

The allies have, in violation of international law, captured vessels and taken cargoes into port, but they have not destroyed a single human life. These vessels, when taken into port, have been made the subject of investigation by prize courts-judicial determination has been possible. I do not say this by way of excuse, but rather by way of distinction.

THE SUBMARINE CAMPAIGN.

On the other hand, Germany embarked upon a policy which violated every principle of international, every mandate of divine law. Instead of capturing vessels, she proceeded to send them to the bottom of the ocean. Her submarines laid in wait in many instances, and without even giving passengers a reasonable opportunity to take to their boats and trust themselves to the dangers of the deep, sent them to the bottom without reasonable warning and without the chance of escape.

March 27 she sank the steamer Falaba; 111 lives were lost, one an American.

February 27 the American vessel William P. Frye was sunk by the Prinz Eitel Friedrich.

April 23 she undertook to sink the American steamer Cushing. May 1 she sank the American steamer Gulflight.

May 7 she sent the Lusitania to the bottom; 1,200 lives were lost, over 100 American citizens perishing.

May 25 the American ship Nebraska was sunk by a subma-

May 27 she sank the Danish steamer Betty in the North Sea. May 25 she sank the Chilean steamer Maximiano, with a loss

On June 5 Germany admitted she was wrong in attacking the Cushing and Gulflight. By that admission she in principle conceded she was unjustified in sinking any of the vessels above named.

July 18 she undertook to sink the Cunard liner Orduna. She fired upon this passenger ship. The ship escaped.

July 25 the United States steamer Leclanaw was torpedoed off the coast of Scotland.

July 31 the British steamer Iberian was sunk by a submarine: 6 lives lost, one an American.

August 19 the Arabic was torpedoed; 20 lives lost, among them several Americans.

August 28 Ambassador von Bernstorff promised full satisfaction for the sinking of the Arabic.

This constituted an admission in principle that all of the boats named were wrongfully attacked, because there was more justification for sinking the Arabic, which was a British boat, than for sinking the other boats, particularly the American boats that I have referred to.

September 1, Ambussador von Bernstorff agreed that Germany must respect the lives of noncombatants, and promised that vessels would not be thereafter sunk without warning. Again this was an admission that Germany had been wrong in all of the cases referred to.

September 4, the Canadian steamer Hesperian was tor-pedoed; 26 killed, 2 being Americans.

September 23, Germany promised that she would not thereafter destroy American vessels carrying conditional contraband. Again this was an admission that she had been wrong in her course toward the United States.

October 5, Bernstorff, by letter, disavowed the act of the German submarine in sinking the Arabic, formally admitted that Germany was wrong, and expressed deep regret and promised to pay indemnity. He said:

"My Government is prepared to pay indemnity for the American lives which, to its deep regret, have been lost on the Arabic. I am authorized to negotiate with you about the amount of this indemnity."

Here was not only an admission of wrong but a promise to pay damages.

November 9, the Italian liner Ancona was sunk by an Aus-

trian submarine; 272 lives were lost, including 27 Americans.

December 30, Austria admitted the commander of the submarine was not justified in sinking the Ancona, and declared his act to be of so grave a nature that he had been severely

punished, and offered to pay indemnity.

Thus it may be said that in every case Germany stands before the world confessing her guilt, admitting the grave nature of her offense, and conceding that the United States has been right

in her every contention.

In view of this solemn admission by the German and Austrian Governments, what man is there in America who dare criticize our Government for having protested against Germany's conduct? What man is there dare protest against the American Government endeavoring to stop the wrongful slaughter of her citizens and the outrageous interference with her commerce?

I say without equivocation that the American, native or foreign-born, who now protests against this act of our Government is not a good citizen of the United States, and ought not be permitted to live under her flag.

THE ALLIES' OFFENSES.

The allies have also grossly offended, but they have not taken human life. Nevertheless, their conduct can not be passed over lightly, and is not being so treated. This Government has insisted England shall cease violating international law; that she shall respect the rights of our citizens upon the high seas. This insistence has been constant, forceful, positive, determined. It will so continue. You can trust Woodrow Wilson to continue powerfully, forcefully, and even threateningly to push these negotiations.

I shall be greatly surprised if within the next 30 days Great Britain does not admit the righteousness of our cause and make

proper reparation.

There are some in this country who have complained upon the ground that we have not been as insistent in our demands upon England as upon the central powers. Let me call your

attention to two or three considerations:

First, if two foreign powers have wronged us, if one of them has murdered our citizens upon the high seas, and another has taken our goods, why should any American citizen complain because we have pushed the death claim more vigorously than the

property claim?

A good citizen of a community where robbery and murder are both being committed may complain if both are not prosecuted, but he surely can not be heard to insist that the authorities have been unjust to the murderer because they did not first try and convict the robber.

The second observation I make is this: That England in seizing our ships took them into a court of law to try the question of her right to confiscate the property. There was, therefore, a remedy open. But when Germany and Austria sent our men, women, and children shricking to their watery graves, there was and is no possible remedy. Damages will not restore life. Money can not compensate for blood spilled.

HAVE STOOD FOR JUSTICE.

It, therefore, must appear to all fair-minded people that in our controversies with all of these powers we have stood at all times upon the rock of justice, and that we have manifested

a marked degree of forbearance.

Had our Government not been headed by a man devoted to the cause of peace, had some excitable or war-ambitious gentleman been the Chief Magistrate of this Nation, the flame of anger burning in the hearts of the American people over the murder of our citizens would probably have been long ago fanned into flame by the Government itself and war declared against Ger-

SHIPMENT OF ARMS AND SUPPLIES.

It is claimed, however, that we have been unneutral because we have permitted the shipment of arms to the allies, and on the part of some, because we have allowed the allies to purchase supplies here. The two complaints must be considered together because, as I shall show, they are of one cloth.

When the European war began we had for years been trading with every country in Europe, sending to them whatsoever they saw fit to buy, and buying from them that which we needed.

When war was declared it was our duty to remain neutral; that is, not to change our position with reference to any of these powers. That is neutrality. Nothing else is neutrality.

The United States Government has never altered its position in one particular. The sole change in the ability of the European nations to obtain supplies in this country grows out of the

The United States does not prevent Germany buying goods or munitions in this country. She is still free to buy, but England prevents her from taking them across the ocean.

If, therefore, we were to refuse to sell goods to England be-cause she will not permit Germany to ship goods across the seas, we would be actually taking sides with Germany against England, and punishing England because she was able to stop Germany from transporting goods. We would at once make ourselves the ally of Germany.

IF CASE WERE REVERSED.

Suppose, on the other hand, Germany were to submarine the entire English fleet so that she commanded the ocean and could capture all goods being sent to England, and we would thereupon refuse to sell any goods to Germany, would we not thereby be depriving Germany of nearly all the advantage she had gained by sinking the British fleet? Would we not be taking sides against the German people? The slightest reflection will con-

vince any candid mind of the correctness of the foregoing conclusion.

The truth is one of the first war loans made in this country was that of \$25,000,000 to Germany. She is still as free to borrow money in this country as she ever was. She is not doing so because England has blocked the highways of the seas, and she can not purchase supplies here, even if she could obtain money.

ALL EXPORTS STAND ALIKE

But it is argued that we at least should prevent the shipment of munitions. This is already answered by what I have said. An attempt, however, is made to differentiate between shipment of munitions and the shipment of other supplies. I deny that there is any real difference. Let us examine the question.

First, we have the undoubted right under international law to sell munitions to belligerent powers. Being therefore within our legal rights, the question remains, Is there any moral duty

resting upon us?

If such duty does exist, then plainly it must be bottomed upon the idea that by selling arms to a belligerent we enable it to kill the soldiers of its enemy. If that be the ground, let us see where it will lead us.

Manifestly if it is wrong to sell a saber to a cavalryman because it enables him to kill his enemy, it is wrong to sell him a

cavalry horse to bear him to the field of battle.

If it is wrong to sell a cannon it is wrong to sell Missouri mules to draw the cannon to the firing line. Likewise, it is wrong to sell automobiles, because they transport soldiers; harness, because it is employed on war horses; clothing, because it enables the army to keep the field; food, because without food and clothing no army can keep the field 24 hours.

Thus it follows that the doctrine which would prohibit us from the shipment of munitions keeps us from the shipment of

every conceivable kind of supplies.

Besides, no army can remain long in the field unless it is supported and sustained by a nation back of it, and the nation back of the army can not give support unless the nation be fed and clothed. Accordingly, the feeding of the nation-of the noncombatants at home-contributes to the maintenance of the army and the ability of the army to overcome its antagonist in

The logic of these gentlemen, carried to its natural conclusion, would prevent us from selling anything to the belligerent powers. It would practically wipe out our foreign commerce, If that were done, horses, mules, cattle, corn, hay—all farm products would go to less than 50 per cent of the value they would have commanded had war never been begun. Our great factories would be closed; our industrial and agricultural Want and misery would stalk through this classes beggared. land. We would be in the grip of a relentless panic.

We would suffer all of the evils incident to a great war save the loss of the lives of our citizens. Nor would we escape this entirely, because the gaunt figure of want would enter the homes of the humble and the poor and our people would walk

the streets in search of bread.

All this we would suffer because of a war which we prayed God might never occur and which we with equal fervency pray may soon end. Let it not be forgotten that our ordinary commerce was largely destroyed by the war, and if we were now to refuse to trade because of the war, national ruin would stare us in the face.

LOYALTY FIRST DUTY.

The first duty of the American citizen is loyalty to the American Government. There can be no such thing as a divided allegiance. It is impossible to "serve both God and Mammon." It is impossible to be a loyal citizen of the United States and at the same time subordinate its interests to those of Great Britain, of Germany, of France, or of Italy

Whenever a citizen of the Republic allows his interests in any foreign Government to control or materially affect his judgment or acts touching any matter in which the American Government or its people are concerned he ceases to be a loyal citi-

zen of the United States.

This is a lesson which ought to be impressed upon all of our people, whether native or foreign born. There can be no such thing as half loyalty, for half loyalty is whole treason.

The duty of every citizen of the Republic is to study all of the exed questions now confronting the world solely from the American standpoint. The only question to be asked and answered is, What action should be taken for the advancement of the Government and people of the United States?

MUST STAND UNITED.

It is intolerable that individuals enjoying protection of the American flag, the benefits of civil and religious liberty, and the opportunities afforded in this land of freedom should by word or act give aid or comfort to foreign nations with which we are involved in diplomatic or other controversies. At this troubled period of the world's history Americans should and must con-stitute an indissoluble unit. The spirit of the people will tolerate nothing less than an undivided allegiance and unquestioned

If we are to escape the manifold dangers which now surround us, if out of these controversies our Government shall emerge triumphant, if the best results are to be attained for the American people, then it is essential that the world should be given to know that back of the demands of the President there is massed 100,000,000 loyal people ready to sacrifice the last drop of blood and the last dollar of money to vindicate national rights and national honor.

Let the diplomats of the world but understand that the people of the United States are thus united and thus determined, and there is no power on earth will dare refuse our reasonable de-

NATION HAMPERED BY ALIENS.

In my judgment, our foreign diplomacy would have escaped many obstacles and long since have triumphed had it not been for the existence of three classes of people who from varying motives have so demeaned themselves as to create a widespread impression that Americans are divided in sentiment, and that the administration does not in truth speak for the entire people,

The first class consists of those foreign-born citizens who have become voluntary expatriates from their native lands, and who in order to secure the benefits of American citizenship have solemnly renounced allegiance to all foreign kings, potentates, and powers, who have thereupon been received into the body of our citizenship, granted the full privileges of the native-born, and who have by adoption inherited the priceless liberties which were purchased by the sacrifices of our fathers upon many a bloody field. Some of these people have given expression to views which have been formed entirely from the foreign standpoint. Instead of asking themselves the question, What is to the interest of the United States? they first determine what in their mind is to the interest of the foreign nation in which they happen to have been born. Let me say to this class of people that if they think more of the place of their birth than of the home of their adoption, if they are more enamored of monarchial than of democratic government, if their sympathies for a foreign power outrun their devotion to the United States, then their place is on the other side of the water, and the field of their activities the battle plains, where their brethren are fighting.

A HAVEN FOR FOREIGNERS.

I say this in all kindliness, but in all earnestness. I have all my life advocated the open door. I have insisted that the acci-dent of birth should not bind an individual to a particular spot of the earth, and that America's doors should swing inward and America's arms be extended in hospitality for the people of European countries who come here because of their devotion to the principles of our Government and who are at the same time capable of amalgamation into our citizenry.

I was one of the few Members of the Senate who made a

serious effort to sustain the President's veto of the restrictive immigration bill. I took that position because I believed then, as I believe now, that the great mass of foreigners who flock to our shores come here because they have felt the oppression of tyranny, learned to hate despots, and to correspondingly love the blessings of free government.

But I insist that when these foreigners enter our gates they shall cease to be French citizens, British subjects, Italian subjects, German subjects, or Belgian subjects. I insist that they shall be as devoted to our flag and to our institutions as is the man who can trace his ancestry back to some soldier who fought upon the fields of the Revolution.

Nothing less than this will satisfy the American people. Anything less than this is intolerable.

AS TO THE PACIFISTS.

The second class who have interfered and are yet interfering are those well-intentioned dreamers who declare for peace at any price. To them let me say a kindly word:

Peace at any price is the most revolting and impossible doctrine ever announced. Carried to its legitimate conclusion, it might mean the obliteration of all liberty and all civilization. Would these misled people be willing to see the Government of the United States supplanted by a foreign military autocracy? Would they consent to live under the flag of a conqueror? Are they willing that a barbarous nation invade and sack our cities, ravish our women, burn our libraries, and establish paganism upon the ruins of Christianity? If they are not willing to sub-mit to these frightful conditions, then they are not in favor of ling bondage.

peace at any price. The moment these gentlemen admit that under any circumstances force should be met with force, the doctrine of peace at any price ceases to be. The question then becomes "Under what conditions and upon what provocations shall we fight to maintain our liberties?" Once this ground is accepted, and it is the only one upon which an American citizen can stand, it must be apparent that the liberties of the people can only be maintained by a government which insists upon the protection of the rights of its citizens. Whenever a government fails to perform this office it sinks into disrespect, and the citizen loses that protection to which he is entitled and for which governments are created.

Accordingly, whenever the vital interests of a people are concerned, whenever our Government's standing in the great family of nations is imperiled, it becomes necessary to employ force. That is only another way of saying that every nation which expects to maintain itself and to preserve the liberties of its people must be prepared to defend its national honor and integrity, if need be, upon the field of battle.

It accordingly follows, if defense must be made, and if in the last analysis force must be employed, that any government is derelict in its duty toward the people which does not make reasonably adequate preparations to enable it to meet all dangers which may be reasonably anticipated.

INCREASE NATION'S DANGER.

But the peace-at-any-price advocates, by their preachments, tend to increase our international dangers. Let the greedy nations of the world once be given to understand that the American people will not fight, and it is as certain as can be anything lying in the future that wrongs and outrages will be so multiplied as to force us into a conflict.

I repeat, America is secure as long as other countries understand that we are a brave, peace-loving, and at the same time warlike people; that we are united; that we will not brook insults; that we will not yield to threats or run from danger. Otherwise, we are far from safe.

THE POLITICAL AGITATORS.

The third class who serve to increase the dangers of war are well typified by that class of individuals who seek to coin into political capital the spirit of resentment which the American naturally feels for the recent outrages perpetrated against our citizens and our commerce.

Happily for us, neither the purrings of the peace-at-any-price propagandists nor the loud-mouthed bayings of professional demagogues have swerved the great body of the people from an adherence to the line of conduct now being pursued by President Wilson. He has adopted neither of the extreme nor foolish views to which I have adverted. He has steadfastly adhered to the doctrine that America desires to promote the peace of the world; that she especially wants to maintain her own peace; and that she will make all reasonable sacrifices to attain these

But she will also steadfastly insist upon the maintenance of the national honor, upon the preservation of the rights of our citizens, upon the adherence by belligerents to the laws of civilized warfare, and that if driven to the extremity this country will enforce these doctrines regardless of cost.

Such is the American doctrine as it has been promulgated by a great American President. It finds a generous response in the

hearts of all American citizens worthy the name.

National Defense.

EXTENSION OF REMARKS

HON. WILLIAM SCHLEY HOWARD,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 18, 1916.

Mr. HOWARD. Mr. Speaker, the question of national defense seems to be paramount in the minds of the American people if the press reports are indicative of public sentiment.

It is to be regretted that our country seems to be dividing into two distinct factions, to wit, irrational and ruinous preparedness and no preparedness. Some of our citizens are worked up to the "cold-shivers" stage and believe that Japan or Germany, or even Villa, will come over under the cover of darkness and take our country from us and place us in everlastOthers can see only a "battle of roses" in the future. How sublime would such a future be! But the great nations of the earth locked in deadly combat are not fighting such a battle. The most scientific, the most destructive, engines of death and devastation are being used for the annihilation of the white race.

If I shall be permitted to do so, I would like to present to the country the real situation as to national defense as it exists; that is to say, our present state of preparedness, the cost of our military establishment, its efficiency and weakness, the wasteful and inefficient administration, where we have thus far been led, and where we must stop.

Let us for the moment eliminate the commercialism of war and the preparation for war. Let me speak to those of our citizens who go to the fields, the shops, the stores, and the mills humming the national anthem—

My country, 'tis of thee, Sweet land of liberty, Of thee I sing.

There should be a complete divorce from politics, so far as our national defense is concerned. Certainly this is one question we can debate and settle as a whole Nation, without prejudice or bias as to party affiliations, section, or class.

The present titanic European struggle has demonstrated beyond the cavil of doubt two things—that no amount of preparedness is any insurance against war; that no nation can conclude when it is adequately prepared, for it can have no assurance beforehand with what nation the breach may occur.

So we may as well concede that we can not purchase perpetual peace with munitions of war and battleships. So, also, unless we are endowed with supernatural foresight, we can not determine which nation will engage us in war.

Therefore, there are but two policies to pursue—prepare to such an extent that we expect to meet all of the great world powers at once, or prepare our Nation for war in such manner that we can arm, equip, and muster into service with reasonable rapidity a percentage of our citizens who have been trained in military tactics and strategy sufficient to repel an attack from a first-class world power.

Preparation for war is the most expensive of all governmental activities. This is true even when the most scrupulous economy is practiced. It seems almost impossible to eliminate the spirit of commercialism from dominating any propaganda for preparedness. In fastening its fangs into our program for preparedness it appeals to political ends to meet its demands, and when this condition exists we go headlong into foolish and wasteful extravagance, without any regard for efficiency and effectiveness.

Politics inch by inch crept into our pension system, until candidates for Congress in certain States of the Union make the amount that can be gotten from the Treasury for the old soldier the sole issue of the campaign. You can see to what extent we have been led in profligacy in granting pensions by the sum annually appropriated 51 years after the Civil War. This year we appropriated, in round figures, \$173,000,000. This one annual appropriation equaled the amount paid in five years by all the other nations of the earth up to the outbreak of the European war. In the War with Spain our enlisted strength amounted to 215,000 men. Our losses from killed and wounded did not exceed 200 men. Fifteen years after this war one out of every seven had successfully connected himself with Uncle Sam's pay roll for the balance of his natural life.

Actually we send over a million dollars abroad every year to pay foreigners pensions, natural citizens of other countries, who, no doubt received large bounties to enlist in the United States Army for service.

We have lost sight of the only legitimate reason for the payment of a pension to a citizen who fought for his country, to wit, indigency and wounds. Hundreds and hundreds of men of means, who have every comfort and luxury, who are free from wounds or disease, annually draw their pension from the Treasury.

Has not this system instilled in the hearts and minds of our citizenry a mercenary rather than a patriotic conception of an American soldier?

From all sides we hear the command: Increase our Navy; increase our standing Army. Very well. How many more super-dreadnaughts, dreadnaughts, battle cruisers, scout cruisers, torpedo boat destroyers, and submarines do we need? Who will assume this responsibility? None of our naval experts have laid the keel for such a program.

Seventy-one cents of every dollar we collected in revenue from all sources in 1914 went for Army, Navy, and pensions.

In 1913 our ordinary expenditures were \$682,000,000, of which \$160,000,000 were military, \$133,000,000 naval, \$175,000,000 military pensions, making a total of \$468,000,000.

The most unpopular act of the Democratic Party was the special war-tax act, made necessary by the decrease in customs duties on account of European conditions. The maximum this law sought to raise was \$100,000,000. Letters are pouring in to Congressmen and Senators asking that this law be not reenacted. What will the people say when they are asked to contribute four to five hundred millions for an indefinite period?

It takes a most blatant demagogue to preach a doctrine to the people that the Federal Government is a great, far-away-fromthe-folks, benevolent association. The truth is, the taxpayers pay for every benefit they derive from the National Government, and pay the "top of the market" every time. The farmer pays for his Rural Delivery Service; the merchant pays for his City Delivery Service; we pay for the boll-weevil experts, the cattle-tick "pickers," the farmers' bulletins, and so forth. They all cost money—lots of money—and the people foot the bills. As Gov. Ferguson, of Texas, wisely said to the general assembly of that State:

The public must sooner or later learn that the Government is not an apple tree whose fruit can be plucked at will and resupplied by nature. The Government is the people, and whatever burdens the Government must in the last analysis burden the people.

The very best thing for the people at this time is correct information in detail of what we have in stock in the way of an Army and Navy to show for the \$3,538.541,023.31 we have expended in 14 years. If we have an inferior Army and an inefficient Navy after the taxpayers have expended this stupendous sum, then somebody has been stealing our money or those who were in charge of these expenditures have been criminally wasteful and extravagant.

As a patriotic American I am unwilling for the people of this country, especially my own constituents, to be imbued with the idea that their money has been squandered and we have only a makeshift for a navy. The truth is that our Navy is so far superior to all the navies of the world, except those of England and Germany, that a comparison would be ridiculous.

Before the European war (and all of them have sustained losses) we had 10 more battleships than France, 20 more than Japan, 24 more than Russia, and 22 more than Italy.

They told us in 1914 that our Navy was inferior to Germany's. Let us compare and see if this is true. We have 39 battleships, 15 armored cruisers, 10 monitors, making 64 armored ships in all. Germany has 20 battleships, 13 dreadnaughts, 16 cruisers, making 55 armored ships. Figuratively speaking, our ships would make a line 16 miles long and Germany's would be 12 miles long.

This, in fact, proves but little as to the naval strength of either Germany or the United States. Gun force is what counts in naval engagements. The lamented Judge Witherspoon, of Mississippi, one of the most painstaking, thoroughly informed men who ever graced a seat in Congress, made a minute scientific comparison of the gun forces of our country and Germany. Here is what he said:

We have on our battleship fleet 492 guns, on our dreadnaught fleet 144 guns, on our armored cruisers 264 guns, and on our monitors 26, making a total of 926 guns on the armored vessels of our Navy. Germany has 380 guns on her battleship fleet, 202 on her dreadnaughts, 255 on her armored cruisers, making a total of 837, showing that we have in number of guns 89 more guns on our armored vessels than there are on the armored vessels of the German Navy.

To make a long story short, every armored vessel we have in our Navy is superior in gun force to every vessel in the German Navy, ship for ship. This statement was not true until the launching of the New York and Oklahoma, as the last two dreadnaughts of the German Navy carried sixteen 15-inch guns, which were larger than any guns we carried until the New York and Oklahoma were launched.

Of course, the American people have not been taken into the confidence of the Navy Department, and they have made no effort to correct the fugitive statements made by the magazines and through the press about the woeful condition of our Navy.

The following comparison of expenditures of the United States and Germany, taken from official documents, might be interesting to those who want to know facts:

From 1904 to 1912, inclusive, the United States expended on her naval establishment \$1,079.434,210.49. Germany during the same period expended \$668.316,799. It is true our naval officers are paid the best salaries in the world. So are our enlisted men, but one-fifth of all expenditures is said to be a correct basis to figure pay allowances for officers and men, so Germany paid as

much in proportion to her appropriations as we paid in the United States to our officers and men.

By a dollars and cents comparison we should have much more to show for our expenditures than we have, and it is only an evidence that an economic reorganization of our Navy is neces-

In the face of the actual facts as to our naval power, we have the losses being incurred each week by the other great naval powers of the earth. By the process of elimination we are gaining daily in naval strength. In addition to this, the appropriation of the last Congress was the largest in the history of the Navy

Eighteen months have elapsed since Europe fired her first gun. Not a single naval engagement of any note has taken place. The submarine has put the tremors in all the crews of the nations engaged. The mightiest and fleetest of battleships and cruisers have been their victims.

The great trouble with our Navy has been that it was "top-eavy." We as a Nation went wild in 1907 on the superdreadnaught type of vessel. Until one of our great naval experts, testifying before a committee of Congress, stated that if we were to become engaged in a naval battle with one of the great powers we would have to bring in nine of our most formidable battleships and protect them from destruction with our coast or harbor defenses. Why? Because our experts had failed to provide the necessary auxiliaries to accompany our dreadnaughts—destroyers, scout cruisers, cruisers, and submarines. The very large appropriation carried in the present bill for naval defense corrects and provides for the necessary auxiliary ships, making our first line effective and balanced.

Another strange condition that can only be explained by the naval officers themselves-but I have never seen any attempt at such explanation: On 21 battleships in our fleet we are considerably over 5,000 men short, although the pay of our enlisted men is as high as or higher than the pay of any other nation on earth, and their allowance much more liberal. There is a reason. Ask any old enlisted man. One reason why we can not enlist men in the American Navy easily except in times of panic is that more court-martials reach the Judge Advocate General's office for petty offenses than go to the same office from the largest navy on earth. Secretary Daniels has devoted much largest navy on earth. Secretary Daniels has devoted much time and study to the enlisted men and has done, and is doing, much to stimulate enlistment.

It might be interesting to know that this year a prominent ex-naval officer, a member of the Naval Committee of the House, seriously urged Congress to build as rapidly as Germany and Japan together, or construct six capital ships or superdreadnaughts a year. Yet, with our present program, with the most alluring posters and the most convincing recruiting officers, we can not persuade enough American boys to enlist in our Navy to man our ships. As it is now an Anglo-Saxon American would stand aghast if he could hear an assembly roll called on one of our ships. Really this would be most enlightening to our people.

The American boy revolts at being made a lackey boy for officers, to do menial service, when he sees plainly written in the Army-Navy regulations a prohibitive clause against it.

Attend a polo game, or any social function in Washington, and see with your own eyes the character of service an Amer-ican soldier is called upon to perform under the guise of "military" service; then you may understand why it is no easy matter to recruit sailors or soldiers.

Then, again, look over our retired list. See the enormous retired salaries being paid to men in the very prime of life, at the very height of their efficiency, sacrificed upon the altar of "promotion" for those below him in rank of less experience and efficiency.

I make bold the assertion, and will gladly give names to those who doubt this statement, that we have naval officers on the retired list to-day in the grade of rear admiral who never commanded a torpedo boat, much less a squadron or fleet, and would become violently seasick 5 miles from shore on account of the little sea service they saw while on the active list of There was a distinct set of officers in the Navy known as the swivel-chair admiralty who held high rank undeserved by merit and sea service. This class of officers are smarting under the orders of Secretary Daniels sending them to sea and exacting the duties of them they were educated to perform.

Gaze upon the magnificent equipages. Depot wagons, drawn by magnificent spans, conveying the wives of majors, colonels, and generals to the afternoon teas and swell receptions of the idle rich. Who foots these bills and pays the drivers and feed bills? The people. Look back over the debate in the Senate and read Senator Bacon's remarks on this practice, which he denounced as outrageous and indefensible,

Look at the political navy yards scattered up and down the Atlantic coast. Millions upon millions appropriated for them by the Government. Not a single Atlantic navy yard can drydock the superdreadnaught vessels of our Navy. Why were these projects undertaken? To gratify political combinations formed for the purpose of "bringing the bacon home."

My purpose in calling attention to these things, many others of which I have made no mention, is that the people should demand, and I feel sure will demand, immediate reform in these extravagances and shameless outrages that have been committed in the past and will continue to be perpetrated in the future unless the people speak to their servants in no uncertain terms.

It is with confidence that I make the assertion that if we stop up the enormous leaks in our appropriations for national defense an additional sum not in excess of \$30,000,000 annually will amply provide for a standing Army of 150,000 men, supplying a reserve army of 400,000 trained and equipped soldiers after the sixth year, and a Navy adequate to furnish complete assurance that our country's honor will be maintained and our homes and firesides secure.

We must have first and foremost an overhauling, as it were, of our naval and military economic policies. Let us have some fixed and definite plan.

First. How many navy yards do we actually need? Where are they to be located? What amount will it take to put them in the highest state of efficiency?

Second. What appropriations are necessary for immediate availability to make our present Navy efficient and evenly bal-

Third. To what extent shall we go in establishing and maintaining a Navy? Shall it be a defensive or offensive program?

Fourth. Have our naval experts learned any valuable lessons in the efficiency of fighting craft from the European nations at war? If so, what are they?

These are a few of the observations the lay citizens have made

and are making as to our naval program.

My judgment is that millions upon millions of dollars can be saved the people by the gathering of scientific information by our naval experts from the European war. Certainly we have already learned that the little submarine is to be dreaded most in the offensive of all crafts. Then why is it that the submarine will not in the future be the most effective defensive arm of the Navy? Then if it is to be, what can we save in the coast-defense program?

Attention is called to these questions solely that the taxpayers and patriotic citizens of the country may not make the mistake of demanding gigantic appropriations for national defeuse and then have their funds squandered carrying out an ill-considered and ineffectual program.

Let me call attention to this fact: Of all the periods in our history this is the time that we can afford to be calm and conservative about our future as to the policy we shall adopt and its extent. There is not a military expert in the world that can at this time draw a map of Europe as it will be after the war. No great diplomat will venture a guess. The result may change our policy materially. Then, again, there can be no reason on earth for us to become nervous and excited; that time has passed for us. The time for nervousness was before the European war, when the great nations were glaring jealously at our commercial activities. Every fellow in Europe now has all he can attend to. If he wants anything, it is a friend, not an additional foe. It will be 25 years after this struggle before the victors can raise their exhausted heads. So let us be calm let us be conservative-inaugurate and consummate a plan that will give us the most effectual security for the least burden.

Most that I have said has had to do with our Navy. No navy afloat is better and more formidable, ship for ship—with the possible exception of our submarines—than ours. But my most intimate acquaintance with our national defense is of the

Army rather than the Navy.

My experience on the Military Affairs Committee has convinced me that there are many abuses, uneconomic policies, and lack of cohesion in the administration of the affairs of the War Department. We get too little for the amount we expend, the per capita cost being in excess of \$1,000 per annum.

Then, again, our present system creates no nucleus for a re-serve army of trained men that may be mustered into the service upon short notice in formidable numbers for defensive

Further than this, we are using too many of our officers in purely clerical positions in the War Department. These officers are drawing large salaries; they attained their military training at a cost of \$16,000 each to the people; and in view of the continued shortage of Army officers they should be in the field

performing the duties they were educated to perform and leave such departmental service to civilian employees.

I have collaborated with one of the most brilliant young officers in the American Army on a practical plan for the future Army. I feel that I would be unfair to this splendid officer if I did not state that every professional detail of this plan should be accredited to him.

The cost of this plan, in my judgment, will not be over thirty millions additional a year. It gives adequate security to the Nation. It will stimulate interest in military affairs; and I confidently submit it to the people as sound from a military standpoint, from a patriotic standpoint, and most economical in every detail.

A great many measures upon military preparedness, pro and con, will be introduced in Congress, which will tend toward mental confusion; but if each thinking American will make himself conversant with the defects of our present military establishment and our military needs, in the light of the recent lessons given us by the present world war, public opinion will soon intelligently express the will of the thinking people, and certain general plans of action will be accepted, others rejected, all of which will tend to prevent the referred-to mental confusion in Congress.

I propose to first ask you to accept a universally acknowledged military principle, then I will discuss, first, the defects of our present military establishment; second, our military needs; third, the present proposed changes to meet these accepted needs; and I will conclude by outlining for your consideration my plan above referred to, and will discuss its merits from every angle.

Two weeks ago England announced that no troops who have not had at least one year of constant training would be sent to the front. In other words, war has become a science demanding, more so than heretofore, that even the private be scientifically educated and trained, which can not be accomplished in less than one year of continuous service with the colors. This is the acknowledged military principle I must ask you to accept. Since we have been in the past successful in all our wars without acknowledging this principle, a fallacy has grown up in this country that a brave man with a gun is a soldier. Any nation that sends its untrained sons in this day and time to the front to face a scientifically trained and educated army commits ignominious murder. Our military history also proves this principle, but our final successes have caused us not to notice or realize the great unnecessary cost in blood of all our wars. I ask you to accept with me this military principle, not only in order to prevent our sons from being sent untrained to war and ignominiously murdered, but also because the ultimate fate of this Nation might be endangered in any war if we should meet a scientifically trained and educated army with troops of less than one year's training.

I will now briefly discuss the most glaring defects of our present military establishment. A regiment of our Infantry—and Infantry is the backbone of the Army—on paper during peace times consists of 12 companies of 65 men each. A regiment is commanded by 50 officers. This number of officers would not be increased at the outbreak of war, but each company would be increased by 95 untrained men, making each company 150 men in number of each regiment 1,800 strong. Thus we see the peace efficiency of the Regular Army would be nullified at the very Thus we see the peace outbreak of war by being swamped with untrained men. Also if 50 officers are necessary to command 1.800 men during war. but only train a regiment of 780 men during peace times, we are not using our plant at its maximum efficiency or speed. During business depressions the recruiting officers have no trouble keeping each company at a strength of 65 men, but during prosperous times men will not enlist, and companies decrease in strength. often as low as 20 men per company, and are officered and trained by, theoretically, 50 officers. Therefore we see our system is extravagant, if we compare the amount of protection it affords us with the money we spend on it. It resembles a commercial plant running at less than two-fifths of its capacity. Such a condition of affairs proves, first, we are not now during peace reaching the proper voluntary enlisting spring of the Nation, and, second, our plant would only be running at two-fifths its capacity even should we be able to get 65 men for each of our companies.

The keeping up of our numerous small posts causes unnecessary expenditures from every point of view. Many of them are distant from our great strategical points, which in most cases are our largest recruiting centers, thus causing large transportation expenditures in sending the men to these numerous and distant small posts and at the end of three or four years returning them to the enlisting places. By saving this unnecessary transportation hundreds of thousands of dollars could be saved each year. The country is crowded with small posts, the upkeep of which

costs immense sums. By selling these small Army posts, with this money for larger commands a saving would accrue, because a brigade post could be maintained at a less cost than three regimental posts. Also it is cheaper to feed 1,800 men than it is to feed three groups of 600 men each.

When we consider the numerous enlistments during hard times and the few enlistments during prosperous times, we come to the conclusion that a great part of the Army is recruited from an undesirable element, which has a tendency to cause the profession to be looked down upon by the layman, whereas it should be looked up to. This undesirable element also contaminates a great many young men, especially those from the South and Middle West, who enlist to go abroad to see the country. This deleterious condition should be corrected at once.

Now we come to a more vital defect. It will be the future policy of this country to rely in time of great national danger upon the discharged soldiers, and during peace the Army should be a school turning out a certain number of trained soldiers each year; these men to constitute the great reserve army to which the country looks for protection when war is declared and not to the small standing army. Since our Army is turning out trained soldiers at the present time at less than two-fifths its capacity and about 30 per cent of the discharged soldiers reenlist, thus reducing the number available for the reserves, we see that the present system if continued will never supply us with a reserve army, and we will be forced to send our untrained sons forth to fight our battle and be defeated and murdered. When we take a pencil and paper and figure the number of trained men our military plant could, by running on a maximum number basis, transfer to the reserves each year we see that the Army is too small to serve this end, the end being to supply us with trained men for a reserve army of 300,000 men, which our military experts tell us is necessary to make this country secure from invasion. Also when we study the personnel of any regiment we find it composed of men from practically every State in the Union, and a practical mind will at once see the impossibility of keeping "tab" on these men when they are discharged and return to the four corners of our country. To keep a record of 300,000 discharged soldiers, assigned to and discharged from scattered regiments in the heterogeneous manner that is now in vogue would require an army of clerks,

Now let us discuss our military needs. Our War and Staff Colleges tell us convincingly that in case our fleet were destroyed or rendered useless, say, by being in the Pacific Ocean when it should be in the Atlantic, or vice versa, and the Panama Canal out of commission, certain strong military nations have, individually, sufficient merchant marine to land a complete army of 300,000 men, out of range of our coast defenses, capture them from the rear, and immediately, unopposed, capture the adjacent cities (New York not being excepted), and they notify us that our greatest possible military need is to be sufficiently strong in organized and trained men to render such an invasion from any nation impossible. Hence it is clearly the duty of Congress to provide this Nation with sufficient protection to make such an invasion impossible, and to do so in the most economical manner as regards money and men permanently withdrawn from civil These military experts convince us that to secure the desired amount of necessary protection our mobile army should be increased by 10 regiments of Infantry and 4 regiments of Field Artillery, the National Guard rendered more assistance and thus made more efficient, and that we should have an organized, officered, and trained reserve army of 400,000 soldiers. I think these demands are sufficiently modest, reasonable, and can be economically supplied.

Then, let us now take up and discuss the different proposed measures which would supply us with the desired Regular Army increase, an efficient National Guard, and a reserve army of 400,000 men. To date all proposed plans for increasing our Regular Army have passed over this vital issue by saying: "We will increase our Regular Army by 10 regiments of Infantry and 4 regiments of Field Artillery," but they do not tell us what spring of national impulse or sentiment to press during prosperous times to obtain these additional men or even the present authorized number of men. All of these proposed plans contemplate continuing to operate our expensive Army plant at two-fifths its capacity; they do not attempt to settle the question of selling or abandoning our undesirable posts and placing our small Army at strategical points; they do not correct our present extravagant transportation expenditures by working out a sane plan of assigning and discharging our soldiers, which would also keep them available for reserve use. No plan so far has figured out what economical changes can be effected in our Regular Army, and how this money saving can be used to partially offset the additional expense of increasing the

Army. Until these questions are considered and corrected, to

increase our regular mobile army would be unwise.

All appear agreed upon the plan of assisting and improving the National Guard by paying them when in camp from both the State and Federal Treasury, and it is certain that this would be of some assistance. However, I do not think such an expenditure a wise one until we correct certain defects in the National Guard system as it now exists. We should change the National Guard so as to make it dovetail into any radical change in our military policy. The spending of Federal money upon inefficient National Guard troops that can never become efficient should not be allowed, but the spending of the Federal money upon even inefficient National Guard organizations situated so that they can be made efficient should commence at once. By efficient National Guard I mean an efficiency possible of being attained at the end of two years' service, which would be equivalent to a degree of efficiency obtainable by one year of continuous service. You see, I adhere, and ask you to adhere, to our accepted principle that we can not use untrained troops in modern wars, and I will not willingly consent to Federal money being spent except in carrying out this principle. No plan of assisting our National Guard proposed to date that I know of takes cognizance of the fact that some National Guard organizations have attained an efficiency almost equal to our Regular Army, while other organizations have for years decreased in efficiency and have been juggled around to meet State and city politics.

Some cities, having an unusual boosting spirit, have increased their complement of National Guard organizations to such an extent that they have been unable to keep them efficient, because interest soon subsided. To spend Federal money on such organizations would not be to our interest; but to reduce, say, a lightly recruited and inefficient regiment to a battalion which could take care of all the men previously in the regiment and then spend the Federal money in making that battalion as efficient as our Regular Army is highly desirable. justice that such a step could cause would be in the letting out of the National Guard of a great many officers who have spent time and money in the same. However, these men should be taken care of in the reserve army. So instead of enlarging our National Guard and paying it out of our Federal Treasury I favor first putting it in some cases in such condition that it can become highly efficient and then rendering it Federal aid. I believe such a plan would serve best the interests of both the Federal and State Governments and meet with approval from all National Guard officers. This would not affect those splendid regiments of National Guard that have attained a high degree of efficiency but would assist them in the manner they

are now asking of Congress

Numerous schemes have been proposed for securing our re-serve army of 400,000 civilians and securing officers for the same. Most of these plans prove to be theoretical and not practical upon examination. They do not recognize the defects in our present recruiting system, nor do they take into consideration the abnormal amount of interest in this subject caused by the atmosphere being electrified by the present world war and appreciate that this interest will subside when the war I dismiss Gen. Wood's scheme of using our business men right here by asking if you believe that 10 years from now. when the world war is over and the atmosphere is not electrified with war, it will be possible to get the mayor of New York and 1,000 of the leading men of that city to go to Plattsburg and spend one month under canvas learning to become soldiers? Look back 10 years and see if such a camp was possible. also impossible because it violates our accepted military principle by attempting to make reserve officers out of these gentlemen by a month's training each year.

The scheme now being proposed by the Secretary of War for a reserve army of 400,000 civilians is as follows: Every year 133,000 civilians would be asked to enlist for three years with the colors and three years on furlough, but during the three years with the colors would be required to undergo an intensive service for a short period of one or two months, and the rest of the year they are civilians to all intents and purposes. plan I consider impractical, for the following reasons:

1. It does not contemplate using the men we discharge from our expensive Regular Army plant as reserves, nor does it contemplate changing our present Regular Army defect so as to make it possible to use these men or operate the plant at its maximum efficiency.

2. As soon as the present abnormal interest aroused military affairs subsides I do not believe we can enlist 133,000 men a year during prosperous times and ask them to give us one or two months of their time each year for three years this in addition to the enlistments necessary for our increased

Regular Army and our increased National Guard that the plan also contemplates.

3. The keeping tab on these 400,000 men would require an army of clerks, and to date no satisfactory scheme has been devised to accomplish it.

 It violates our accepted principle and means we would permit them to be murdered if they were ever called upon to face a trained army. Such a scheme has been successfully used in Switzerland, which is a small country, and the complement enlisting each year with the colors includes all the men of a certain age; but 133,000 men each year would not include one-fifth of our available men of any specified age, and this fact alone would defeat its successful application in this coun-We know too well how ultra polite each young man would be during prosperous times when the Government would ask for the 133,000 recruits. I fear there would be a great deal of nudging and bowing to the other fellow, with the remark, "After you, my dear Gaston." We must recognize the fact that a successful system of a small republic will not of necessity meet the different existing conditions found in a large republic without radical modifications.

Now, we come to the solution of the problem that I propose to submit to the American people for their consideration. I desire to say that I am in accord with the administration as regards the amount of increase necessary for the Regular Army. also the general idea of the administration as to extending to the National Guard a helping hand and as to the size and necessity of our reserve army. However, I differ with others in that I do not believe that a practical plan that will attain the desired end has as yet been submitted. I would not criticize other plans were I not able, in my opinion, to submit a better one, which is economical as regards money and men withdrawn from civil life, and which hurts no one, but benefits many not at present benefited.

Recognizing that our present voluntary system of enlistment is a failure during prosperous peace times, we ought to bring other forces to play on the recruiting element of the Nation when we consider increasing our Regular Army. Where can such a force possible of utilization be found? I believe it can be found during peace in State patriotism, loyalty, pride, or enthusiasm. I do not mean to say that we as a Nation have no Federal patriotism, loyalty, pride, or enthusiasm, but I do say that these elements lie dormant within us during peace only to burst forth with fury and make State patriotism sec-ondary when war is imminent. I believe this State spirit is the strongest potential force possible of utilization during peace, prosperous, and hard times that the Government has with which to solve Regular Army, National Guard, and reserve army problems. And I base my entire plan on the possibility of its successful utilization.

In utilizing this State spirit my plan calls for an Army post in each State, and the Regular Army organizations, after being increased as now contemplated, assigned permanently as Federal troops to the different States. This assignment to States would troops to the different States. This assignment to States would be on the general basis of the number of recruits now being obtained from the respective States. Understand that the State governments themselves would have nothing whatsoever to do with these organizations. These Regular Army organizations will be recruited to war strength, the men to serve two years with the colors and to be then placed in the State organized reserves for four years, during which time they would receive a small monthly allowance from the Federal Government and be required once each year to report for field training. These dis-

charged men would constitute my national reserve army.

I presume you are now asking, "But how do you propose to get the recruits for this army?" I will answer this question and probably others by illustrating the general application of the plan in the State of Georgia. From the recruiting data of the State of Georgia, based on both prosperous and hard times, we would at least have assigned to this State our permanent Coast Artillery garrisons and one regiment of Infantry, this regiment consisting of 1,800 men, divided into 12 companies of 150 men each. These men would enlist for six years, but only serve with the colors for two years and then four years in the Georgia reserves. This regiment would forever be called, say, the Twentieth Georgia Infantry. It would forever, when not on foreign service for two years or on the border, be stationed at Fort McPherson, Ga. Let it have a distinctive, natty, inexpensive, full-dress uniform. Let the officers understand that expensive, full-dress uniform. Let the officers understand that they are permanently assigned to this regiment. All the recruits would be Georgians, and all recruiting officers would be extra Infantry or Coast Artillery officers of the Twentieth Georgia Infantry and the Georgia Coast Artillery companies. Now, what would be the results? Soon all Georgia would take an interest in her regiment of Infantry and Coast Artillery companies and a competitive spirit would spring up between all the States. This would cause a Georgia esprit de corps in this Twentieth Georgia Infantry Regiment and this esprit would increase as the interest of the State of Georgia increased. The disadvantages of separation from loved ones and family that attend an enlistment in the present Regular Army would not exist, and a father would not object to his son enlisting and receiving the benefits of two years' military training when he knows his son would in all probability reside the two years in the State of Georgia at Fort McPherson and upon the termination of his service would return to him at once. These sons would be given a two weeks' or a month's furlough each year and could then visit their homes and assist with the crops, and so forth. The very presence of these men on furlough in their home towns, in their natty full-dress uniforms, sober, straight, and erect, would offer positive evidence of the benefits to be derived from military training; would stimulate enlisting, and would quicken the pride of all Georgians. And what is true in Georgia is true in all other States.

would add to the now known benefits derived from military training that of teaching each man a profession during his two years at Fort McPherson. I would conduct a school corresponding to any public school in the State; also a school for carpenters, bricklayers, mechanics, blacksmiths, surveyors, typewriting, and so forth. Every man would be required to attend one of these schools. The higher officers of the regiment and recruiting officers would be asked to cooperate with the chambers of commerce, and the spirit of Georgia would then pervade the entire regiment. I would send a crack company to all the large State affairs. I would, as far as practicable, even assign men from the same sections of Georgia to the same companies, so that a young man joining the regiment would be living in the same room and messing at the same table with his friends, and mothers would know their sons to be among friends of the family and cared for by them in case of sickness." If this system presses the desired enlisting spring of the Nation, Georgia would be able to supply, according to recent enlisting data, at least her Coast Artillery companies and two regiments of In-

fantry each 1,800 strong.

Of course, as you see, the plan first corrects the enlisting defects of our present Army, and you can not support it unless you believe it corrects this defect. Let us now discuss its application to the reserves. All men would, of course, enlist for six years, two with the colors and four in the reserves, which would cause approximately 900 men to go to the Georgia reserves each year and would give us about 3,600 men, or two reserve Georgia regiments. Most of these men would reside in Georgia, thus making it possible to keep in touch with them and mobilize them in a very short time (possibly not over three days), and certainly in a very economical manner. Their clothing (especertainly in a very economical manner. cially shoes), rifles, and other accouterments would be in perfect condition at Fort McPherson in lockers, and to put our reserves in uniform would be only a question of an hour after their arrival. Each reserve soldier would receive \$2 a month during the four years of his reserve service. This would insure and make possible the keeping track of the whereabouts of each man every month, and the pay of \$2 to every reserve man would drop into his lap out of a clear sky each month, thus keeping up his interest in his military career and stimulating enlisting in his community. We must not expect something which is efficient and worth having for nothing; if we want the service and protection of 300,000 trained reserve men we must be willing to make a reasonable payment for the same. few reserve men would, of course, move out of the State of Georgia; in these cases they would be transferred direct to the reserve of the State to which they moved by the commanding officer of the Georgia reserves. The commanding officer of the Georgia reserve regiments would be a high-ranking Regular Army officer, who should have an office force of not over two assistants, one from the Infantry and one from the Coast

To obtain the necessary number of trained officers to command the two regiments of reserve Infantry and the reserve companies of Coast Artillery of the State of Georgia, I would give preference to the officers of the National Guard of Georgia. When I reduced slightly the number of organizations of the National Guard, there would be an excess of National Guard officers, and to these men I would offer commissions in the reserve regiments and Coast Artillery companies, subject, of course, to mental and physical examination. These reserve officers would, of course, receive a small monthly salary. For the rest of the reserve officers I would take the honor graduates of the military schools of this State, pay them \$100 a month for a year, during which time they would serve as

additional lieutenants in the Twentieth Georgia Infantry and Georgia Coast Artillery companies. At the end of the year these officers would be transferred to the reserves and assigned to companies. Once this system is started, the number of men to be accepted as officers from the military institutions of the State would vary according to the vacancles. At the end of the first year of the system we would require sufficient officers to command 900 men, the second year 1,800 men, the third year 2,700 men, the fourth year 3,600 men. So by using one to five honor graduates of each military school each year and the National Guard officers we could have a corps of trained officers sufficient in size at the end of four years to officer the reserve organizations. These officers would know their men, and esprit de corps in each reserve regiment would soon be noticed An honor graduate assigned to Company A, Twentieth Georgia Infantry, as an additional second lieutenant, upon the completion of his year of training, should be assigned to Company Λ of one of the reserve regiments. Likewise all enlisted men of Company A, Twentieth Georgia Regulars, upon being transferred to the reserves, should be assigned to Company A of one of the reserve regiments. This system would soon create an esprit de corps in the companies of the reserve regiment. Officers and men would look forward to the yearly maneuvers as a reunion. They would then meet and rub elbows with the men with whom they served for two years; reserve officers would be commanding in many cases the men they commanded during their one year. The entire system would blend toward real efficiency

When the President desired to mobilize the Nation's military forces one telegram only to each State would be necessary. The reserves of each State could be mobilized, clothed, and armed certainly within a week, and the President could mobilize a trained and educated army of over 300,000 men at any strategical point on either coast within three weeks from the date of ordering the mobilization. This is brought about because the plan works automatically to this end when we study it. Take New York State, for instance: It is at present our greatest recruiting center; hence it would have the largest number of Regular Army and reserve organizations. The States adjacent to New York are naturally densely populated, and therefore would have a fairly large number of Regular Army and reserve organizations, all of which makes possible the concentration at New York of a large number of troops at a moment's notice and also at a very small cost. Also we find that the system eliminates the present deleterious condition of having the young boys from the farms in the South and West serving with and being influenced by some of the undesirable element enlisting in some of our large cities. It also works our small Army plant at its maximum capacity.

How would the system work when applied to our foreignservice conditions? Foreign service is very popular with our soldiers. As soon as it is definitely known that a certain regiment is scheduled for a tour abroad the regiment is at once filled with recruits. Hence when our First Georgia Regiment is scheduled for two years abroad, and at the end of which time is to be returned to us at Atlanta with our sons, we would be only too glad to permit our sons to take advantage of the splendid opportunity of seeing the world. Especially would this be so when we realized the regiment was to be officered by sober, honest, and efficient officers. The system eliminates two very grave existing conditions. It takes the question of where troops are to be stationed and the elimination of many of our undesirable posts out of politics. Each State would have only one post for its mobile army troops; and by mobile army troops I mean all troops except those in the Coast Artillery.

This system would greatly benefit the National Guard. The discharged reserves would be encouraged at all times in associating themselves with the National Guard. Soon the National Guard organizations would consist mostly of men who would have completed their six years' regular service. These men would join the National Guard in order to attend the encampments and see their friends again if for no other reason. Understand that I would at the commencing of this system only reduce the National Guard organization at places where it has been clearly demonstrated that the guard organizations are below the required strength per company or where they are very inefficient. In these cases I would simply request fewer organizations, say the transferring of all the men of a weak regiment into four strong companies or a battalion. However, I would take care of the officers eliminated as mentioned above.

From an economical standpoint the system is well within reason. The real economy can only be realized when you figure the additional security attained by having the Army plant running at full capacity, and a reserve army of 300,000 trained and officered soldiers (not civilians), and compare this class of security and what you pay for it with that attained by

having your plant running at two-fifths of its capacity, a reserve of 400,000 citizens, and what it costs you.

The visible economical features are listed below:

First. Men to-day are sent from the place of enlistment to different and very often distant regiments, and upon being discharged are returned to the place of enlistment, which averages one-half the distance across the continent. This item of expenditure which runs into hundreds of thousands of dollars each year would be eliminated.

Second. At present each soldier has the same money clothing allowance, because he is liable to be called upon to serve in any Under the proposed plan there would be no occasion for southern troops to have a money allowance for clothing as large as the New England troops. Likewise the money allowance for clothing of the New England troops could be reduced because they would not require certain articles of clothing necessary for southern wear. By carrying out this idea a large saving could be made.

Third. Officers would remain with the regiments and the present large officers' mileage expenditures could be practically eliminated.

corresponding saving on the freight bills for Fourth. A officers' household effects would be made as their mileage expenditures are reduced.

Fifth. It is cheaper to feed 1,800 men than it is to feed three separate groups of 600 men as we are doing now.

Sixth. The cost of keeping up a post for a large command is less per man than keeping up three posts for the same number of men.

Seventh. The cost of mobilizing troops for maneuvers would be less than it is now, because in practically every State by assembling Regulars, Reserves, and the National Guard a brigade maneuver could be held each year, and by combining the adjacent States a division or corps maneuver could be held every two years, and in each class of maneuvers the distance required to move the troops is less than at present. In other words, there would be a sufficient uniform distribution of our force over the country for this purpose,

Eighth, By selling the undesirable and useless Army posts, sufficient funds could be secured to enlarge the remaining ones and to build the new ones necessary and still have funds on hand. Fully two-thirds of the States have at least one post

possible of utilization if we adopt this plan.

If at any time the Government considered the Army plan turning out too many reserves, it would be reduced by only having 100 or 125 men in each company. Any reduction below 100 men to a company is believed unwise. On the other hand, if it is found that not enough men are supplied for the reserves a limited number could no doubt be attained by calling on civilians to enlist in the reserves, as the President now con-templates. However, if over 20 per cent of the reserves enter thus as untrained civilians, it would reduce the efficiency of the reserves to an undesirable point. Also a provision should be inserted permitting reserve men to reenlist in the reserve when the reserves are not at authorized strength.

Let us now figure how our plan would work out:

Forty regiments of Infantry, at 1.800 each Pifteen regiments of Cavalry, at 1,200 each	
Ten regiments of Field Artillery, at 1,000 each Two hundred and ten companies of Coast Artillery, at 100 each Three battalions Engineer troops, at 500 each Medical Department	72,000 15,000 10,000 21,000 1,500 500

Two times this number, or 240,000, will give us the strength of the reserve army. The 120,000 in the Regular Army does not include the native regiments in our insular possessions or the special troops, such as those in the Quartermaster, Ordnance,

_ 120, 000

and Signal Corps, and so forth.

Our National Guard, after being reduced, will amount to a trifle over 100,000. So our total available strength possible of mobilization would be 440,000 men, less those on foreign service. We could eventually increase our militia by 60,000 as the reserve soldiers terminated their six years' service, and then we would have our 500,000 trained and officered soldiers, which amount of preparedness should render us forever free from even the fear of an invader's heel. If we accept this plan we avoid the evils of a large standing army and at the same time make ourselves secure against attack, at only a small increase over our present military expenditures. We also improve morally, physically, and mentally a large percentage of our population, whose earning capacity will be sufficiently increased to warrant the expenditures.

Dyestuffs and High Explosives.

EXTENSION OF REMARKS

OF

HON. EBENEZER J. HILL. OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES.

Monday, January 17, 1916.

Mr. HILL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an extract from an address by Prof. Charles H. Herty, Chapel Hill, N. C., president of the American Chemical Society, delivered at the annual convention of the society at Seattle, September 3, 1915.

The extract is as follows:

In conclusion, let me discuss with you one other phase of cooperation, namely, that between the American people, through their Representatives in Congress, and our chemical industries. I have no leanings toward paternalism, and I believe in the doctrine that a good, stiff struggle for existence is conducive to longevity, but there are certain normal functions of our National Congress which make or mar industrial development, and there are certain undertakings in behalf of the Nation as a whole which individuals can not be asked nor expected to assume.

struggle for existence is conducive to longevity, but there are certain normal functions of our National Congress which make or mar intustrial development, and there are certain undertakings in behalf of the Nation as a whole which individuals can not be asked nor expected to assume.

Recent events compel the conviction that the assumption of our peaceful world relations, which formed the basis of my earlier piea, may be at any moment completely shattered. In such an event the responsibility of all chemists in this country will be added to by the impelling call of patriotism. That the contributions of our science are of the highest value in modern warfare is daily attested in the reportorial accounts of the new developments among the now contending nations. Who would dare say that the innovations of chemistry in the methods of warfare have reached a limit?

In view of this recognized fundamental importance would it not be well, in these days of talk of preparedness, to consider the question of chemical preparedness. Ships, guns, and shells are necessary; yes; but most largely as a means to an end, and that end the effecting of a violent chemical reaction at a point more or less distant. Naturally in advisable, be reparedness there are topics whose public discussion is in facts are all matters of published record, and that is the question of the visible supply of sedium intrate in this country.

In these days of rapidly shifting international relations the only sound and rational policy is national self-containedness. Blessed with a rich heritage of wonderful and varied natural resources and, in our isolation, confident of freedom from grave international complications, we have received potash supplies from Germany with but scant forethought, save in the National Bureau of Soils; and now to-day agriculture is seriously threatened. So, too, textile manufacturers, reaping a bountful harvest from the haboratories and dyestuff factories of termany, have given no helping hand to the struggling young home industry whi

Finally, in the light of the present situation, may we not hope for more generous cooperation between Congress and our chemical industries in solving those innate economic difficulties whose temporary correction can be provided for only through adequate tariff legislation? I realize fully that the trend of national opinion in recent years has been toward a lowering of tariffs in the conviction that industrial glants were parading in the guise of swaddling clothes, but the present unforesceable situation, resulting in the cessation of imports from the chemical industries of Germany, has shown to all several strikingly weak links in our industrial chain. We can not afford such. "National self-containedness" is a more fitting slogan for us now than "tariff for revenue only." If such links are to be strengthened, we must as a people meet the expense by giving for a reasonable time that measure of protection which will effect a union of capital and scientific skill under no undue stress of unfair foreign interference.

No other phase of our chemical industry illustrates so well the point in mind as the synthetic dyestuff industry about which so much dis-

cussion has turned during the past year and concerning which even more active discussion is defined to be furnished during the year just ahead of us. Although the clamor over the shortage of synthetic dyestuffs in the early period of the present war was shown by undeniable statistics to have had no basis in fact, nevertheless the present complete cessation of shipments from Germany and the constant inroads on the stocks in hand have now brought about a real and serious shortage.

consion has turned during the past year and concerning which even more active discussion is detined to be furnished during the year just ahead of us. Although the clamor over the shortage of synthetic dyestuffs in the early period of the present war was allowed your considerable process of the product of fifteen million dollars, including duties pald, is not large as compared with the volume of many other industries, yet the use of the product of fifteen million dollars, including duties pald, is not large as compared with the volume of many other industries, yet the use of the product of the produc

and not mencinal, should be taxed 15 per cent at valorem and 32 cents per pound specific."

Are the people of this country ready to cooperate with the chemists by authorizing the prompt enactment of such legislation? If so, there need be no fear that active capital will be longer withheld, and thus we can feel confident of a synthetic dyestuff industry commensurate with

our needs.

As I think of the possibility of such an industry, I recall the words of the Swiss professor, Guchm, who, in 1900, after one of his lectures

on coal-tar dyes, said to me: "The natural home of the dyestuff industry is in your country, and some day it will flourish there."

The creation of such a self-contained industry, however, has far deeper meaning for our national welfare than the supplying of needed dyestuffs, for such plants would constitute an easily convertible reserve for the manufacture of coal-tar explosives in times of war.

Through its stimulative effect on research, on technique and in supply of material the dyestuff industry has furthered the development of both the explosives and the medicinal industries. Its firm establishment here would foretell the complete development of each of this great trio of industries, which, as a whole, furnish the rational and economic utilization of that great mass of coal tar which now wastes itself in useless flames above the coke ovens throughout the land.

Cooperation—it is a good word, and carries with it a wonderful power of accomplishment!

The Adventure of Being an American Shipper.

EXTENSION OF REMARKS

HON. S. D. FESS. OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 18, 1916.

Mr. FESS. Mr. Speaker, under leave to print, I submit a communication from Mr. William Bayard Hale on the adven-

ture of being an American shipper.

William Bayard Hale was the first of President Wilson's representatives in Mexico; in that capacity he is understood to have recommended a policy more vigorous than the administration was willing to adopt. Since the beginning of the war Mr. Hale has devoted his time to the study of international maritime law.

THE STORY OF THE "HOCKING," THE "GENESEE," AND THE "KANKA-KEE"—THE ACTUAL VALUE OF THE AMERICAN FLAG.

Up to the present moment of writing it is believed such American vessels as are navigating the Great Lakes, the Mississippi River, and the Hudson River are safe from capture or detention at the hands of British cruisers. The Long Island Sound lines also are running without interruption. Beyond this statement we have no certain assurance.

Between New York and Norfolk, Va., the voyage is dangerous. Within a few weeks at least two ships on the voyage have been chased by British men-of-war. The Vinland is not, indeed, an American ship, being of Danish registry. With a cargo out of New York November 11 for Norfolk she escaped by creeping. closely pursued, through the fog inside the 3-mile line down the Jersey coast.

The Hocking was not so fortunate. The Hocking is an American vessel, flying the American flag, owned by Americans, and was steaming between two American ports. She had, and could have had, no contraband on board, for nothing can be contraband

passing between two ports of a neutral country.

But, as a matter of fact, she was in ballast, without a pound of cargo in her. A British cruiser caught her on her way out of New York Harbor, boarded her within sight of the Jersey shore, put her in charge of an armed prize crew, hauling down the American flag and running up the British jack, and took her a prize into Halifax, where she was put in charge of the mar-shal of the prize court.

American ships voyaging to the Caribbean are likely (as was the Zealandia at Progreso on November 5) to be boarded by a British boarding crew within the shelter of a Mexican port. American ships bound for South America are likely to be captured, as was the *Genesce*, out of Norfolk October 14, carried, a prize, into a British West Indian port, St. Lucia.

The rights of American vessels or of American cargoes on vessels of other neutral nations on the other side of the Atlantic, being what they are, namely, nonexistent, abandoned (for not a ship crosses the Atlantic to and from our ports without license of the British Admiralty), it may perhaps be worth while to inquire whether we have any privileges left us along our own coasts.

The cases of the *Hocking*, the *Genesce*, and the *Kankakee* are dramatically illustrative of the attitude of the British Government toward our shipping.

ment toward our shipping.

Once the *Hocking* was a Dutch ship. Then her name was the *Amcland*. In course of time she passed under Danish registry and was known as the *Gronland*. On October 22, 1915, she became a registered American ship, having passed into the ownership of the American Transatlantic Steamship Co., incorporated under the laws of the State of Delaware, and with its chief office at No. 17 Battery Place, New York City.

There was some heart the *Hocking* part of the Washington authorities in according the *Hocking* registration as an American

authorities in according the Hocking registration as an Ameri-

can ship. In fact, protest against this action was made by representatives of the British Government, and three months were expended in an exhaustive investigation of the American Transatiantic Steamship Co., the character of its stockholders, the nationality of its officers, and the good faith of the transfer of the vessel. It is alleged to be the ambition of the present administration at Washington to build up an American merchant

The Hocking was not indeed a gigantic addition to our shipping list, but the good faith of her transfer was so apparent, the honorable commercial ambition which made her one of a growing fleet of American ships was so clear that, in spite of British opposition, she was, on the date above mentioned, impressed with the character of an American ship and given the right to fly the American flag and enjoy whatever protection that emblem affords.

What that protection amounted to was soon manifest. A week and a day after she had acquired American nationality the Hocking fell the prey of one of the British cruisers which blockade the entrance of New York Harbor, and was carried as a prize to Halifax.

There must, of course, have been, and there was, a ground upon which Great Britain interfered with this modest attempt of American enterprise to take care of its own shipping interests. It could not, of course, be alleged that the Hocking was an "enemy ship" transferred to American registry for the purpose of escaping the embarrassment of, say, German ownership.

Something over a year ago there was a good deal of talk about building up an American merchant marine. Under existing circumstances such a marine could be built up only by purchases of foreign ships and during a couple of months there were heard in the neighborhood of Washington many brave words about the right of a nation to provide for its necessities.

A ship-purchase bill was introduced into Congress calling for the organization of a steamship company, part of whose capital was to be contributed by the Government in order to secure available ships to carry our commerce. The declaration of London, the most authoritative statement of international maritime law, expressly provides for the "transfer of an enemy vessel to a neutral flag after the outbreak of hostilities.

International law fully acknowledges the validity of such transfer made in good faith. But there was no such question in the case of the transfer of the *Hocking*. The *Hocking* had never enemy" vessel. She was purchased by an American been an company from a Dane-purchased by one neutral from another

No belligerent has a right on any ground to object to the transfer to American registry of any neutral ship. It was, however, alleged the American Transatlantic Steamship Co. was backed by money furnished by gentlemen whose nationality is offensive to Britons.

Let it be noted that, even if this were the case, it would afford no ground whatsoever upon which the Hocking might be made a British captive. It is not a crime for Germans to invest their money in an American enterprise. There is no Federal statute, there is probably no enactment in any State in the Union, which forbids the investment of foreign capital of any national denomination in American enterprises.

There is no international law that forbids citizens of one nation from investing in business in another nation. There is nothing harmful to the interests of the United States in having foreign money invested here; the investment of foreign capital in our enterprises is, on the contrary, beneficial.

There is, of course, nothing in the law that prohibits foreign ownership of stock in corporations owning and operating vessels under the American flag. It would be a very poor law if there were. Tibet, Haiti, or Siam might deem it good policy to forbid the investment of foreign money in native enterprises; but enlightened policy invites foreign capital, assures it protection-and then fulfills the assurance.

The American Transatlantic Co. is an American corporation, the members of which declare there is no German capital invested in it. Even if there were, the fact would give Great Britain no right to touch the ship; it is to the advantage of the United States to have German capital as well as British, French, or any other kind of capital invested in American business

There would be as much justice in Germany confiscating the Pennsylvania Railroad because a large amount of capital invested in that carrying concern is English as there is in Great Britain's seizing the Hocking or the Genesee on the ground that German capital is invested in them.

It is a just complaint that the Mexican Government does not protect American capital invested in Mexico. Is the United States prepared to sink to the Mexican level by refusing to

protect foreign capital invested in legitimate business carried on under the American flag?

The registration statute under which the Hocking took its place as an American vessel was the act of August 18, 1914. Under this act the American Transatlantic Steamship Co. furnished the United States Government with a certificate of its organization, and the names of its president and managing directors, all of whom were citizens of the United States.

By the capture of the Hocking the British Government served notice upon the Government of the United States that upon its mere assumption, or its mere allegation, money belonging to persons of a nationality disagreeable to Englishmen was invested in a ship, that ship might be made a prize by a British cruiser wherever caught, haled into a British port, and thrown into a British prize court.

That was the situation up to a day or two ago. It was desperate enough, in all reason. But it has now become infinitely worse, for the Hocking, after having had nailed upon her mainmast in Halifax Harbor an Admiralty notice giving her eight days in which to show cause why she should not be condemned as a "good and lawful prize," has been denied even that mercy.

There is to be no prize court; there is to be no hearing; the Hocking is declared confiscated-presumably under His British Majesty's order in council of October 20, 1915.

What is that order in council of October 20? Article 57 of the declaration of London provided that the character of a vessel, namely, as to whether it is an enemy vessel or a neutral vessel, is determined by the flag which she is entitled to fly.

The declaration of London, drawn up under the inspiration of the British Government and signed by it February 26, 1909, was at the beginning of the present war, namely, by an order in council of August 20, 1914, readopted and put in force by His Majesty's Government. However, on October 20, 1915, at the Court of Buckingham Palace, present, the King's Most Excellent Majesty in Council, it was declared that it was no longer expedient to abide by the said article 57.

That is to say, the British Government sets up a court of high seas which arrogates to itself the right to go behind the decisions and the determinations of a Government like that of the United States and to decide on its own account whether or not the acts of a branch of the United States Government, for instance, are legal or illegal.

Papers emanating from the Government of the United States in Washington have no force or effect with a captain of an English cruiser. The certificate of the department of the Government of the United States is of no consequence to him. "full faith and credit" between nations, upon which all international amity rests and all hope of civilization abides, does not exist to-day for any officer of the British Government.

The case is even worse. As it stands to-day the British Government not only disregards the certificate of registration by a Government like that of the United States to the extent of requiring its possessor to prove before a solely British tribunal his right to possess the certificate; but it goes further, it does not give the possessor of the certificate a chance to prove his right to possess it.

The British Government does not only require the owners of a ship like the Hocking to prove that they are entitled to carry the American flag which the American Government has given them, but refuses to award them an opportunity to prove that Without taking the trouble to go through the form of condemning the Hocking she was confiscated by the British authorities in Halifax.

The case of the Hocking has a clear parallel in that of the Genesee-another humble vessel lately added to our merchant marine. The Genesee is likewise the property of the American Transatlantic Steamship Co. Like the Hoc ing, she is a recent acquisition of the company. The Genesee was built in England and sailed as a British ship under the name of Avristam. Her British owners sold her to L. N. Cordylis, of Andros, Greece. As a Greek ship she was known as the Cordylis. She was then acquired by the Finland Steamship Co. of Copenhagen.

The American Transatlantic Steamship Co. bought her from the Danish owners June, 1915, and rechristened her the Genesee. Soon after her acquisition by the American company she was chartered to C. G. Blake & Co., of Cincinnati, and loaded with a cargo of 3,800 tons of coal for Montevideo. She cleared from Norfolk October 15.

An American ship, plying between two neutral ports, she was captured in the Caribbean Sea by a British cruiser and carried into the harbor of St. Lucia. There she likewise has been confiscated without prize court proceedings by the British Government.

To these two cases is to be added that of the Kankakee, concerning which few particulars have as yet reached the United States. She was a member of the fleet to which the Hocking and the Genesce belonged, and was on her way from a United States port to a South American port. When off the mouth of the River Plata she was, on October 31, captured by the British auxiliary cruiser Macedonia, carried as a prize into Port Stanley, Falkland Islands, where orders for her confiscation will prob-

There are seven other vessels in the American Transatlantic fleet which have been blacklisted by the British Admiralty, and which will be captured and confiscated as soon as British

cruisers are able to get hold of them.

Two of the blacklisted ships, the Manitowoc and the Muskegon, lie at Buenos Aires, afraid to leave port; another, the Allaguash, lies at Rio under like intimidation. The Winneconne is in New York Harbor awaiting a cargo which nobody dares put on board her. The Ausable is at Galveston in like case. The Maumee is hele up at Copenhagen. The Saginaw is in Marseille Harbor, seized by the French.

Meanwhile goods are accumulating at New York and other American ports to such an extent that railroads decline to carry

further consignments to the docks.

And this is the answer to the American note of October 21. It took the United States Government seven months to make up its mind to write that note; it has taken the British Government

one month to deliver its practical answer to it.

The Government of Great Britain has virtually set up in the midst of the busy seas an arbitrary court, claiming unheard-of powers, and exercising the most tyrannous police functions, seizing and hauling into the dock as suspects all travelers upon the ocean highways and visiting many of them with heavy penalties for unproven, and, indeed, unprovable, offenses

This lawless assizes of the seas, contemptuous alike of its own precedent and of the rights of others, scarcely stoops to the pretense of citing authority for its actions, which are determined solely by its brutal will, and enforced, though, indeed, largely through intimidation, by the gigantic power of its naval police.

The extent of the earth's surface over which this extraordinary

court is permitted to wield its self-arrogated jurisdiction, the magnitude of the interests which its actions vitally affect, and the supineness with which sovereign States submit to the erection upon the ruins of their self-respect and the debacle of their highest commercial and political interests of an island's municipal statutes into international formulas unite to render this

one of the spectacles of history.

A contemplation of that spectacle suggests the hour imposes upon the United States a duty of supreme historical importance.

Rural Post Roads.

EXTENSION OF REMARKS

WILLIAM E. COX. HON. OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 20, 1916.

Mr. COX. Mr. Speaker, the greatest question before the American people to-day is the country-life question, and in importance to our Nation as a whole it far transcends all tariff,

trust, and financial questions combined.

The country people do not ask special favors at the hands of any legislative body; they ask only a square deal. This they are entitled to have. They are not seen lobbying around legislative bodies asking special favors, but are content with a fair share of degislation. The rural community of any nation furnishes its very backbone and sinew, its base for prosperity, vigor, and in fact its foundation for a strong life. The rural problem in this country consists in maintaining or our farms and in our village communities:. Christian cizilization with modern American ideals of happiness, progress, and efficiency. The census of 1910 arbitrarily took the figures of twenty-five hundred, and declared that all those who lived in towns and cities having a population of twenty-five hundred and more lived in cities, and those who lived in towns and villages with less than twenty-five hundred, including rural communities, lived in the country. For the past 20 years and more there has been a mighty life current going on, sweeping from the country to cities many of the brightest boys and most ambitious girls whom the country could ill afford to spare. Everywhere to-day the country is suffering from this Why do they go? It is necessary that a larger number of these boys and girls must be kept on the farm if the rural communities are to hold their own and a new rural civilization really have a chance to develop as it should.

The 1910 census showed, in spite of a steady gain in country districts in the United States, thousands of rural townships continued to lose in population. This shrinkage in population was found to be true everywhere, except in the newer agricul-The older the communities the earlier the ture districts. tendency to rural depletion became serious. The trouble began in New England. Now the rural problem is moving west, until the last census showed that New England was the one part of the country to show this loss as a whole. The last census figures showed a net rural loss for the first time in the States known as the East North Central States, which include the State of Indiana. From 1900 to 1910 cities grew in population three times faster than the country. While the country communities during this period of time increased in population 11.2 per cent, the cities and towns above 2,500 increased in population 34.8 per cent. During this period of time rural communities of Iowa lost 120,000; rural Indiana, 83,127; rural Missouri, 68,716, or 3.5 per cent. In the great rural State of Illinois, out of 1,592 rural townships 1,130 lost in rural population. The last census showed that 37 per cent of the farms in the United States were operated by tenants, and the tenant is cursing the soil. The country is the natural source of supply for any nation. No city has ever been self-sustaining, nor will it ever be. Cities have always drawn their raw material and population from the country, and always will. The country must continue to produce the food, the heartlest young men and women, and much of the idealism and leadership of the Nation. So long as there is a city civilization to be fed and clothed there must always be a rural community to feed and clothe the city. We can almost say the growth of the city made the country problem. It would be nearer the truth to say it has made the country problem serious. The problem of rural progress would still exist if there were no cities, but had the cities not been drafting their best blood from the country and villages for more than half a century we would probably not be anxious about the rural problem to-day, for it is the loss of country leadership that has made country progress both slow and difficult. The growth of cities is not merely an American feat; it is universal in all the civilized world. Wherever modern industrial systems hold sway cities have grown phenomenally large. City population is less in this country in proportion than it is in England, Scotland, Wales, Austria, or Germany, but these Governments nearly a century ago recognized that they had a country problem to deal with and began dealing with it by just, wise, and proper legislation.

They recognized that unless something were done for their rural communities the country would soon become depleted in population, cities would become congested and overcrowded; and their wise men began setting their heads toward the rising sun and to enact laws inuring to the benefit of rural people, particularly in making heavy appropriations for improving high-ways, enactment of laws creating farm rural credits, and so forth, whereby the farmer could get money at cheaper rates of interest and on longer terms of payment. By this means, to a large extent, they have overcome the rush from the country to the cities, and now the growth of rural population is practically holding its own with the growth of city population. Let the farmers cease their work and labor from March to October and Wall Street will grow up in grass, skyscrapers will be vacated for want of tenants, and that present world metropolis will live only in the memory of the past. Every one of our large, busy, and overcrowded cities await with hope and expectation the maturing and marketing of the farmers' crops. abundance is loaned upon their strength; contracts for work and labor, goods and materials, amounting to hundreds of millions, yes, billions of dollars, are all annually bottomed upon the prosperity and welfare of the farmer. If he fails, all fail with him. If he succeeds, all share in not only his prosperity but all pros-

perity growing out of his labor.

A saying written by an old Chinese philosopher is applicable to-day. Said this old sage:

The well-being of a people is like a tree. Agriculture is its root, manufacturing and commerce are its branches and its life. If the root be injured, the leaves fall, the branches break away, and the tree dies.

This saying is true and applies to conditions of affairs in our own Nation at this time. Agriculture is at the very base of our wealth, our happiness, our prosperity. The Secretary of Agriculture in his annual report this year estimates that the farmers' crops for the year 1915 were valued at \$10,000,000,000, a sum so large in amount as to both stagger and appall the human mind. This is nearly ten times as much as the total capitalization of all the 7,400 national banks in the United States. It is practically one-half the total value of the banking power of all the

banks and trust companies in the United States. It is nearly one-half the total value of 250,000 miles of steam railroad in our Nation. This amount of farmers' commodities expressed in tonnage was so large it completely overtaxed transportation, broke down railroad traffic, and almost brought freight transportation for weeks and months to a standstill. This vast amount of wealth annually added to our material resources represents an equally vast amount of labor to sow, reap, and harvest the same. And yet this tremendous amount of products was produced by only 35 per cent of the total population of our country, because the last census showed that out of every 100 persons in the United States only 35 of them were living in rural communities, the remaining 65 living in cities.

One of the first things which greets the traveler's eye on arriving at Union Station at Washington City, cut deep in marble, is the beautiful and sublime thought: "The farm; best home of the family; main source of national wealth; foundation of civilized society; the natural providence." No writer, no thinker, has ever expressed more thought in fewer words. None could. This thought represents human life from birth to death. farm; best home of the family; main source of national wealth; foundation of civilized society; the natural providence.' rural people can not live alone on beautiful thoughts and happy epigrams. They can not live and continue prosperous alone on promises. They must have realities furnished them. For years promises. they have battled and struggled along against adversity, never murmuring, ever overcoming all obstacles, until they have reached, not by means of favored legislation inuring to their interests, but in spite of lack of legislation for their immediate benefit, to their present commanding position, until to-day those living in our rural communities are recognized as a dominant and controlling power, financially, morally, and socially, throughout the land.

But, Mr. Speaker, what is the cause of the rapid depletion of rural districts and the abnormal growth of our cities? It may be due to many and diverse causes. Isolation has been the curse of rural communities exactly as congestion has been the curse of the cities. The American farmer is bold, daring, and independent, and desires to live alone upon his farm, instead of in villages and towns, as the farmer does in many, if not all, of the older European countries. The advent of farm machinery for the time being caused a tremendous exodus from the farm to the city, as shown by the Census Bureau. Laborsaving machinery is as much a feature of modern civilization in the country as it is in the city. Machinery, by developing the factory system, centralized industry and took from the farms many thousands to man the looms. But this is only one-half the Agricultural machinery made it possible for the farm work in the country to be done by fewer men. The farm population decreased from 47.6 per cent in 1870 to 35.7 per cent in 1900, representing a change from agriculture to other pursuits of three and one-half millions of people, but during this period of time the average farmer became 42 per cent wealthier than he was before. The coming of farm machinery threw a great many men out of employment. One man with a modern harvester to-day can do the work of eight men by the older meth-The modern thrashing machine has displaced from 15 to 20 men. In the production of the nine important agriculture crops the average increase of labor efficiency as a result of farm machinery in the past two generations has been 500 per cent, while that of barley has been 2,200 per cent and nearly the same for wheat. The plow, the greatest of all agricultural implements, has passed through constant changes from the former crude wooden moldboard of the earlier times to the giant steam gang plow of the present time. The first steel plow was made in 1837 from an old saw blade. The first mowing machine was perfected in 1831. Imperfect reapers apng machine was perfected in 1831. Imperfect reapers appeared two years later and were made practical by 1840, one of the triumphs of modern machinery. At the Paris Exposition in 1855 a hopeless contest was waged between six sturdy workmen with the old hand flail and thrashing machines from four different countries. In half a day the six men found themselves decidedly defeated and gave up the contest. As a result of labor-saving machinery the cost of producing a bushel of wheat has been reduced from 38 hours and 40 minutes labor in 1850 to 10 minutes labor in 1896. In 1860 it required 41 hours to produce a bushel of corn, while in 1894 this time was reduced to 41 minutes and in 1911 it was further reduced to 27 minutes.

Labor, as a result of machinery, has reduced the time to produce a ton of baled hay from 35½ hours in 1850 to 11½ hours Many things have come to make country life more pleasant and agreeable. Farm machinery is one of them; the telephone; modern automobiles; cooperative creameries;

will not stem the tide of country depletion in population. Other things must be done, because the country will hold its own in growth and in population as against the city when the country is made worth while to live in it. Then, and not until then, will the call of the city fall on deaf ears of the country boys and country girls, and, in my judgment, the essential thing that can be done to make country life worth while is for the Government of the United States to aid in the improvement of the highways of the Nation.

Ill fares the land, to hast'ning ills a prey, Where wealth accumulates, and men decay; Princes and lords may flourish, or may fade—A breath can make them, as a breath has made; But a bold peasantry, their country's pride. When once destroy'd can never be supplied.

It is an unfair proposition for Congress to annually appropriate \$50,000,000 for the rivers and harbors and not appropriate anything for the improvement of highways. The same warrant for improving highways by Congress is found in the Constitution of the United States, which grants to Congress power to improve rivers and harbors by making these large appropriations. The equity of the situation is and should be to treat all alike, not only to appropriate money to improve rivers and harbors, but to appropriate money to aid the States or subdivisions of States to improve their highways. All the people of the United States are taxed to improve rivers and harbors, and the people of the States do not ask that money enough be appropriated by Congress to build, improve, and maintain their highways. All they ask is for Congress to appropriate a part of the money to aid them in constructing and maintaining their highways. They are willing, and perfectly so, to bear a part of this burden, and to match the Government, dollar for dollar which the Government puts into this line of improve-ment. The only money which Congress annually appropriates to aid rural people is the appropriation made to sustain and support the Agricultural Department, which amounts approxi-mately each year to about \$25,000,000. This sum is only onehalf the amount which Congress annually makes for the improvement of rivers and harbors, and is one-fourth the amount which Congress annually makes for the support and mainte-nance of the Army, and one-sixth the amount which Congress annually makes for the support and maintenance of the Navy. And yet every enterprise of our Nation is based upon the wealth and prosperity of the people living in rural communities. With us there is no more "Going out West and entering cheap and productive lands for settlement." With us there are no more countries to conquer. Here we are staked between two seas. Here we must remain and work out our own destiny, and in my judgment it would be money not only wisely but beneficently expended if Congress would come to the rescue of the people living in the country, and aid and assist them in building and maintaining good roads. It would be bread seed cast upon the waters to be gathered many days hence. my judgment, would cause the bright boys and ambitious girls to remain and live in the country and not desert it and go to towns and cities.

In spite of the great handicap under which the American farmer is working to-day, he has reached, as above stated, his position of commanding importance. Every dollar's worth of the \$10,000,000,000 worth of farm commodities had to be hauled The department of good roads estimates that the average haul of farm commodities in this country from the farm to the market is 8 miles; that it costs the American farmer to transport a ton of his produce over the 8 miles of roads \$1.25. It costs the German farmer to haul a ton of his produce 8 miles but 23 cents, and it costs the French farmer to haul a ton of his produce 8 miles but 19 cents. These two latter Governments, many years ago, seeing the necessity of building up a strong, virile rural population, began and did aid the people by making liberal appropriations for the building of their roads. This question has been neglected, and neglected far too long for our own welfare in this country. The time has come for us to do something real and do it now; something vital, something of importance ought to be done for our rural people in the way of improving their roads.

In 1911 Congress made an appropriation of \$500,000 and turned it over to the Post Office Department to be apportioned by that department among the States with a view of seeing whether or not the Federal Government and the States, or subdivisions of the States, could work in harmony in the way of building roads. The States which accepted their part of this fund and the Government worked admirably together, and the plan was found to be satisfactory.

On the 10th day of February, 1914, the House of Representa-tives passed à good roads bill, not only making it a permanent cooperative buying and selling agencies; but these things alone law and pledging the Government to this policy for the future, but it carried an appropriation of \$25,000,000, under which the State of Indiana would have received approximately \$1,000,000 per year if the bill had become a law. The bill passed the House by 284 votes for it, 42 votes against it, 5 Members voted present, and 101 did not vote at all. The bill went to the Senate, where it had to go before it became a law, and there it was killed. There is pending now on the calendar a good roads bill similar to the same bill which passed the House two years ago, carrying an appropriation of \$25,000,000, and under it, if it becomes a

law, Indiana will receive approximately \$1,000,000. I sincerely hope that this bill will not only pass the House but that it will successfully pass the Senate, be approved by the President, and become a permanent law. But under this bill, as under the bill of two years ago, the States, or subdivisions of the States, will be required to put a like amount of money on top of the Government's appropriation. While this is not treating the rural people, in the way of appropriation to improve their highways, as fairly and as equitably as we treat the rivers and harbors, where Congress appropriates all the money, in my judgment, the rural people would, if they could get this much, be thoroughly satisfied. If they can get some help, they will willingly do their part, but by doing their part they will cast an onerous burden upon themselves in the way of taxes. Indiana has done more in the building of rock roads than any other State in the Union. There are to-day between \$65,000,000 and \$70,000,000 worth of rock-road bonds bearing 4 and 4½ per cent interest upon the rural taxpayers. This is a tremendous burden upon them. They have stood it without murmuring, longing and expecting that a belated Congress would come to their rescue and either help them build their roads or help maintain those that are already built. In my judgment, if this were done, you would soon see the country rehabilitated, revivified, happy, jubilant, and prosperous; but unless this is done the continued sweep from the country to the cities will go on until, in the course of another generation, our country will become depleted in population, farms will become abandoned, communities will lose in population, fields become unproductive, and the pinch of hunger will be felt then in the cities as never

At the present time there is considerable agitation going on in the country on the subject of preparedness. There are two organizations advocating this subject with all the energy they possess. They are known as the Army League and Navy League. If these leagues had their way about making appropriations for preparedness, they would appropriate not less than \$750,000,000 per year for the Army and Navy. This, however, is not the preparedness for which President Wilson stands. We are annually appropriating \$100,000,000 for the Army and \$150,000,000 for the Navy. If the Army and Navy Leagues had their way about it, they would appropriate in excess of this amount \$500,000,000 per year. This amount annually appropriated for 10 years would amount to \$5,000,000,000. From information furnished by the Department of Agriculture I find the average cost of a macadam road 16 feet wide and 6 inches thick is \$6,000 per mile.

If we count the distance from north to south 1,200 miles, and the distance from east to west 3,000 miles, we could with \$5,000,000,000 build enough macadam roads to make 100 highways from the Atlantic to the Pacific, putting them 12 miles apart; and we could make highways from north to south 12 miles apart; so, when the \$5,000,000.000 were expended, the country would be gridironed with macadam roads 12 miles east and west, north and south, and no American citizen would then live more than 6 miles from a hard road that would take him anywhere in the United States. Instead of making such vast and tremendous appropriations for the Army and Navy, would it not be better, safer, and saner to make liberal appropriations for the improvement of the highways of our Nation?

At the close of the fiscal year ending June 30, 1915, the Government collected in the way of taxes from all sources, exclusive of postal receipts, \$703,191,989.85. The Treasury says that 65 per cent of this vast sum of money—or \$457,114,724.60—now goes to pay for the preparation of war or the expenses of past wars, including pensions, maintenance of Pension Bureau, cost of administration, and so forth.

An appropriation for the improvement of highways, in my judgment, will bring about greater preparedness even for war than the enormous appropriations asked for by the Army and Navy Leagues for the purpose of buying powder, guns, ships, and other munitions of war—things to take human life.

Such highways when improved will be great thoroughfares

Such highways when improved will be great thoroughfares over which the people will travel in time of peace and prosperity and over which our Government can and would quickly transport armies in time of war. But, Mr. Chairman, of course, no one thinks for a moment of appropriating \$500,000,000 for the

improvement of highways per year. No one for a moment would stand for this tremendous sum of money. I merely use this as a basis to show what could be done in the way of improving highways if the suggestions of the Army and Navy Leagues were carried out. No one living in rural communities seeks or asks such appropriations for the purpose of aiding the States in improving their roads. All the States ask is a reasonable appropriation upon the part of the Government to aid them along this line, and they are willing to do the remainder themselves.

Our material wealth in the Nation to-day aggregates nearly \$200,000,000,000, more than the combined wealth of England and Germany before a single gun was fired in Europe and almost as much as these two countries with France thrown in to boot. With this immense amount of wealth, largely created by the farmer, surely they are entitled to recognition at the hands of Congress to enable them to do what ought to be done, to wit,

improve the highways of the country.

Mr. Speaker, the question of improving the highways is a far-reaching one. It has an economic side to it which no one should forget. Already the number of people living in the country is small as compared with the number living in cities, with the constant abnormal and rapid growth of the cities at the expense of the country; and if this condition continues, before we pass the next quarter-century mark we will find ourselves importing wheat for bread from South America and cattle for meat from South Africa, because the people refuse to live in the country surrounded by present conditions. We have millions of acres of land yet undeveloped, many millions more of swamp land only needing the hand of the American farmer to seize upon them and make them bloom and blossom like the rose, and to encourage the people not to leave the farm but to remain on it we ought to be wise enough to make a liberal appropriation for this purpose. My idea of improving the country highways is that we ought to improve the post roads over which the rural and star-route mails are carried. These roads begin at the centers of population, reach and ramify every rural community in every county of the United States, passing by the homes of farmers.

It is this class of highways that I am earnestly in favor of improving, or at least aiding in the improvement at the expense of the Government, leaving the residue of the expenses to be maintained by the people themselves. To do this means the building up of a new rural civilization to develop community life in rural districts, and upon the development of distinctly rural civilization rests ultimately our ability, by methods of farming requiring the highest intelligence, to continue to feed and clothe the hungry nations; to supply the metropolis with fresh blood, clean bodies, and clear brains; to endure the strain of modern and urban life and to preserve a race of men in the open country that in the future, as in the past, will be the stay and strength of the Nation in time of war and its guiding and controlling spirit in times of peace.

The Dyestuff Situation.

EXTENSION OF REMARKS

HON. RICHARD OLNEY, 2D, .

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 11, 1916.

Mr. OLNEY. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I submit an article printed in the Lewiston Journal, of issue September 15, 1915, relating to the dyestuff situation particularly as it affects the textile industry. It seems that seven years ago a group of textile manufacturers clamoring vigorously for protection on manufactured products protested against any advance in the rates of duty on coal-tar dyes or colors. Largely as a result of this protest no encouragement was afforded to prospective dye manufacturers to erect plants in this country. There is to-day an absolute, or nearly an absolute, embargo on dyes, and it is a fact that can not be disputed that manufacturers are paying ten times, and even forty times, for certain dyestuffs over normal prices. The war has clearly shown us how dependent we are upon Germany as color producers, and that a critical situation like to-day can be avoided by so protecting the manufacture of American dyes that the American manufacturer can be induced to build factories here for the production of dyestuffs. No attempt has

ever been made in this country to extensively manufacture dyestuffs, on account of the enormous capital needed to equip such plants with the expensive machinery needed and to be attached.

Following is the referred-to article from the Lewiston Journal: AMERICAN CONSUMERS' PROTEST AGAINST INCREASE OF DYES. WASHINGTON, D. C., December 20, 1908.

COMMITTEE ON WAYS AND MEANS, Washington, D. C.

GENTLEMEN: Your memorialists, cotton manufacturers, consumers of coal-tar dyes for the coloring of various cotton fabrics (the largest consuming industry of coal-tar dyes in the country) respectfully

submit—
First. We desire to protest against any advance in the rates of duty on coal-tar dyes or colors under section 15 of the present tariff on the ground that such advance would—

(a) Increase the cost of manufacturing colored cotton goods in the United States.

ground that such advance would—

(a) Increase the cost of manufacturing colored cotton goods in the United States.

(b) Increase the price to the consumer in the United States.

(c) In the case of export trade an advance in the cost of any of our raw materials adds to our burden and minimizes our opportunity to compete with foreign cotton manufacturers in foreign markets.

Second. We further petition that, for the same reasons, alizarins and dyes derived from alizarin and anthracene, as well as indigo, be left upon the free list, and that no change be made in the following schedules now on the free list:

SEC. 468. Alizarin, natural or artificial, and dyes derived from alizarin or from anthracene.

SEC. 580. Indigo (meaning vegetable and synthetic).

Very respectfully,

Amoskeag Manufacturing Co., F. C. Dumaine, treasurer, Manchester, N. H.; Hamilton Manufacturing Co., Franklin D. Williams, assistant treasurer, Lowell, Mass.; Pacific Mills, Edwin F. Greene, treasurer, Lawrence, Mass.; Cocheco Manufacturing Co., H. De F. Lockwood, treasurer, Lowell, Mass.; Teasurer, Lowell, Mass.; Cocheco Manufacturing Co., H. De F. Lockwood, treasurer, Dover, N. H.; American Printing Co., B. H. Borden, treasurer, Fall River, Mass.; the United States Finishing Co., J. H. Wright, president, New York; the Apponaug Co. J. H. Wright, president, Apponaug, R. I.; Garner & Co., Oscar Hartley, vice president, Pleasant Valley, N. Y.; Passaic Print Works, Edward E. Poor, fr., Passaic, N. J.; Arnold Print Works, W. A. Gallup, treasurer, Passaic, N. J.; Arnold Print Works, W. A. Gallup, treasurer, North Adams, Mass.; Renfrew Manufacturing Co., Ira S. Ball, assistant treasurer, Adams, Mass.; Queen Dyeing Co., B. J. Horton, treasurer, Providence, R. I.; S. H. Greene & Sons Corporation, Francis W. Greene, treasurer, Riverpoint, R. I.; the Aspinook, L. Johnson, treasu

GERMAN PROTEST AGAINST INCREASED DUTIES ON DYES.

NEW YORK, November 20, 1908.

Lon. Sereno E. Payne,
Chairman Committee on Ways and Means,
House of Representatives:

At a meeting of the firms interested in and dealing in "coal-tar colors or dyes" and "coal-tar products not colors or dyes, not otherwise specially provided for," held here to-day, the following resolution was ananimously adopted:

"Resolved, That we, the undersigned, protest against any increase in the duties on coal-tar colors or dyes, by whatever name known, or coal-tar products not colors or dyes, not otherwise specially provided for, and request an opportunity to be heard individually at such time and place as is convenient to the committee of Congress."

H. A. Metz & Co., H. A. Metz, president; Cassella Color Co., G. W. J. Matheson; Badlsche Co., Adolf Kuttroff, president; Farbenfabriken of Elberfeld Co., Y. Rellmerling, president; A. Klipstein & Co., G. O. Klipstein, treasurer; Berlin Anlline Works, E. O. Patz, second vice president; Geigy Anlline & Extract Co., Alfred Kublein, vice president; Walter F. Sykes & Co., Jno. A. McGuire, attorney; Geisenheimer & Co.; C. Bischoff & Co.; Kalle & Co. (Inc.), Wm. Junker, secretary.

THE RESULT.

The following extract is from the Daily Trade Record, August 14, 1915:

Give the American dye industry the assurance of 10 years of State tariff and then they will be in a situation to go it alone. That and a law that whosoever patents an article in America must make it here and the trouble is over, and war in Europe would never again catch our American manufacturers and users of dyes in so embarrassed a position.

American Ideals.

EXTENSION OF REMARKS

HON. WILLIAM E. COX, OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 20, 1916.

Mr. COX. Mr. Speaker, it is 140 years since the adoption of the Declaration of Independence. It is 117 years since America took her place among the nations of the earth. Prior to the happening of these events great struggles for human liberty had raged throughout the ages of the past, yet no concerted movement to the support of which the lives, honor, and fortunes of all the people were pledged was ever undertaken before the happening of these two great events. With us it was an experiment, pure and simple, and the future historian must write the chapter as to whether the form of government set forth in these immortal documents is an assured success.

Forty centuries to-day look down upon China. During this time the old Empire has rocked to and fro with varied fortune of success and failure, but between foes on the one hand and friends on the other she has managed to keep her place among

the nations of the earth.

Half this many centuries look down upon the Governments of Europe, and looking back over this long history of the past, and viewing these nations in the light of to-day's events, have they made much progress for the uplift of mankind?

The student who bottoms his faith in the defense of his country upon material force will answer, "Yes," while the student who bottoms his faith in the defense of his country upon principles of justice and right answers, "No."

Six thousand years of written and unwritten history lie behind the beginning of ours. During this making of the world's history the earth was literally strewn with every con-ceivable form of government from the family, groups of families, clans, and monarchies on down to the worst form of political and military despotism that ever disgraced universal history. But governments, like people who make and unmake are subject to the never-failing and unvarying law of evolution, and, true to this principle, governments have moved onward and upward, and every new government born during the centuries of the past has been better than the old. Each succeeding government has given man more political and religious freedom than the old. Little by little, step by step, man has fought his way up from a cave dweller to his present intellectual position, and in this upward struggle to better his condition socially, morally, and politically step by step he has gradually taken power which formerly belonged to kings and emperors and placed it upon his own shoulders, to be administered by himself in the making of governments and in the making and unmaking of laws to govern himself and pos-terity. And my fondest hope is that in the future, as in the past, men and governments designed to govern them will continue to grow, expand, and unfold until they reach a pure democracy.

All governments derive their just powers from the consent of the governed. What is our Government, and of what does it consist? Does it consist solely of our lawmaking, law-enforcing, and law-determining bodies, or does it consist of the laws these bodies make, enforce, and determine; or does it consist of flesh and bones, human souls and human spirits?

Our law making, enforcing, and determining bodies constitute but a small portion of our Government. These are the agents, the trappings, the framework of our Government, and the laws passed by these bodies are but rules and regulations intended to prescribe the conduct of man to man. Behind these agents and agencies stand the great moving masses of people. people constitute the Government; they constitute the great reservoir of power, and they alone can give or withhold power to or from their agents. They can intrust them with all power or refuse to give any power at all or give such power as they see fit.

If our Government is based on justice, it is because, running

back and through all the years of our past history our people

have been just, not only to themselves but to their fellow men, based upon the principle of equal and exact justice to all, it is because the people themselves have failed to exercise justice or because they have been deceived by those they have chosen to make laws for them.

Mr. Speaker, a study of government, therefore, is a study of the people who make and compose it. To have a government based upon the principle of equal and exact justice to all, it is essential that behind it we have a people whose ideals in life are based upon equal and exact justice. No stream can rise higher than its source; and as the people are the source of all power, no government can have any more justice nor can it administer more than the people have surrendered to the govern-

ment to be administered by it for them.

At the risk of their own lives, their fortunes, and their sacred honors our forefathers declared "that all men are created equal," and "that all are entitled to equally enjoy life, liberty, and the pursuit of happiness," and "that all just governments derive their just powers from the consent of the governed." On these two sacred principles our Government rests to-day. these two principles our fathers intended it should forever rest These principles, enacted into law and enforced by the people, will be the beginning of a true democracy. These principles represent the quest of the ideal on the part of a people to find justice, and while the people had searched for these ideals for thousands of years it remained for our forefathers to establish them as sacred principles on which a just republican form of government should rest.

For the first 50 years of our national existence these principles stood forth in the enactment of all legislation as apples of gold in pictures of silver, but for the past 50 years as a nation we have become engulfed in the awful maelstrom of commercialism, and I fear we have lost sight of the ancient landmarks of selfgovernment erected by our fathers and are embarking upon an unknown and untried sea, without chart or compass, acknowledging allegiance to no king, not even the King of Peace, except the ling of the almighty dollar; until man to-day quickly asks the ever-searching question, "What is there in it for me?" And yet if all the wealth of our continent, and it is great, were piled in one heap beside these shining principles of self-govern-

ment it would sink into insignificance.

These indestructible principles should never perish from the earth; on them rests a democracy governed by justice. These principles point the way to every man who has justice in his heart, teaching him how to render justice to his fellow man. Pity the hour and pity the day when we forget the teachings of

our fathers along these lines.

When the time comes, if it does, reason will lose her sway, justice will take its flight, and mercy will veil herself in tears. Some one has said, "Every war is but the birth pang of a new nation," and as these principles were born and established in war "Lord, God of Hosts, be with us yet, lest we forget" the birth pangs our Nation underwent to establish them as prin-

ciples of self-government. Mr. Speaker, that we are a great nation of people is conceded by all; great in wealth, great in knowledge and wisdom, great in social progress, great in all things that make a nation great. History has no record of anything approaching us. Some feebly point to Rome, Greece, Babylon, and Egypt of the past and seek to compare these nations with ours; but there is no comparison, no rule or measuring rod whereby we can compare our Government with any of the past or present. Unique and alone she stands in all the world, the wonder and the admiration of all throughout the history of the past, and I hope for all future time.

As a nation we have not only done more for our people than any other nation but our work is not confined to our own shores; our light has shone to the remotest ends of the earth. We lead all nations in establishing republican forms of government, rest-ing upon the shoulders of the consent of the governed. Our Government was far in advance of all others in first placing its trust in man, and to this day the trust has never been mis-

placed or the confidence misapplied.

Other governments, which until yesterday were political and military despotisms of the worst sort, catching the inspiration of ours, have learned to trust men, and on the ruins of many of these old empires new republics have arisen in their stead, creating new impulses in the hearts of men and opening up new visions before their eyes. Truly, we have made progress under our form of government.

It was but yesterday when we had no railroads, telegraphs, or telephones. It was but yesterday when the pioneer was

out with the flail or tramping the seeds out with horses and cattle and hauling it to market in old wooden oxcarts. It was but yesterday when the pioneer was walking or riding horseback, with his wife seated behind him, over roads marked through the forests by the blazing of trees. He now rides in palace passenger cars propelled by steam, or in rubber-tired buggies, automobiles, or flying machines. It was but yesterday when the homes were lighted with candles. They now are lighted with oil, acetylene, gas, or electricity. It was but yesterday when the bathtub, sewing machine, cream separator, and even the cookstove were wholly unknown in our homes. It was but yesterday when mother's old spinning wheel and loom held prominent places in every household. It was but yesterday when mother was married in the cheapest calico with her old sunbonnet to father dressed in jeans pants or buckskin breeches. was but yesterday when we had the old insanitary, dark, and dingy one-room schoolhouse.

The old things have passed away and new things have come, but the old teach us the struggle of the past; the present is but

the beginning of a new era.

Mr. Speaker, standing to-day and looking back over the 140 years of our existence with a clear vision, we behold with wonderment and awe the progress made by us during this short period of time. The old sickle and flail have given way to the modern harvester, cutting and thrashing hundreds of acres of grain per day. The old family ox and horse cart have given way to giant, monster engines, speeding along at the rate of 60 miles per hour, or the modern automobile, at the same rate, with flying machines yet in their infancy. Mother's old knitting needles have given way to the machine knitting a thousand dozen pairs of socks per day; mother's old spinning wheel and loom have been replaced by steam and electricity, turning out hundreds of suits of clothing per day.

I do not recall a single invention that has added to our wealth,

happiness, and prosperity but what either originated in the brain of an American citizen or was perfected by him. We have issued more patents in our short life than the combined Governments

of England, France, and Germany.

The genius of Americans operating in a free country, governed by the principles to which our fathers pledged their lives, fortunes, and sacred honors, unchained and unfettered by force or power, have harnessed the very air and compelled it to yield nitrogen, and soon they will lay hold upon the sun's rays and extract heat therefrom to take the place of fuel. through the genius of Americans we have added twenty-two hundred new plants as food products, adding annually to our wealth many hundreds of millions of dollars. Through the science of medicine and surgery we have invaded the very domain of death and reclaimed from him millions of victims every year by lengthening the span of human life 14 years to each individual, which means fourteen hundred million years of human life to America.

Truly this is God's country, situated here between the seas, ordained to work out the divine purpose of His creation. We have given the world great fundamental truths in self-government, many of which have been borrowed from us by other

nations many centuries older than ours.

A fair question: "What makes our Nation great, and what must we do in order to maintain its greatness in the future? Is it due to the fact that in one short century of time we have accumulated material wealth aggregating nearly two hundred billions of dollars? No; while this is a contributing factor to our greatness, it is far short of being the rule by which to measure our present greatness.

Is it due to the fact that we have one-half of the total mileage of the steam railroads of all the world; that we raise more wheat, corn, barley, oats, and live stock than any other nation; or that we build the highest buildings, the biggest battleships, the longest bridges, span the deepest rivers, tunnel more mountains, and build more miles of subrailway than any other nation? While these things are all evidences of greatness and great things done by a great people, they are far short of

the greatest things we have accomplished.

Mr. Speaker, if this were all to which we could point, we would be far from fulfilling our true destiny. Have not the greatest nations of the world, those which all men acknowledge greatest, possessed few or none of these things? Could not a nation to-day be great without any of these things? Is not our country great just to the degree that she possesses certain qualifications not mentioned by material things? Would she be a great nation if she had all these things and had no character, no fine idealisms, no sense of honor and justice within breaking his land with the old wooden moldboard plow, cutting her borders, no spirit of mission, no great men, no lofty deshis wheat with a sickle or scythe and cradle and thrashing it tiny in view? What are the things that will make all the world-

call her wonderful? Is it not soul as well as things that makes our Nation great? No one ever thinks of China as a great nation, although she has probably one-fourth of the total population of the earth. We may some day, for the large human mass is stirring, new impulses are at work in her breast, and new visions are dawning upon her eyes. But no teacher would point out China to his boys and say "Here is one of the leading pations of the earth, an ideal of progress, a great civiliza-China, too, has unending miles of fertile plains on which grow vast fields of rice; her material resources will be fabulous when our western industry opens the gates of her locked mines: railroads will run in every direction; and yet, even though her material prosperity should suddenly multiply to be commensurate with her vastness, she would not be a great She has never given the world great men or great The average man knows the name of only one great Chinaman-Confucius. Neither has she given the world a type of humanity so great that all nations will point to it and say, "This is humanity worth striving for."

On the other hand, there is a little nation in the heart of Europe which would be lost should it be put in the center of She has little wealth of coal and ore; she has no army to speak of and no navy; she has no great prairies of waving grain, although there are some fields of blue and golden flowers. Her chief possessions are rock and ice. Her only buildings are high, because they are built on tops of mountains. and yet everybody calls Switzerland a remarkable nation. Why? Because she does so much for her people. Every child is given as fine an education by the State as he wants, or at least needs. Children have rights assured them and are never dependent upon charity. The Government is continually devising new plans and methods of giving the child both a happy childhood and one which prepares him for manhood. hears little of child labor and sees no children begging. The marriage and divorce laws are framed with the happiness and welfare of the children in view. Taxation is assessed to take the burden off the man using his land productively and for the poor. Every poor mother is entitled to free care in the best maternity hospitals, and the hospital service is said to be Wood is free in many of the Cantons, and the Government does all it can for its people.

There is a little country in the North Sea which has no fabu-

lous wealth in mines or quarries; it is not big enough to have any long railroads. It grows more heather on its towering mountains than grain; it thinks more of its universities than it does of its insurance towers; and yet it is a country which is synonymous with greatness wherever its name is mentioned. Of course Scotland is the country to which I refer. And why is Scotland everywhere and always great? Because she has given the world great men; she has literally blessed the world with them; every generation she has produced several, and every spot on earth knows them. from dark Africa, whose portals were flung open by her noted son Livingstone, down to the present time. Her Wallaces, Bruces, Knoxes, and Mont-roses of early days on down to Burns, Scott, Carlyle, Livingstone, Chalmers, Blakesley, Balfour, Bryce, Guthrie, Hume, and a host of others; a procession of great men carrying the genius of Scotland into the life of every nation. But even more than this, Scotland has given to the world a great race of men; the Scotch manhood is recognized everywhere as a great type. is great because she has produced great manhood; and who worries much whether she has any Woolworth buildings or not? Again, there are two little countries not far from Turkey, so

Again, there are two little countries not far from Turkey, so small they are lost on any map of the world, but which are perhaps the greatest nations the world has ever known and have influenced the world more than all other nations combined. One of them consists mostly of sea-washed mountains and islands. She has no railroads, no bridges, hardly any material wealth, yet Greece stands forever wonderful, crowned with glory, for Greece gave the world one of these truths which underlie the whole fabric of civilization and has been inwrought into all the world's thinking, for Greece taught the world forever that the quest of the ideal is the one quest worthy of human beings; that the human soul is greater than the whole universe of dead matter; that those ideas which underlie all that is best and highest in our life and thinking are invaluable and universal and give light to all pure hearts; that beauty is truth and truth is always beautiful. This idealism that came to us from Greece lies underneath all lofty thinking, all great artistic achievements, and has infused itself into all civilization which loves the good, the true, and the beautiful more than things.

But there is another country whose glory outshines that of Greece. It has no railroads, no mines, no rich soil, no buildings, no wealth of any kind, not even art, yet every child who ever lived in Christendom could tell us all about it, and has probably

known its history better than that of his own land. What country with all the treasure in things that some have had, with all the greatness of armies and conquests in wars that some have achieved, has influenced the world or been called great in comparison with the little strip of barren soil we call Palestine? And why is Palestine so great? Simply because she gave, along with her great men and women, a great foundation truth on which Christian civilization has been reared. She taught the world that back of and running through all creation was the Eternal Goodness, and that His right name was Father; that men were the offspring of this Father, made in His image, therefore sons of God; that all mankind was comprehended in the infinite love and mercy of God; that the world was not at the mercy of fitful fates and blind matter, but that it moved onward and upward to some divine consummation under the impulse and guidance of the indwelling spirit; that all creation traveleth to bring forth perfect man and the final kingdom of service, peace, and good will among men; that the soul was the final wealth of great work; that all the resources of heaven and earth existed to free this soul and exalt it; that it is immortal.

This message has made the very mental and spiritual atmosphere in which we live. It has determined the lives of countless millions and shaped their whole conduct and outlook upon life. On it our institutions have been based. Out of it has sprung most of our literature. It has become a part of our language, and it is the one word which to-day will be spoken where any man is talking of the common life.

This is what it is to be a great nation; to give the world such truths as Greece and Palestine have given it. That nation is the greatest which gives the world a truth that makes its very structure new.

Mr. Speaker, the United States will be the greatest Nation in the world if it, like Greece and Palestine in ancient days, can in these modern days give the world another truth that shall be woven into the very warp and woof of its destiny. And I dare venture to believe that God has called our country to speak some such great word just as He called Greece and Palestine to teach the righteous, or Rome to teach an organization under law; and is not this great truth just the one for which all the world is even now asking, praying for, and seeking? The truth of the brotherhood of man—not the mere saying of it, not the truth as a beautiful, desirable, and distant operation, not as an unattainable ideal to be always approximated but as a possibility, a reality, an achievement, an object lesson to all other nations.

The very statement of the fact is God's voice calling America to its high destiny to-day. The nation with the greatest standing army, the most powerful navy, has never been the nation that has made the greatest impress upon the world's history. For nearly 20 years Napoleon held all Europe in the throes of deadly war. During this time he parceled out kings and kingdoms; he trafficked in kings and queens, and the price paid was human blood, the consideration being death, widows, and orphans, and when the final settlement was made with him it was found that he had not given to the world a single basic truth on which a higher civilization could rest, and for lack of this the memory of this bloody conqueror is fast disappearing from the lips of men.

A few years ago the question was put to the school children of Paris asking them to name the greatest Frenchman France had produced in a century, and 98 per cent of the children answered, "Dr. Robert Pasteur," the man who did not bring death, but who snatched life from it.

Mr. Speaker, people no longer conjure with the names of Napoleon, Cæsar, Charlemagne, Hannibal, and Alexander the Great. They no longer regard them as great men; they no longer look upon them as men who have moved the world onward and upward, but as time goes by the names of Washington, Jefferson, Madison, Hamilton, Patrick Henry, Jackson, Webster, and Clay continue to press themselves upon the thoughts of the modern world. These were great men; men who stood for principle; who stood for the uplift of man; who stood for better government, better society, and a higher civilization. For 3,000 years now we have been basing our civilization on force, and it has failed. We have had wars and strifes unending, and if history has any one lesson it is that national security based on force alone is an eternal fallacy, and that the true greatness of a nation longer from its exercise of righteousness from within and without.

There can be no lasting kingdom built on force and power. These things are all temporal. It is the unseen things, good will and justice, which are eternal. Force and power can be overrome by force and power. Nations resting on swords will finally perish by the sword, but nothing in heaven or on earth can conquer justice and the spirit of good will. Let justice and good will between man and man be taught in our public

schools, proclaimed from the pulpit, declared by the forum, and thereby will grow up a nation of people not taught to hate their fellow man but to love, revere, and respect him.

If Europe had spent but one mill to the dollar in disseminating and teaching the doctrine of love, justice, and good will to all their people to every thousand dollars she has spent for armament and preparedness during the past 50 years, not a single gun would be heard firing now in that awful conflict raging there, where countless thousands of men, brothers in everything that makes life worth the living, not enemies, not even an estranged feeling between them, but having every interest in common with each other, are now compelled to shoot each other down as though they were enemies. Surely when this awful conflict has ceased the sons and daughters of husbands and fathers who were slain in battle or crippled and maimed for life will rise up as one voice and one people and demand that the people begin to arm themselves with the doctrine of justice and right, as taught by the lowly Nazarene, "Peace on earth, good will to men."

There are hermit souls that live withdrawn
In the place of their self-content;
There are souls like stars that dwell apart
In a fellowless firmament;
There are pioneer souls that blaze their paths,
Where highways never ran—
But let me live by the side of the road
And be a friend to man. And be a friend to man.

Let me live in a house by the side of the road,
Where the race of men go by—
The men who are good and the men who are bad;
As good and bad as I.

I would not sit in the scorner's seat
Or hurl the cynic's ban—
Let me live in a house by the side of the road
And be a friend to man. And be a friend to man.

I see from my house by the side of the road,
By the side of the highway of life,
The men who press with the ardor of hope,
The men who are faint with the strife.
But I turn not away from their smiles nor their tears,
Both are parts of an infinite plan—
Let me live in a house by the side of the road
And be a friend to man. And be a friend to man.

I know there are brook-gladdened meadows ahead,
And mountains of wearlsome height;
That road passes on through the long afternoon
And stretches away to the night,
And still I rejoice when the travelers rejoice
And weep with the strangers that moan,
Nor live in my house by the side of the road
Like a man who dwells alone. Let me live in my house by the side of the road,
It's here the race of men go by.—
They are good, they are bad, they are weak, they are strong,
Wise, foolish—so am I.
Then, why should I sit in the scorner's seat
Or hurl the cynic's ban?
Let me live in my house by the side of the road
And be a friend to man.

—S. W. Fe -S. W. Foss.

A New Year Greeting to the People of Mississippi.

EXTENSION OF REMARKS

HON. EDWARD W. SAUNDERS.

OF VIRGINIA, IN THE HOUSE OF REPRESENTATIVES,

Friday, January 21, 1916.

Mr. SAUNDERS. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include an address by Senator Vardaman to the people of the State of Mississippi. The addresss is as follows:

A NEW YEAR GREETING TO THE PEOPLE OF MISSISSIPPI.

Christmas having passed—the celebration of the birth of One whose mission to earth was to bring peace to mankind and urge the nations of the earth to beat their swords into plowshares and their spears into pruning hooks; that nation should not lift up sword against nation, nor learn the lessons of war any more—I have thought that it would not be out of place for me to bring to you at the beginning of the new year the tribute of my love and to lay the garlands of my gratitude at your feet.

You have been good to me far beyond my deserts, and the most loyal heart would quail, overwhelmed with a sense of despair in any effort or hope to absolve the obligations which I cheerfully acknowledge to you for your unparalleled generosity to me. That you deserve more than I can give or any individual man could give is a matter of disquieting concern and vital moment to me. The extent of my ability to repay you is the consecration of all the strength of body, of mind, and soul

that I possess to your service. In all the annals of American history there was never so great a demand for strong and wise men to conduct the affairs of the Government and direct the current of public thought as now. Men with the wisdom to see, the knowledge to understand, and the unhesitating courage and patriotism to act, are needed. The present is pregnant with momentous problems, and the manner of dealing with them holds much of weal or woe for the future of the American Republic. In the coming years it is my deliberate judgment that the present will be looked upon as a turning point in the life of this Nation.

THE WORLD ATHIRST FOR WAR.

The world is afire with the passions of war; blood lust seems to have temporarily dethroned the reason of man; the conflagration is raging in Europe across the seas, and the sparks are falling even upon the roofs of our own houses. We see the danger; we behold the sorrow wrought by this spasm of world madness, the rivers of women's tears, the seas of human blood, the blighted lives, the frustrated ambitions, and all the horrors of war rise vividly before us, "like the troubled visions o'er the breast of dreaming sorrows." It is a time for contemplation, retrospection, and prayer. Out of the errors of the past let us hope we may find the truth that shall save us in the future.

Has gone, and with it, many a glorious throng Of happy dreams. Its mark is on each brow, Its shadows in each heart. In its swift course, It waved its scepter o'er the beautiful, And they are not. It laid its pallid hand Upon the strong man, and the haughty form Is fallen, and the flashing eye is dim. It trod the hall of revelry, where thronged The bright and joyous, and the tearful wail Of stricken ones is heard, where erst the song And reckless shout resounded. It passed o'er The battle plain, where sword and spear and shield Flashed in the light of midday—and the strength Of serried hosts is shivered, and the grass Green from the soil of carnage, waves above The crushed and mouldering skeleton. It came And faded like a wreath of mist at eve; Yet, ere it melted in the viewless air, It heralded its millions to their home In the dim land of dreams.

THE PAST OUR GUIDE.

The only light we have to guide us in the darkness of the future is that which shines out from the experiences of the past. Human nature is the same to-day that it was when the Pharaohs ruled in Egypt, or the Cæsars wielded the scepter of authority in ancient Rome, and the same influences that moved men to action in the remote past impel them on to-day. The strongest heart and most towering intellect are not wholly exempt from the insidious influences of environment. The mountain peaks upon whose summits the sun ever shines, undimmed by the passing clouds, are very few. The individual who can live in an atmosphere of perfect altruism is rarely met. Really, I know of but one instance in all the world's history, and He was crucified for the sins of a selfish world. And I am afraid He is being crucified anew to-day by His professed followers. "Preparedness," with all its train of inevitable evil, brands our cherished faith in the Prince of Peace as a bloody lie. The strength of this Nation is not in its material wealth, its virtue is not in the honesty of the leaders of public thought, the foundation upon which it rests is not the Constitution and laws, but rather the moral qualities and intellectual acquirements and patriotic purposes of its entire people.

Not in hewn stone, nor well-fashioned beams, Not in the noblest of the builder's dreams, But in the courageous men of purpose great— There is the fortress, there's the living state. THE PEOPLE THE COURT OF LAST RESORT.

If this Republic shall live, if it shall fulfill the beneficent hope and realize the dream of the great men and women who gave it being, it will be through the saving grace of the honesty and unselfish patriotism of the men and women who deposit the ballot. "The public is wiser than the wisest critic," says Bancroft. "In Athens the arts were carried to perfection when the 'fierce democracy' was in ascendancy. The temple of Minerva and the works of Phidias were planned and perfected to please the common people. When Greece yielded to tyrants her genius for excellence in art expired, or, rather, the purity of taste disappeared, because the artist then endeavored to gratify a patron and, therefore, humored his caprice, while before he had endeavored to delight the race." The virtue and strength of all good law consist in the fact that it is the unbiased, consentient judgment, the blending of the moral qualities and the intellectual acquirements of the governed. all, the court of last resort is the people. They are the Government. That is, they should be. The Government was established and should be maintained for them. They should write

the laws through the instrumentality of their agents—the Congress and the President. I would, therefore, call upon the people of America to consider well the issues with which they Do your own thinking, and when you are now confronted. think, think as sovereigns and not as subjects. You should lead in thought rather than follow the politician in public office. The man in public office is often unconsciously influenced in his judgment by his personal political interests. No man is wholly exempt from such an insidious influence. The appearance of things is often affected by the peculiar position from which they are viewed. There can be no selfish interest to becloud the vision or warp the judgment of the private citizen. If he is prudent and wise, his ballot will always register a patriotic freeman's will, and the will of the patriotic freeman in America should be the supreme law of the land.

THE QUESTION OF PREPAREDNESS.

I am especially desirous that the people of Mississippi think deeply on the question of "preparedness" for war. On the surface it may appear harmless, but to my mind it is fundamentally pernicious. I heard a distinguished officeholder say a few days ago that he was in "favor of preparing for war for the purpose of preserving peace." My countrymen, Germany was prepared for war at the beginning of the devastating struggle now going on in Europe. Did her preparation preserve peace? France was prepared for war; England had the greatest Navy the world has ever known at the beginning of this war. Russia with her compulsory military spirit rampant and paramount—did all these influences work for peace? Let the flowing blood, the groans of the wounded in the trenches, the heartaches of the mothers and wives and the cry of orphaned children of Europe answer that dread question. Governments are but the individuals in the aggregate. The same influences move masses of men to action that actuate the individual. Did you ever know a man who really wanted peace to ornament his person with a couple of pistols and a bowie knife, and other modern implements of hell, and go out into the street as an apostle of peace? Do you really think that character of man ever promoted peace in the community in which he lived? Of course you do not. But, on the contrary, he is a disturber of the peace and a fomenter of strife.

Nations, I repeat, are but the individuals in the aggregate. The same code of laws and morals should govern the nations in their dealing that individuals insist upon governing men in their intercourse with each other. Does anyone in Mississippi believe that doubling our Navy and quadrupling our Army, taxing to depauperization the laboring people of this country, is going to be productive of good to the people of the world? If we shall enlarge our Navy and increase our Army other nations will do likewise, and we shall be relatively weak or strong as we are It is a fatal mistake to assume that others will remain inactive in the matter of preparation while we are getting very busy. I can not think, my countrymen, that your judgment and consciences are so warped and distorted as to believe that. It is not necessary. We have the President of the United States as authority for the statement that "We are at peace with all the world—no one who speaks counsel based on fact or drawn from a just and candid interpretation of realities can say there is any reason to fear from any quarter that our independence or the integrity of our territory is threatened." Then why this change in policy, I might say polity, of our Government in order to gratify the greed and cupidity of a certain favored class to the eterrory detriment of the telling masses? eternal detriment of the toiling masses?

PREPAREDNESS MEANS WAR.

And war means sorrow, broken hearts, blighted lives, poverty, everything that is bad and un-Christlike. The manufacturers o" munitions of war, the builders of battleships, the members of the Army and Navy who live as aristrocratic parasites upon the products of the laborers' toil will be benefited by it. And they alone will be benefited. Millions of dollars have already been made in the United States by the manufacturers of munitions of war. Dollars have been coined by the plutocratic advocates of "preparedness" in this country out of the blood of the men in Europe who died that royal vanity and kingly egotism might be gratified. The tears that have been shed by broken-hearted women, the sighs of suffering mothers whose sons have been fed to the Moloch of war across the waters, have not disturbed in the least the conscience poise of the men on this side who have grown fabulously rich furnishing the instruments of death. Oh, the hell of it all! It is enough to break the heart of the Prince of Peace and bankrupt Infinite Mercy. Somebody at some time must pay the penalty for this monstrous crime against mankind. But in this day of practical politics, we are told by the dauntless fingo, that-

Men must learn now with pity to dispense, For policy sits above conscience.

I shall not follow their lead or do their bidding.

These are terrible times which call for serious thought. Altruism should drive from the heart the cloud of hate and consuming greed for gain should give place to a passion to serve the people. It should be the peculiar function of the Govern-ment of the United States at this critical period in the world's history to lead the nations, maddened with blood lust, back into the paths of peace. So "fair an occasion" seldom calls a nation to serve so well its day and generation. To push aside this supreme opportunity, I fear, will be a fatal mistake. Think on it, my friends, not as partisans, but as patriots. Permit not your vision to be clouded by personal or private interests. The things yo do to-day will either bless or ver you in the years to come-not alone you, but all posterity.

LET TOLERATION PREVAIL.

Let the utmost toleration characterize your profound consideration of this vital question. The whole responsibility in the end rests with you, because you are the source of all legitimate power in this Republic. The Ark of the Covenant of American institutions is in your keeping. I can not better close this new year greeting than by quoting from the great writer and commentator, Judge Story. I wish that his wise and patriotic words might be engraved upon the memory of every American:

"Let the American youth never forget that they possess a noble inheritance, bought by the toil and sufferings and blood of their ancestors; and capable, if wisely improved and faithfully guarded, of transmitting to their latest posterity all the substantial blessings of life, the peaceful enjoyment of liberty, property, religion, and independence. The structure has been erected by architects of consummate skill and fidelity; its foundations are solid; its compartments are beautiful, as well as useful; its arrangements are full of wisdom and order; and its defenses are impregnable from without. It has been reared for immortality, if the work of man may justly aspire to such a title. It may, nevertheless, perish in an hour, by the folly or corruption or negligence of its only keepers—the people. Republics are created by the virtue, public spirit, and intelligence of the citizens. They fall, when the wise are banished from the public councils, because they dare to be honest, and the profligate are rewarded, because they flatter the people in order to betray them.

May God give you prudence and wisdom to understand the duties devolving upon you in this great emergency, and may that prosperity and happiness throughout all the coming years which belong of right to the true, the patriotic, and the wise, Bless and crown your every endeavor. God bless you.

Cordially and sincerely,

JAS. K. VARDAMAN.

Parcel Post.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND. OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 21, 1916.

Mr. BORLAND. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include articles on the subject of the parcel post:

[From the Kansas City Weekly Star, Jan. 19, 1916.]

BOOSTS THE PARCEL POST—UNCLE SAN COOPERATING WITH FARMERS TO FIND CUSTOMERS—KANSAS CITY POSTMASTER BEGINS CAMPAIGN TO LINK PRODUCER AND BUYER IN THE "FARM-TO-TABLE" MOVEMENT.

To Link Producer and Buyer in the "Farm-to-Table" Movement. There were 500 parcel-post turkeys eaten in Kansas City last Thanksgiving. W. N. Collins, the acting postmaster, got the figures while keeping close tab on the parcel-post business, trying to make it better. The turkey business clinched a conviction he had that there ought to be more parcel-post turkeys, butter, eggs, and other produce moving cityward from the country. He told the Post Office Department so, and asked permission to do a little pioneering. The other day Postmaster General Burleson wrote back and told him to wade right in and pioneer.

To be sure, Mr Burleson's language wasn't in just those words. He simply authorized Mr. Collins to be a mediary between the consumer and the producer, to help work out the department's "farm-to-table" movement, which already has been started in post offices in Washington, Philadelphia, St. Louis, and other cities.

INTERESTS COUNTRY POSTMASTERS.

Mr. Collins is now sending letters to between three and four thousand postmasters in fourth-class offices in the first and second parcelpost zones, asking them to cooperate in the "farm-to-table" movement, to give it publicity among the farmers of their communities, and to suggest that local merchants carry different types of parcel-post containers.

Any farmer who has butter, eggs, poultry, meat, vegetables, or other products to sell need but drop Mr. Collins a line saying what he has to sell and how much of it, and Mr. Collins will find the customers. Such letters should be addressed:

"Postmaster, Farm to Table, Kansas City, Mo."

In reply the postmaster will send the farmer a circular with full instructions as to parcel-post regulations and rates. The farmer's name and the products he has to sell will be put on a list, and these lists supplied to city consumers. A producer's name will be kept on a list only 30 days. By that time he will be supposed to have found customers. If he has not, his name can be kept on the lists by further requests.

"We're trying to get the consumer and the producer hooked up," said Mr. Collins, Monday. "That's the biggest problem in the parcel post. We can get at least five or six prospective customers for every farmer that writes in. Since we first announced this plan, a few days ago, many farmers and city people have sent in their names. The first lists will be prepared as soon as sufficient names have come in.

WITHIN 150 MILES OF MARKET.

"We're trying particularly to interest farmers in the first and second zones out of Kansas City—that is, within 150 miles of the city. The parcel-post rate in these zones is 1 cent a pound plus 4 cents. Thus, a 20-pound can of lard would cost 24 cents to ship by mail. Of course, a farmer outside of these zones is welcome to have his name and products listed, but we feel there's a better chance for those within these

"A city consumer may ask the post office for the general list of farmers on which all products are listed or for the list that includes only butter and eggs. He may then write to several farmers, getting their prices and ordering by cash, C. O. D., or credit, just as he and the farmer arrange. It will cost 10 cents extra to send a parcet C. O. D., and payment must be made for it to the carrier, including the money-order fee of 3 cents for a \$2.50 order, 5 cents for \$5, or 8 cents for \$10.

cents for \$10.

"But this C. O. D. and money-order expense should be eliminated after the first trial order. The success of the farmer lies in giving strictly first-class goods; that of the consumer is in paying promptly. Both must be fair and square. A farmer ought to be able to pick reliable consumers by the references they give, and thus establish a line of regular customers and the proper credits.

RIGHT TO THE CARRIER.

"I believe one development will be the turning of a lot of waste products to profit. The farm housewife isn't going to be so careful of saving winter eggs when there's a chance of having only a scant dozen to take to town to sell at wholesale. But if she knows she can put those eggs in a container and hand them to the rural carrier to deliver to a reliable carrier in town, she'll find means to save a few more eggs."

To a question Mr. Collins denied that parcel post had been slow in developing. It had increased about 25 per cent a year, he said. How much of this increase was city business sent to the country he could not say, but the country-to-city business was growing, he declared.

Most all country produce goes through three middlemen—the country buyer, the commission man, and the city grocer. Each must have a profit. If the farmer and the consumer can agree on a division of these three profits the parcel-post marketing system will be established on a lasting basis. But the producer has got to remember the city grocer isn't keen to lose any of his trade. Neither is the commission man or the usual country buyer.

WIDENS FARM-TO-TABLE PLAN—ACTING POSTMASTER SUGGESTS A WAY FOR
TRAVELING SALESMEN TO BELP.

A plan to make the thousands of commercial travelers who live in
Kansas City active boosters for the new parcel post farm-to-table service has been suggested to W. N. Collins, who proposes to take the matter
up with the secretaries of their organizations.

His proposal is that each traveling man shall demonstrate the value
of the service by keeping his family supplied with fresh food purchased
in the small towns and sent in by parcel post. This plan is now being
followed by men in the Rai-way Mail Service.

"No class is quicker to recognize a good thing than the commercial
travelers," he said, "and no class can be of more use in making the
service popular. Egg cartons may be purchased that the traveling man
carry flat in his case, or he can buy the containers at the stores in
many towns. I am requesting the postmasters in all towns within the
150-mile zone of Kansas City to see that their merchants put in a
line of carrying cases. Egg cases holding a dozen eggs may be purchased for as low as 3½ cents each, and they lie flat for carrying when
empty.

empty.

"I assume that the greatest bargains in produce should come from the man who has no handy market save the rural route, but the small town merchant can save the consumer considerable money by furnishing fresh produce. I remember buying fresh eggs in a small inland town near Kansas City for 16 cents a dozen when eggs retailed for 30 cents here."

Among the new products offered for the list Mr. Collins will probably issue next week are headcheese and cottage cheese.

A Carroll County man writes he will have 600 farm-cured, hickorysmoked hams to market within four weeks. These are the kind that make red gravy, he declares.

Statement from Mr. Jones in Regard to Sisal.

EXTENSION OF REMARKS

HON. WILLIAM L. IGOE. OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 21, 1916. Mr. Speaker, recently resolutions were introduced for an investigation of the company that is making loans on sisal. In a previous issue of the Congressional Record and in newspaper articles the names of the Mississippi Valley Trust Co., of St. Louis, and Mr. Breckinridge Jones, the president of that company, have been mentioned in connection with this investigation. I am in receipt of a statement from Mr. Jones, which I ask to have inserted in the RECORD.

The statement is as follows:

The statement is as follows:

The question having been raised in Washington, and from Washington through the public prints, in relation to contracts recently formed to make loans in this country on warehouse receipts for sisal, some facts about the matter may be of general interest.

Sisal, or Henequen grass, which is found in Mexico, is a fiber that is left after taking the pulpy substance from the leaf of the maguey, or, as it is sometimes called, the century plant. This fiber was used for rope making and the like by the natives in Mexico even before Cortez came over. There is imported into the United States annually about 800,010 bales of sisal, and this is used principally in the manufacture of binder twine, or twine used in binding up bundles of wheat, rye, oats, or other grain. The average weight of the bales is 375 pounds each.

My information is that in Mexico, and especially in Yucatan, from whence comes most of the sisal, there is a kind of cooperative selling agency, established by those who raise the sisal, assisted by the State government of Yucatan, very much the same as the fruit growers' association established by the fruit growers in California and at Hood River, Wash. This selling agency is not operated for independent profit, but makes advances against the product, markets the product, and whatever profit there is made over and above the expenses of the agency, is divided between the farmers, or those who have produced the sisal. This selling agency in Mexico has been called the Comision Reguladora del Mercado de Henequen. Since the revolution has been going on in Mexico transportation has been irregular and at times this agency would have on hand very large quantities of sisal, both in Yucatan and in the United States, and as it had no financial arrangements for borrowing money on these accumulated stocks it was at the mercy of the International Harvester Co. and its ally, the Plymonth Cordage Co., the chief purchasers of sisal in this country, as well as being placed in the position where o

time to time.

To remedy this trouble the Mexican selling agency conferred with Sol Wexler, president of the largest national bank in New Orleans (the Whitney-Central National Bank) and with Lynn H. Dinkins, president of a large trust company there (the Interstate Trust & Banking Co.), tooking to the establishment of financial connections that would enable the Comision Reguladora to borrow money on warehouse receipts on bales of sisal, duly insured and stored in public warehouses in the United States.

Sisal is just as staple as cotton, comes in bales somewhat smaller than a bale of cotton, has regular grades as to quality, is not subject to depreciation in storage, and is just as safe a basis for credit as cotton, grain, pig fron. or other staple articles. Sisal is exported from Mexico to the Argentine and also to Europe, as well as to the United States.

States.

Messrs. Wexler and Dinkins presented the matter to large banking institutions in St. Louis, Chicago, and New York, suggesting that this was an opportune time for the United States to permanently establish a reliable market for sisal in this country, as our farmers through the United States have a definite need for the articles manufactured from sisal. It is believed, also, that this move might tend to develop into other large importations from Mexico and other southern countries, with the resulting increase of trade relations with our southern neighbors.

child states have a definite need for the articles manufactured from sisal. It is believed, also, that this move might tend to develop into other large importations from Mexico and other southern countries, with the resulting increase of trade relations with our southern neighbors.

When the matter was presented to us here in St. Lonis, owing to the disturbed conditions in Mexico, we asked whether the matter would meet with the approval of our own Government. The parties in charge of the matter shortly thereafter presented the whole plan, so we were informed, to the State Department at Washington, to the Department of Justice, and to the Comptroller of the Currency, and no objection was raised by any of them.

The plan was to make loans on sisal owned by the Comision Reguladora from time to time in the next five years on the receipts of public warehouses for sisal, properly insured, loans not to be in excess of 60 per cent of the market value of sisal, and in no event beyond a given amount per pound, such amount representing only a reasonable and usual market price for sisal. To effect these loans and to have a responsible American company with which the banks in this country could deal, it was provided to be incorporated, under the laws of New York, a company with at least \$1,000.000 cash capital, this new company to have the contract from the Comision Reguladora for furnishing loans on sisal from time to time as needed, the banks agreeing to make loans to this American company on the warehouse receipts. The banks could carry on this regular business of lending money on staple products from time to time just as they are now doing on cotton, grain, pig iron, and other products With this credit assured, the selling agreety in Yucatan, namely, the Comision Regularoda del Mercado de Henequen, could import into the United States sisal from time to time, as transportation could be found, storing the sisal and then not be at the mercy of any one big companny or other buyer, and be in a position where it could have an

BRECKINGIDGE JONES.

St. Louis, Mo., January 17, 1916.

Discrimination at Annapolis.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL. OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 20, 1916.

Mr. SIEGEL. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include the following

JANUARY 12, 1916.

Hon. Josephus Daniels,

Secretary of the Navy, Washington, D. C.

My Dear Secretary: Approximately one-quarter of the people of my district are residents who came from Italy or who are their descendants.

In New York City they have made steady progress in all the professions until to-day numbers of them are holding public office, both on the bench and in the Legislature of the State of New York.

We never hear in New York City of any discrimination of any kind or description, either in the administration of our civil or criminal law or in treatment accorded them in our schools, high schools, colleges, or universities.

or description, either in the administration of our civil or criminal law or in treatment accorded them in our schools, high schools, colleges, or universities.

The two midshipmen who heretofore represented the twentieth congressional district of New York at the United States Naval Academy, at Annapolis, have been from amongst them, and following my idea of the best manner of filling such vacancies, namely, by holding preliminary competitive examinations after due notice to all the residents of my district, I find a disinclination on their part to go to Annapolis, basing their refusal on the ground that those who have come from Italy or are their sons would never be permitted to graduate from Annapolis on account of social ostracism and unfair treatment.

To remove the 'mpression, I would like to obtain the information from you as to whether there is any basis for any such conception as to what actual conditions are at Annapolis, and as to whether there has ever been any graduate from Annapolis amongst those who came from Italy, or their sons, and as to whether there are any such midshipmen now at the academy.

It is needless for me to refer to the fact that Italians have fought most gallantly, both on land and sea, and that many Italian officers have won the world's recognition for heroism and undaunted courage in times of war, and I would indeed be most surprised to learn that there is any discrimination of any kind at the present time at the Naval Academy against Italians, as I personally know that you would not permit same.

As I have set the examination for the 25th of January, could I ask you for an early answer to this letter?

Sincerely, yours,

Navy Department,

NAVY DEPARTMENT, Washington, January 18, 1916.

Washington, January 18, 1916.

House of Representatives, Washington, D. C.

MY DEAR Mr. Siegel: I have the honor to acknowledge the receipt of your communication of January 12, and hasten to assure you that there is no discrimination against midshipmen who are of Italian descent.

A glance at the names contained in the Navy Register will show that descendants of persons belonging to the principal nations of the world are officers of the United States Navy.

Sincerely, yours,

JOSEPHUS DANIELS.

Comments on the Mexican Situation.

EXTENSION OF REMARKS

HON. JOHN H. STEPHENS, OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 22, 1916.

Mr. STEPHENS of Texas. Mr. Speaker, the El Paso Herald's Republican editor, Mr. H. D. Slater, a few days ago editorially condemned Senators Fall, Lodge, and others for their recent denunciations of President Wilson for recognizing the Carranza government in Mexico. Further on in this editorial this Republican editor, whose long residence in El Paso fully qualifies him to speak on Carranza's recognition, says:

It was the first step that seemed to have the support of reason, wisdom, or healthy American sentiment. This being so, it is to be regretted that the Republican Senators have chosen this particular net as the main point of attack.

The other commendable act of the administration was the appointing of a competent and experienced diplomat to be ambassador—a man chosen from the ranks of the Diplomatic Service and called to this exacting task in spite of his being a hold-over appointee of a Republican administration. How the Republican Senators hope to make this a party issue is beyond our powers of comprehension.

There seemed to be only one practical alternative to recognition of the Carranza government—that was armed intervention and long-term occupation of the country. That may come some day, but every possible resource in reason should be exhausted before armed intervention is seriously considered. The Herald believes that armed intervention is not necessary, has not been necessary, and will not become necessary,

if the relations with Mexico are handled with honesty, sincerity, tact, and ordinary wisdom.

But, on the other hand, it is idle for anyone, no matter how ardent a friend of the administration he may be, to attempt to minimize the terrible wrongs that have been committed in Mexico and along the border with the full knowledge and almost with the connivance of our Government. When the time comes to present proper claims in behalf of Americans and other foreigners, the negotiations should be carried on with the utmost firmness and persistence. Mexico must pay, and pay heavily, for the wrongs deliberately done in the course of her revolution. Payments of money will never remedy the wrongs or bring back the dead; but the long course of abuses has been to a very large degree the fault of our own Government, and this fact must be taken into consideration. It is along this line that Senators may justly, wisely, and patriotically assail the Washington administration.

Conditions in Mexico are bad, but they are not so bad as some of the more radical critics would make them appear. Generally speaking, there has been marked improvement since the recognition of the Carranza government. Many things do not go to the satisfaction of foreigners interested in the Republic, but, after all, the Mexicans will expect to administer their own country in their own way; and, subject to general and well-established law of international intercourse, foreigners will have to meet the situation now created. Many of the projects of the Carranza party are economically faulty and dangerous to the material welfare, the moral and social welfare, of the Republic. But Mexico will have to pass through the travail and will have to find out a lot of things for itself before it will believe and recant.

The Herald is totally out of sympathy with any general denunciation of Mexico and Mexicos on any campaign, in or out of Congress, to embarrass the de facto government at this time. The Herald because the facto government and dishonest for the Americans

Rural Credits.

EXTENSION OF REMARKS

HON. WILLIAM SCHLEY HOWARD,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 24, 1916.

Mr. HOWARD. Mr. Speaker, I submit a request for unanimous consent. I ask unanimous consent that I may extend my remarks in the Record by publishing a letter from Hon. Charles

remarks in the Record by publishing a letter from Hon. Charles Hall Davis, of Petersburg, Va., which is a criticism of House bill 6838, known as the Moss rural-credit bill.

The SPEAKER. The gentleman from Georgia asks unanimous consent to extend his remarks in the Record by printing a letter written by Charles Hall Davis, of Petersburg, Va., on the Moss rural-credit bill. Is there objection?

Mr. BARNHART. Mr. Speaker, reserving the right to object, I would like to inquire of the gentleman from Georgia the length of the communication and what the nature of it is?

Mr. HOWARD. Mr. Speaker, in reply to the gentleman from

Mr. HOWARD. Mr. Speaker, in reply to the gentleman from Indiana I will state that Mr. Davis is considered, in my judgment and by all of the people who have devoted any study to the question of rural credits, to be one of the greatest experts on that subject in the United States. He was the secretary to a former joint committee of the House and Senate and practically drafted all of the organization features of every bill that is now before Congress for every one who introduced them. He knows more about the question and is more vitally interested in it from the standpoint of the farmers of the country than any man that I know of. This is a reply to a communication addressed to him by me, asking him to take the Moss bill and criticize it from the standpoint of an expert, and he has done so, and I will say to the gentleman that he has criticized it down to the bone.

The SPEAKER. Is there objection? There was no objection,

The communication is as follows:

PETERSBURG, VA., January 21, 1916.

Hon. WILLIAM SCHLEY HOWARD,

Member of Congress, Washington, D. C.

DEAR SIR: Replying to your favor of the 17th ultimo, asking for my comments and criticisms on the land-mortgage banking bill, recommended by the Joint Committee on Rural Credits and introduced in the House by Mr. Moss of Indiana, on January 4, 1916, as H. R. 6838, and comparing it particularly with the land-mortgage banking bill, which you have introduced as H. R. 4714, I beg to say:

First. The joint committee's bill (H. R. 6838) seems to me to be a great improvement over the Hollis-Bulkeley bill, and over the Hollis bill, introduced at the last session of Congress. It has evidently been most carefully and ingeniously drawn, and at first reading leaves a vivid impression of thoroughness and painstaking care in its preparation. Assuming the correctness of the theory on which it is drawn, there are very few criticisms that I would make of its details.

Second. But, in my judgment, the theory of the bill (H. R. 6838) is fundamentally wrong. Many of its underlying principles seem to me to be improper, and I do not believe that it will give to the farmers the retief desired or the facilities demanded to anything like the extent that would be afforded by the bill which you have offered, or by some bill which will adopt and adapt the underlying principles of your bill.

some bill which will adopt and adapt the underlying principles of your bill.

The joint committee's bill (H. R. 6838) is subject to the following criticisms as to its fundamental principles:

First. The joint committee's bill arbitrarily divides the country into 12 Federal land-bank districts, providing for the organization of a land bank in each of those districts. Bach of these district land banks is authorized to issue and sell Federal farm-loan bonds or dehentures secured by the deposit of first mortgages sent up to the district land bank by local farm-loan associations operating in territory designated by the Federal farm-loan board in Washington. All of the farm-loan bonds or dehentures issued by any district land bank are guaranteed by each of the other 11 district land banks.

The subdivision of the country into 12 districts is purely arbitrary, and there is no logical reason apparent for such an arrangement. Apparently, this subdivision into 12 districts is simply an adaptation of the subdivision into districts under the Federal reserve act. While there may have been sound economic reasons for the establishment of district Federal reserve banks in commercial banking, there exists no such, reason for the establishment of district land banks in rural banking.

there may have been sound economic reasons for the establishment of district federal reserve banks in commercial banking, there exists no such, reason for the establishment of district land banks in rural banking.

In order that this distinction may be clearly understood and appreciated, the difference between commercial banking and land-mortgage banking must be clearly understood. When clearly understood, it is evident that while there may be reasons against the establishment of a central band in commercial banking, these reasons do not exist in land-mortgage banks. The concentration of resources possible with a central bank—which might be a source of weakness in commercial banking—can not help but be a source of strength in land-mortgage banks, because the two systems of banking are entirely different and are practically in direct antithesis. A central bank may be a source of weakness in commercial banking. It can not help but be a source of strength in land-mortgage banking. A central bank may be a source of danger in commercial banking. It can not help but be a source of danger in commercial banking through its control of the cash resources of the country. A central bank can not help but be a source of safety in rural banking properly organized, because the dangers of improper control, as they exist in commercial banking, are impossible.

To appreciate this point, a thorough understanding must be had of what land-mortgage banking is. I can not more succinctly express the difference between the two systems than by quoting from a speech which you delivered in the House of Representatives on January 22, 1915, as follows:

"The commercial bank is the exact antithesis of the land-mortgage bank." The operation of the one is an exact reversal of the operation.

difference between the two systems than by quoting from a speech where you delivered in the House of Representatives on January 22, 1915, as follows:

"The commercial bank is the exact antithesis of the land-mortgage bank. The operation of the one is an exact reversal of the operation of the other. The commercial bank brings together the cash of the community and sells that cradit for community and sells that cradit for cash. The commercial bank pools the money of the community and sells it for interest-bearing notes or bonds. The land-mortgage bank pools the interest-bearing notes or bonds of the community and sells them for cash."

The theory of land-mortgage banking is to give to the smallest farmer the benefit of the collective credit of the farmers of the Nation. This can be done only through a system of guarantees of institutions practically presenting this collective credit. An independent land bank operating only in a given district, could give to the farmers of that district the benefit of nothing more than the collective credit of the whole country, would give greater benefit to the individual farmer. The farmer can never get the cheapest credit and can never berrow money on the best terms unless and until he can get this collective credit of the whole farming country, thereby giving to the bond which he offers for investment the very greatest security.

The joint committee's bill apparently recognizes this principle, because it requires each Federal land bank district to guarantee the farmloan bonds or debentures issued by each of the other 11 Federal banks. This being the case, it would seem that the wisdom of giving to each individual farmer the benefit of the collective reasons against a central bank in the case of the control banks is not true that the central bank is based on some other reason.

Let us examine into the various possible reasons against a central bank and in favor of 12 district banks and see if there is any valid objection to a central bank; if there is any valid reason for the e

posed 12 district owners as the farmer.

When the Federal reserve act was passed the principal arguments against the central bank and in favor of a number of district banks

When the Federal test of the against the central bank and in favor of a number of district banks were:

(a) A central bank would centralize all the cash resources of the country at one point. There was great danger of an improper use of these concentrated cash resources at the point of concentration. Under the national banking act, as it existed prior to the passage of the Federal reserve act, there had been a concentration of the cash resources of the country in New York and other large centers. These concentrated cash resources had to be utilized by the banks in some way. The most inviting field for such use became the lending of this money on short-time or call loans, for stock speculation, and other speculative purposes. As a result of the demand so created, additional inducements in the way of interest on deposits and facilities for collection were offered to the country banks. The result was that the country banks were tempted to send their available funds to these large centers, thereby increasing the concentration of cash resources at such points, and depriving their local customers of the use of the money when local business needs demanded such use.

But in land-mortgage banking there is no such danger. The word "tank" in the term "land-mortgage banking" is probably misleading, and the function of a land-mortgage bank is entirely different from, and almost an exact reversal of, the function of a commercial bank. To talk about the danger of concentration in land-mortgage banking is

absurd, because the whole theory of land-mortgage banking and the entire value of its operations is dependent on and conditioned upon a concentration of credit resources so as to give the individual farmer the benefit of the collective farming credit of the Nation. The theory of land-mortgage banking is to build up a collective credit for the usc of the Individual. The larger this collective credit is and the more concentrated it is made the greater will be the benefit to the individual borrower. The smaller the collective credit and the less concentrated it may be the smaller will be the benefit to the individual borrower, Land-mortgage banking is designed so as to secure a concentration and collection of credits. It is obvious, therefore, that there can be no objection to the centralizing of this credit, as that is the very object which is aimed at.

(b) Again, in commercial banking there is danger always that the

bory over. The minister the culecture credit and the less concentrated it Land-mortgage banking is designed so as to secure a concentration and collection of credits. It is obvious, therefore, that there can be no objection to the centralizing of this credit, as that is the very object which is aimed at.

Control of a central bank, dominating the eash resources of the country, might, through some means, pass into improper hands or be unfairly directed for the benefit of one section of the country and to the detrimination of the country of the country, might, through some means, pass into improper hands or be unfairly directed for the benefit of one section of the country and to the detrimination of the country of the

credit of the whole country.

It is also submitted that the natural subdivision of a land banking system is a division by States and counties and not a division into arbitrary districts embracing several States.

The reasons for a subdivision by States rather than by arbitrary districts are obvious. Land banking deals primarily with land. The laws relating to land and regulating conveyances, mortgaging, registration, foreclosure, etc., are State laws. These laws vary in different States, but are substantially the same for ah the land in a given State. Now, when the mortgages for a State are brought together to be used as a security for the issue of land-bank bonds, all of those mortgages are in substantially the same form, all are governed by the same

laws, and all can be easily and readily handled together. The requirements for conveyancing and registration and the power and method of foreclosure are exactly the same in each case. These mortgages, all coming from the same State, can readily and properly be taken together as the basis or security for an issue of land-bank bonds (designated as of a certain series).

But if the mortgages, securing a certain series of land-bank bonds, are selected from two or more States, then a part of the security for the land-bank bonds so issued will be governed by one set of laws regulating conveyancing, registration, mortgaging, foreclosure, etc., in one State, and another part of the security for the land-bank bonds so issued will be governed by an entirely different set of laws regulating conveyancing, registration, mortgaging, foreclosure, etc., in another State.

Any complication or variation in methods of order in another state.

Any complication or variation in methods of enforcing the security for these land-bank bonds must result in raising questions and comparisons that can only be to the disadvantage of the farmer borrower. The Howard bill recognizes that the State is the natural unit of subdivision in a system of land-mortgage banks. It provides for the lending of the money to the farmers by local institutions, limited in their operations to a single country. The local county bank then guarantees the mortgages so taken and sends them to the State bank. The State bank then guarantees the mortgages sent to the tocal banks in that State and sends these mortgages sent to the tocal banks in that State and sends these mortgages to the central bank. Each mortgage sent to the central bank is guaranteed by a local county bank and by the State bank of the State in which that county is located. Upon receiving these guaranteed mortgages, the central bank deposits them in trust as security for an issue of land-bank bonds of a given series. But all the mortgages securing a given series of land-bank bonds must come from the same State and must be governed by the same laws. same laws.

Under the Howard bill, the central bank alone can issue and sell land-bank bonds. All such bonds are the direct obligations of the central bank; all are secured by first mortgages at a given percentage of the value of farm lands; all such mortgages are guaranteed by a local and by a State bank, which can guarantee mortgages only to the amount of a fixed proportion to their capital stock. But the land-bank bonds issued by the central bank in a certain series are all secured by first mortgages that are homogeneous in character, that all come from the same State, and that are all governed by the same-laws.

Second. Under the joint committee's bill, provision is made for the establishment of 12 district land banks, each having a minimum capital of \$500,000. This capital is to be subscribed by the investing public, and if the investing public fails to subscribe it, then the National Government takes the unsubscribed stock and holds it until it is otherwise disposed of.

Naturally these 12 Federal land banks will be located at some center

ernment takes the unsubscribed stock and holds it until it is otherwise disposed of.

Naturally these 12 Federal land banks will be located at some center in the selected districts, which districts will probably be largely coterminous with the districts under the Federal Reserve System. The location of these district land banks will almost certainly be in some large city. The stock will doubtless be subscribed by men of large means, and it would appear probable that if 12 such district banks were established the existing land-mortgage companies would promptly subscribe to the entire six millions of capital stock of these banks, and thereby control the operations of the entire system would probably be at once taken over by the existing land-mortgage companies or by a very few individuals. And even if this were not done at once it is probable that in a short time these individuals, by the purchase of stock on the market, would control all of these district land banks, carrying with it the control of the entire land-mortgage banking system of the country.

Now, the writer has contended above that there is no particular danger to the individual farmer in the possible control of a central bank or banks by an Individual or individuals, provided the system were operated under proper restrictions. But, on the other hand, it is respectfully submitted that the system outlined by the joint committee does not contain some very essential restrictions, and that, in consequence, there might be a very decided disadvantage to the farming community should this control of the 12 district land banks pass into the hands of a few individuals.

The joint committee's bill provides that the only charges against the individual farmer shall be—

The joint committee's bill provides that the only charges against the individual farmer shall be—

(a) An amount sufficient to meet his semiannual interest payments, (The act limits the rate to the legal rate fixed by law for loans by national banks. This means a varying rate in the different States.)

(b) An amount sufficient to meet his semiannual amortization payments.

(b) An amount sufficient to meet his semiannual amortization payments.

(About this there can be no criticism.)

(c) An amount sufficient to pay the expense of operation and the profits of the system.

This is defined in the act as "the excess of interest payments on indorsed mortgages above the interest payments on farm-loan bonds for which said mortgages are held as collateral security, said excess of interest in no case to be more than 1 per cent of the amount of principal remaining unpaid on said mortgages.

Note.—This provides that the district land bank can receive for its expenses and profits an amount not exceeding 1 per cent on the unpaid principal due on mortgages. It is proper that the maximum to be charged should be limited, but this is not the only needed limitation. There should also be a limitation on the amount of dividends which the stockholders of the Federal land bank can receive. Otherwise the Federal land banks will undoubtedly always charge this full 1 per cent for expenses and profits, so as to secure large dividends for their stockholders, although a very much smaller amount than 1 per cent is sufficient in European countries to take care of this item of expense and profits. This point will be more fully dealt with hereafter under "fourth" below.

The Howard bill provides that the capital for the proposed system shall be obtained as follows:

The local people in the farming communities subscribe to the stock of the local county banks which are organized with small capital. Each of these banks devotes a part of its capital toward subscribing for stock in a State bank. Each State and local bank devotes a part of its capital toward subscribing for stock in a State bank. Each State and local bank devotes a part of its capital toward subscribing for stock in a State bank is owned by the local farmers of the State. The central bank is owned and controlled by the local farmers of the State. The central bank is owned and controlled by the local farmers of the State. The central bank is owned and

local bank only receives a fixed dividend of 6 per cent, and the surplus profits of the whole system are ultimately used to buy in and retire the stock, thereby mutualizing the organization, after which all dividends go back to the borrowers, and, in effect, reduce the interest rate paid by them. This point will be more fully elaborated under "fourth"

profits of the whole system are ultimately used to buy in and rethre the stock, thereby mutualizing the organization, after which all dividends so back to the borrowers, and, in effect, reduce the interest rate paid by them. This point will be more fully claborated under "fourth" below.

This point will be more fully claborated under "fourth" below.

The system is for the benefit of the cubir system, including local banks, State banks, and the central bank, is in the farmers of the country. The system is for the benefit of the farmers. The farmers must support it. It is proper that the control and ultimate ownership of the system should be in the farmers. The proposed system should start with the farmer and end with the farmer. It is impossible, under the property of the system should be in the farmers. The proposed system should start with the farmer and end with the farmer. It is impossible, under the property of the system should start with the farmer and end with the farmer. It is impossible, under the property of the system of the system for the property of the system of the system for their own benefit, who will operate it at a minimum expense, and who are willing to invest small amounts in the stock of local banks and to receive a reasonable return thereon so as to get the benefit of the system. Third. Under the joint committee's bill it is provided, as stated, that secribed for by the general public or must be taken temporally by the National Government. The objections to this method of placing the stock of the Federal land banks have just been outlined.

But, under the joint committee's bill it is also provided that each borrower from a local farm-loan association then devotes a farm-loan association. The local farm-loan association then devotes a farm-loan association to stock in the district Federal land bank.

Under the joint committee's bill the district land bank.

Under the joint committee's bill as a part of the proportion between the stock and the guaranteed farm-loan bonds or debentures to be

permission of the directors of the land bank, be paid off at par and retired."

But if not so retired, then it remains outstanding as a dividend burden on the system, as more fully stated under "Fourth" hereafter, and it also serves to reduce the proportion between the outstanding stock of the district land bank and the amount of farm-loan bonds or debentures which that land bank can issue, because every applicant for a new loan must subscribe to one-twentieth of his loan in new stock, and the already outstanding stock issued in connection with loans that have been paid will serve to reduce the proportion between the outstanding stock of the land bank and the amount of outstanding farm-loan bonds or debentures.

Fourth. The fourth fundamental objection to the joint committee's bill has been already touched on above. It consists in the fact that the system proposed by the joint committee provides for a constantly increasing outstanding stock of the district land banks; a constantly increasing dividend burden on the system; a constantly decreasing proportion between the outstanding stock of the district land banks; and the outstanding farm-loan bonds or debentures—that is, a constant decrease in the power of the district banks to issue farm-loan bonds or debentures to the extent of twenty times their capital; and a failure to provide for the retirement of the stockholders, although the amount which the banks may charge the borrower is limited; and a failure to provide for the retirement of the stock, the mutualization of the system, and the turning over of its earnings to the borrowers with a consequent ultimate material reduction in interest rates.

It has been already shown how the stock of the district land banks must be constantly increased, because each borrower must take one twentieth of his loan in new stock, because the stock originally subscribed by borrowers whose loans have been paid off may be still outstanding, and because the original \$500,000 of capital of the district

land bank will still be outstanding, except, perhaps, in so far as it is subscribed for by the National Government, that stock being retired when an equivalent amount of stock is taken by borrowers. This means, as stated, that the proportion between the capital of the district land bank and its outstanding farm-loan bonds or debentures will be constantly decreased. Although authorized so to do by the act, it can never have outstanding in farm-loan bonds or debentures an amount equal to twenty times its capital. If borrowers under this system who take out one-twentieth of their loans in stock should pay off their loans and still hold the stock, and if new borrowers are required each to take one-twentieth of their new loans in stock theat a position where its outstanding farm-loan bonds or debentures could not exceed double or treble the amount of its outstanding stock.

This would mean an enormous additional dividend burden on the district land bank, It would have to pay dividends on all of its outstanding stock. It could make no new loans unless it also issued new stock. In consequence the borrower, who is required to take one-twentieth of his loan in new stock, would be in the position of being forced to buy stock which the bank did not wish to issue, which could only earn small dividends (because of the large amount of stock outstanding), and which he did not want to own. Moreover, in order to pay for expenses and profits the full amount authorized by law, viz, 1 per cent upon balance due upon his loan. This would mean an increased burden on the borrower. It is evident, therefore, that the plan of requiring the borrower to take one-twentieth of his loan in stock is fundamentally wrong, so far as he is concerned and so far as it requires him to assume an unnecessary burden. It is inadvisable from the standpoint of the bank, in that it constantly reduces the bank's full increases the dividend-burden of his loan in stock is fundamentally wrong, so far as he is concerned and so far as it requires him to assume an

their borrowings, thereby reducing still further the interest charge to the farmer.

It is respectfully submitted that any system which is established should contemplate the ultimate mutualization of the system, so that the profits thereafter can go to the farmer borrowers. It should provide for a constantly decreasing amount of outstanding dividend-bearing stock, rather than for a constantly increasing amount of such stock. It should certainly insure that the power of the laind bank to issue farm-loan bonds or debentures in the proportion of twenty times its capital stock shall never be impaired or reduced, because such impairment or reduction must be an additional charge or burden against the borrowers, whose payments for expenses and profits must care for a constantly increasing dividend burden.

The foregoing will serve to show what appear to me to be the principal fundamental objections to the bill of the joint committee. I might, perhaps, raise other objections to some of its details, but this criticism is already too long.

On the other hand, I do not think that the Howard bill is yet letter perfect. It also is subject to criticism in detail, but is seems to me that the general theory of that bill is correct, and that it is fundamentally right; whereas the general theory of the joint committee's bill seems to me to be absed, and to show you the lines along which it seems to me that changes and corrections should be made in the joint committee's bill.

Very truly, yours,

Charles Hall Davis.

Pork.

EXTENSION OF REMARKS

HON. FRANK CLARK, OF FLORIDA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 24, 1916.

Mr. CLARK of Florida. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include articles from the Ocala Daily Banner, Saturday, January 22, 1916.

The articles are as follows:

PORK.

The New York Times is up on its hind legs and makes a most pitiful howl because the Congressman from this district, who happens to be chairman, of the House Public Buildings Committee, favors not expensive but fairly attractive Federal buildings for the smaller cities in the rural districts.

We are made to believe that it is an awful crime.

When an appropriation is not made for the metropolitan cities in the eyes of the metropolitan newspapers it is always "pork," an opprobrious epithet they have coined to bring the Congressmen into contempt; but when an appropriation, however large, is made for the hungry maw of the big cities it is patriotism, per se.

No amount of money wasted on Sandy Hook, Hell Gate, East River. Dovils Point, or the regions in and around Staten Island ever gets to be "pork," but the merest pittance to be applied in any congressional district in any of the remote sections of the country at once resolves itself into "pork" and is met with grave attempts at wit.

If the same money that is spent for the improvement of harbors and the crection of Federal buildings in our great cities were spent outside those cities for the improvement of rivers and harbors, the erection of Federal buildings, and the construction of good roads, the moneys would be more evenly distributed and the Nation would be immensely better off.

It would be in a better state of "preparedness" in case of war. The metropolitan newspapers exhibit a mean and contemptible spirit and show not only their want of patriotism, but their intense selfishness.

But despite the poor attempt at wit and ridicule Federal buildings.

But despite the poor attempt at wit and ridicule Federal buildings are going to be erected in the smaller cities in remote congressional districts, the rivers and harbors are to be improved, and the Nation is to wax in strength and greatness by lending Federal aid to these worthy

measures

Nothing would redound more to the Nation's greatness than to be cobwebbed from ocean to ocean, and from the Great Lakes to the Gulf with good roads as a measure of peace, but in order to have it done it will have to be accomplished under the specious plea that it is a "military necessity" and can be constitutionally done under the clause relating to "military and post roads."

In the last analysis, let the Federal Treasury be denominated as mere "swill," other sections of this country do not want to see it all fed into one trough—the little pigs are just as deserving as the big hogs.

Parcel Post.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 24, 1916.

Mr. BORLAND. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following articles:

[From the Kansas City Star, Jan. 20, 1916.]

THE COLLINS IDEA SPREADS—A HUNDRED LETTERS DAILY INQUIRE OF FARM-TO-TABLE PLAN—PRODUCERS AS WELL AS CONSUMERS ARE AWAKENING TO THE CHANCE OFFERED THROUGH PARCEL POST—RULES FOR SUNDAY TRADE.

The farm-to-table Parcel Post Service is catching its stride.

Six days ago W. N. Collins, acting postmaster, announced it. The letters of inquiry from consumers now average about 75 a day. The producers, who get the news slower, are sending in about a third as many letters, but the number is increasing daily.

"The invisible results will be even greater," Mr. Collins said to-day.
"I do not know how many people have told me that reading of the new bulletin service had reminded them to write to a relative or friend in the country and make arrangements for securing fresh produce at a cheaper price. The announcement they can get produce through the mail for a cent a pound plus 4 cents reminds them they are overlooking an opportunity.

DEAL WITH SOME ONE YOU KNOW.

DEAL WITH SOME ONE YOU KNOW.

"This kind of business will not show on our bulletin list of producers, but it will show in the receipts of the office, and I am glad to see it. Really the best way is to deal with some one you know, so the question of credit and quality of produce does not bother.

"There is hardly a family in the city that could not make some arrangements of this kind. If they do not know anyone in the country, they have a neighbor that does, or if this falls they can write to some acquaintance in the small town, who can make arrangements for them, thus confidence and responsibility is fixed in the transaction."

RULES FOR SUNDAY TRADE.

Mr. Collins calls attention to the Sunday dinner service which the parcel post offers. Perishable produce that arrives Saturday night or early Sunday morning will be delivered free Sunday morning in time for the Sunday dinner. Such packages should be marked "perishable," and, if there is danger of breakage, should also be marked "fragile."

A Lathrop (Mo.) woman offers to sell eggs in quantities and let the receiver sell to neighbors at a profit. Mr. Collins says this plan is being followed now. Two dozen eggs in a light container can be sent 150 miles for 9 cents. Ten dozen eggs would cost only 27 cents in a similar container, so there is a saving in the larger package.

The postmasters in the small town offices are taking up the service quickly. Many of them write and offer to find customers for farmers in their neighborhood.

[From the Kansas City Star, Jan. 1, 1916.]

" FARM-TO-TABLE " LE" ORDERS HEAVY—SOLDIERS AT FORT LEAVENWORTH BECOME INTERESTED IN PARCELS CAMPAIGN.

Many Kansas City consumers have written to friends and relatives in the country asking they be supplied with foodstuffs since the opening of the farm-to-table campaign at the local post office.

"The campaign seemed to put the idea into their heads," said W. N. Collins, acting postmaster, this morning. "At least a dozen persons have told me in the last few days they have written for country food. Anybody can write to friends in small towns who might act as gobetweens for them if they have no friends on farms. I am glad to see this being done."

The soldiers at Fort Leavenworth want to take part in the movement. The postmaster there has written Mr. Collins asking for particulars for the benefit of the troops.

One Kansas City consumer feels as follows about the movement:

"I was raised on a farm, so these city 'fresh' eggs that settle when 'you shake them, and the 'pure' butter that smells to high heaven in three days' time, and the little, measly apples at 60 cents a peck, all combine to inspire deep gratitude to the post office for coming to our relief."

Mr. Collins announced farm-to-table parcels arriving Saturday night would be delivered Sunday in time for dinner.

The Late Representative Joseph A. Goulden, of New York.

MEMORIAL ADDRESS

HON. WILLIAM J. CARY, OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Sunday, January 23, 1916,

On House resolution (H. Res. 101) paying tribute to the memory of Hon. JOSEPH A. GOULDEN, late a Representative from the State of New York.

Mr. CARY. Mr. Speaker, in the few remarks I wish to address to the House in memory of our departed colleague, I must necessarily confine myself entirely to a short, but very pleasant,

friendship with Col. GOULDEN.

I never knew him until I met him in Congress here. He came from New York and I from Wisconsin. He was a Democrat and I a Republican, and we differed honestly and sincerely on many political questions, but I found from the very beginning of my acquaintance with him in every way a patriotic American citizen, a wise, sincere Member of Congress, faithful in the discharge of his duty to his constituency and to the country, and as a man one of the manliest and most lovable characters that I have met in the eight years that I have been a Member of this body. He was always willing to lend a helping hand to any good cause or to any deserving person, kindly to an extreme degree. He reflected in his everyday attitude toward his fellow man a warm and brotherly interest in humanity. I have heard numbers of the employees of this House, regardless of their political affiliations or the section from which they came, speak with deep feeling of his unfailing courtesy and affability, and I am sure that a man so much beloved among people whom he knew for so short a time here in Washington must be greatly missed and deeply mourned by the constituents, friends, and neighbors who honored him so often by their confidence and trust in him.

One of the most pleasant features of congressional life is the many warm friendships we form here, the contact we have with men from every section of this great country, and the lessons we learn from such contact with men whose ideas on many subjects are so different from our own, but whose ideals are almost invariably on the same high plane of Americanism which influences us all; but while these friendships and acquaintances form one of the most pleasant features, as I have said, of congressional life, the partings that so often take place here are a source frequently of the deepest grief and sorrow. Every two years men whom we learn to know and love leave this body through the varying exigencies of politics, and we see them but seldom in after life, and ever so often a dear brother passes over to the shadowy regions of the great beyond, and we know that here we will see him no more, we will never feel his warm and friendly handclasp, we will never be greeted by his cheerful words and pleasant smile, and were it not for the consolation we can find in a submission to the decrees of the Almighty, who doeth all things well, this interruption of friendships would make the whole world a mourning place and its people a congregation of sorrowing mourners.

But into these sad moments there steals the comforting hope of a hereafter; the faith that a well-spent life leads to a blessed rest, and I know of no one whom I have known in the half century I have spent on earth who was ever more deserving of rest and peace than Col. Joseph A. Goulden. His whole life was an inspiration to ingenuous youth, and he leaves a memory that will be a precious inheritance to those he leaves He was, as I knew him, a man who thoroughly enjoyed life, but also a man who was absolutely fearless of death. On more than one occasion in his political life he was forced to fight a strenuous and bitter political battle, but it never took from him his unfailing and human outlook on humanity, nor did I ever hear him in speaking of the political contests he had waged give vent to the slightest tinge of bitterness or ill feeiing toward his opponent. He had a high sense of duty, and

was a faithful and hard-working Member of this House, both on the floor and in committee, and I know that as long as a single Member of Congress who served with him lives some heart will beat a little quicker and a thought of tender memory will stir the breast of some man in every State.

Death will come to us all we know. To some it may come quickly, to some it may come after weeks and months of suffering, but if we recall the way men like Col. GOULDEN lived we will not be afraid to die as he died, for, in the words of a

recent poet-

If you are done to the death, what then?

If you battle the best you could:

If you played your part in the world of men,

The Great Critic will hold it good.

Death comes with a crawl or comes with a pounce,

Rut whether it's slow or spry.

It isn't the fact that you are dead that counts,

But only how did you die?

Joseph A. Goulden, Late a Representative from New York.

MEMORIAL ADDRESS

HON. PETER J. DOOLING.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, January 28, 1916,

On House resolution (H. Res. 101) paying tribute to the memory of Hon. JOSEPH A. GOULDEN, late a Representative from the State of New York.

Mr. DOOLING. Mr. Speaker, in the death of the Hon. JOSEPH A GOULDEN the House of Representatives lost a valuable Member, his party an able and resourceful campaigner, the city of New York an esteemed citizen, and we who knew him well a faithful, sincere friend.

His sudden and untimely death came as a shock to all who heard the news, and it came so unexpectedly that even now while we are paying the last tribute of affectionate regard to his memory it seems almost impossible that he should have left us forever, for our memory of him is that of a strong and vigorous man, whom we all expected to see live many more years of a healthy and useful life.

Col. GOULDEN was an exemplar of all of the traits that go to make up a modern, aggressive, energetic American man. He was a good business man, whose sound judgment was always a valuable asset to those with whom he worked in either business or politics. He was a fearless and able political leader, and he was always a sincere and honest official, who, while a strong partisan, was above all a true and patriotic American.

Added to these characteristics he had a most engaging personality, and to those who met him was one of the most cordially liked men in public life, both here and at his home. He easily attracted the friendship of all, and the numerous times he was honored by the suffrages of his neighbors is sufficient proof of the confidence he inspired.

In all of the relations of his life he was the same courteous. friendly, and straightforward man, and he was one who never

failed to help anyone who needed his assistance.

I knew Col. GOULDEN long and intimately, and the memory of his friendship will always be to me one of the most pleasant recollections of my public life.

He had very few, if any, personal enemies, and it speaks vol-umes for the character of the man that he could go through so many bitter political campaigns and still retain the respect and even the friendship of so many men who were politically opposed to him, but it is true of him that among his very best friends were many men who were always opposed to him in politics

He was a Member of Congress long before I entered this body, and I had been here but a very short time when I found that my colleague, friend, and fellow New Yorker was as popu-

lar here as he was in our home town.

It is therefore to a departed personal friend that I pay this last tribute of respect. He has left us, and his place will know him no more. We know, of course, that death must come to us all some day, but we rarely realize this until we meet, as we do to-day, to speak of one who has gone before on that mysterious road. It is indeed, then, a consolation that we can gather from the memory of a man like Col. Goulden that no matter how sudden death may come, if life is well and honestly spent, the remembrance of us will linger and the immortality that we are promised will have its reflection in the thoughts of us that still dwell in the hearts of those we left behind.

Justice and Equal Opportunity.

EXTENSION OF REMARKS

HON. JOHN M. MORIN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 7, 1916.

Mr. MORIN. Mr. Speaker, the bill which I have introduced provides for the establishment of an American merchant marine and the placing again of our flag upon the high seas, with justice and equal opportunity to all Americans to ship the products of our great industrial country wherever needed. Included in this bill is a plan for the incorporation and regulation of a corporation for the purpose of promoting the commerce of the

United States, and so forth.

The corporation is to be known as the American Foreign Trade Co., with the Secretaries of the Navy, Army, and Treasury Departments as directors. Its object is to have the United States participate in the management and control of a corporation intended to establish an American merchant marine, which includes the building of ocean steamers and their necessary auxiliaries for carrying the commerce of the United States to foreign ports; authorized to build shipyards, railroads, and all necessary and incidental adjuncts to the establishing of an American merchant marine so that the United States shall be independent of foreign companies and countries in times of war and peace; that the \$100,000,000 paid annually for carrying American freight in foreign bottoms shall come to the stockholders of the said corporation living in the United States; that our people shall have the benefit and advantage not only of a profitable ocean carrying trade, but profit by having American citizens employed in shipyards and other industries providing and supplying the necessary material and artisans to carry on this business; and that it would fly our flag on every sea and in every port of the world.

It would carry our enterprising and stalwart Americanism to every clime and every place. It would transport our produce and materials wherever civilized man is in need of articles of

utility and necessity.

It would give our country prestige, influence, and power second to none on earth, and invoke the spirit of liberty, independence, and progress wherever man has a desire for justice

and equal opportunity.

This bill is not drawn with a view that this corporation shall be controlled or financed by the United States Government, but is to be influenced by our Government in its operations to the extent that the subscribers to the stock shall know that it is intended as a patriotic as well as a profitable plan to establish an American merchant marine.

It is intended to be a popular corporation, in which the par value of the stock shall not exceed \$100 per share, and appeal to patriotic citizens, whether in inland towns or seaports, to subscribe for the stock generally and popularly because of its high purpose to make the United States free and independent

at sea or on land.

The idea is that many men of reasonable and large means would and could readily subscribe for a share or more of this stock on account of its patriotic object who would not, perhaps, expect large dividends, if any, to be derived from the corpora-tion, but who would feel that they had performed a patriotic duty in contributing to the establishing of a merchant marine, independent of all foreign nations, to carry the commerce of the United States everywhere in the world. It would add materially to the business prosperity of our country and reflect credit upon us everywhere.

The connection of the United States Government with this corporation is intended to guarantee that its purpose can and will be carried out; that its management will be in the hands of lionest and patriotic men; that its receipts and expenditures will be supervised and directed in such way as to insure the honesty of the officers of the corporation and their capacity and

fidelity.

Properly organized, this corporation should be one of the most popular in the United States. Its stock should earn dividends. Its failure would add but little to the burdens of the people, as its stock would be widely circulated and in small amounts, and last but not least in importance, while establishing an American merchant marine, it meets the objection that the United States Government should not enter into competitive business with its citizens, either on land or sea, as

this corporation is a private corporation with supervisory control by officers of the United States to guarantee only that it will not be diverted from its purposes or be made use of to defraud its stockholders.

The Delaware River Up to Date.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE. OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 25, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, one of the important agencies creating revenue for the United States Government is the Delaware River. In normal times it is good annually for about \$20,000,000 collected at the port of Philadelphia, and that return is greater than the sum total spent upon the improvement of the river since the beginning of time. This is interesting in view of frequent assaults made upon river and harbor improvements, the continuance of which is seriously threatened now, when the country is most in need of the revenue produced by them.

While I shall not discuss the oft-recurring question whether a single stream like that of the Delaware is to be given credit for the big return it pays upon the Government's investment. it is fair to presume that the Federal Government would get more money out of the Delaware River if it would speed up its appropriations for the completion of the 35-foot channel from Philadelphia to the sea, as provided for in the act of June 25,

It is highly important also that the upper Delaware project leading into the city of Trenton be completed, so that a uniform depth of 12 feet may be maintained between Philadelphia and Trenton. An increased traffic is now awaiting that improvement.

The great project connecting the upper Delaware with the New York Harbor and New England on the north and with the Chesapeake Bay and other southern waters along the Atlantic seaboard should likewise be advanced at this session of Con-Commerce and preparedness both demand that this great work shall be started.

DELAWARE PORT STATISTICS.

When the engineer in charge last reported upon the 35-foot Delaware River project, it was about 33 per cent completed. The river at that time—June 30, 1915—had an assured depth of 30 feet from Philadelphia to the sea, with a rise of tide of 5.9 feet, which, of course, permits of an increase of shipping over that of former years. The port of Philadelphia, however, containing the great Philadelphia Navy Yard, with its fresh-water basin for the storage and repair of ships, and the Frankford Arsenal, where all of our small-arm Army and Navy ammunition is made, is not yet on a par with the channel depth assured to New York, Boston, and Baltimore; yet more shipbuilding is done upon the Delaware River than upon any other river of the United States; and the merchandise carried is more valuable and more varied. By reason of the great labor market and fuel supply in easy range, the Delaware has also become exceptionally attractive to manufacturing industries of one kind or another.

In this connection I wish to include the report of the statistician of the board of commissioners of navigation for the River Delaware and its navigable tributaries for the year 1915:

REPORT OF STATISTICIAN.

PHILADELPHIA, PA., January 4, 1916.

To the President and Members of the Board of Commissioners of Navigation for the River Delaware and Its Navigable Tributa-

Gentlemen: The year 1915 has gone down into history as a record breaker for the port of Ph'ladelphia, the value of her exports having reached the total of approximately \$135,000,000, exceeding by \$69,000,000 the figures reached in 1914 Only once before in the history of the port have our exports reached the hundred-million-dollar mark, that being in 1907, when they were \$106,570,527.

While tremendous gains in our exports have resulted from the European war, our imports show a falling off in value of approximately \$18,000,000, having totaled, with December estimated, but \$69,000,000, the lowest since 1908, when the value was \$57,407,923.

Grain shipments from here during the past year totaled 44,344,756 bushels, an increase of 21,313,550 bushels over what were exported during 1914. This record was exceeded only in 1900, when the shipments totaled 45,915,968 bushels. These shipments were divided as follows: Wheat, 30,707,772 bushels, compared with 19,106,292 bushels during

1914; oats, 9,959,618 bushels, compared with 2,437,436 bushels in 1914; corn showed a gain of 1,580,303 bushels over 1914 shipments; and rye exceeded by 1,817,024 bushels the shipments of 1914; and

1915 Coal. Tons Anthracite_____ Bituminous _____ 81, 477 1, 075, 535 1914 Anthracite_ Bituminous 56, 628 649, 201

A feature of the export trade was the large quantity of refined and granulated sugars shipped to France and England. These shipments totaled 677,960 bags of granulated and 12,491 barrels and 5,425 bags

totaled 677,960 bags of granulated and 12,491 barrels and 5,425 bags of refined.

Importations of crude oil from Mexico and nitrate of soda from Chile have increased. Crude-oil receipts for the year totaled 82,250,808 gallons, compared with 48,727,862 gallons during 1914. The receipts of nitrate of soda totaled 1,035,164 bags, compared with 600,190 for 1914. During 1915 sugar imports footed up to 1,789,664 bags and 724,272 mats, compared with 3,719,073 bags and 645,681 mats during 1914. In these figures are not included sugar from the Hawaiian Islands. Other imports showing gains were lath, licorice root, logwood, woolens, molasses, salt, and magnesite.

In the coastwise trade the greatest gains were shown in the receipts of lumber coal-tar products, crude oil, phosphate rock, stone, sulphur, and sugar from the Hawaiian Islands. The lumber receipts for 1915 were 227,335,520 feet, compared with 191,775,273 feet during 1914. Crude-oil receipts were 4,227,629 barrels, compared with 4,29,155 barrels for 1914. Hawaiian sugar shows an increase of 2,058,267 bags, the receipts for 1915 footing up to 4,086,988 bags, compared with 2,028,721 bags in 1914

The registered tonnage of foreign arrivals at the port of Philadelphia for the 12 months of 1915 shows a falling off, although a greater number of vessels entered and cleared than during the previous year. This is due to the fact that the larger and more up-to-date vessels formerly engaged in the Philadelphia trade have been commandeered by the various Governments as troop ships, colliers, etc.

In the foreign trade a total of 1,355 vessels, with a tonnage of 4,280,090, entered the port, and 1,353 vessels, with a tonnage of 4,590,781, arrivals, and 1,287 vessels, with a tonnage of 4,590,781, arrivals, and 1,287 vessels, with a tonnage of 4,590,781, arrivals, and 1,287 vessels, with a tonnage of 4,590,781, arrivals, and 1,287 vessels, with a tonnage of 4,590,781, arrivals, and 1,287 vessels, with a tonnage of 4,590,781, arrivals, and 1,287 vessels, with a tonnage of 4,590

In the coastwise trade during 1915 the vessels arriving numbered 4,319, with a tonnage of 5,085,067, while the sailings numbered 4,287 vessels, with a tonnage of 5,160,920. For the same time last year the arrivals from coastwise ports totaled 4,329 vessels, with a tonnage of 5,269,195, and the sailings 4,311 vessels, with a tonnage of 5,341,739. Respectfully submitted.

ARTHUR F. RENNER, Statistician.

COOPERATION BY THE MUNICIPALITIES.

In order to do so vast a business-and the total tonnage of the Delaware River reported by the Chief of Engineers, for 1914, was approximately 25,000,000 tons, of a value exceeding a billion dollars; not a very good year—there must be a great expenditure by local authorities along the line. The port itself must be made attractive, and this has been done at the city of Philadelphia by municipal dredging and by the construction of great municipal piers, inviting trade. It is now in contemplation, apart from vast expenditures already made, that the city of Philadelphia alone shall continue its harbor improvements at an expense to the people ranging from \$5,000,000 to \$7,000,000. Loans for this purpose have been approved, and while it may be said that the city will derive some benefit from this expenditure it is also fair to say that the Government will get a considerably increased revenue at the customhouse in consequence of this local enterprise.

Notable instances of the readiness of other municipalities along the Delaware to cooperate with the Government might be cited: Camden, N. J.; Wilmington, Del.; Chester, Pa.; and Trenton, N. J., are among these. At Trenton, 30 miles north of Philadelphia and 130 miles from the sea, the municipal development along the water front has been most creditable. a recent communication the mayor of Trenton, ambitious that the Government shall complete the work it has started, which is to make Trenton "a seaport," says:

DEPARTMENT OF PUBLIC AFFAIRS. Trenton, N. J., January 13, 1916.

Department of Public Affairs,

Trenton, N. J., January 13, 1916.

Hon. J. Hampton Moore,

Member of Congress, Washington, D. C.

Dear Sir: The project for improvement of the Delaware River from Lalor Street, Trenton, N. J., to the Pennsylvania Raliroad Bridge provides for the dredging of a channel 200 feet in width and 12 feet deep at mean low water, with a turning basin at the upper end 300 feet wide and 400 feet long, with the same depth.

The engineer officer in charge of this district has stated in his report that, in addition to the sum available for this work, the further sum of \$40,887.50 is needed to complete the project; and I can not urge upon you too strongly the necessity for this sum being appropriated by this session of Congress.

The above project was adopted by the river and harbor act of July 25, 1912, and imposed the condition that the city of Trenton shall provide substantial terminal facilities commensurate with the probable needs of present and prospective commerce.

To meet this condition Trenton has acquired practically two-thirds of her water front, more, by far, than other cities; has constructed a timber wharf at the lower end of the city for low-grade freight; and has under way the construction of a modern terminal at the upper end of the channel above referred to.

This includes a dock 205 feet wide and 438 feet long, with a timber-concrete bulkhead around it; the wharf to have a modern freight and passenger shed, with recreation pler on the upper deck. The arrangement and devices called for will facilitate the rapid and economical handling of both freight and passengers. This work is well under

way, and its completion and use depend only on the completion of the channel. Indeed, the matter has gone so far that a new, up-to-date line has been established; boats have been purchased, and it is awaiting the day when it may commence operating from the new terminal, which would land freight and passengers close to the heart of the city. To relieve the situation, landings are now being made at the timber wharf at the lower end of the city, which was not constructed for this grade of business and forces upon them a great handicap.

To further show the need of the early completion of this channel, the American Bridge Co., whose plant is located near the upper end, has entered the field of steel-barge construction and, to meet its contract requirements, has been obliged to start building ways for their construction and iaunching near the lower end of the plant instead of the upper end, as contemplated, because of the noncompletion of the channel.

Trenton's plans for the improvement of its water front are comprehensive and embrace the ultimate utilization of the entire front, the different units to be constructed as rapidly as the increase of shipping necessitates and invoives the ultimate expediture of a large sum of money.

necessitates and invoives the ultimate expenditure of a large sum of money.

You will see from the above, I think, that Trenton is doing her part, and that there exists right now a great need for this channel. If the funds are made available, the project can easily be completed in 1916. If this is not done the present contract would lapse, and it is highly improbable that as low prices would again be obtained and an increase up to \$50,000 in ost might easily result.

Such delay would also greatly handicap Trenton in the improvement of her water front, as assurances have been given that 1916 will see the channel and terminal in use; and, as you may see from the above, not only the city but new shipping interests would be very seriously embarrassed by failure on the part of the Government to live up to this.

Very truly, yours,

FRED'R W. DONNELLY, Mayor.

In view of the activity about "the port of Trenton." 130 miles from the sea, but midway between the great cities of New York and Philadelphia, it would not seem unreasonable that the \$40,000 appropriation needed should be made to put the Government in the customs-revenue business at so promising an inland station.

NEW JERSEY'S STEP FORWARD.

Another step forward in this important business is revealed in the correspondence of the New Jersey Board of Commerce and Navigation, as it pertains to the State's participation in the proposed Federal ship canal across the State of New Jersey to connect up the Delaware River and streams south with New York Bay and New England. I shall not stop to dilate upon the strategic importance of this invaluable commercial watercourse. The Army and Navy know what such an avenue of communication inland would mean in the defense of the country. For commerce it would be a boon in transportation the extent of which is incalculable.

All I wish to say about it now is that New Jersey has offered to meet the Government squarely on this proposition. It will provide the right of way.

The correspondence shows in addition that although the Government may be slow in approaching the project, the State is "on the job," and ready to do its part.

The following letters to Secretary of War Garrison and to Gov. Fielder, of New Jersey, evince a commendable interest in the matter of State help:

STATE OF NEW JERSEY,
BOARD OF COMMERCE AND NAVIGATION,
Jersey City, N. J., January 6, 1916.

DEAR SIR: Inclosed are copies of two letters mailed this day by President Smith, of the State board of commerce and navigation, the one addressed to the Secretary of War and the other to the governor and Legislature of New Jersey, both concerning the New Jersey ship canal project.

Respectfully, yours,

B. F. Cresson, Jr.,

B. F. CRESSON, Jr., Chief Engineer.

(Inclesures.)

TRENTON, N. J., January 6, 1916.

(Inclesures.)

TRENTON, N. J., January 6, 1916.

Hon. Lindley M. Garrison,

Secretary of War of the United States, Washington, D. C.

Sir: The State of New Jersey, through the former New Jersey ship canal commission and the present board of commerce and navigation, has run out on the ground and monumented the center line of the proposed New Jersey ship canal, between Bordentown, on the Delaware River, and Morgan, on the Raritan Bay. The line monumented is that adopted by the special board of engineer officers and referred to in House of Representatives Document No. 391, Sixty-second Congress, second session.

The 1911 Legislature of the State of New Jersey adopted a resolution providing that "in order to bring about the construction of this canal and its completion within as short a time as possible" the State should acquire the right of way for the canal by purchase or condemnation, and should cede the same to the Federal Government for the uses of the Government in construction and maintenance of the canal, on condition that the canal, when completed, shall be free and open to the commerce of the world, without tolls or charges for the passage of vessels or freight thereon, provided that the right of way can be obtained for a sum not exceeding \$500,000, or such a sum as may be appropriated by the legislature for that purpose.

The board of commerce and navigation, which is now intrusted with the State's interests in this project, believes thoroughly in its national importance and wishes to advance it as rapidly as possible.

The board will recommend to the legislature that the State carry out its part in this work, which appears first to be the acquisition of the right of way. In order that this may be done it is necessary that the State shall know that the line as now monumented represents the line on which the Government will undertake construction.

The board therefore respectfully requests:
First. The acceptance by the Federal Government of the line as monumented; and
Second. The adoption of this project by the Government.
When these things are done the State may properly proceed to undertake its part in the project.
Respectfully, yours,
J. Spencer Smith, President.

TRENTON, N. J., January 6, 1916.

To Hon, James F. Fielder, Governor, And to the Senate and General Assembly of New Jersey, Trenton, N. J.

And to the Senate and General Assembly of New Jersey.

Sirs: The board of commerce and navigation has completed the survey and monumenting of the center line of the proposed New Jersey ship canal, this work having been started by the former New Jersey ship canal commission.

Being greatly impressed with the importance, both to the State and to the Nation, of this ship canal project, the board feels that it is its duty to advance it as rapidly as possible. With this in view the board has addressed a letter to the Secretary of War, copy of which is herewith inclosed, asking the Federal Government to accept the line as now monumented between Bordentown, on the Delaware River, and Morgan, on the Raritan Pay, as the center line on which the construction of this proposed ship canal will be made

The board has also asked of the Secretary of War the adoption of this project, but if feels that before an appropriation can be asked for from the Government for construction that the State should undertake its part of the work, which the 1911 legislature indicated by resolution would be the acquisition of the right of way.

The board therefore respectfully requests the consideration of the governor and Legislature of New Jersey in this matter, so that if it is deemed proper an appropriation may be made for the acquisition of the right of way, to become available when the Federal Government shall make appropriation for the construction of this canal; then the State can appeal to the Government to proceed with the actual construction work.

Respectfully, yours,

J. Spencer Smith, President.

Good Roads.

EXTENSION OF REMARKS

HON. CALEB POWERS.

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 22, 1916.

Mr. POWERS. Mr. Speaker, I am so intensely interested in the good roads propaganda, so vitally concerned in seeing a beneficent road system spread like a great web all over our country, reaching into the remotest nooks and corners of every part of our fair land, that I expect to give this bill my support, realizing at the time I do it that it has many defects and falls far short of what I would like to see incorporated in a bill of this character. And since those in charge of the bill have in-vited criticism of its provisions I shall venture to point out what I deem to be a few of its defects. Section 4 reads, in part, as follows:

All constructions and maintenance of roads under the provisions of this act shall be under the supervision and control of the State high-way departments of the several States.

In other words, the Federal Government is called upon to put its money into a project, and after it has done so it loses all jurisdiction and control over both the money and the project, although the rural routes into which it puts its money, and over which it is to have neither jurisdiction nor control, are still to be used by the Federal Government in transporting and carrying its mails. Under the provisions of this bill the Federal Government selects the State highway departments of the several States as its agents to receive its money, and after it is received by them the law of agency no longer exists, and it is in the power of the States to defeat entirely the objects of the Federal appropriation by discontinuing the use of the rural post roads as such into which the Federal money is put. I regard this as a most serious defect in the bill. And then again the Secretary of Agriculture, unless the provisions of this bill are stretched far beyond their apparent intent, will have no power to determine upon what roads the Federal moneys are to be expended, except from the data and information which may be furnished him by the several State highway departments. The Secretary of Agriculture ought to at least have the power of having his representatives and agents make a personal inspection of every road into which one copper of the Federal money is to go. But it has not been my intention to do more than to merely call attention to these things. The point I really want to discuss is this:

That this road bill, in at least so far as the State of Kentucky is concerned, is a misnomer. It provides in its title that the purpose of the bill is to "aid the States in the construction and maintenance of rural post roads." It will do nothing of the

sort in the State of Kentucky. I do not want anybody down in that State to be mistaken about it. Of course this bill will not become a law as long as the present occupant of the White House remains in power. I suppose nobody is deceived about that. But I want to show that if it should become a law practically none of Kentucky's part of the \$25,000,000 annually authorized by this bill will be expended on the rural post roads in the State of Kentucky. To do that, however, is supposedly the object of the bill. It so declares in its title, but the money will not be used for that purpose.

Section 3 of the bill declares, in substance, that the State highway department shall expend the money donated to it by the Federal Government in accordance with the laws of the State that receives it. That being true, before we can know how and where the money will be expended in each State, we must know the laws of the several States on the subject of road construction, maintenance, and improvement. I am more or less familiar with the Kentucky road law. One section in that law

There is hereby created a system of public State highways, which shall be composed and be all the roads to which State aid is furnished.

There is another provision in the Kentucky road law which defines what public State highways are. It reads, in part:

There is hereby created a system of public State highways, which shall consist of roads connecting the county seat of each county of the Commonwealth with the county seats of the adjoining counties by the most direct and practicable route. * * * These roads shall be the first to receive State aid; and after such roads are constructed in any county of the Commonwealth, then all other roads to which State aid is furnished thereafter may be deemed public State highways.

So it is plain to be seen that no county in the State is to receive any State aid, and therefore Federal aid, under the provisions of this bill for any of its public roads until State highways have been built connecting the county-seat towns of the county with the county seats of the adjoining counties of the State by the most direct and practicable route, as well as-quoting the Kentucky law

the county seats of the border counties of the Commonwealth with the State line on the most direct and practical route leading from said county seat to the county seats of the adjoining counties in the adjacent States.

And the Federal appropriation authorized by the bill we are now considering can not be expended even on these State highways unless they are to be used as post roads.

In other words, no public road, for example, in any county in the eleventh congressional district of Kentucky, can receive any State aid, and therefore Federal aid-because the Federal aid is to be applied in accordance with the law of the State-until all the county-seat towns of the adjoining counties have been connected with one another by State highways. For example, under the provisions of the bill we are now considering and under the laws of the State of Kentucky, not a copper of either Federal or State aid can go to the ordinary public dirt roads of the county of Knox until State highways have been completed from Barbourville to Williamsburg, and from Barbourville to London, and from Barbourville to Manchester, and from Barbourville to Pineville. Nor can any of the ordinary public dirt roads—those that need aid most—of the counties of Monroe, Cumberland, Clinton, Wayne, McCreary, Whitley, Bell, or Har-lan—all counties of the eleventh district and all bordering on an adjucent State-be constructed until public State highways have been constructed, not only connecting all the adjacent county-seat towns in Kentucky, but the adjacent county-seat towns in the States upon which these counties border, or at least to the State line in the direction of the county-seat towns in the counties of the bordering State; so it is not difficult to understand that none of the ordinary rural post roads in the eleventh congressional district, and in the State of Kentucky generally, can receive virtually any Federal or State aid. This is true notwithstanding the fact that the people will be taxed for the benefit of those sections of the State living along the lines of these highways connecting the county-seat towns where State aid har been or will be received.

The Kentucky law provides:

That there shall be levi-d and collected and paid into the treasury of the State * * * a special tax to be known as the State road tax * * * the State road taxes on all real personal, franchises, on all intangible property, not exempt from taxation shall be * * * 5 cents on every \$100 valuation thereot.

In other words, every person in the eleventh district and the State of Kentucky is taxed under the State road :w 5 cents on every \$100 worth of taxable property he owns for the purpose of constructing and maintaining, not all the public roads in the eleventh district and the State of Kentucky, but only those roads known as public State highways. The people are to be taxed, whether they receive any State aid or not, even for the roads connecting the county-seat towns; and in

order for any county in the State to receive State aid even for those roads it will have to be taxed a second time. In other words, before any county can get a dollar from the State it will have to match that dollar with one of its own. Failing in this, the county, under the Kentucky road law, can not secure State aid even for the roads connecting county-seat towns, and of course if they do not get State aid they can not get Federal aid under the provisions of the bill we are now considering, for the Federal money-under section 3 of this bill, as I have said—is to be applied in accordance with the law of the State. The query then naturally arises, Where will the State-road fund go which every taxpayer is taxed to create, and where will the Federal money go that will be allotted to the State of Kentucky under the provisions of the bill we are now considering? The Shackleford bill, the one now under consideration, authorizes an appropriation of \$25,000,000 annually to be expended on the rural post roads in the United States. Kentucky's share of this each year would be \$273,500. This sum would be received—should this bill become a law—by the State of Kentucky and would go into the road fund of that State. What would become of that money, and what will become of the \$25,000 road taxes that the people of the eleventh district have to pay each year? In the event any county in the eleventh district should fail to meet the requirements of the Kentucky road law what will become of its money and its share of the Federal money? The Kentucky road law itself answers that question. Section 6 of the Bosworth road bill, which became a law, reads as follows:

If any county shall not avail itself of the aid from the State apportionment under the provisions of this act, then and in that case the amount so apportioned shall remain in the treasury of the State to the credit of the State fund to be again apportioned among the counties at the next annual apportionment.

In other words, if any county in the State for any reason falls to meet the requirements of the Bosworth law in applying for State aid, or falls to apply at all, or falls to get the approval of the State road commissioner of any line of road it desires to build, then the State road tax, which it is each year bound to pay, does not remain in the State treasury to its credit to be called for and applied to any future road construction or improvement, but its tax goes back into the State road fund, and later goes to the counties in the State that do meet the conditions and requirements of the State road law, and only those counties that do this will get any part of the State road fund or any advantage from it; and since this Federal fund of nearly \$300,000 which would be placed to the credit of the State each year is to be distributed in accordance with the law of the State, it follows that no county in this State will get any part of it if it falls to meet the requirements of the State road law. In other words, both the State road fund and the Federal fund would be expended only in those counties meeting the requirements of the State law, and then only on the State highways connecting county-seat towns.

I represent a district that is more or less mountainous in its character, and while it is my duty to represent the entire country in so far as I can in any votes I may cast on the floor of this House, my first duty is to the constituents who sent me here. Let us see how this law would operate, for instance, in the splendid mountain counties of Clay, Leslie, and Harlan, all within the district I have the honor to represent, all rich in mineral resources, and all inhabited by a virile and stalwart citizenship, loyal and patriotic-and the same thing can be truthfully said of the citizenry in every county in the district. It would be next to impossible for these mountain counties to put up their share of the money in constructing State highways from their county-seat towns to the county-seat towns of all the adjoining counties. It would take barrels of money to construct these roads across the hills and streams and mountains connecting these various county-seat towns, even if their construction would be deemed advisable or would be approved by the State commissioner of public roads, which in all probability it would not be. These counties are now all being taxed to help put up this State road fund, but are getting no advantage from it. They are getting no advantage from the State road fund and will therefore get no advantage from the Federal road fund.

The counties of Wayne, McCreary, Clinton, Cumberland, and Russell are all being taxed under the State road law to help create the State road fund, and, if I am not mistaken, no one of them is now receiving, or will likely soon receive, a single cent of the State aid, and until they do meet the requirements of the State road law and thus receive State aid they could not receive Federal aid.

The following table shows the counties in the eleventh congressional district, together with the assessed value of the real,

personal, and railroad property in them for the year 1912, and what each county will have to pay each year as a State road tax:

Counties in eleventh congressional district,	Value of real property.	Value of personal property.	Value of railroad property.	Total.	Amount of yearly State road tax of 5 cents on each \$100 of taxable property.
Bell Clay Clinton Cumberland Harlan Knox Laurel Lestle McCreary 1 Monro Pulaski Rockeastle Russell Wayne Wayne Whitley	\$4, 301, 245 1, 796, 045 938, 633 1, 477, 241 3, 453, 709 2, 841, 862 2, 032, 405 1, 945, 308 1, 685, 890 4, 387, 980 1, 270, 166 1, 205, 929 2, 701, 261 3, 345, 936	\$1,807,836 616,416 361,801 438,610 543,035 957,686 817,988 278,104 735,179 1,616,081 492,889 586,756 1,424,902 2,131,798	\$534,210 217,280 353,865 584,880 674,475 1,086,505 696,340	\$6, 643, 291 2, 412, 461 1, 300, 434 1, 915, 851 4, 214, 024 4, 153, 413 3, 435, 273 2, 323, 412 674, 475 2, 421, 069 7, 490, 579 2, 49, 395 1, 792, 684 4, 126, 163 7, 348, 449	\$3, 321. 64 1, 206. 23 650. 21 957. 42 2, 107. 01 2, 076. 70 1, 718. 13 1, 161. 70 337. 23 1, 210. 53 3, 745. 28 1, 229. 70 896. 34 2, 033. 08 3, 674. 22
Total				52,710,973	26,345.42

¹ Its property, except railroads to value indicated, is credited to counties out of which it was created.

Both the State road law and the bill which we are now considering ought to be so amended as not only to make it possible that the people who are taxed to help create these road funds may chance to get the benefits of them, but that those who pay the taxes shall receive benefits from them. If the bill we are now considering is not amended the Federal money will go to the State as a whole, and the counties in the State desiring State and Federal aid will be compelled to put up just as much money after this bill becomes a law as they would if it were not on the statute books at all. This is not fair to the counties in the State of Kentucky desiring State and Federal aid. This bill ought to be so amended that each county in the State desiring State aid shall have its proportionate share of this Federal fund and have it counted to its credit in the money it is required to put up to get State aid. Anything short of this will work a grave injustice to the counties in the State of Kentucky seeking to improve their highways through the assistance of State and Federal aid.

As much as I believe in State and Federal aid, and as much as I want to help that cause along, I would be constrained to vote against this bill, but for the fact that the Republican Party is soon to come back in power in this Nation, and possibly at no distant day, in the State; and when power is once again given us, I have an abiding faith that these laws will be samended as to do justice to the taxpayer, not alone in the district I have the honor to represent, but to every taxpayer in the State of Kentucky and throughout the Union.

No citizens throughout the confines of this great country are more essential to the welfare of this great country in time of peace, and its salvation in time of war, than those living in the rural districts and those living by the sweat of their brow in other avocations of life. It is there that you find honesty, integrity, loyalty, and truth. In the breasts of those living close to the soil and close to nature are embedded all the Christian virtues. During all these years they have been taxed to help defray the expenses of this great Government in times of peace, and during the times of war they have been its bulwark and defense. A few little country post offices, in many places miles apart, and a few little rural routes, have been the only direct benefits they have received at the hands of the Government in the way of expenditure of the public moneys. Millions upon the top of millions of the public moneys have been spent on the great customhouses in the cities and the larger towns; millions on top of millions have been poured out upon the rivers and harbors of our country; millions upon millions have been spent upon the Army and Navy; but the farmer has had to wait. The coal miner has had to be content. It is high time that this Government protect its protectors and defend its defenders. I am going to vote for this bill with all of its defects; I am going to put myself down on the side of national aid for road construction and road improvement, although there are many things about this bill that are far from my liking. The idea of putting this money in the exclusive control of the various States and letting the Government have no sort of control over the money it appropriates after it puts it up, no sort of jurisdiction over the post roads into which it puts its money, is far from advisable. [Applause.]

The Stewart-Screven Monument.

EXTENSION OF REMARKS

HON. WILLIAM C. ADAMSON, OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 25, 1916.

Mr. ADAMSON, Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address delivered by Hon. CHARLES G. EDWARDS on April 26, 1915, at the dedication of a monument erected by an appropriation made by Congress under the auspices and direction of the Fine Arts Commission.

The address is as follows:

HON, CHARLES G. EDWARDS MAKES PRESENTATION FOR UNITED STATES
CONGRESS—HE HAS COOPERATED WITH THE COMMISSION MANY
YEARS—MIDWAY ONCE WAS SEAT OF LEARNING.

"Congressman Charles G. Edwards made a brilliant and eloquent address this afternoon at Midway in making the presentation of the Stewart-Screven Monument. He said:

"The task assigned me is an honor and a privilege which I appreciate, and for which I thank the Midway Society and the committee having these arrangements in charge. For a number of years I have been interested in Midway and its splendid his-For several years I have cooperated with the Midway Society in its efforts to secure a monument for two of Midway's distinguished dead, and our labors have not been in vain.

LOVED LIBERTY.

"Over a century and a half ago a little band of cultured and plous men with their families penetrated and settled a portion of this county, the name 'Liberty' having been bestowed on it by the legislature because of the liberty-loving spirit of her citizens. Piety and education characterized this people, and at once upon settling in this county they erected a house in which to worship God, having previously formed themselves into an organization called the Midway Society. The first building was destroyed by the English in 1788, but as soon as possible, in 1792, another building was erected on the same spot, which you see still standing.

"I am reminded, however, that it is not my lot here to recount the details of history concerning Midway or the patriotic deeds of her noble sons who rest in these sacred precincts. Those things will be dealt with by others who are better fitted and more intimately acquainted with them.

Duty to sacred memories, and to this hallowed spot, has turned our thoughts in this materialistic age from the absorbing present and future to the discharge of a lasting obligation we owe the past, its heroes, and their patriotic deeds, who contribute so largely to the realization of American independence.

A NOBLE HISTORY.

"This section for many years in the earlier history of our country was not only a seat of culture and learning but con-tributed generously of its men and means that a republic might be born and preserved, and that liberty might be our priceless heritage. Liberty County and her people have a noble history of which they can justly feel proud. Much of Georgia's history, and, indeed, much of our Nation's history, would be lack-ing but for the history of this section and of Liberty County. The fires of American liberty burned early and fervently upon the altars here that are sacred in our history and our memories.

"The South, more than any other section of this country, contributed to the nurture and development of our young Republic, and of this work Georgia's was a great part. Our forefathers builded earnestly and well. To-day, as beautiful flowers are reverently placed by loving hands upon the graves of our Confederate dead throughout the South, our thoughts go back to our forefathers' part in founding and building this Republic, and while we sorrow for a 'lost cause' yet every southern prayer, on this Memorial Day, is for a reunited country, a Republic of peace for all time.

HONORED SONS.

"Midway has furnished many able and distinguished sons, She has had three representatives in the White House. She can boast of governors, Senators, signers of the Declaration of Independence, Representatives in Congress, authors, lawyers, doctors, inventors, diplomats, scientists, statesmen, soldiers, historians, and educators. She has sent 83 ministers of the gospel of various denominations into the Master's vineyard, to spread the glad tidings of salvation to the world, a record probably unsurpassed by any Christian congregation.

"The members of the Midway Society were remarkable for uprightness, refinement, and education, hence it is no surprise that their descendants have filled and are occupying high and honorable positions in all parts of our country, who may trace their proud lineage to that little band of patriots that worshiped God in this church and laid their dead to rest in this hallowed cemetery. A Liberty County man, or any other Georgian, who is not proud of Midway's achievements is void of appreciation of worthy and patriotic deeds, and lives with a thankless soul in his bosom, and is out of tune with the great God who has guided our national destinies.

A REWARD.

Written histories and biographies perpetuate the memories of great men. The real affection and esteem of the people, however, are reflected in the marble shaft, granite, stone, or bronze tablet erected to mark some spot closely identified with their lives or to represent enduring deeds performed for the benefit of mankind. Such is the reward for appreciated and patriotic

services.
"It has been said 'a people without monuments is a people who have without civilization and without progress.' People who have commemorated in bronze and marble the worthy deeds and virtues of their heroes have mightily swayed the destinies of mankind, while on the other hand people who have failed to go so have left but little imprint on the history of the world.

DISTINGUISHED DEAD.

"Within the walls of this moss-draped cemetery, covering about 1 acre, beneath these majestic oaks that have stood guard faithfully here for generations, lie entombed the ashes of more distinguished dead and of those who have given their country more noted posterity than any other burial acre in the land. In its bosom repose the remains of one governor, Nathan Brownson; one commodore, John McIntosh; two Revolutionary generals, James Screven and Daniel Stewart; one United States Senator, John Elliott: 11 ministers of the gospel; besides scores of good men and women, many distinguished in the various professions and vocations of life.

"Gen. Screven and Gen. Stewart, heroes of the American Revolution, have long slept here without a grateful country's monument to proclaim their valiant deeds and their useful services. Gen. Screven lost his life not a great way from this spot during the Revolution in the cause of liberty, his manly form pierced by 11 bullets, baptizing and making sacred the soil of his county

and his State with his patriotic blood.

SERVED GALLANTLY.

"Gen. Stewart was a young man and a private in the ranks of Gen. Screven's brigade, but his services were conspicuous and valuable, and he later became a brigadier general. They were both statesmen, patriots, soldiers, heroes, and useful. Godfearing citizens, who sacrificed much for their country when it needed true men of their type. Our country has not been unmindful of these men who helped to give it liberty. Although somewhat tardy in properly recognizing the services of these heroes of seventy-six with a suitable memorial, it has finally done a splendid thing in this direction. For many years it has been admitted by all that a suitable memorial should be erected here by our Government to properly mark the resting place of these great Georgians. As early as 1801 the United States House of Representatives passed a bill appropriating \$500 with which to erect a monument to one of them, but the money was never used. Georgia perpetuated the names of each of these great men by naming two of her counties in honor of Stewart and Screven. The fact that the National Government had never erected a monument to the memory of these deserving patriots was a burning indictment against the gratitude and patriotism of our Nation, which Congress was glad to remedy, and which it did substantially remedy by the passage of House bill No. 7549, as follows:

"Be it enocted, etc., That a joint monument be erected in the old cemetery at Midway, Liberty County, Ga., in memory of the lives and public services of Gen. James Screven and Gen. Daniel Stewart.

"Sec. 2 That for the purpose of the construction, erection, and completion of said monument the sum of \$10,000, or so much there of as is necessary, is hereby authorized, out of any money in the Treasury not otherwise appropriated, to be expended under the direction of the Secretary of War: and the design may be made by the Midway Society, charged as it is with the preservation and care of the said cemetery: Provided, That said design shall be approved by the Secretary of War.

"Approved March 4, 1911."

THE PESIGNER.

"In obedience to this act of Congress, this beautiful memorial was designed by Mr. George Bunap, landscape architect for the Commission of Fine Arts of Washington, D. C. Under the supervision and with the approval of our efficient Army engineers, it has been erected by the McNeil Marble Co., Georgia contractors,

out of Georgia granite, upon Georgia soil, to perpetuate the memories of two of Georgia's greatest and most beloved sons. The architect, the engineers, the contractors, and the Midway Society have all done their work well, and are entitled to the thanks and plaudits of a grateful people.

FOR PATRIOTIC SERVICES.

"Here it is, Mr. Chairman and fellow countrymen, a stately and completed memorial, rearing its knightly head to the heavens, proclaiming to the world for all time a loyal Nation's gratitude and a devoted people's appreciation for the patriotic services and heroic deeds of Gens. Screven and Stewart

"As I had the honor to introduce in Congress the bill that authorized the erection of this shaft, I am delighted that I have been commissioned, as the representative of our Government, with the honor of presenting this magnificent granite memorial to the care and keeping of this honorable society. My friends, to you, in the name of our country, 1 present this precious charge, with full confidence that it goes to loving hearts and willing hands, to consecrated men and women who revere this spot almost as a shrine, many of whom are worthy descendants of these brave generals, to whose lives and public services this monument is erected, and to whose memories it is lovingly dedicated by the greatest Nation in the world. It has been authorized, designed, constructed, and presented during an era when our country is at peace with all the earth. Though erected to perpetuate the memories of two great soldiers, let us hope and let us pray that it will stand guard for all time not only as a vigilant sentinel over these illustrious dead but that while it stands our country will never again unfurl its battle flag. May the Stars and Stripes, the flag of liberty and human hope, the flag of our forefathers, and our flag, which so proudly flies above us to-day, endure not only as the flag of the greatest Nation known to man, but as the emblem and promise of eternal peace to all the world."

Rural Roads.

EXTENSION OF REMARKS

HON. FRANK PARK. OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 25, 1916.

Mr. PARK. Mr. Speaker, the constitutional question as to whether the National Government can aid the States in the construction and maintenance of rural roads has been settled by the committee having in charge this bill as far as it can be settled without the opinion of the United States Supreme directly bearing thereon.

I am not clear as to how this bill, good in theory, may operate practically. It presents some good features, the best, in my opinion, being that part of section 5 to encourage and promote the improvement of a general system of roads leading from cities, towns, and railway stations into the adjacent farming communities.

I am on record where I live for good roads, and I am on record here for good roads, and I want to go on record now for better roads.

Most farms are more or less remote from railway depots and stations, and the worse the roads to be traveled the further in

point of time and convenience they are from markets.

The products of farms should be as easily accessible to the markets of towns and cities as our resources will permit.

Schools and churches in rural communities should be easily reached in all kinds of weather.

Good roads mean rapid material advancement to rural and urban communities; nothing will reduce high cost of living in cities more surely than a cheaper means of transportation of farm products to cities.

Nothing enhances the value of farm lands more greatly than good roads; thereby the applicant for benefits under the rural credit system, which we hope soon will be enacted into law, may receive a greater loan at a less rate of interest on his farm,

Good roads are the deeper arteries of trade, enriching the

lands, the intelligence, and the resources of communities.

A good, broad road built through a settlement that is cut off from the rest of a county by bad and impassable roads will be as beneficent in its results as the installation of an electric arc light in a densely populated and poorly lighted part of a city.

While this bill doubtless is defective, as time will prove, still it is a start in the right direction, and, if it shall become law, will stimulate States and counties to greater and more intelligent effort at good-road building.

I am in favor of any measure that we can pass which will fairly and rightfully help the people who have most of the burdens and who produce the food and raiment for the world.

National Guard.

EXTENSION OF REMARKS

HON. L. C. DYER,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 25, 1916.

Mr. DYER. Mr. Speaker, under leave granted me to extend my remarks in the Record, I beg to call attention to some communications that I have received from officers and enlisted men of the National Guard of Missouri, praying for assistance from the Government in the way of legislation therein re-ferred to. I believe that the National Guard can be made most efficient and beneficial to the country in every respect if they receive deserved consideration from the Congress. 'The communications are, in part, as follows:

STATE OF MISSOURI,
THE ADJUTANT GENERAL'S OFFICE,
City of Jefferson, January 5, 1916.

Hon. Leonidas C. Dyer,

House of Representatives, Washington, D. C.

My Dear Sir: It is the unanimous opinion of the members of the National Guard of Missouri that the passage of Senate bill 1158, commonly called the pay bill, will increase the strength and efficiency of the National Guard to the full extent necessary to accomplish the purpose for which it is intended; i. e., to place at the disposal of the President and available for immediate service a force of citizen soldiery sufficient to meet the needs of the country for national defense purposes; and, further, it is their judgment that such legislation furnishes the only practicable and possible system for the organization and maintenance of a civilian force for the purpose mentioned, based upon voluntary service. They believe it is impossible to secure any civilian force in this State which contemplates a service of two months continuous intensive training; that is, which will require its membership to absent themselves from their usual avocations for a period of two months or for any period other than that required of the National Guard.

At a meeting of the commanding officers of the various units of

continuous intensive training; that is, which will require its membership to absent themselves from their usual avocations for a period of two months or for any period other than that required of the National Guard.

At a meeting of the commanding officers of the various units of the National Guard I was directed to express this view to you as representing the serious, deliberate, and carefully considered opinion of the officers and men of the National Guard of this State, based upon past experience and careful inquiry as to future probabilities. In order that you may know something of the experience these gentlemen have had, I am attaching hereto a brief statement of the service and military experience of the gentlemen who command the brigade, the several regiments, and the artillery battallon constituting the National Guard of Missouri. You will note that, without exception, they are experienced business men of high standing in their communities, and that all of them served as officers in the Spanish-American War, and that all of them have served continuously in the National Guard of Missouri for more than 20 years.

The first question which will instrually occur to you is as to whether or not the pay bill will secure the attendance at drills, etc., necessary to bring the guard up to the required standard of theoretical and practical instruction and efficiency. It is the unanimous opinion of both officers and enlisted men in this State that it will. While the pay of an enlisted man as proposed in this bill is small, the fact that almost without exception he earns small wages makes it certain that this pay will be a consideration to him sufficient to insure his attendance at the required number of drills. As a rule our company commanders are men of modest means, dependent upon small salaries for a livelihood. The amount paid a company commander for example, would be a substantial object to him, and if he is able to supplement the income which he receives from his civil employment with this allowance it will in

such officer can not be recognized or paid, and, of course, this would force his retirement from the service, so that the Secretary of War is vested with absolute authority to prescribe and insist upon the meeting of all requirements necessary to secure efficient officers. In this connection your attention is invited to the fact that the militia system of this country is identical with that of Switzerland, except that in the latter country service is compulsory, while here it is voluntary. The Swiss Army is admitted to be one of the most efficient in Europe, and its efficiency is cited as the reason that country has been able to maintain its neutrality. As you know, Switzerland is divided into Cantons, which are civil subdivisions corresponding to our States. Under the Swiss system each Canton raises and trains its own force and selects the officers therefor. The General Government under this bill prescribes the system of discipline and training and furnishes the arms and equipment. The several Cantons furnish the uniforms and incidental expense of maintenance and are reimbursed therefor by the General Government. The regular army of Switzerland consists of the commanding general and a general staff. The analogy between the Swiss system and that proposed under this bill is complete, except that in one country the service is compulsory, while in the other it is voluntary. This would seem to meet the objection so often urged as to the method of selecting officers. Furthermore, it will be remembered that the Volunteer Army raised by the United States in 1861 and 1898 was officered by the Swendiscered by the Sevence of the General Government, and this method has always been followed in this country, and without complaint as to the efficiency of the officers selected in this manner.

In conclusion, it is earnestly urged that for the reasons above set forth the pay bill is advocated by the officers of the National Guard of all of the States, and that no other system has been advocated by those who have had practical

JOHN B. O'MEARA, The Adjutant General,

Very truly, yours,

JOHN B. O'MEARA,

The Adjutant General.

Brig. Gen. Harvey C. Clark: Nevada. Lawyer. Commanding the National Guard of Missouri. Has served continuously in the National Guard of Missouri 27 years. Graduate Wentworth Military Academy and Scarrett Collegiate Institute. Lieut. Col. Sixth Missouri Volunteers, Spanish-American War. FIRST REGIMENT INFANTRY, NATIONAL GUARD MISSOURI, St. Louis, January 11, 1916.

Hon, L. C. Dyer.

Member of Congress, Washington, D. C.

Dear Sir: As the question of national defense claims at the present time the attention of every citizen who has the interest of this country at heart, and as it is or should be of vital importance to the representatives of the people, I think it not out of place to call your attention to certain facts which may better qualify you to act for the best interest of the country.

Your attention is called to the fact that my information is received at first hand—that is, as an officer of the National Guard; that my opinion is that of any private citizen with the same source of information; that I do not follow the military game as a profession; and that my motive is therefore entirely unselfish. Proof of the latter statement lies in the fact that I have served over five years in the National Guard without pay and at a personal loss of both time and money.

while no thinking man could, after very slight consideration, admit that the so-called continental army plan is the solution of our military problem, this plan becomes even more impracticable when the experience gained in the National Guard is applied to it.

The period of training contemplated under the new army plan is two nonths each year, covering a term of three years, followed by three

years' service in the reserve. Those supporting the plan hope—bear in mind that they only hope—that the business men of this country will allow their employees two months' leave of absence to attend the camps of instruction. Ask yourself this question: How many St. Louis firms do I know of which will give their employees two months' leave of absence even without pay? It is admitted by military men that an annual training period of less than two months is too brief to produce results. In other words, it means that our so-called continental army will necessarily be composed of schoolboys and hobos. These are not the men to be relied upon in an emergency.

I could call to your attention a dozen other reasons against the adoption of this plan, among them the problem of handling the men, the impossibility of officers knowing their men, the difficulty of choosing noncommissioned officers, etc. The difficulty of assembling such an organization in an emergency would lie in the fact that an officer would not see his men during 10 months of the year. A great many would not see his men during 10 months of the year. A great many would be findaters," their address might have changed, and so far as their company would be concerned those men would be dead.

The only practicable answer to this problem is in the National Guard. Here you have a body of men whose patriotism is above question; who, not only in the face of universal ridicule but even without sufficient financial support and without legislation behind them to enforce discipline, have not only held the National Guard Guard them to enforce discipline, have not only held the National Guard to the very might of the week.

With Federal pay the National Guard can be made fully as efficient as the Regular Army. We have the espirit de corps—the pride of our organization—without which a military organization is no better than a mob. Officers are in constant touch with their men; the armory is their clubroom. They go there not only on drill nights but many of them every night

GEO. A. BILSBARROW, First Lieutenant, First Infantry, National Guard of Missouri.

FIRST REGIMENT INFANTRY
NATIONAL GUARD MISSOURI,
St. Louis, January 10, 1916.

Hon. L. C. DYER, M. C., Washington, D. C.

DEAR SIR: Knowing that great interest has been aroused in Congress and that a great many plans are being formulated for national preparedness, we the officers, noncommissioned officers, and enlisted men of Company D. First Infantry National Guard of Missouri, beg to bring to your attention the following facts relative to the National Guard or Organized Militia, so that you will lend every effort to pass the militia

to your attention the knowing lacts relative to the Mational Guard of Organized Militia, so that you will lend every effort to pass the militia pay bill:

That the Organized Militia is authorized by the Constitution of the United States and has existed since its adoption.

That the officers and enlisted men have served for periods as great as 30 years without remuneration, ready at any time to form the first line of defense of our country in case of need.

That during the War with Spain on the first call for volunteers the Organized Militia or National Guard volunteered to a man and served creditably in Caba, Porto Rico, the Philippines, and in the United States.

That in order to have an efficient reserve force they must be in constant touch with each other, as they are in the National Guard, drilling one night each week with target practice and camp of instruction for from two to three weeks each year.

That the militia pay bill is the only salvation of the National Guard, as should the plans for the continental army be adopted it would mean the dissolution of the National Guard, as they then could not be held together without pay.

That under the militia pay bill an effective force could be had ready at all times to respond to any call at the minimum of expense.

Respectfully signed and submitted.

Capt. Gunther Maiser.

And 38 other members of Company D.

Capt. GUNTHER MEIER
(And 38 other members of Company D.
First Regiment National Guard Missouri of St. Louis, Mo.).

Hon. L. C. Dyer, House of Representatives, Washington, D. C.

Dear Sin: We, the undersigned members of Company H, First Infantry, National Guard of Missouri, citizens of the State of Missouri and residing in the city of St. Louis, believe as follows:
That the National Guard is important and necessary in any plan looking to the defense of this country.
That the members of the National Guard are giving up their time to prepare themselves to aid in the defense of this country. They are assembling for drill and target practice at their own expense.
That it is unjust to force citizens to pay for the privilege of giving up their time and energies preparing themselves against their country's need.

That the members of the National Guard should be paid a small amount for each drill they attend.

Therefore, they request that the Senators and Congressmen from the State of Misscuri support a bill to be introduced in Congress, entitled "The Militia Pay Bill."

EDMUND J. McMahon.

EDMUND J. MCMAHON,
Captain First Regiment Infantry, N. G. Mo., Commanding Co. H.
JAMES J. MCMAHON,
First Lieutenant, Company H.
(And 42 other members of Co. H, 1st Regt. Inft., Mo. N. G.)

FIRST REGIMENT INFANTRY, NATIONAL GUARD MISSOURI, St. Louis, January 13, 1916.

Hon. L. C. Dyer, M. C., Washington, D. C.

Washington, D. C.

Washington, D. C.

Dear Sir: In taking the liberty of addressing you at this time I feel justified as a patriotic American citizen to call your attention to the subject now before the present Congress, in which we of the National Guard are vitally interested—national preparedness.

The continental army bill, as presented by Secretary of War Garrison, in my estimation will not prove the necessity now before the American Government, as from my 16 years' experience as a national guardsmen I feet that the business men are loath to let their employees away for such a long term as three months a year, as provided in the continental army bill.

Under such support as the militia pay bill offers the different cities and towns will take a pride in building for the National Guard organizations such armories as will meet their requirements, and I feel assured that within a year's time the National Guard could present a fighting force of at least a million men, all of whom would be thoroughly trained and ready for service. Three years of such work as is given enlisted men fits them for a call into the service for years to come, and I feel assured that this is the solution to our national preparedness.

Humbly asking your able support in this measure, I am,
Yours, very truly,

W. K. Sauemeir,

Very truly,

W. K. SAUEMEIB,

Captain, First Infantry, National Guard Missouri,

Commanding Company O

(And 30 other members of said company).

P. S.—My communication to you has been read before my entire company at the Federal inspection held January 10, 1916, and has their moral support, as their signatures will indicate.

HEADQUARTERS NATIONAL GUARD MISSOURI, Nevada, January 15, 1916.

Hon. L. C. DYER, Washington, D. C.

My Dear Captain: I am greatly pleased to receive your favor of the 12th instant, and I assure you of my sincere appreciation of the sentiments therein expressed. Being yourself a military man and familiar with the needs of the country and the methods by which this can best be accomplished, your influence means a very great deal. I will take occasion to acquaint the officers of the guard with your position in the matter, and I know how very appreciative they will be.

In the same mail in which your letter came I am in receipt of your address delivered in Ohio last November, and which was printed in the Congressional Record. I am exceedingly glad that Members of Congress and the country have been given this opportunity to read what you so ably and so truthfully said on that occasion. It seems to me if our people could have the situation brought home to them by those who served so well during the Spanish-American War and who have opportunity to know what the National Guard can be made if it is adequately supported, there would be no difference of opinion as to the scope which the legislation proposed at this time ought to take.

Again expressing the great satisfaction it is to us to know of your interest in our cause, and with the assurance of my high regard and esteem

esteem Sincerely, yours,

St. Louis, Mo., January 19, 1916.

Hon. L. C. DYER, Washington, D. C.

DEAR SIR: At this time when the most important question of "national preparedness" is before Congress and subject to so much debate by the people throughout the country I think it is not only proper but really my duty to write to you giving my views and some facts on the

by the people throughout the country I think it is not only proper but really my duty to write to you giving my views and some facts on the subject.

I being an officer in the National Guard of Missouri, and this matter having been discussed several times at meetings of the company to which I am attached, you will understand that this is not only a personal letter but one that expresses the sentiments of 60 men.

As I understand, in the proposed continental army it is intended that 400.000 men are to go to a "camp of instruction" for three months each summer. What class of men can be spared from their business for that length of time during the busiest season of the year? And what business house will really stand behind an organization that takes from 1 to 20 of these employees when they are most needed?

Looking at it from that point of view, the continental army can be recruited from but two classes, viz. college boys and bums, and neither will enter with a true patriotic spirit; one goes in for excitement and the other to be fed.

Again, while the Organized Militia under existing laws can not be a big success, give the officers some real authority and the enlisted men an incentive for giving up two evenings a week and conditions are bound to change for the better.

The men in our regiment, some of whom have been with us for 30 years, all have the interest of the organization at heart, and would dislike to see any legislation that would disrupt the organization or make it such a joke that a man would be too proud to join.

Are we who have been the backbone of the Regular Army, the Continental Army, since the 13 culonies banded together, to be thrown with the discard for an untried experiment, one which can never be a success?

Please give this matter your careful thought and attention, and be assured that we are all behind you for the welfare of the Government.

Respectfully,

EDW. J. RUF, Lieutenant, First Regiment Injantry, National Guard of Missouri.

COMFORT LEATHER CO., OFFICE AND WAREHOUSE, St. Louis, January 21, 1916.

Hon. L. C. DYER, Washington, D. C.

Dear Sir: As a captain of the National Guard of Missouri, with seven years' service therein, I have some very firm convictions on the pending military legislation.

The continental Army, as proposed, is a dream that can never be realized. The officers or men can not be secured. Only three classes of people could join—millionaires, bums, or schoolboys. The first will

not join, the second are not worth having, and the parents of the third will not permit.

Under the present plan of the continental army, recruits are to serve actively two months yearly for three years, and be held on the reserve list for three more years.

No man engaged in business, whether his own master or employed by some one else can afford to sign such a contract. Parents of school-boys 18 years of age or over could not afford to permit their sons to enter unless they, the parents expected to support them until enlistment ceased.

Gen. Wood is right. Conscription universely to the disclosure

some one else can afford to sign such a contract. Parents of schoolboys 18 years of age or over could not afford to permit their sons to
enter unless they, the parents expected to support them until enlistment ceased.

Gen. Wood is right. Conscription universally is the ideal solution,
if it can be made a law. Falling in this, amend the Constitution, taking the National Guard over to exclusive Federal control. Pay the
guard. Not much, just enough to give a man at least what it costs
him now to belong, say, \$1 per week for privates, unless in the field,
then full Army pay, as they receive at present. Make enlistment contracts binding and enforce penalties for absences or other shortcomings.
This will change the guard from a "victous" organization to a real
force of soldiers.

The guard can be increased to any limit in numbers, will cost the
Government practically nothing except for equipment, will work no
hardship on any man drilling one or two nights per week; camp of instruction during summer for two weeks.

The reason the guard is weak and inefficient at present is due entirely to lack of hold on recruits after they enlist.

A man gets tired of coming to drill and quits. What can be done
to him? Nothing. Bind the men that enter and we will give you a
force worth while.

We of the guard don't care what you call us—guardsmen, reserves,
continentals, or whatnot. We are not serving through State patriotism but through national patriotism. We are not strike breakers or
any other kind of odious persons, as seems to be the general impression. We are in the guard because it is the only military organization
we can join and the same time live at home with our families.

Why abandon an organization that has since George Washington's
time served the best way they could under national handicaps? Suppiled the Army with most of its officers in past wars, been faithful
when called upon for duttes they have not voluntarily chosen. Studied,
spent of personal means, and given all asked—for what? Deriston.

If

Norman B. Comport, Captain First Infantry, National Guard of Missouri.

Good Roads.

EXTENSION OF REMARKS

HON. ROBERT L. HENRY. OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday. January 25, 1916.

Mr. HENRY. Mr. Speaker, this bill has my earnest support, and I shall cheerfully cast my vote to pass it. Several years ago it occurred to me that the subject of good roads was one of the very greatest importance and should be of paramount interest until action was taken by Congress looking in that di-rection for cooperating with the respective States in the con-struction of necessary highways for the benefit of the people carrying the burdens of taxation.

As chairman of the Committee on Rules, I had the honor of introducing and reporting the resolution establishing the great Committee on Roads, at whose head there now presides that distinguished and patriotic Representative from Missouri, the Hon. Dorsey W. Shackleford. The creation of this committee has paved the way for the passage of this good-roads bill.

It gives me pleasure to know that in an humble way I have contributed to the establishment of that committee and now may enjoy the privilege of voting to pass the admirable bill reported by them. Illustrating the importance of good roads, and connected intimately with the subject, allow me to set out some views recently promulgated in their report by F. C. Weinert and Peter Radford, warehouse commissioners for Texas. They clearly state the issue and show the transcendent importance of rural credits, cooperative marketing, warehouse facilities, and their relationship to good public highways, giving easy access to markets and the avenues of transportation.

Here they are:

NEW YEAR TOAST.

"Here's to the son of toll, who sacrifices his honest labor that an unappreciative world might exist; whose unselfish and hampered position in life is borne with fortitude which should bespeak for him benevolence rather than treachery in trading with

his fellow man; whose ideals are honesty and confidence and a fervent desire to provide the deserving comforts of life for those who are near and dear to him. To this unselfish soul we bow with esteem and drink to his health, happiness, and prosperity.
"Weinert and Radford."

THE ISSUE.

"An epoch in the history of agriculture was ushered in with the creation of this department. From that hour the future will date the mobilization of the producers to demand, to receive, and to enjoy what every human being everywhere is entitled toa square deal. Unnumbered cries from the millions who toil to produce have gone up through the centuries, and while one appeal was being born and another dying the world has worked on as heedless of the one as it has been careless of the other.

"As long as men only offered to compliment the farmer, as long as politicians only exchanged soft words for votes, and the custom continued of speaking kindly and doing nothing, the greased road to nowhere remained unobstructed and without opposition. But as those who profit by the injustice which has deprived the producers of their just reward find that in reality this department has been created to convert the past pretty phrases of politicians into real human deeds that shall bear real fruit that does not turn to ashes on the lips-it would only be the innocent and unsuspecting who would doubt that those who have manipulated the farmers' produce for private gain unjustly obtained would oppose and criticize and obstruct. Those who get easy money under long-established customs of injustice to the producer feel most keenly how sacred those customs are-to those profiting by them. And if there were no wailing and gnashing of teeth in the camps of the crooked and no crying and self-pity among those who have been innocently living off the wastes the producers have suffered, it would only prove that we have been mistaken in the belief that a real evil

"Therefore, if we approach the issue with calmness and clear vision we must first see in no sense of doubt, but with all certainty, that if already the producers are getting a square deal, and there are no customs or wastes that are depriving him of due reward for his labor, then this department has been created by mistake and should be abolished with utmost haste. But if an evil exists either in carelessness or crookedness, in waste or wrong, in ignorance or in thoughtlessness, and the remedies we are charged with carrying into effect will bring to the toilers who produce the reward justly theirs, no man should oppose this first act of the State to serve in a practical way those who make our prosperity and commerce possible.

Therefore let all those who claim the farmer deserves no better than he now has, and all those who claim that the tillers of the soil and the toilers who produce on the farm and orchard and ranch already receive their full share of the wealth they produce, line up and demand the repeal of this great marketing system committed to this department for development.

But if there be those who are unafraid to proclaim that the producer deserves a better reward at the hands of those who are fed and clothed by his labors, and if there be those who count the producers as the vast throng who steady and carry on their shoulders the destinies of our country, and are ready to cham-pion their rightful demands for a just share of the riches their labors produce, then let them line up on the other side and demand, so that their demands can not be denied, that at last justice shall be done by those who eat their bread by the sweat of their brows

Let there be no mistaking of our purpose. Let there be no errors as to the issues at stake. We do not disparage the magic of the world of commerce. But the products of the farm are part of that commerce—so great a part that without them there And cotton is part of that commerce, could be no commerce. and in our Southland cotton is a magic word. Its history one day will read like a romance of world forces, and in that history Texas will stand as the great champion that led the way to justice for the producers of cotton. But our question is greater than cotton, greater than commerce. It is greater than corn, the king of the world's crops. It is greater than wheat, the queen of grains. It is greater than the fleeces of the fields and flocks; it is greater than the foods of the grains and the ranches; it is greater than substances and things and dollars. It is as great as humanity is great, for the issue has come and come to stay in the question being anxiously asked from the backwoodsman's rude hut to the farm palace, and from the tenement den of want and filth to the castles of the captains of industry: 'Is the laborer worthy of his hire?

since first was heard the plea for justice to the producers, and yet that justice has not come. Many have grown desperate and cursed their fate, many have lost faith and quit, but once more we are reaching the high tide of hope. On every hand a feeling akin to pain in its clearness, a consciousness equal to certainty in its force, is telling all men everywhere that those who produce are not yet satisfied with their lot, and that the cry for relief must at last be answered-answered not in words and smiles, but with deeds and dollars.

"Platitudes have loaded literature and policy supplied politicians with the battle cry, 'Back to the land.' It is not only a battle cry, it is a song and text, a slogan and motto, a thesis and a certainty-yes; it is all of these, and more. We find in country places and hamlets, in towns and villages, in skyscrapers and dugouts, in factories and loafers' lodges, in churches and in jails, in the mountains and by the seaside, the

echo of the far refrain, 'Back to the land.'

"In the farmer's paper and in the city's yellow sheet, in the shoddy pamphlet and the glazed magazine, in the editor's sanctum and the teacher's schoolroom, in the lawyer's office and the commercial club, in the bankers' convention and the political powwow, in the poor laborer's scream for food and the rich man's search for variety in life, behind the plow and in the jitney bus, in the chophouse and in the cafe, with the pipe organ and the jew's-harp, from Sambo's banjo and the military band, out floats far and wide the grand old song, 'Back to the land.

"And the pencil pushers, the preachers, the doctors, the lawyers, the teachers, the brokers, the merchants, the bankers, the clerks, the shop girls, the toilers, the waiters, the stenographers, the editors, and all manner of beings who have forever turned their backs to the land, in season and out of season, Sundays and holidays and plain working-days, march out to the crowded city's edge by the roadside and sing 'Back to the land.'

"And the sons of toil come marching up from the farm to the city with a pace that is long and strong and a face that is set and grim, until some faint echo reaches him of the city dwellers singing 'Back to the land,' and the marchers from the farm to the city catch the tune but heed not the words, and the tune is lively and the grim face brightens, and the marchers quicken their pace with its gladness and glory while he flees from the farm to the city, and as each one borrows a pencil he joins inand the city dwellers and the country boys, flourishing their pencils and white hands, march into the crowded city as the sun goes down to the tune of the chorus, 'Back to the land.'

"All the land believes in the battle cry 'Back to the land." They are willing to teach it, to publish it, to preach it, to sing it, to proclaim it and shout it, and even to march by the tune of it, so the march does not in truth lead 'back to the land.' But it is not the words we utter but the deeds we do that make our lives. And it is not the advice we give nor the songs we sing but the deeds we do that lift the race to higher things; and so it is that to-day's chorus, 'Back to the land,' is music to charm the breasts of writers and politicians and editors and bankers and others who have forever turned their backs to the land; but the marching of the grim sons of toil from the farm to the city is the deed that we are doing, and that deed is a battle cry without words or music, which says: 'If you want the marchers to march back to the land, give the producers a square deal."

DOES THE PRODUCER GET A SQUARE DEAL?

"There are some people who are opposed to admitting that the motives of any of those who unjustly profit by the farmer's losses are by any possibility bad. But the motive is not important to the department. Whether the farmer's annual loss of 100,000 bales of cotton, in the form of a city crop pulled, picked, or stolen from the crop he raises, is due to human depravity or human ingenuity or to custom or accident, it costs the farmer the same number of dollars. Whether the market is manipulated to rob the farmer from the motives of greed and gain or as a pastime and vacation sport, it takes the same number of dollars from the farmer's pockets. Whether the large fortunes made at the producer's expense all over our country while the toilers remain poor are stolen, taken under ancient custom, or merely collected to keep the farmer from becoming rich and extravagant, does not change the fact that the farmer's pockets carry just so many dollars less money. If we can get for the producer the dollars his labors entitle him to, the motives we have to combat or overcome will take care of themselves; and, in discussing whether the farmer gets a square deal or a crooked deal or merely a misdeal, we desire to be always understood that we are dealing with facts, not motives; with conditions, not theories; and seek results, not argument.

"Centuries have come and gone, generations have been born and passed away, and nations have risen, flourished, and died shall know them,' and by this test we propose to submit to your

consideration the vital question whether the producers of to-

day and of the past have gotten a square deal.

There are some people who now and then ask why there should be such widespread agitation for better treatment of agri-One who has studied three tendencies in our country's history which affect not only the farmer, but our whole society, will cease to wonder that thoughtful people are turning more and more to answer the farmer's needs. Let us consider them in their order:

"First. The concentration of wealth in the hands of a few

Second. The drift of the people from the farms to the

"Third. The increase of the tenant class and homes under

liens and the lessening of the number of home owners.

"There is no informed man who will deny that these are the tendencies in America. And yet we stand ready to say that unless we can find a way to prevent centralizing our government at the expense of the people's power, secure a fairer distribution of wealth, and juster rewards for the toilers of our land, turn back the onward tide of population from the farm to the city, and make our people home owners instead of tenants and mortgagors of homes, the great experiment in free government in America will fail because we fall into the same errors that have destroyed free government wherever it has Before we go more particularly into these facts let us say that we have no fears of the final outcome. The very last hope of free government in the world depends on America, and our faith that the end will prove the wisdom of the fathers is unshaken.

"But let us turn to the facts as they are.

THE CONCENTRATION OF WEALTH.

"That there is an increasing number of poor and destitute people, and that private fortunes on the other extreme are growing larger and larger, are facts of universal observation. But there is an idea very broadly believed to the effect that.in older countries the concentration of wealth is greater than in America. We find on investigation, however, that over 30 years ago we had already outstripped every country in the world in the number and size of gigantic private fortunes. As early as 1800 it was estimated by reliable authorities that 1 per cent of the people owned over half of all the Nation's wealth, and that one-eighth of the people owned seven-eighths of the wealth of the country. In 1900 it was estimated that only 440 industrial, franchise, and miscellaneous trust combinations owned \$20,000,000,000 of the Nation's \$90,000,000,000 of wealth, or two-With the immense profit of recent years added, this total now would reach one-fourth of the Nation's wealth. In the early days of the Steel Trust it was estimated that the 24 men composing its board of directors directly or indirectly controlled one-twelfth of the total wealth of the country.

"In 1889 Thomas G. Shearmon, a brilliant corporation lawyer and political economist, declared that 'the United States of America is practically owned by less than 250,000 persons.' dicted that if the tendency of that day continued 'within 30 years the United States of America will be substantially owned by less than 50,000 persons.' Twenty-six of those years have passed, and the other day a Federal investigation in New York City brought out the fact that in the employment of labor in the United States that part of New York City on Manhattan Island, which includes Wall Street and the main business section, controlled half the employing power of the Nation. In other words, that persons on Manhattan Island had the power to hire or discharge one-half the laboring population of our country. If 30 years ago one-half of the people owned seven-eighths of the wealth, and to-day Manhattan Island controls one-half of the employing power of the Nation, who knows just how few people do own the country to-day? And if the board of directors of the Steel Trust in its early days controlled one-twelfth of the Nation's wealth, in these days, when it waxes fatter and fatter on the profits of supplying war materials, who can estimate their power? And yet there are people who would ask if we need turn our attention to making better the lot of those who till the soil of our land. Remarkable as it may seem, it has been but a dozen years since the star orators of the Republican Party openly boasted that their policies were to be credited with this the most gigantic crime of the ages. Chauncey Mitchell Depew, the favorite after-dinner advocate of the McKinley and Roosevelt régimes, in a biographical sketch of William McKinley, after his death, used these remarkable words:

"'He made possible the gigantic fortunes which have been amassed by master minds in the control, use, and distribution of iron, coal, oil, cotton, and wool, and their products. Though | What say you of this? But some say this does not affect never an organizer or beneficiary of combinations or trusts, yet | Texas. Let us see about Texas. In 1890 the city population

the constant aggregation of most industries in vast corporations of fabulous capital, while due to tendencies of the age and common to all countries, received tremendous acceleration from his

"Mark that wonderful utterance. In all literature there is not a truer or more fatal description of the facts. your memory the fact that cotton and wool have been the means of amassing gigantic fortunes in America. But cut deeper into your hearts the fact that no great fortunes have been amassed in the production of cotton or wool. No; they have been amassed, just as Chauncey Depew says, 'in the control, use, and distribution ' of the products of your hands and fields.

Yet when a courageous public man says that trusts manipulate for criminal gain the industry, the labor, and the produce of the people by bringing to bear the great power of their wealth, that man is denounced as an agitator and sometimes a socialist and often as an anarchist. But the wonderment of all is that in the face of this simple statement of truth anyone should ever ask why the people drift from the ranch and the farm, where the Nation's wealth is produced, to the cities, where gigantic fortunes are amassed in the 'control, use, and distribution' of the products of their toil. And we need look for no checking of the drift to the cities while the producers toll and remain poor and the trusts in the cities manipulate and grow richer and richer. Nature's laws did not decree that those who produce should do so in poverty and those who manipulate their products should amass gigantic fortunes. It is not nature's laws but man's greed that has decreed that the reward of toll is more work while remaining poor, and that the reward of controlling, using, and distributing is the amassing of gigantic fortunes. nature had so decreed there would be no remedy, but as man has made these conditions, it is the duty of the Government to find a way to get for the producer a reasonable compensation for his service to mankind.

CONCENTRATION OF PEOPLE IN CITIES.

"Farming is primarily the science of making both ends meet and having something over, and the something over determines

whether the man will stay on the farm.

"This brings us to the most remarkable proof of the injustice of the toiler's lot that can be found in any age, for our census enables us to put our finger on the fact, while in other times the world suffered without knowing just how or why. It is this drift from the ranch and farm to the cities. More than this drift from the ranch and farm to the cities. half a century ago warnings were uttered against this tendency. Daniel Webster said: 'When tillage begins, other arts follow The farmers, therefore, are the founders of human civilization. Therefore in a free government we should look for the en-couragement of agriculture, and if we do not find it, the handwriting is on the wall that freedom will depart from the land. It has been said that water flows downhill, but if you pump hard enough you can make it flow uphill. There has been a great deal of pumping in this country, but when water is free to flow where it will it flows downhill. And we are discussing this drift of the people to the cities, where all the people are free to go and come. If the ranch and farm had the conveniences, the attractions, and the pleasures the city affords, with equality of wealth and social enjoyment, this drift would cease overnight. And there is no remedy in any theory or any platitudes of political platforms. Nothing but the restoration of equal opportunity and equal rewards for the producer of wealth, along with those of the manipulator of those products, will ever have even a tendency to overcome the evil.

"In a great speech delivered by Henry Grady, perhaps the greatest winner of the hearts of men that the South has ever produced, away back in 1889, he reviewed these conditions and proclaimed his belief that unless this tendency were overcome it meant disaster for the Republic. Many times have we been warned since then, and at last we are waking up. But let us remind you that when Henry Grady delivered that speech only 30 people in a hundred lived in the cities, while to-day 50 out of every hundred live in the cities. He was alarmed then; we should be panic-stricken now. Listen to the figures: Grady's speech was based on the 1880 census, showing 29½ per cent of our people in the cities of over 2,500 population. In 1890 it rose to 36 per cent, in 1900 to 404 per cent, in 1910 to 464 per cent. So in three decades the drift is 16 people out of every hundred, and all this since the census figures Grady used. It averages over 5 per cent, or 1 person in every 20, leaving the farm for the city in every decade. Based on that rate of drift, we have already reached the point where the producers are only half the people and the city population the other half, when 40 years ago the producers outnumbered all others by 3 to 1.

was 15½ per cent, in 1900, 17 per cent, and in 1910 over 25 per cent; and if the ratio of the last decade has continued to now nearly 30 per cent of our people live in cities. In the United States the last decade showed the cities gained 70 per cent and the country 30 per cent, but in Texas the cities gained 80 per cent, while the country only gained 17 per cent. So we find that Texas, the great cotton State, is rushing headlong to the cities.

CONCENTRATION OF LAND OWNERSHIP.

"But what is to us a more distressing evidence of this inequality of reward is shown in the ownership of homes. In 1890 our farms were under liens for six and a half million dollars, but in 1910 they were under liens of over \$76,000,000. The numbut in 1910 they were under liens of over \$70,000,000. The number of farms under liens had been multiplied by 6 and the amount by 12, showing that the liens not only multiply in numbers but also in amount. The tenants in 1880 were 37 per cent of our farmers; in 1890, 42 per cent; in 1900, 49 per cent; and in 1910, 52½ per cent; and to-day, if the rate of increase has continued, 55 out of every 100 of our farmers are tenant formers. But these facts only 100 of our farmers are tenant. farmers. But these facts only partially disclose the real conditions, for a large number of those listed as owners of homes

owed on them.

"In 1890 only 5 per cent were under lien, but in 1900, 23 per cent had come under liens, and in 1910 one-third of supposed home owners had their homes under liens of some kind, and if the rate of increase has continued to-day the homes under liens will reach 40 per cent of all homes in Texas. But in the true light we find that those tilling the soil or occupying homes in our State, and either paying rent or interest on them, in 1890 were 41 per cent of the whole number, in 1900, 61½ per cent, and in 1910 nearly 69 per cent, and if the rate of increase has continued, to-day three-fourths of our people either pay rent for their homes or interest on them. And when we turn to the tax rolls of our State to find where Texas is helping the farm owner and the home owner, what do we find? In the seven years from 1907 to 1914 personal-property taxes have increased only 40 per cent, while land taxes have practically been doubled. But in another way, in 1907 real estate consisted of a little over one-half of our taxed values and in 1914 almost two-thirds of our taxed property. So we find the burden of the land by way of taxes in the greatest agricultural State in the world keeps pace with the other inequalities, driving wealth into the hands of the few, the people into the cities, and the homes under liens.

SOME ILLUSTRATIONS OF EFFECTS.

"At a recent national convention of labor unions held in California and presided over by President Gompers it was disclosed that the annual production of farm, orchard, and ranch products amounted to \$13,000,000,000, the producers receiving \$6,000,000,000 as their portion and the middlemen reaping \$7,000,000,000 for their undeserved share. Realizing that the membership of labor unions constitute the majority of consumers, a resolution was offered and passed that the union join hands with the producers to the end that some relief might be obtained that would forever relieve them of the parasite who grows rich upon the difference paid by the consumer and the price the producer receives.

'If we study these tendencies we need no concrete facts to tell

us the producers do not get a square deal.

Farmers would not rush to the cities if they were getting a square deal. Great fortunes would not be amassed in manipulating the soil's produce, while the producers remain poor, if the farmer were getting a square deal.

Liens on homes would not be piling up if the farmer were

getting a square deal.

'The producers would get more than \$6,000,000,000 out of a total annual production of \$13,000,000,000 if the farmer were

"To those who think, these facts are not speculative or doubtful. They are certainly beyond all dispute or question. We have given the facts in calmness and no conclusion can be reached by any fair mind except that the farmer is not getting a square deal.

SHALL WE DO NOTHING OR PEEK A REMEDY?

"Lord Macaulay once said that when a remedy fo an admitted evil was offered, and it was defeated by those who professed regret for the evil, but objected to the method of cure without offering a better remedy, it was safe to say that there was no real desire for any remedy at all.

'Since we face conditions as to which there is no dispute, since we know that the producers are suffering from age-old injustice in many forms, since we know he is getting nothing near his fair portion of the wealth he produces, we ask the producers of our State to scan carefully the objectors who object and object and object, but offer no remedy to allay the evils no

"What say you toilers who produce to those who would tell you that your lot is already as good as your desire?

When politicians come to you on a plea that the great marketing system we are working to complete is the wrong way to get justice for you, ask him if he has a better way. Ask him if he wants you to repeal the only remedy ever offered for the evils you suffer before he offers one to take its place.

PURPOSE AND BENEFITS OF WAREHOUSE AND MARKETING LAW

"The vast benefits which finally will result from the warehouse and marketing law are but dimly realized. We quote below the opinion of the Court of Criminal Appeals in the Dabney White case, an able statement of several features, and showing among other things that the law will save for the farmer at least \$5 on every bale of cotton. If it were admitted that this is all the possible saving, that alone would prove this law the greatest benefit to the farmers of Texas ever enacted by our legislators, for this saving of only \$5 per bale is \$20,000,000 annually to the people of Texas. But this saving is only the beginning and only scratches the surface of the real benefits to result. But let

the opinion of the court speak for itself:

"' Has experience demonstrated that there are evils connected with the preparation of cotton for market and the marketing of same which affect the State as a whole-the general public welfare? If so, then under the authorities quoted by relator, the State, in seeking under the police power to correct and remedy those evils, would not and can not be held to violate any provision of the Federal Constitution. Cotton is not only the chief product of this State but of the entire South, and not only "within the memory of man" but at the very time of the enactment of this law all the industries of this State and of the South were paralyzed by conditions affecting the cotton crop. The farmer, the merchant, the bank, the lawyer, the doctorin fact, the entire citizenship of this State-was brought almost to the door of the bankrupt court by conditions affecting the marketing of cotton, and the conditions were such they not only authorized but imperatively demanded that the legislature enact laws remedying or tending to remedy these conditions if within the power of legislation to do so. No one can gainsay that a condition existed in which the public welfare was vitally interested and the whole public affected, and relief from such conditions provided, if it was possible to do so. And the instance of the conditions of the year 1914, while impressing the necessity for legislation to avoid and prevent such conditions from again arising, is not the only instance in which the conditions affecting the cotton crop have about paralyzed the entire industries of the State and South. All of us can remember that but a few years ago cotton was selling at from 4 to 6 cents per pound (much less than the cost of production), and that many failures in business were occasioned thereby, and almost starvation brought to the doors of many. In fact every legitimate interest and business in our State was affected thereby. It has been demonstrated, and we think fully shown by the evidence in this case, that such conditions were not the result of the law of supply and demand, but were brought about by conditions which can, in a measure at least, be remedied by suitable legislation, and this is the object and purpose of the legislation involved in this case. But it may be contended that these conditions were conditions in no way brought about or contributed to by the ginners in ginning the cotton, yet, even if that were true, if it became imperatively necessary to regulate the ginning of the cotton, by suitable legislation, to remedy the evils which had brought about such conditions, this would authorize the legislature to regulate the ginning to accomplish the purpose sought, if it was necessary to do so.

The evidence adduced on this trial, we think, demonstrates there are evils connected with the ginning of cotton that im-peratively demanded regulation, else no legislation could be adopted which would enable the legislature to adopt a system which would relieve or tend to relieve those oft-recurring periods in which the welfare of the entire citizenship is seriously affected. It was shown by the evidence that it has grown to be the custom with virtually all ginners to "plate" each bale of cotton ginned with a portion of the cotton of the previous bale ginned. Col. Sheb Williams, in his testimony, aptly illustrates how this is done by the ginners in order that they may gin more cotton each day. There is what is termed a "roll" that must be filled before the gin can be run at its regular speed. He testified: "You must first fill your roll before you can properly gin cotton. If I should bring a bale of cotton to the gin and the roll was filled from that bale, a good bale, just when the box and feeders were clear, this would be shut off, and in order to keep the roll tight with the lint that may be taken from the seed, now the bale of cotton succeeding me of necessity would get the lint from the seed that this roll ginned,

and that would go into the succeeding bale. If the succeeding bale were a better one than this roll, that side of the cotton would, of course, be worse than the sample and better than the cotton actually was. In other words, it would be plated. is shown to be the general custom of the ginners of this State; and then by the testimony of D. C. Reed, a cotton buyer, called as a witness by relator, it is shown that the buyers, under conditions heretofore existing, took a sample from each side of the bale of cotton, and bought by the sample that graded the lowest. This is but human, and we censure no one for doing so. So, if the plate was of a superior grade, the farmer would not get the benefit by reason thereof, but if the plate was of an inferior grade, then the farmer sold his cotton by the inferior grade and consequently lost thereby. So it may be said, through no fault of the raiser of the produce, he sells at least a portion of his crop by the inferior sample, occasioned by the fact that the ginner does not clean his roll and put all of a man's own cotton in his bale-in lieu thereof placing a portion of the preceding man's cotton in each bale, and at the place where the sample is taken from the bale under former conditions. This should be remedied, and this the law seeks to do by prohibiting the "plating" of cotton and providing for the taking of samples as the bale is ginned.

"'Again, the evidence before us shows that there are at least a few ginners—they being the exception and not the rule, we will say in justice to the ginners—while ginning cotton to so arrange a steam cock or valve that steam would escape and spray the cotton while being ginned, thus adding to the weight. This was done to bring customers to their gin—giving an extra large "turnout." This was an evil that needed correcting, and this the law attempts to remedy. This and other matters incident to the way the cotton was ginned and baled had caused what is termed "overhead charge" to be made by the spinners against each bale of cotton, amounting to 30 pounds on each bale of cotton of 500 pounds. It is known, and the evidence before us shows, that the bagging and ties on each bale of cotton weigh from 12 to 22 pounds; that the average weight of bagging and ties would probably be from 18 to 20 pounds per bale, and yet the "tare" or "overhead charge" has been fixed at 30 pounds, thus penalizing every bale of cotton from 10 to 12 pounds, amounting, at the present price of cotton, at from \$1.10 to \$1.30 per bale, which the producer loses by reason of this "overhead" or "tare" charge. This was occasioned, in the main, by reason of loss from spraying the cotton, mixed-packed, sand-packed, and waterpacked cotton, all of which can, and, under the law, should be, and if properly enforced will be, prevented by the ginner in ginning the cotton. Under the system heretofore existing, as shown by the testimony of Mr. Reed, the buyers who ship the cotton to the spinners know there is an overcharge on every properly ginned bale of cotton of at least 10 to 12 pounds that should not be made, consequently when the buyer is having the cotton compressed for shipment he has what is termed "patches" put on the cotton, additional bagging, old sacks, or something of similar character, to the extent of 10 or 12 pounds, and then bills his cotton out as weighing this much in addition to the weight on which he purchased it. If he purchased a bale, by weight of 500 pounds, when he ships and the "patches" have been put on he bills it as weighing 510 or 512 pounds, and for this reason the "tare" or "overhead charge" will not be reduced by the spinners under former conditions. Mr. Reed frankly testified that he could buy cotton at 11 cents a pound and sell it to the spinner at the same price-11 cents a pound-and make from a dollar to a dollar and a quarter a bale, by reason of these "patches" being placed thereon, and by reason of the further fact that if the cotton as billed to the spinners comes to within 1 per cent of the billing, there is no reduction, thus giving another margin of 5 pounds that can be added to the weight in shipping over and above the weight as purchased. This makes it apparent that while a bale of cotton weighing 500 pounds is sold on the market here as weighing only 470 pounds; that is, the price is fixed so that is the number of pounds paid for, yet in selling the cotton to the spinner it is sold as weighing 485 pounds—half the tare, or 15 pounds, being taken advantage of by the purchaser who sells to the spinner.

"'We are censuring no one, but this evidences a condition that needs remedying, and this the legislature has sought to remedy by this bill. In addition to this, the evidence before us shows that by cutting the bales and taking out samples, by what is termed "picking the cotton" at the cotton yards and compresses, there is annually what is termed a "town or city crop" of 100,000 bales. And this is marketed and sold by men who did not raise a pound nor even a single lock of cotton. All this is taken into consideration in fixing the "tare" or "overhead" charge as against each bale of cotton. If a bale is completely covered by the bagging or wrapping placed on cotton and it is

not necessary to cut the bagging to obtain a sample, all this 100,000-bale town or city crop will disappear and the head " charge or " tare " can be reduced proportionately. one of the reasons shown why the "sample' " should be taken while the cotton is being ginned, instead of the bagging being cut on each side and samples taken after being baled. Again, it is shown by the evidence before us that the place where the bagging is cut and samples pulled out of each side will form a cup. so when it rains these cups will fill with water and form what is called by cotton men "a cancer," which continually eats its way into and in some instances entirely through the cotton, rendering a number of pounds of cotton valueless; and this is taken into consideration in fixing the "overhead charge"—all of which is a loss to the producer, for it is taken into consideration in

fixing the price.

"'But it was insisted on behalf of the relator that cotton, after being pressed, gives a better "sample" than when taken as the There is but one instance in the evidence becotton is ginned. fore us, and that shows the samples when taken as being ginned and one taken out of the same bale after being baled were exactly the same, there being no difference. But by some of the testimony it was shown that cotton after being baled took on what was termed a "bloom" that it did not have while being ginned. This adds nothing to the length or strength of the fiber nor to the cotton in any way, according to the testimony; but if it did cause the cotton sample to grade better, the testimony before us would show that when the sample is taken as ginned and placed in a sealed receptacle the same "bloom" comes upon the sample, and if it added anything to the grade of the cotton it would be upon both samples, when taken when being ginned or when taken after being baled. There was testimony that the buyer could not rely upon the sample taken as ginned and placed in a scaled receptacle, for it was said the first purchaser who bid on it when it was opened might get a correct view of the sample, yet in carrying it to different cotton buyers, and handled by them, the dirt and trash might be shaken out If so, the buyer would be at no greater disadvantage than formerly, for if the bagging were cut and a sample taken from the side, the first buyer who bid on it would see the sample just as taken from the bale; but when the producer carried the sample thus taken to the different buyers the dirt and trash would be shaken out in the one instance as well as in the other, and we all know it is not customary for each buyer who bids on cotton to take a sample out of the bale, for if they did the bale would soon become almost all "samples."

"'We have mentioned these matters to show why we think the evidence in this case demonstrates that the general public in this State is so affected by the heretofore existing system of the preparation of cotton for the market and the system of marketing the same as to authorize legislation under the police power of the State to correct the evils and to show that there were evils connected with the ginning of cotton which, under this power and authority, to authorize the legislature to enact a law to remedy the evils that have grown up and become a part of the system of ginning cotton heretofore carried on in this State. To our mind there is and can be no question that the public weifare demands the eradication of these evils, that legal fraud may be prevented, that unnecessary overhead charges may be eliminated. and the staple crop of the State, upon which the prosperity of each and every citizen of the State, in a measure, more or less

depends, may not be thus penalized and sacrificed by being forced on the market in a few months' time.

"'The expense necessary and incident to the ginner complying with this law was variously estimated by the witnesses at from 3 cents per bale to 25 cents per bale. It was shown of some 700 gins inspected by the inspectors provided for by the law, only about one-fourth of that number were making any extra charge in ginning cotton, and the one-fourth who did make an extra charge charged on an average about 25 cents per bale. The expense testified to by Mr. White was that in a gin ginning 30 or more bales of cotton per day the services of an additional man would be required. That three wrappers cost from one-half to 1 cent each and from 12 to 3 cents per bale. scales to weigh the samples would necessarily be required to be purchased, and the scales would cost about \$12. That scales weigh the cotton after it was baled would cost about \$40. This is all the additional expense testified to by any witness, and relator contends that this is a taking of his property without due process of law. If the evils growing out of and connected with ginning cotton have rendered it necessary to regulate the business, to eliminate the plating of cotton, to prevent the spraying of cotton, to prevent the sand packing of cotton, and the other evils testified to by witnesses, that the law necessarily fastens this extra charge on the business of ginning cotton, would not render the law obnoxious to the Federal or State Constitution. There is many a charge or license fixed that must be paid or endured necessarily for the public welfare under the laws of this State and of every State in this Union. But is such a charge necessarily fixed on the ginner? The testimony shows that many ginners do, and all could, make a charge to cover this extra expense. So the ginner is not necessarily deprived of any property by the law. If he does not gin for the public, and that is not his business, he has no such expense; however, we have no such gins in this State. If he does follow the business or occupation of ginning for others and suffers any loss, he voluntarily does so, for the law forces no expense without allowing him compensation, if he sees proper to charge it, for performing the duties required by the law. But take Mr. White's estimate of the expense, what does it amount to per bale?

"If one gins as much as 30 bales per day, he must employ an extra man at a cost of \$70 per month. Thirty bales per day. 26 working days aggregate 780 bales per month, or about 9 cents per bale; the best wrappers, the testimony shows, cost 11 cents per bale, and, adding both together, 101 cents per bale. All gins already had scales for weighing the bales after being ginned. and the scales for weighing the samples would last for years, and the cost per bale incident to the purchase of such scales would be infinitesimal, but say one-half cent per bale, and the cost, under the testimony, where the extra man is employed, would not exceed 11 cents per bale, and under all the testimony, both for the State and relator, it is shown that if the provisions of the law are complied with the price received for the bale of cotton would be enhanced not less than \$5 per bale, and the man who had the cotton ginned could well afford to pay the Il cents per bale out of the \$5 additional received-if the ginner saw proper to make the additional charge.

We doubt very seriously whether or not a ginner is in position to raise the question that the law would be invalid for the reason that it takes the property of the farmer, for if it did do so it would not be the taking of any property of the ginner. But we will not rest our decision upon that ground, and will consider it on the theory that the producer must bear or can be made to bear, under the law, the 11 cents per bale expense additional to the ginners by the provisions of the law, if it shall be so much, or whatever it may be, and in addition thereto he will be deprived of 5% ounces of his cotton, required by the law to be deposited with the ginner. At present prices this would figure about 4 cents, or a total of 15 cents per bale—that the producer under the provisions of the law would be finally deprived of by the act; yet under all the festimony, if the law is complied with and the system is carried out, he will receive in addition to the amount heretofore received \$5 per bale. There are but few, if any, men who would object to the regulation of the preparation of his product for the market, at so small an expense, if the price he received would be enhanced in so much greater sum that taken-he would deem it adequate compensation for the property taken."

HOW SHALL THE FARMER GET RESULTS?

"There yet remains the vital principle of our whole work—cooperation. If every farmer will learn that lesson, the road to prosperity is wide open to every deserving farmer. By it the evils of to-day's systems, both of commerce and law, can be overcome. If we were asked to state the truth most important to our farmers it would be this:

"Until the farmers of America learn to stand together and cooperate like all other callings they are doomed to hew the wood and carry the water and do the drudgery of the world in poverty for all time.

"This truth must first be brought home to the larger farmers, Those who feel their own independence and freedom from want and necessity must open the way or it will never be opened.

"Let those who are the stronger of our farmers study this law of nature: In all (times the burdens of the poor and weak must be carried by somebody, and as only the strong can carry the burden, that is where it always has fallen and always will fall. A thousand small farmers who are poor may produce no more cotton than a hundred larger and better fixed farmers, but when the poor farmer is forced to dump his cotton on the market he breaks the price, and the larger farmer has to suffer the loss in the price of his cotton along with this poor neighbor. The poorer farmers can not hold their cotton off the market unless the larger farmers help, and neither the larger farmer nor the smaller one will ever get a fair price until they stand together.

"In marketing cotton gradually the cost of holding must be reduced to a minimum. There are three elements of cost that must be dealt with:

"1. The cost of warehousing.

"2. The cost of insurance.

"3. The cost of interest.

"To reduce these expenses to the lowest possible point there must finally be a standard marketing system and practically the whole crop handled under one system. The present system of 'every man for himself and the devil take the hindmost' results in untold waste.

THE COST OF WAREHOUSING.

"When a small town has one or two open cotton yards, two or three parties engaged in handling cotton to and from yards. a warehouse only half patronized and a half dozen buyers, scattering cotton about town, it is needless to say they are wasting money. It is also needless to say the farmer is losing this waste. Warehousing will cost a very insignificant amount when the big farmer and the little farmer and all the farmers patronize the warehouse and save all these wastes. Only by acting together can such inexcusable wastes of money be prevented. All the cotton of a community can be warehoused and cared for at an expense very little more than the warehousing of onethird of it. So, if the other two-thirds came into the system, the cost per bale would be ultimately very much less than at present. The great waste now is in the scattered handling of cotton without system or method, and these expenses can be cut in half when once the farmers learn to act all together.

"Build a warehouse and then everybody patronize it so as to keep it up and reduce expenses should be the motto of every community.

THE COST OF INSURANCE.

"Already this department has secured a reduction of insurance on over 50 warehouses, and the total saving in insurance alone will amount to more than the expense of operating this entire department, yet only a beginning has been made. In South Carolina, under State supervision, a rural rate of \$1.58 per hundred is enjoyed, while in Texas the rural warehouses are being charged a rate of \$3 to \$3.50 per hundred in many cases.

"Yet we must fully realize that a radical change must come in the matters of cotton insurance. The present rates can not be permanently endured. The present practice of charging exorbitant rates in the rural communities and granting lower rates in the centers must be overcome.

".It would be well for insurance companies to consider the possibility of a mutual insurance of cotton in warehouses under State supervision.

"The guaranty of deposits under the bank guaranty fund system of this State furnishes a tempting model and proves the practicability of a mutual system of insuring the farmer's cotton at cost. Unless the insurance companies cooperate with the warehouses to reduce insurance costs the demand for such a system will make its adoption inevitable.

"It is well known that over 40 per cent of all insurance premiums is absorbed in agents' commissions and operating ex-These heavy commissions were established under the old system of the competitive selling of insurance demanding great activity of agents. To-day, under the bonded-warehouse system, the law of the State sells the insurance for the companies by compelling the warehousemen to take out insurance to cover the products stored with them. Insurance companies must reduce these overhead charges or a mutual system will be the only possible escape from conditions no free people should Since the State demands by law that cotton and other products stored shall be insured under the permanent warehouse system, that demand places the duty on the State to see that insurance is furnished at a reasonable rate, or to provide a mutual system which shall protect the farmers from charges established under the old system and which are unreasonable and exorbitant under the present system. Insurance companies in the past have justified these extremely high rates by explaining that cotton was insured in bulk, and that whenever it burned they were required to pay for the better grades of cotton. We can see that if a dishonest man had cotton insured in bulk he might be willing for it to be burned so that he could collect for better grades of cotton and make a profit, and we can also see that to some extent this condition in the past justified the rates then established. But under the system of sampling at the gin and the issuance of a negotiable receipt from the warehouse, showing weights and grades, the value at the time of the loss is established, rendering this kind of fraud impossible. We are assured by the highest insurance authorities that this system of gin sampling and warehousing justifies a material reduction in the rates of insurance, as it largely eliminates the moral risk. This feature alone more than justifies the taking of the sample at the gin, as no other system will accomplish such a saving.

THE COST OF INTEREST.

"Mr. Sol Wexler, president of the Whitney Central Bank, of New Orleans, delivered a very able address and discussed the financial phase of warehousing and warehouse receipts. He created much enthusiasm and declared that the high quality of such security is comparable with Government bonds, which secured a rate of interest from the bankers of approximately 3 per cent; that the bankers should consider making the lowest rate of interest possible to temperature of enable the producer to market slowly and gradually rather than to force him to sell on a congested market, and that establishing such a low rate of interest on such a high class of collateral would not in any way affect the interest of other loans, as the receipts issued by a bonded warehouse, properly safeguarded, is the last word in the highest form of banking security, and same is given preference by the Federal Reserve Board and reserve agents.

'We believe the bankers made a mistake against their own interests when they failed to utilize the funds provided by the Government through the national reserve banks and offered to the member bankers at a 3 per cent rate on condition it be loaned to farmers for not more than 6 per cent upon warehouse receipts as collateral. Many bankers who declined to avail themselves of this money borrowed money at 4 per cent and more so as to be free to charge such rate as their customers could be made to pay. We believe it would have been a wise policy to have shown a willingness to aid the farmer. The idea among bankers that loaning the farmers money at a low rate on such collateral as warehouse receipts for cotton would set a precedent to embarrass them in other loans is a mistake. The 6 per cent rate on those loans is asked on account of the fact that the security is of a character to justify the rate, and the money will be used generally at times when bankers have surplus funds.

"We are confident that the opening of another season will find the Federal reserve bank, the bankers of Texas, and the farmers of the State working in harmony to this common

purpose.

"Lending money to the producers at a favorable and low rate is the vital principle of the rural credit system, and the rural credit system is based on the true theory that helping the farmer helps the world.

CONCLUSION.

"No man need believe Texas will take a backward step in the work now begun. It takes no long argument to convince all people of all classes that the time has come when justice must be accorded the producers.

"Everyone can see that the continuance of the concentration of wealth in the hands of a few people, and the drifting of the population to the cities, and the increasing of the tenant class, accompanied by the diminishing numbers of home owners, must

in the end dethrone free government.

"The warehouse and marketing law is already accomplishing larger results than many of its friends predicted. We have saved enough money in the reduction of insurance rates that if this were the only result that saving would pay the expense of operating this entire department. The court of criminal appeals has reviewed the evidence in the Dabney White case and announced the conclusion that the undisputed evidence shows that the regulation of cotton ginning and the preparation of cotton for the market, unaccompanied by any other feature of the law, will result in a saving of \$5 on every bale of cotton for the farmers of this State. It is easy to calculate that this will average more than \$20,000,000 annually, which is a greater benefit to the people of Texas than any other piece of legislation ever passed for the benefit of the producer.

"Yet the greatest feature of the law is the marketing system, and when once in operation it is conservatively estimated that the savings to the producers of this State will be many times

greater than all other features of the law combined.

"In the provisions of this law there is the germ of the rural credit system. We wish to call the attention of all warehouses and of the people generally to the fact that the charter of every permanent warehouse makes of it not only a warehouse but also a cooperative marketing system and a rural credit association. Every such warehouse has full power to conduct a cooperative selling agency in marketing any and all products. It also has power, if its members so desire, to extend credit to the producers on such terms as it finds practicable. The charter provisions of every such warehouse are broad enough that, with an adequate capital, each warehouse company can operate its own selling agency and can finance all produce stored with it and make loans to its customers. And under the same charter developed in its broader usefulness each warehouse company may, and when provided with sufficient capital probably will eventually be, the connecting link between the farmer and the Federal reserve banks in financing the cotton crops. With experience the useful-

ness of the warehouse companies, not only for warehousing but also as marketing agencies and as genuine and practicable credit associations for aiding the producers, will be constantly widening. We do not yet realize the scope, the usefulness, and great-

ness of the warehouse and marketing law.

"The farmer asks nothing but a square deal, and he is willing to deal fairly with others, and the world is getting to understand that he is determined to offer only a standard product. To this end, and at his demand, we have already provided for an honest bale of cotton, which shall be what it appears to be and what the market takes it to be. From this will grow year by year through warehousing, marketing, and cooperative efforts, an ever-widening field of usefulness.

"F. C. WEINERT.

Mr. Speaker, these remarks would not be complete if I did not here reproduce a remarkable and wonderful pamphlet prepar d by Messrs. Peter Radford and W. D. Lewis, Loth of whom have been president of the Farmers' Urion of Texas, and Mr. Peter Radford serving as lecturer of the National Farmers' Union. It is convincing and thrilling and points to the necessity and way for bringing the tenants and homeless and landless to the proud proprietorship of the soil, and thus placing within their reach the more than 100,000,000 acres of tillable land in Texas, as yet untouched by the plow and the patriotic hand of the husbandman. The document ranks as a classic. Hear the plea:

" HOME SWEET HOME "-A PLEA FOR THE TENANT FARMERS OF TEXAS.

"The most important problem that confronts the Texas Legislature in its thirty-fourth session is relief for the tenant farmer. It was the paramount issue of the campaign and the platform demand of the Democratic Party. The Farmers' Union stands on its platform of principles adopted at the State convention of January 14-15, 1914, which, in discussing the tenant question, said in part: 'Our homes are the corner stone of government and legislation that contains building material should be provided for the tenant farmer.' We have nothing to deduct from that resolution. We believe that the final solution of the tenant problem is to make the tenant farmers home owners in fact as well as in name, and we feel the landowner will be more than willing to cooperate with the tenant farmer and the Government in bringing about this very desirable result.

"To deal intelligently with the subject a few fundamental

"To deal intelligently with the subject a few fundamental facts are essential. We have in this State, according to Federal Government reports, 219,575 tenant farmers who operate 12,756,000 acres of improved land and 198,195 home owners who operate 14,604,000 acres of improved land. During the past 10 years the land farmed by tenants increased 4,620,000 acres, and the land farmed by home owners increased 3,180,000 acres. The tenant farmer, however, operates over 25,000,000 acres of land, including the unimproved area; the acreage first shown is the area under cultivation. In Texas 53 per cent of the farms are operated by tenants and in the United States 37 per cent. The

tenant population in Texas is 1,500,000 people.

"The subject is a monumental one, for it involves an area equal in size to Pennsylvania, Indiana, or Maine, and a population equal to the total inhabitants of Arkansas, Louisiana, or Oklahoma.

SOUND LEGISLATION DEMANDED.

"There are certain inalienable conditions to agriculture. We have had landless men from the beginning of time, and we will have them to the end of eternity. So long as nature endows men with different degrees of intelligence we will have different classes and stations in life. It is said on divine authority that the poor we will have with us always; but considering all elements that enter into our civilization and comparing our people and our land with other States and countries, one can not escape the conclusion that farm tenancy in Texas is abnormal and should receive the attention of State government.

"We do not believe ability can be legislated into human minds or that the incompetent can be made capable by law, but opportunity for owning a home can be brought within the reach of the industrious and deserving tenant farmer through a system of rural credits adapted to Texas conditions, and we favor the

passage of such a law.

"There are many transactions between the tenant farmer and the landlord or his agents that are reprehensible, and in order to enable the legislature to properly deal with the subject we want to present a few facts for their consideration.

we want to present a few facts for their consideration.

"Out of the 219.575 tenant farmers, the Federal Census Bureau shows that 17,500, or less than 10 per cent, pay cash rent, and we estimate that 60 per cent rent on the basis of one-third grain and one-fourth cotton and 30 per cent pay more than a third and a fourth. There are, perhaps, 65,000 tenant farmers in this State, who, in some form or other, pay a rental of more

than a third and a fourth on land. To this number we may add the 17,500 cash tenants, for it is there the worst forms of rental extortion exist, although it might be difficult to prohibit, by law, a willing renter paying a willing landlord an agreed sum for use of property.

ARCSES OF TENANT SYSTEM.

"There are many abuses growing out of our tenant system which should be corrected and punished by law if they can not be corrected peaceably. We will mention a few of them. Out of the 65,000 tenant farmers who pay more than a third and a fourth land rental, we estimate that 40 per cent, or 26,000, pay direct to the landlord and the remaining 39,000 pay it to brokers and agents who rent lands on a basis of a third and a fourth and then subrent at a profit, charging a cash bonus for the farm or advancing the rents beyond the price they pay. Such practices should be broken up by law, for they constitute an illegitimate occupation. The owner of the property should look after his business personally or hire some one to do so, paying him a reasonable sum out of his own pocket, and not become a party to an injurious system of speculation. We leave the legislature to deal with the iniquities of the tenant system according to their

"We believe a rural-credit bill, properly drawn, permitting long-time loans at a low rate of interest will place a home within the reach of every tenant farmer and automatically eliminate many of the evils of farm tenancy as well as help the home owner. We believe that agriculture will receive more substantial benefit from increasing opportunity than in multiplying penalties. We think it a greater legislative achievement to expand the area of opportunity than to increase the zone of crime. It is an important function of government to keep open and enlarge the avenues of choice, but no effort should be made to restrain freedom of judgment and action.

"The farmers, like every other class of people, have the weak There are some tenant farmers who, if offered a home in the skies, would prefer to rent so they could move once a year, and no amount of constructive legislation will benefit We do not favor restrictive legislation that involves the entire structure of society in order to benefit the incompetent. Give the man who tries a chance and give it abundantly.

"We invite the Texas Bankers' Association to appoint a committee to assist in framing a bill that is sound commercially and one that will enable them to recommend the securities to their customers. We have too many 'stillborn' laws on the statute books now, and there is no use for the legislature to waste time creating securities which can not be financed.

"The Democratic Party, in demanding that the legislature define and punish land usury, has opened the door to the biggest room in the world, and while they are on the inside they should explore the domain of agriculture from cellar to garret. They will find the cupboard bare, the wardrobe depleted, and the bookcase empty, and no greater service can be rendered society than to fill them.

"We have previously pointed out the evils of exorbitant land rentals, but where the tenant farmers of this State pay \$1 in land usury they pay more than \$5 in money usury, and the latter has been a subject of legislation since the beginning of time, and even the laws of the Medes and Persians were unable to stop it.

Perhaps some results might be accomplished by further indicting money lenders for their failure to comply with the spirit of the law on interest rates, but we feel that in the creation of new and stable securities, reducing the risk of the lender and increasing the volume of money by encouraging foreign capital, we can more easily and effectually reduce the rate of interest, for the volume in circulation is an important factor in fixing the interest rate. We think the legislature should enter this field of activity vigorously, and they will not only benefit the tenant farmer but agriculture as a whole as well as commerce and industry.

WHAT THE CREDIT SYSTEM COSTS.

"The farm value of the crops produced by the Texas tenant farmers approximates \$100,000,000 per annum, and of this amount \$30,000,000 goes for payment of land rentals and \$20,000,000 for credit while making the crop. The latter amount is complete waste, as it represents the sum the farmer pays for credit over and above the legitimate interest or profit. It expresses in a lump sum the tax levied against the tenant farmer by our present credit system.

"The home owner also adds a few million dollars to this waste, for he, too, must pay a tribute to their obnoxious credit system by paying a price for his supplies that absorbs the bad debts on the merchants' books.

"Through our credit system the trustworthy farmer is compelled to become surety for the debts of his neighbor. The

right of contract—the most sacred privilege of an American citizen—is denied him, for when he patronizes a credit store, although he may pay cash, he is compelled, in effect, to sign a joint note with all customers guaranteeing the merchant a net profit on his goods.
"The tenant farmer in Texas who pays his debts contributes

\$90 per annum toward balancing the unpaid account of his

delinquent neighbor.

"The Farmers' Union favors a rural credit bill and bonded warehouses and such other facilities as will give the farmer stable credits and cheap money. The legislature, by passing suitable laws, can make possible a saving of \$90 per year to every farmer, and it will hurt no one. It is not a transfer of wealth from the merchant to the farmer, but an actual saving which will also benefit the merchant, for he is more often a victim than a beneficiary of the credit system.

"The \$20,000,000 bonus which the tenant farmer pays for credit, as well as the \$30,000,000 rental he pays for the use of

the farm, should be used in buying homes.

The solution of the tenant problem is home ownership.

HOME, SWEET HOME.

"Let the Legislature of Texas sing Home, Sweet Home to the tenant farmer. The home is God's greatest heritage to man; His most noble gift to woman, and the birthright of every child; in its cradle are rocked the destinies of the human race.

"Around the fireside love and friendship laugh and play and human happiness springs into being and shouts of joy echo through the corridors of life. Around its doorstep ambition builds cities, rules nations, and conquers commerce, and the desire to achieve first sways the mind and then hurls its challenge to the world. At the woodshed obedience and honesty are spanked into life and discipline is crowned ruler of human

"At the family altar angels whisper their message to mankind and soul material enters the world, illuminating the pathway of life. At the mother's knee justice is enthroned in human hearts, mercy is given her scepter, and truth is arrayed in all

her power and glory.

"In the family library the greatest miracles in the world are performed. It is there that the intellect bursts forth and life unfolds like a rose in all its beauty and glory. It is here that the hunger for knowledge and thirst for power-the greatest forces in life-take possession and man steps out into a big world. Is he not entitled to do so from an owned home?

"W. D. LEWIS, " President Farmers' Educational and "Cooperative Union of Texas. "Peter Radford,
"National Lecturer Farmers' Educational "and Cooperative Union of America."

FACTS ABOUT THE TEXAS TENANT FARMER.

UNITED STATES CENSUS FIGURES.

"Texas has more tenant farmers than any other State in the Union

"About 60 per cent of the tenant farmers of Texas move every

"Only 8,000 of the 220,000 tenant farmers in Texas have not moved during the past 10 years.

"The operation, ownership, tenure, etc., of the 417,770 farms

ı	or reads are as ronows.	
	Tenant farmers (landless)	219, 575
Į	Tenant farmers (owning part of land)	28, 348
	Mortgaged farms (operated by owner)	64,008
	Farms free of mortgaged encumbrance	99, 734
	Farms operated by managers	2, 332
	Tenure unknown	3, 773

"Only 99,734, or 24 per cent, of the farms of Texas are entirely owned by the farmers operating them.
"There are 314,263 homeless farmers in Texas and only 55,000

of them are negroes, leaving 259,000 white farmers that do not own the soil they till or the homes in which they live.

There are 219,575 tenant farmers in Texas, and in addition to this number 28,348 farm land owners rent additional land, making a total of 247,923 farm-land renters in this State.

"More than 202,000 Texas tenant farmers operate on a share basis, while only 17,549 pay cash rental.

Nearly 10 per cent of the tenant farmers in the United States live in Texas, while only 5 per cent of the Nation's farmhome owners reside in this State.

"In 1880 only 38 per cent of the Texas farmers were tenants, 42 per cent in 1890, 50 per cent in 1900, and 53 percent in 1910. "Less than 8 per cent of the Texas tenant farmers pay cash

rental.

"During the past 20 years the number of all farms in Texas has increased 83 per cent, while the farms operated by tenants show a gain of 130 per cent. Farm home owners have increased only 50 per cent during this time.

"Tenants constitute 53 per cent of the farm operators of

Texas and cultivate 47 per cent of our tillable land.

"The land and buildings on the tenant farms of Texas are worth only one-half as much as those on the farms operated by

"The land operated by Texas tenant farmers is equal in area

to the State of Pennsylvania, Indiana, or Maine.

"Farm tenancy in Texas directly affects 1,500,000 people, which is equal to the entire population of the State of Arkansas, Louisiana, or Oklahoma.

"The tenant farmers of Texas, if marching single file, would form a line from Temple to Galveston, and it would require 36

hours to pass a given point.

"During the past 10 years the land farmed by tenants has increased 4.620,000 acres and the land tilled by owners has increased 3,180,000 acres.

"The average size of a Texas farm (all kinds) is 269 acres. Those operated by owners contain an average of 353 acres,

by managers 7,700 acres, and by tenants 115 acres.

The average value per acre of all farm land in Texas is \$16.39. The land that is operated by its owners is worth \$14.94 and that by tenants \$25.84 per acre. This includes land and

"There are 24,000 farms in Texas that contain more than

500 acres each.

"Texas tenant farmers produce nearly one-fifth of the world's

"The annual cotton production of Texas is 10 bales per

"Texas tenant farmers produce a quarter of a million dollars" worth of cotton per day.

"One year's production of cotton by Texas tenant farmers will clothe 200,000,000 people.

"Fifteen per cent of the total land area of Texas is occupied

by tenant farmers.
"There are 15,000 silos in Texas, but few of them are located

on tenant farms.
"The total annual value of crops produced by Texas tenant farmers is greater than the value of those produced by renters in any other State in the Union.

"Practically the entire tenant farmer population of Texas is in the cotton belt, and in the leading cotton counties more than 65 per cent of the farmers are renters. The following table shows the leading cotton-producing counties of Texas, the total number of farms, number of tenant farms, and the percentage of tenants in each one:

County.		Tenant farms.	Tenants' per cent of total.	
Bell Collin Dallas Denton Ellis Fannin Grayson Hill Hunt Johnson Kanfman Lamar Limestone Milam Mayarro Travis Williamson Williamson Washington Collins Col	4, 915 -6, 507 5, 281 4, 303 5, 801 6, 433 5, 723 5, 589 5, 941 4, 115 6, 156 4, 987 5, 599 3, 568 4, 482	2,973 4,475 3,217 2,624 4,005 4,309 3,582 3,566 4,011 1,875 2,744 4,047 3,781 3,281 3,668 2,156 2,647	60.5 68.8 60.9 61.0 62.6 64.4 67.5 52.1 66.7 65.7 63.3 64.1 64.3 65.5 60.4	

"Cotton is the leading crop produced by Texas tenant farmers. "There are few tenant farmers in Texas that produce enough

meat for home consumption. "The Texas tenant farmers, in marketing their yearly crops, form a procession that will reach from the earth to the moon.

"Tenant farms are increasing at the rate of 4,500 per annum

"About 15 per cent of the wealth of Texas is invested in tenant farms

"The farm property occupied by tenant farmers in Texas increases \$50,000,000 in value per year.

ESTIMATES BY TEXAS FARMERS' UNION.

"The farmers of Texas borrow approximately \$80,000,000 per annum on chattel and other forms of credit, and the land mortgages total \$225,000,000.

"The farmers of Texas pay for the use of money approximately \$55,000,000 per annum.

"To reduce the rate of interest 1 per cent saves the Texas farmer \$5,000,000 per annum.

"One-third of the farm lands are mortgaged; one-half the

growing crops are encumbered.

"The tenant farmers of Texas pay \$90 each per annum for credit over the customary interest rate.

"There are 65,000 farmers in the State who pay more than a

third and a fourth rent.
"There are 39,000 farms in the State that are rented on the basis of a third and a fourth by speculators, and bonuses are charged the tenants.

"There are crops mortgaged four and five years in the future, "The farm value of the crops produced by the Texas tenant farmers approximates \$100,000,000 per annum.

"The tenant farmers pay a land rental of \$30,000,000 per annum.

"The tenant farmer pays \$20,000,000 per annum for credit while making the crop.

AGE OF TENANT FARMERS.

"One-half the tenant farmers of Texas are over 34 years old. "There are 55,000 tenant farmers in Texas that are 45 years of

"Texas has approximately 10,000 tenant farmers that are over

60 years old.
"Only 37,000 of the 220,000 tenant farmers of Texas are 25 years of age and under.

"The following table shows the tenant farmers of Texas by

age groups:	
25 years and under	37,000
25 to 34 years	75, 000
35 to 44 years	52,000
45 to 54 years	33, 000
55 to 64 years	16,000
65 years and over	6, 000

"One-third of the Texas farms are mortgaged. The encumbered debt is approximately \$225,000,000. This does not include crop mortgages.
"The average Texas farm is worth \$6,203 and is mortgaged for

\$1,584, the average equity being \$4,619.

"Texas mortgaged farm homes are increasing at the rate of 2,600 per annum.

"During the past 20 years the average mortgage debt of a Texas farm has increased from \$899 to \$1,584, a gain of 76 per

"The mortgaged farms of Texas are encumbered for onefourth their value.

The mortgage debt of Texas farms during the past 20 years has increased thirteen fold.

"There are seven times as many mortgaged farms in Texas to-day as there were 20 years ago.

"Every farm in Crane County is mortgaged.

FARM LABORERS.

"In addition to the tenant and mortgaged-farm operators there are nearly a half million farm laborers in Texas whose daily compensation ranges from 50 cents to \$1.50.

The farm laborers of Texas are divided 329,914 males and

165,103 females.

Texas has more farm laborers than any other State.

"The average monthly pay of the Texas farm laborer is \$19 with board and \$27 without board.

"There are 165,000 women that earn their living by doing manual labor on Texas farms. Of this number 137,400 cultivate the land upon which they live and 27,600 hire out.

"Texas has 11,000 women farm laborers that are over 45

years of age.
"The annual pay roll of the farm laborers of Texas is \$25,000,000.

THE NEGRO TENANT FARMER.

"Forty-nine per cent of the white farmers of Texas are ten-ants and 70 per cent of the negro farmers are renters.

"Of the 219,575 tenant farmers in Texas, 170,970 are white and 48,605 colored.

"The white tenant farmers cultivate 10.933,000 acres of Texas land and negro renters till 1.822.000 acres.

"The value of the land and buildings on the farms operated by white tenants is \$593.293.000 and that on the negro tenant farms is valued at \$59,809,000.

"White tenants farm 44 per cent of the land in Texas that is tilled by white farmers. Among the negro farmers 65 per cent of the land is cultivated by renters.

"The average size of a farm operated by a white Texas tenant farmer is 134 acres, of which 64 acres are in cultivation.

Number of farms free of mort-gage debt.

Number of tenant farms.

Number of mort-

"The average Texas negro tenant farm contains 48 acres, and 38 acres are under cultivation.

"Forty-eight per cent of the land in a white tenant farm is in cultivation, while 78 per cent of the negro tenant farm is

"The five States that lead in the number of white tenant farmers are as follows. They rank in the order listed:

Texas Illinois Oklahoma	170, 970 103, 761 94, 643 84, 242
Georgia	84, 242 73, 504

"The six States that have the greatest number of negro tenant farmers are as follows. They rank in the order mentioned:

Mississippi	139, 605
Georgia	106, 738
Alabama	93, 309
South Carolina	76, 295
Arkansas	48, 885
Texas	48, 000

"There are only two States in the Union in which the negro tenant farmers outnumber the white renters. They are South

Carolina and Mississippi.

"In Comanche County, one of the leading agricultural units of Texas, there is only one negro farmer. Ellis County, which produces more cotton than any other county in the world, has only 563 negro farmers, or 1 negro farmer to every 12 white plowmen. Collin County, which ranks third in cultivated area and has more farmers than any other Texas county, has 6,507 farms and only 135 of them are operated by negroes.

"In the 20 leading cotton counties (the combined production of which is more than 50 per cent of the Texas crop) less than 10 per cent of the tenant farmers are negroes, and only 15 per cent of the negro farm population of Texas live in these counties.

"Every county in Texas has white tenant farmers. Ninety-two Texas counties have no negro tenants, and 35 counties have

less than five negro renters.

"In only eight Texas counties do the negro renters outnumber

the white tenant farmers.

"Harrison County, on the Louisiana border, has more negro tenant farmers than any other Texas county.

"Thirty-three per cent of the white farm home owners of Texas have their property mortgaged, compared with a percentage of 23 among the colored farm home owners.

"Less than 8 per cent of the tenant farmers of Texas pay cash rental, while 11 per cent of the negro farm renters farm

"The following table shows, for every State in the Union, the number of tenant farms, number of mortgaged farms, and the number of farms free of mortgage. The per cent of the total farms in each State that are operated by tenants is also

State.	Number of tenants.	Number of farms mortgaged.	Number of farms free of mortgage.	Tenants' per cent of total.

Mr. Speaker, the above facts and arguments show the overshadowing importance of good roads to agriculture and their relation to its real advancement. The subjects are closely interrelated and must be solved together. Too long have we neglected these things of prime necessity to the development of the entire country. Let us to-day by our action accord justice to the man who tills the soil and produces food and raiment for mankind throughout the world.

Good Roads.

EXTENSION OF REMARKS

OF

HON. JAMES V. McCLINTIC,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 25, 1916.

Mr. McCLINTIC, Mr. Chairman, on the first day Congress convened I introduced two bills—one seeking to create a rural farm-credits system, the other designed to provide national aid in cooperation with the various States for the construction of public highways. To my mind, such legislation as is involved in these measures is of extremely vital importance to the entire country. I know of no higher duty a Member of Congress can

perform for his people than to ardently, earnestly, and uncompromisingly support legislation of this character.

I have had the privilege of listening to those who have opposed this measure and could not help wondering what form of selfish interest prompted them to be antagonistic to legislation possessing such well-known and widely recognized merits. has occurred to me that they might be representing districts where farms and farmers are a minus quantity. Upon investigation I find that the majority of the gentlemen who have so vehemently voiced their sentiments against this bill are either from the large cities or from sections of the country that have been well taken care of in the past in the way of large appropriations for rivers and harbors, ornamental public buildings, and other Government institutions.

One gentleman has complained because the corporations of his State have to pay a corporation tax, and he raises a hue and cry protesting against the passage of any bill that will provide aid in the construction of roads. He makes the statement that his State has already provided for the construction of highways, and that he does not think it fair that his people should be called upon to contribute toward the construction and improvement of reads outside of his own State. The history of our Government bears evidence of the fact that we have been constructing public buildings and spending thousands of dollars in his State 50 years before my State, Oklahoma, was admitted to the Union. It also shows that the munition factories and steel industries of his section have been receiving large benefits; that many of his people are rated as multimillionaires. In fact, his position on this bill recalls to my mind the prayer offered up by the head of a certain household when he prayed, "O Lord, bless me and my wife, my son John, and his wife, us four and no more." I venture to predict that the attitude he has manifested in opposing this bill will receive about as much consideration from this House as the selfish prayer would receive from the Divine Ruler of the Universe

There are some who look upon an appropriation of \$25,000,000 for the construction of roads as setting a dangerous precedent, while they tell you of the depleted condition of the Treasury and, with a long face, inquire from where this money is going to come. They forget that they are willing to spend hundreds of millions of dollars for preparedness and for the creation of a larger Army. I was very much interested in a speech recently delivered on the floor of this House in which the statement was made by one who was opposed to this bill that we should create an Army numbering half a million soldiers, even if it took an expenditure of a billion dollars. This proves to me that those who are opposing this bill are not serious when they ask where

the money is coming from.

The progress of every nation goes hand in hand with the development of its roads. The people to be prosperous and happy must have the proper means of travel. I know of no better way to bring this about for all the people than for our Government to render aid to the various States in the construction and maintenance of good roads. The good-roads movement now sweeping over our land is not the result of the selfishness of automobile owners nor manufacturers. It emanates from the patriotism of our people and the deepest law of economics. The Government can not break into and enter the hearts and homes of men to control and improve them, but it can construct good roads and enact legislation which will improve the condition of men mentally, morally, and materially, thus exerting the greatest and most beneficent influence on earth over the minds, manners, and motives of men.

This bill is but the beginning of one of the most patriotic movements ever inaugurated by our Government. History tells us that the Roman Empire has been dead for centuries, yet its roads still girdle the empire and stretch their mighty arms roads still grune the empire and streeth their inginy arms throughout its length and breadth—uncrumbled, undecayed, undestroyed—in full beneficent efficiency, unchanged by time. This is another testimonial which demonstrates that we are not building for to-day or to-morrow, but for all times to come. While we may not from an individual standpoint live to see the day when the Republic will reap the greatest benefits from this legislation, we must remember that our work is in the interest of the Nation, present and future, and that the monuments erected to-day should be so constructed that they can withstand the time of centuries-even long after our own pioneer efforts are forgotten. In the West where I live, to use an oft-repeated phrase, necessity has been the mother of invention when it became necessary to construct roads. Community cooperation has in many counties temporarily solved this problem, and each year, on certain days set apart therefor, it is no unusual thing to find the patriotic people of every town in a county closing their business institutions to join the farmers in gratuitously contributing manual labor toward the construction of highways.

Even the governors of some of our Western States at times don overalls and with pick and shovel go to work on the roads. Such manifestations as these should not escape the notice of this House or fail to impress its membership with the burning necessity for Federal aid and cooperation in the construction and maintenance of roads. In some sandy sections the roads have been covered with clay; in other sections with straw, hay, and other material. All these things demonstrate that the people must have roads, and that they are willing to make sacrifices in many ways to help develop the country in which they live.

Let the Government assist in the building of roads. Let the

highways of progress be used in a manner that will make conditions in the future better. We will soon have additional millions of acres of public domain opened for homestead entry. We must have roads to successfully develop the West, so that we may bring the natural resources of the western country to the more thickly populated sections of our Nation, thereby rendering to our entire citizenship a great amount of good.

The road bill I have introduced is as follows:

A bill (H. R. 620) establishing post roads and making an appropriation for the construction and improvement thereof.

dering to our entire citizenship a great amount of good.

The road bill I have introduced is as follows:

A bill (H. R. 629) establishing post roads and making an appropriation for the construction and improvement thereof.

Bet it exacted, etc., For the purpose of increasing the service of the Post Office Department of the United States by the establishment and improvement of rural-delivery and star-route mail service, all roads or highways, including bridges and culverts forming a part thereof, now established, and as may hereafter be established, by and in each county or civil subdivision of the several States of the United States.

Sec 2. For the purpose of constructing or improving any post road established by this act on a permanent basis or foundation by ditching, draining, rocking, or macadamizing the same with rock, gravel, or some other solid or durable material, and the constructing of bridges there is hereby appropriated, out of any money in the Treasury of the United States not otherwise appropriated, the sum of \$25,000,000 for the Secal year Leginning July 1, 1916, and all like sum for each discal year thereafter for nine years, to be paid by the Secretary of the Sac, 3. The money appropriated by this act shell be apportioned among and allotted to the several States of the United States in the proportion which the population of each State, exclusive of incorporated towns and cities therein, shall bear to the population of the United States in the proportion which the population of each State, exclusive of incorporated towns and cities therein, shall bear to the population of other States in the proportion which the population of such county or civil subdivision, such saving the appropriate of incorporated towns or civil subdivision shall, by bond issue, taxation, cash subscription, or otherwise, provide a sum equal to the amount available to such county or civil subdivision, as and specifications of such such county or civil subdivision shall be population in the manner provided by this act, for ap

of this act, at the end of each fiscal year in which such funds have been received, to make a detailed report of the expenditure of such funds, a copy of which report shall be filed with the Postmaster General and one with the Secretary of the Treasury. The Postmaster General shall make an annual report to Congress of the expenditures and results thereof made under the provisions of this act.

SEC. 8. All post roads heretofore established, and established by and under the provisions of this act, shall be maintained in the same manner as the original cost of such roads constructed under the provisions hereof.

as the original cost of such roads constructed under the problem hereof.

SEC. 9. The Postmaster General is hereby authorized and directed to prepare such rules, regulations, and requirements, not inconsistent with the provisions hereof, as in his discretion he may deem necessary for the full and complete execution of the purposes of this act.

In some ways it differs from the bill under consideration, as it seeks to carry relief to the people who actually reside in any subdivision of a State applying for the benefits accruing thereunder. It would also make every rural route and star route in the United States a post road, thereby placing these highways under the supervision of one of our great executive departments. Such a system would provide for a uniform plan of construction, and such rules and regulations could be promulgated as would be necessary to care for the maintenance and up-keep of these highways. Each year the people of the United States spend many millions of dollars for the construction of roads. records show that a large amount of this money is wasted, because we have no proper supervision, the roads, when completed, being neglected and permitted to deteriorate until they are in many instances impassable. Mr. Chairman, the Government in the past has enacted a law making an appropriation for the building of railroads in Alaska, so that the people of the United States might have a way to get into the interior of that country that the vast, natural resources of the Territory might be developed, incidentally affording many opportunities to the 100,000,000 people of the United States. The Government has purchased a line of ships which are now plying between Panama and New York City, an investment that has shown a profit from the beginning to the present time. The Government pays each year millions of dollars to the agricultural schools and colleges of the various States to assist in preparing the young man so that he may be in a better position to share the responsibilities of the future and at the same time render to his Nation a greater amount of good. The Government is furnishing millions of dollars to build irrigation plants in order that the arid and semiarid land of the West may be transformed from a barren desert into a productive garden. The Government has made enormous expenditures for rivers and harbors, erected thousands of public buildings for the cities, and for years has been aiding in the While development of this Nation in every conceivable way. there are those who are opposed to the Government lending aid to the rural districts by building roads, I am one who is firmly of the opinion that if there is any one class that is justly entitled to this kind of help it is those people who live in the rural districts, the tillers of the soil, the producers. It is this class that gives stability and strength to a nation; it is this very class—the producers and the toilers—that makes it possible even for the Nation to exist.

Child Labor.

EXTENSION OF REMARKS

HON. L. C. DYER, OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. DYER. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I include the following:

ST. Louis, January 11, 1916.

Hon. L. C. Dyer, House of Representatives, Washington, D. C.

House of Representatives, Washington, D. C.

Dear Mr. Dyer: I beg leave to call your attention to the Keating-Owen bill now pending in Congress and to say that your vote in favor of the bill becoming a law at the proper time will be appreciated, not only by myself but every one interested in such laws in this State.

The Missouri law at the present time forbids the employment of any child under 14 years of age at any occupation whatsoever. It also forbids the employment of any child under 16 years of age in any dangerous or injurious work. The proposed Federal act will in nowise impair the operation of the child-labor law in this State, but, on the other hand, will strengthen it considerably. In this State children under the age of 16 years are not permitted to be employed more than eight hours in any day or more than six days in any week, or before the hour of 7 a.m., or after the hour of 7 p. m. Thus you will see that the proposed Federal act is in entire conformity to the present conditions in this State, and would not in any way inflict any hardship whatsoever on employers in this State.

In fact, in my capacity as factory inspector, charged with the enforcement of the child-labor laws in Missouri, employers frequently have called my attention to the fact that the laws of other States and of the

Federal Government not being as strict as the law of Missouri in these matters was a great hardship on employers in this State. They repeatedly have said to me that if the laws of all the States, or particularly those bordering on Missouri, were uniform the present Missouri law would be no hardship. Whereas at the present time the Missouri law does seem to place employers in an unfair position from the standpoint of competition. In other words, employers naturally are unable to compete with an even chance with those of outside States where the employment of smaller children for longer hours and less wages is permitted.

Cases have been called to my attention where employers have located their establishments in other States than Missouri purely for the reason that in those States they could employ younger children and under conditions less exacting than those of Missouri. Temporarlly, therefore, Missouri and other States which have as good a child-labor law have suffered from the lack of such uniformity as the Keating-Owen bill proposes.

Regarding the justness of the provisions themselves I am sure there can be no question in your mind, public sentiment in Missouri on all of these questions having been very completely expressed through legislation. If you desire it, I shall be glad to send you a copy of the child-labor law which, however, you will find at page 132, Missouri Laws of 1911.

Very respectfully, yours,

A. S. JOHNSTON,

A. S. JOHNSTON, State Factory Inspector.

Missouri Laws, sections 1715 and 1716, referred to above, are

as follows:

Sec. 1715. Children under 14 not to be employed in certain occupations.—No child under the age of 14 years shall be employed, permitted, or suffered to work at any gainful occupation within this State, except at agricultural pursuits and in domestic service.

Sec. 1716. Children under 16 not to be employed in certain occupations—Notices to be posted.—No child under the age of 16 years shall be employed, permitted, or suffered to work at any gainful occupation in this State more than 48 hours in any one week, nor more than 8 hours per day, nor before the hour of 7 o'clock in the morning nor after the hour of 7 o'clock in the evening. Every employer shall post in a conspicuous place in every room or place where such minors are employed a printed notice stating the hours of service required of them each day of the week, the hours of commencing and stopping work, and the hour or hours when the time or times allowed for meals begin and end. The printed form of such notice shall be furnished by the State factory inspector.

The Late Representative Joseph A. Goulden, of New York.

MEMORIAL ADDRESS

OF

HON. DAVID A. HOLLINGSWORTH,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES, Sunday, January 23, 1916.

On House resolution (H. Res. 101) paying tribute to the memory of Hon. JOSEPH A. GOULDEN, late a Representative from the State of New York.

Mr. HOLLINGSWORTH. Mr. Speaker, I desire to place one little chaplet on the bier of my good friend and comrade, Col.

Others who knew him better and were more fortunate in long association with him have spoken at length of his merits, his lovable character, his courage, his tenderness, his genial, generous, forgiving nature, his broad humanity and universal love for his fellow men, coupled with lofty patriotism and love of country, and each and every sentiment expressed has found

an echo in my own heart. He was to me a real friend. I met him soon after the organization of the Sixty-first Congress under peculiar circumstances. I was a new Member, one of the then dominant party, without acquaintance or experience in Washington; he, although on the other side, was just the kind of a mentor that I needed. Perhaps a feeling of Army comradeship drew us together and taught us both to look over the garden wall of politics, on which bloom the sweetest and most fragrant flowers of friendship. At any rate, fortunately or unfortunately for me, before the committees of the House were named, I found myself unable to agree with a few strong leaders of my own party and especially on the old rules of the House, the adoption of which became a matter of serious controversy. I was conscientious in my convictions, and in my simplicity thought this a sufficient warrant for controlling my own vote, but that did not seem to excuse me with party leaders in a contest where a single vote might be and was decisive of the result. I had promised my vote to no interest and voted as I thought right, resulting in the defeat of a resolution of my party friends. But a combination of selfish interests, a crossing, in fact, of party lines, quickly followed, by which the essential feature of the old rules, absolute control of the important committees, was preserved.

I met the usual results of an independent. Very little con-

genial work fell to my lot; opportunities did not come my way, but I never complained. A few, however, who knew that I had been attorney general of a great State and for years before chairman of the judiciary committee of its highest legislative

body, noticed, or thought they did, in me a shade of disappointment. Comrade Goulden was one of these. Crossing over the Hall one day and taking me by the hand, he said, in substance: "Comrade, that was a brave act of yours to vote against these old arbitrary rules of your party, but come back to the next Congress, which will be Democratic, and, instead of punishment for independent thought and action, we will make amends."

It was, of course, only an idle thought, but somehow it was comforting, and the cordiality and warmth of his handshake started a friendship which, though modest and undemonstrative,

continued throughout the Sixty-first Congress.

When the whirligig of Ohio politics changed conditions and I found myself coming back, I naturally scanned the lists of the Sixty-fourth Congress to see if I could find the name of Col. Goulden, and it was a real pleasure to learn that I was to meet him again in this House. But, alas for human expectations. The news of his sudden call by the Master, May 3 last, was a profound shock to me, and, of course, must have been a much greater one to his intimate associates.

He was a lovely character.

Personally, I feel like repeating the first verse of the beautiful poem found in his pocket after his death:

A little more tired at close of day,
A little less anxious to have our way,
A little less ready to scold and blame,
A little more care of a brother's name,
And so we are nearing the journey's end,
Where time and eternity meet and blend.

Democratic Legislation.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. COX,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. COX. Mr. Speaker, the Democratic Party has been in control of the Government for nearly three years. It made many promises to the people, and these promises, as far as time would permit, have been faithfully and conscientiously redeemed.

It revised the tariff by a measure kn wn as the Underwood bill, and in its revision the party faithfully kept its promises and pledges and reduced the rate of duty from a prohibitory rate in many instances to strictly a revenue rate for the purpose

of raising revenue to support the Government.

It is recognized by all people that this is one of the ways of raising revenue, to impose a tax or duty upon good; imported from foreign countries to ours. This has been a favored method of raising revenue for 125 years, and until some other system more equitable and just than this is discovered to raise revenue this will continue to be one of the ways of raising money to support the Government.

The Democratic Party has always contended that luxuries should be taxed for this purpose and necessities of life, as far as possible, should be admitted free of duty. This principle was faithfully carried out by the party in its revision of the tariff, at the same time keeping in view the necessity of raising reve-

nue to support the Government.

No honest business was compelled to close its doors by reason

of the enactment of this law.

The Democratic Party has always contended that the Government has no constitutional or moral right to impose a tax upon all of its people for the purpose of hothonsing a few industries unable to stand on their own feet and meet fair and just competition. The Underwood bill still retains considerable protection, yet it absolutely restores the fair and economical rule of competition.

The Government has no right to impose a tax upon all the people for the purpose of enabling a few of them to float a losing enterprise, and where an enterprise can not stand without being protected the sooner it quits business the better it is for

all the people.

The first year the Underwood bill was in operation it raised revenue to the amount of \$275.000,000, and to this was added revenue from income taxes, corporation taxes, and all other taxes, until the close of the first fiscal year that this measure was in operation there was a clear surplus of \$31,000,000 in the United States Treasury.

Because of the European war and the shutting out of foreign imports it has not had a fair chance and a fair opportunity to demonstrate what it can do as a revenue producer.

The Secretary of the Treasury in his annual report to Congress says that as a result of the foreign war the Treasury lost \$112,000,000 the first year of the war. This report is based upon facts and figures. It is neither a conclusion nor a conjecture, but it is the truth.

It is a known and undisputed fact that for more than a quarter of a century vast individual and corporate wealth, reaching beyond the dreams of avarice, had escaped its share of just taxation. The Democratic Party for the same period of time had earnestly advocated the enactment of an income-tax law for the purpose of making the wealth of the country bear its just and proportionate share of the burdens of taxation. The Democratic Party succeeded in getting incorporated in the Wilson tariff of 1893 an income-tax law, but which was, unfortunately, held to be unconstitutional by the Supreme Court of the United States in 1895. Almost from the date of the decision of the court the Democratic Party pressed forward this legislation and never ceased to fight for it until it was actually enacted into law and made a part of the Underwood bill. Until this wise and humane measure was enacted into a law, the wealth of the Nation was escaping its just and proportionate part of taxation. Conceded by all, admitted by everyone, that an income tax is the fairest revenue measure that any government can have, it is the one tax that is not able to be shoved out upon the shoulders of another and the amount thereof paid by others. This tax is a graduated income tax, ranging from 1 per cent to 7 per cent in proportien to the income. It is young yet, has not been tried long in this country, and may require some amendments to perfect it, but in the event it needs it, there is no question but that Congress will give speedy attention to any amendment which may be necessary to perfect it.

At the time the Constitution of the United States was adopted our forefathers denied the people the right to elect Senators by popular vote and lodged this power of electing Senators in the various legislatures of the United States. No reason on earth could be assigned for this other than the fathers were afraid to trust the people with too much power. For the past 25 years it was a burning question with the people, to be given the right to elect Senators by popular vote. It remained for a Democratic Congress to finally pass an amendment to the Constitution enabling the people to elect Senators by popular vote, a thing which they should have had from the very inception of our Government, a thing they never should have been denied, a

thing to which they are clearly and justly entitled.

Perhaps the crowning act of the present administration is what is known as the Federal reserve act, the admitted greatest piece of constructive legislation enacted by Congress since the Civil War. We were the one great power that bottomed our currency upon our national indebtedness, Government bonds being the one medium on which currency could be issued. This destroyed the necessary element of elasticity in our currency. Under this system in times of stress there was an invariable contraction of currency and in times of prosperity an undue inflation, one equally as dangerous as the other.

By far the richest Nation on the earth, with inexhaustible resources, teeming with wealth on all sides, with prime commercial paper in all the banks, the moment Wall Street sent a flurry over the country every bank, operating under the law of self-defense, quickly ran to cover, calling in its loans, piling up its reserves to meet the stringency. There were no great reservoirs, with the power of the Government behind them, to which the banks could go with their prime paper, have the same discounted, take the currency back to their banks, and extend credit to their customers. For the lack of this many hundreds, yes, thousands, of good honest business men were annually compelled to go into bankruptcy.

Under the old system the 25,000 banks were each separate

Under the old system the 25,000 banks were each separate units each fighting for itself in time of distress. Under the new system all the banks of the Nation, especially all the national banks, are now coordinated into a single unit, making this unit the greatest financial fighting machine in the world.

The bank capital of our Nation is upward of \$20,000,000,000,000. Under the old system this strength was divided between the 25,000 banks in proportion to their capital and surplus. The new system takes the combined bank power of all the United States and puts it into one system, with the President of the United States practically its governor, because he has the appointing power of the members of the Federal Reserve Board.

This constructive piece of legislation was fought by special interests with a determination to defeat it if possible. One of the arguments used by special interests to accomplish its defeat was that it gave the President too much power in giving to him the right to appoint the members of the Federal Reserve Board.

If the time ever comes in this fair land of ours when we can not trust our President to appoint the members of this board, then let us say, "Abandon hope all ye who enter here."

Under the Constitution we have to trust him to name the members of the Supreme and inferior Federal Courts, and in looking over the long list of illustrious men who have adorned these courts from the day of the first appointment by President Washington down to the present hour, I am unable to see where many mistakes were made. We trust him to appoint the members of his own Cabinet and the Interstate Commerce Commission, as well as countless thousands of other appointments. We ought to be able to trust our President in a matter of appoint-

ing members of the Federal Reserve Board.

If this measure had been in force the blistering and blasting panics of 1893 and 1907 which swept over this country devastating fortunes and wrecking values would not have occurred. Such a condition, under the present Federal Reserve System, would be impossible. It completely divorces every legitimate interest of the Nation from Wall Street, which for 50 years by its wicked system of interlocking directorates, combination of interests, and cruel war of retaliation held the financial interests of all the people of the United States in the hollow of its hand. No political despot ever ruled his people with such an iron hand or firmer grip than Wall Street has ruled our people in the past. It played high politics as well as high finance, always ready with its cash box during each occurring campaign, always seeking special favors at the hands of those able to render them.

The present sound business in the United States, despite the catastrophe in Europe which has deranged the avenues of trade linking all the world together, is entirely due to the administration in bringing about the enactment of the currency law which gives the country a safe, sane, and up-to-date currency system. But for the presence of this law which provides the machinery for the mobilization of the credit of the entire Nation, the European crisis would undoubtedly have brought ruin and bankruptcy to our country. As a financial bulwark the value of its enactment can not be overestimated. Its passage, initiated by Democrats, is directly attributed to the strong stand taken by the President, who aroused the public to its support and overcame the opposition of the big moneyed interests and those who for years had contended for central banks under private control. At the time of its passage the measure was deemed so good, wise, and frugal that it received the patriotic support of Representatives and Senators of all parties. This great law makes it impossible for cabals of vast wealth to precipitate a panic any more in the United States. The law gives the right to establish branch banks anywhere in the world, and when this banking system is extended to other countries, particularly to South America, there is every reason to believe that in the not far distant future the United States will be in complete control of the trade of 75,000,000 people living south of us to-day.

Europe has mobilized her mad armies; death, destruction, devastation, and sorrow beggaring human description is following in their wake. Under the guiding genius of that master mind that walks the ways of peace, Woodro v Wilson, we have mobilized our credits and there follows in its ways happiness

and prosperity to all of our people.

When private interests get control of the finances of any nation, that moment private liberty and public rights are both subordinated to individual and personal interest to the injury of the masses. This measure sounded the death knell of the of the masses. This measure sounded the death knell of the Money Trust. It allows no more nation-wide financial panics. It stabilizes the commercial, financial, and industrial conditions of the whole United States. It makes it impossible for a few high financiers to concentrate the money of this country in Wall Street; it extends a strong, helping hand to the farmer, while protecting fully the interest of the business man, and the bank provides a plan for concentrating the resources of 25,000 banks into the most gigantic banking association of the world. It provides for the establishment of foreign branches of Federal reserve banks, which are to take care of our foreign commerce, and provides for the issuance of an elastic currency through reserve notes on the surety of commercial bills on a plan of shorttime maturity.

As a result of this wise legislation our country may travel through eras of depression and eras of low prices, but never again will we see a money panic in this country unless the wealth of the entire Nation suddenly fails-a thing impossible

For years both of the leading parties recognized the necessity of strengthening the Sherman Antitrust Act in certain particulars and making it plain in others. The present administra-tion has accomplished all of this, and it did not do it without first meeting and overcoming determined opposition by big business as well as by high finance, which, as usual, resorted to scarecrow methods, threats, and bulldozing in trying to prevent

the administration from enacting this legislation; but, refusing to do their bidding, Congress, under the direction of Wilson, went forward and fulfilled the platform promises in this regard.

This measure makes it plain that officers of corporations violating the trust law can be fined and imprisoned. Under it holding companies are prohibited where the effect is to lessen competition and create monopolies. Interlocking directorates in competing corporations, any one of which has a capital of more than \$1,000,000, were made illegal two years after the passage of the act. Interlocking of railroad directorates are forbidden with corporations dealing in securities, railroad supplies, or contracts in excess of \$50,000 per year, except where the transactions are shown to be by public competitive bid or with the consent of the Interstate Commerce Commission.

Under the benign provisions of this law Federal judges are prohibited from issuing injunctions against persons on account of their ceasing to perform work or labor or from issuing injunctions to prevent laborers from recommending, advising, or persuading others by peaceful means to cease work, or from issuing injunctions enjoining laboring men to attend near a house or place where persons reside or work or carry on business or happen to be for the purpose of peacefully obtaining or communicating information or peacefully persuading any person to work or abstain from work, or from issuing injunctions enjoining laboring men from ceasing to patronize any party to a labor dispute, or from issuing injunctions enjoining laboring men from advising, recommending, or persuading others by peaceful means so to do, or from issuing injunctions enjoining laboring men from peacefully assembling at any proper place or in any lawful manner and for lawful purposes.

The amendment to the Sherman antitrust law passed by the present administration further provides for trial by jury in cases of indirect contempt. This constitutes a magna charta or bill of rights for the laboring men of our Nation, a principle fought for by them for the past 25 years. During this time laboring men petitioned Congress, they pleaded with Congress, they asked Congress for bread in the way of being given this legislation, but until the present administration they were given They asked for fish, but were given a serpent. They asked for an egg, but were given a scorpion.

In the land which stamped out slavery 50 years ago should the labor of human beings be considered as a commodity, as an article of commerce, as property? Labor is not a commodity and never should be treated as such; while the products produced by labor are a commodity, labor itself is composed of flesh and blood, possessed of a soul filled with wants and desires; it has intangible and inalienable rights, and among these it has the right to better its condition socially, morally, and financially by the use of all possible legal means and methods at its command to bring this result about.

These rights are fully recognized in the amendment to the Sherman antitrust law, approved by labor leaders and the best students of economy throughout the Nation. This amendment humanizes labor instead of commercializing it; it places it upon high and broad planes instead of debasing it; it makes a laborer worthy of his hire, instead of reducing him to servitude.

For a quarter of a century the toilers at the mills and factories, in their lodge rooms, in their labor meetings and congresses formulated petitions addressed to the Congress of the United States asking for redress along these lines, but these petitions and memorials went unheard and unheeded until the present administration assumed power and control over affairs at Washington.

But this is not all this administration has done for labor. national Department of Labor has been created with a seat in the President's Cabinet, where the wrongs of laborers in labor disputes can be adjudicated and in a measure tried and determined. This seat in the President's Cabinet had been fought for by the laboring men of the Nation for many years in the past, but it remained for the present administration to at least recognize the long-delayed rights and justness of the request of the laboring men of our country.

No country is more prosperous than are its farmers. When they are prosperous all are prosperous. Recognizing this rule the present administration passed a bill appropriating \$4.000,000 per year, which goes to the respective States for farm-demonstration work. Under this measure Indiana will this year receive \$30,000, with the sum of \$10,000 annually added thereafter until at the end of 10 years from the date of its passage Indiana will receive \$100,000. Not a dollar of this money can be spent in the erection of puildings, equipment, or laboratories. Every dollar of it must go for farm-demonstration work. will make every farm in Indiana at the end of the 10-year period practically a demonstration school, and no doubt will increase the yield of our farms at least 50 per cent and at the

same time teach the people how to conserve their own energy and

For more than 30 years the consumers of the Nation, through their various organizations, demanded of Congress the enactment of parcels-post legislation. It remained for a Democratic House to originate and pass this important measure, which has been and is being rapidly extended by the present administration. The net result of this legislation has been to vitally decrease express rates as well as postage rates on fourth-class matter; to bring the producer and consumer in closer touch, rendering home life in the country more pleasant; and enabling the country people to reduce expenses and practice economy.

the country people to reduce expenses and practice economy. It is a known economical fact that for 25 years and more the express companies were robbing the American people, charging enormous and exorbitant rates for fourth-class mail matter. As soon as the parcel-post law was enacted express rates began to tumble; people began to get relief; and I dare say had it not been for the enactment of this wise, just, and Lumane provision of the law people to-day would be overtaxed, overburdened, and overcharged with enormous express rates, as they were prior to the enactment of this legislation. Too much can not be done for the farmers. They are the backbone and sinew of the Nation. Let them cease their work and toil from March until October and Wall Street would grow up in grass, great transportation companies would cease to move, the wheels of industry lay idle, business would become paralyzed, and ruination and destruction would stare everyone in the face.

These progressive measures had been asked for by the people for many years, but special interests had been able to prevent

their passage.

The old soldiers were told that the Democratic Party was hostile to their interests, and that if the party was ever intrusted with power their pensions would stop. Instead of this proving true it remained for a Democrat, gallant old Gen. Sherwoon, who rose in the Army from the rank of private to that of brigadier general, to prepare and pass through the House a bill increasing the old soldiers' pension until the first year of its operation it added \$30,000,000 to the pension appropriation bill, and it would continue to add this much each year were it not for the fact that the old soldiers now are passing over at the rate of 40,000 per year.

The administration has humanized our Government by enacting more humane measures than any administration ever before placed upon the statute books. Not one of the many big constructive measures placed upon the statute books by the present administration will ever be repealed by the Republican Party

if put into power.

The stock argument of the Republican Party in the early days of the administration consisted of calamity howling—trying to convince the country that as a result of the measures and policies inaugurated by the present administration rulnation, devastation, destruction, and starvation were clearly staring everyone in the face; but we do not hear that argument any more; that has ceased. The calamity howlers are estopped from using that argument any more, either upon the floor of Congress or in the country. No longer do we see in the big dailies anything about distress, hardship, or men out of employment, but every daily paper has flying headlines telling about the prosperity of the country; all kinds of men wanted for all kinds of jobs; every industry in the United States to-day running at full tilt, with banks full to overflowing with money seeking investments, ready to loan to borrowers at the exceeding low rate of from 3½ to 4 per cent interest. With these undisputed conditions existing there is no room for calamity howlers to-day, but every reason and every argument says to every man, "Get busy, get into the race, or you will be left behind."

Good Roads a National Necessity—How to Raise the Money— Tax the Swellen Fortune—Give the Little Fellow a Chance.

EXTENSION OF REMARKS

HON. WILLIAM J. CARY,

IN THE HOUSE OF REPRESENTATIVES, Wednesday, January 26, 1916.

Mr. CARY. Mr. Speaker, the question of good roads is, to my mind, one of the most vital questions affecting the people of this country, and I am glad to have the opportunity of voting in favor of an appropriation for this purpose.

I have been in favor of a measure of this kind ever since I have been in Congress and attended, I think, the first good-roads convention held in this city.

I regret to note that the opposition to this measure comes from Members from large cities, who appear to think that a measure that will be of incalculable benefit to the farmers will

mean nothing to the cities.

There could not be a more fatal error than to imagine that the interests of the city and country are divergent. The cities could not live a single day without the country, and the country needs the city as a market for its produce. The country needs the city for its educational facilities and the city needs the country for the vigorous young manhood that comes from the farm to help in the strenuous work of building and maintaining a great city. They are interdependent on each other, and real progress and prosperity can only exist when they are united in their efforts for betterment.

Nothing that can be done will do more to connect city and country life than the establishment and maintenance of good highways, and I represent both of these classes. Good roads mean that a farmer can haul larger loads for less money and with less effort, and that will enable him to sell his produce for lower prices and be one method of reducing the cost of living. Good roads will unite farmers into closer personal contact with each other and will lessen the isolation that has been the worst feature of agricultural life in this country. Good roads will keep the farmer boy and girl on the farm and lessen the tendency to overcrowd the city. They will make the country, with its beauties of nature, more easily accessible to the city boy and girl and wean them from the intemperate and fast life of the modern city to the sane and temperate enjoyments of the country.

I know of no better way to spend Government money than this; and while the list of benefits to be derived is almost without limit, I can not see that there would be any detriment

to the interest of anyone in either city or country.

We are about to enter into a discussion of preparedness, and I think it is self-evident that good roads will be one of the most effective methods of keeping our country in a state of preparedness. The quick movement of troops will be facilitated and the transportation of supplies made easier by good roads, and that alone would be sufficient reason for the adoption of a policy of generosity in appropriating for them.

The operations of the parcel post would be immensely helped, and the city dweller would have better chances than ever to deal directly with the producer for his daily needs, while the shops of the city would be more accessible to the farmer.

As to the cost, in this case as in every other the funds are in sight all right, but we will persistently look in the wrong direction for them. Charity organizations, educational institutions, and all of the various projects that need money know where to look for it and get it in pretty big lumps very often. They go to the big millionaires, to the Morgans, the Carnegies, and the Rockefellers, and get large checks to educate a few people and build libraries and carry out their various schemes—some of them worthy enough, but not a single one a direct benefit to the whole people. But when we want to raise money who do we usually think of first when we start to impose a tax? Is it the millionaire, or the big trust, or any institution, or person who has the cash in any quantity? Well, not so you can notice it. All of the tax suggestions that come across the board here are aimed directly at the little fellow who has just about got enough to keep him going.

Take the proposition to tax gasoline, for instance. Who would bear the hardest burden of that? The small dealer who uses a small car to deliver his goods; the farmer who uses a traction machine to cultivate his land. If you wished to tax along these lines, a tax on the horsepower of automobiles would be far more just, for that would catch the wealthy joy rider with his big limousine, who, in the words of the Bible, "toils not, neither does he spin," unless he spins along some road and runs over a few poor men's children.

I have tried over and over again to show where to get money enough to pay for preparedness, do away with the deficit in the Treasury, and pay for good roads in the bargain, and do it honestly and righteously, without placing the burden on those

least able to afford it.

In the Sixty-third Congress I introduced a bill and two resolutions which, if they had been acted upon by the Government, would have brought enough money in the Treasury to pay all of the preparedness bills, good-roads appropriations, and left a comfortable balance in the Treasury besides.

Besides this there were dozens of other means of enriching the Treasury without mulcting the little fellow. The Tobacco Trust is pocketing \$55,000.000 annually by a change in the tobacco schedule in the tariff bill, which enables them to lop off a half ounce on every package of tobacco they sell, and they do

not have to pay any extra tax on this either.

Just now some people are shouting about the prosperity that we are beginning to feel. It has not struck any place where I have been, and from all that I can discover it is confined to a few sections on the coast, where the trade in implements of murder has helped to fill the already swollen pockets of a few millionaires. I propose that if there is any prosperity in this evil business it had better be distributed, and I have therefore introduced a bill imposing a tax of 20 per cent on all sales of ammunition. They can stand it easily enough. The powder company always charged a much higher price for its product than it was worth and has mulcted the Government out of millions that they might have saved by manufacturing powder in Government plants. The foreign contracts are made on a still higher price basis, and all of the munition makers are getting top-notch prices for their ungodly wares and are a fit and proper subject of the tax collector.

I do not believe the people of this country want the Government to be niggardly in its expenditures. I believe that Americans in general expect governmental projects to be carried on in a thrifty and businesslike manner, with due and proper checks on extravagance and the absolute elimination of that graft that is our greatest economic and political danger, but I am sure that the whole country will stand behind any administration that makes liberal appropriations for all matters which

are for the good of all.

But the great mass of people are getting very, very tired of paying all of the bills. They are demanding and will continue to demand that the bill of expense be properly apportioned and that the burden of taxation be lifted from the shoulders of the peor and placed in proper proportion on the shoulders of those who make their riches by the hard work of other people.

Rural Post Roads.

EXTENSION OF REMARKS

OF

HON. THETUS W. SIMS,

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 25, 1916.

Mr. Speaker, my honorable and distinguished colleague [Mr. McKellar] offered as a substitute for this whole bill the bill passed by this House during the Sixty-third Congress, which was almost identical with the bill passed by this House in the Sixty-second Congress, and from his remarks in favor of his substitute the gentleman from Virginia, Judge SAUNDERS, one of the able members of the Roads Committee that reported this bill, seems to have conceived the idea that Tennessee had in some way indorsed or approved the bill which Mr. McKellar offered as a substitute for this bill. I must confess that I read nothing in the reports of the debates that took place in the senatorial primary contest tending to show that there was any kind of an issue between the distinguished competitors for the senatorial nomination as to any kind of a plan for Federal aid to State and county roads. All the contestants claimed to be in favor of Federal aid, and each of them may have indicated what, in his judgment, was a good plan, but there surely was not so sharp a difference in the various plans suggested as to constitute an issue,

I feel that I am warranted in saying that there was not as many as 1,000 votes cast for any one of the candidates due alone to the plan of Federal aid advocated by him. I do not think Judge Saunders fully understood the remarks of my colleague, Mr. McKellar, and I want to assure him and the chairman of the Roads Committee, Judge Shackleford, that I have not the slightest doubt that the people of my State will most heartily approve the plan of this bill when they fully understand it, and I think they will agree with me that the present bill as it has been amended at the suggestion of the Committee on Roads in this Committee of the Whole is the best bill that has been reported to the House or passed by it since I have had the honor to be a Member of it. Taking the view I do of the merits of this bill. I could not vote for the substitute offered by my esteemed colleague, and I was glad to hear him say in debating his substitute that if it was rejected by this Committee of the Whole he intended to vote for this bill. The people are more inter-

ested in getting some good bill enacted into law than they are as to any particular plan or the details of this or any other plan.

While I believe that it would have been wiser to authorize the United States Government, unaided or assisted by the States, counties, or municipalities, to build at its own expense a general system of well-constructed, hard-surfaced roads, connecting all the county seats in all the States of the Union, and let such a system of Government-owned roads, of uniform standard and quality, constitute the entire contribution of the United States to the highway systems of the whole country, constituting, as they would, a splendid network of trunk-line intercounty and interstate roads, and leave the construction and maintenance of all other roads that may be needed to the States, counties, and municipalities, with no sort of partnership between the Federal Government and the several States of the Union. But the committee in its wisdom has seen fit to report the bill we now have before us, and I am too anxious to secure good-roads legislation at the earliest possible date to oppose this bill simply because I think that the bill I have proposed is a better system to adopt than the one proposed in this bill.

I think I can assure my colleague that no highway commission in Tennessee will ever have the hardihood to map out and propose a system of roads chiefly beneficial to automobile owners, to the neglect of the roads used by the great mass of the people in hauling their produce to the market towns and shipping points. The governor appoints the highway commissioners, and he has to be elected every two years, and he certainly would not appoint a commission that would neglect the rural sections of our State in the distribution of either State or Federal aid to

good-road construction.

The plan I have suggested in my bill can easily be adopted by the highway commission of my State for the construction and maintenance of a system of State, interstate, and intercounty highways if in its wisdom it deems it the best system to apply to the State as a whole.

The Hundredth Anniversary of the Birth of Gen. Nathaniel Prentiss Banks.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. CARTER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 27, 1916.

Mr. CARTER of Massachusetts. Mr. Speaker, I am prompted at this time to ask the indulgence of the House as I wish to speak briefly of Maj. Gen. Nathaniel Prentiss Banks, one of the most highly honored citizens from that historic State of Massachusetts, which does not permit the affection which she holds for her distinguished sons to go unnoticed.

One hundred years ago, on the 30th day of January, there was born in Waltham, Mass., a city which I now have the honor to represent, a boy who later served his country with distinction in the time of war and his State and Nation in positions of high trust in the time of peace. With only the advantages of a common-school education, he was compelled to go to work in a cotton mill in the city of Lowell, and because of his work there he was often referred to as the bobbin boy of Massachusetts,

The young lad was not satisfied to remain at work in the mills and studied diligently during his leisure hours. When only a very young lad he secured many engagements to speak before assemblies and meetings. He then became the editor of a local paper in Waltham, and later studied law and was admitted to the Massachusetts bar. In 1849 he was elected to represent Waltham in the Massachusetts Legislature.

It was at this time that the Free-Soil Party was becoming prominent in New England and the ancient power of the Whig Party was on the wane. Mr. Banks favored a coalition between the Democrats and the new party, and was elected speaker of the Massachusetts State Assembly in 1851. In 1852 he was reelected to this high office. The next year he was selected to be chairman of the Massachusetts constitutional convention, and later in the same year was elected to Congress as a coalition Democrat. During his term of service he withdrew as a member of the Democratic Party and identified himself with the "Know-Nothing" Party.

He defeated the Democratic and Whig candidates in his district by an overwhelming vote when he was reelected to Con-

gress. The following year he was elected Speaker of the House of Representatives in a contest which lasted over two months. It was not until the one hundred and thirty-third ballot was cast that the deadlock was broken. The Know-Nothing Party went out of existence and Mr. Banks was reelected to the Thirty-fifth Congress as a Republican, by a larger majority than before, and resigned December 4, 1857, when he was elected governor of Massachusetts.

He served in that office for three years, and in 1860 was made president of the Illinois Central Railroad, succeeding Gen. George B. McClellan. He gave up this office at the outbreak of the Civil War and received a commission from President Lincoln as major general of Volunteers, and was assigned to the Fifth Corps in the Army of the Potomac. His corps acquitted itself with much honor during its first active service in the Shenandoah Valley, on the upper Potomac, as well as at the Battle of Winchester, March 23, 1863.

During April and May of that year he was left to guard the

Shenandoah with two divisions. Gen. Banks was left with but 8,000 men, and it was upon this force that "Stonewall" Jackson made one of his sudden onslaughts, and the corps only escaped well-ordered marching and stubborn fighting. Through good generalship the bulk of his army crossed the Potomac at Front Royal on May 26 and the Confederate leader failed to realize his apparently reasonable expectation of capturing the entire force.

Gen. Pope was placed in command of the Army of Virginia, and June 27, 1862, he concentrated his forces in the neighborhood of Culpeper Court House early in August. Gen. Banks's corps was ordered to the front August 9 and took part late in the afternoon of that day in the Battle of Cedar Mountain. His corps held the position against a largely superior force, was strengthened during the night, and before the morning of August 11 the Confederates retreated to the Rapidan. After participating in Gen. Sigel's campaigns in September, Banks was placed in command of the defenses of Washington while preparations were secretly made to dispatch a strong expedition by sea to New Orleans.

He was assigned to the command of the expedition, which sailed from New York in November and December, and on reaching New Orleans he succeeded Gen. B. F. Butler in command of the department. Baton Rouge was occupied with a large force, and during the winter reconnoissances were made toward Port Hudson and other points in the vicinity. Early in April of 1863 he led the army up the Teche country, encountering no very formidable opposition, as far as the Red River. Thence he crossed the Mississippi and invested Port Hudson in connection with the fleet under Farragut. Several unsuccessful attempts were made to storm the works, involving heavy

losses to the assaulting columns,

In July the news of the surrender of Vicksburg was received. and on the 9th of that month the garrison of Port Hudson, 6,000 strong, capitulated, and the Mississippi River was once more open to the sea. No military movements of great importance were undertaken in the department until the succeeding spring, when Gen. Banks's army, supported by a powerful fleet, was sent up the Red River, with the intention of regaining control of western Louisiana. At the same time Gen. A. J. Smith, with 10,000 men, descended the Mississippi, reaching the rendezvous first, and was joined by Gen. Banks, who assumed command of the whole force at Alexandria.

The Army advanced along the south bank of Red River as far as Sabine Crossroads, when it suffered a defeat by the Confederates, under Gen. Richard Taylor, and was obliged to fall back to Pleasant Hill, having sustained heavy losses in men and material. Here on the following day the Confederates renewed the attack, but were repelled with great loss, and the National Army retreated without further serious molestation to Alexandria, where a new complication arose in consequence of the subsidence of the Red River after the spring freshets. The gunboats were unable to descend the river, owing to shoal water, and were only saved by the engineering skill of Lieut. Col. Joseph Bailey. The whole force then retreated to the Mis-

Gen. Banks has been censured for the failure of this expedition, but it was undertaken contrary to his advice and in spite of his protest. During his command of the Department of the Gulf he endeavored to reorganize the civil government of Louislana, but did not accomplish it in a manner satisfactory to the inhabitants. He was relieved of his command in May, 1864, resigned his commission, and returning to Massachusetts was elected to Congress from his old district. He was reelected to the successive Congresses until 1877, failing only in 1872, when he was active in behalf of Horace Greeley, the Liberal-Demo-

cratic candidate for President. He served for a long time as chairman of the Committee on Foreign Relations. He was again elected to Congress in 1888, and in 1891 he received a pension.

He died at Waltham, September 1, 1894.

In the city of Waltham he is not forgotten. In 1900 the Massachusetts State Legislature provided an appropriation for the erection of a statue of the statesman and soldier, which was dedicated with fitting exercises on September 16, 1908. the unanimous consent of the House at this time to have inserted in the Congressional Record an extension of my remarks by the printing of the address which was delivered by the Hon. Herbert Parker, of Massachusetts, at the dedication exercises. This address was a fitting tribute to this great man.

ADDRESS BY HON, HERBERT PARKER.

"The grateful affection of Massachusetts does not suffer the memory of her distinguished sons or their high service in her name to fade and perish in her heart; nor will she permit the laurels she has proudly set upon their uplifted brows to wither

in the dust of forgetfulness.

"This stately memorial ceremony, this assembly of her people, declare that she holds in tenderest thought and remembrance an honored son whose achievements have become a part of her own enduring fame. No spoken word of eulogy is needed to breathe life into those deeds and that service, for they live and move and have their being in the peace, the power, and the glory of our Commonwealth and Nation. History shall have eternal care of the record of his works; her vigilance shall keep the letters she has berself inscribed bright as the stars which mark the pathways of the immortal; his name shall live upon the lips of all who shall love the Commonwealth and cherish and revere the lessons of her citizenship. Yet love ever seeks some visible remembrance of a presence that has faded from the sight. The poet is minister to the soul, but the divine genius of sculptor and painter can best give expression to the loving memories of the heart.

"And now, again, the figure of a statesman, tireless in his service to the State, rises before the sight of the generations yet unborn, who shall know the everlasting presence of a great past, made visible inspiration of their own days. To such high purpose the memorial bronze which with reverent hand we unveil

to-day shall speak to the coming ages.

"This hour, when our Nation is secure in impregnable power, serene in universal peace and honor, might lead us to question the recitals of the historian, to distrust the annals of those days of doubt and darkness through which our Nation came to its own redemption; for living lips no longer sustain the fierce debate, the threats of impending conflict, the outbursts of implacable controversy that stirred the thought and tried the souls of men when Nathaniel Prentiss Banks, son of the soil of Massachusetts, and, by virtue of her spirit, born leader of men, had commanding part in making our country what it isin its Constitution and in truth a Nation of free men.

"The impressive story of this life engages and holds our present thought, gives purpose to these ceremonies that shall far outrun the brief hour that they occupy. The life of Gen. Banks is the lesson of the splendid possibilities and perfect realization of American citizenship, for no fortuitous advantage of birth or opportunity raised him to an eminence to which any American may not aspire. Senator Hoar, wisest and kindliest philosopher of our time, has said he was 'an example of what a generous ambition can accomplish for the

humblest child of the Republic.'

"He was born in Waltham, in the county of Middlesex, on the 30th day of January, 1816, the eldest of seven children, his father a competent mechanic, but without means to provide educational advantages for his son other than those of the elementary schools, not then developed to the high standards of to-day. From his early boyhood the gaining of a livelihood was the first necessity of his thought, and this period of his life challenges our careful observation—a time of great influence, it is said, in the formation of character; but it were more in accord with the truth if we say that such circumstances do but reveal real qualities which can only be manifested by the trial of environment and the tests of self-reliance, in most cases postponed until years of maturity. Dominating the limitations of his youth, he gave assurance of that great future which he already grasped in making himself master of opportunities, which he made possible through constancy of purpose

and ceaseless and intelligent study and industry.

"With his parents he sought employment in the factories of Lowell, and his first labor gave him that sobriquet of affection which the people adopted, and, half in earnest and half in kindly jest, the name of the 'bobbin boy' followed him through

"His youthful tasks were long, spent in joint servitude with the mechanism of loom and spindle, but they constantly sang to his prophetic ear of the limitless possibilities of labor, of industry, of self-reliance, and of courage. Scant were his moments for the study of books after 12 hours of laborious service, but in all ages the fitful evening firelight and dim flame of the rush taper have made luminous the pages of learning and have cast their rays forward and far over the pathway that leads

upward to the heights of exalted fame.

With an earnestness that knew no fatigue in the quest, he sought the enlightenment of good books and spent such hours as he might call his own in the company of the great teachers The English classics were his delight, and he acquired such knowledge of Latin as to enable him to read with some facility the great authors of that tongue. He diligently studied Spanish, and with a curious prescience declared that the day would come when America must have intimate association with the people of that race. His early and constant study of the poets, of the historians, and philosophers doubtless gave him, by the aid of his retentive memory, that mental equipment, that fullness of knowledge, that admirable style which have given his State papers and his public addresses an assured place with the best that our English literature

"By the kindness of friends he had access to the stores of learning in the Boston Athenæum, and there his few holidays were passed in studious delight, and his long journeys homeward in the evening after days of such enlightenment were, in truth, in the company of the stars which shone above and

before him.
"The stern necessities of life kept his hands as closely occupied as his mind; apprenticed as a machinist, he became an

expert journeyman.

In 1839 he assumed the proprietorship of the Middlesex Reporter, and as editor prosecuted this first literary venture with success for three years. He read law, and was duly admitted to the bar, but never engaged in practice. Other occupations, more congenial to his taste and for which he was doubtless better fitted, fully engaged even his intense intellectual energies, The lecture platform gave him earliest opportunity to try his forensic powers, and it was manifest that limitations in education had been more than compensated by industry and mental attainment. His speech was graceful, natural, vigorous, and adorned by that versatility and accuracy of phrase that can be acquired only by wise and appreciative acquaintance with the best authors. It is related that after the delivery of a lecture at Salem a delighted auditor inquired from what university he had been graduated, to which, with apt humor, he replied,

From a college with a water wheel in the basement.'
"His genial, candid nature, the enthusiasm of his youth, his energy and evident talents, gained him the confidence and regard of men of influence, and among the most fortunate of these associations was the friendship of the Hon. Robert Rantoul, collector of the port of Boston, afterwards United States district attorney, and later Senator. This eminent scholar and lawyer offered the young student free access to his private and professional library, encouraged and aided him in his literary studies, and by example and conversation taught him much of that refinement of thought and diction which was afterwards the marvel of those admiring critics who knew the meagerness of the school education which he had enjoyed. His intensely virile voice was of extraordinary charm, of marvelous compass, sweeping an audience to exalted enthusiasm in a resistless torrent of stirring eloquence; again, captivating all opposition by the spell of persuasive argument or moving appeal that no auditor could resist; and this power survived all the infirmities of age. Even in the chill of decrepitude which enfeebled all his physical energies, when he rose before an audience the fire of youth rekindled, and-

"Pale flashes seemed to rise, As when the northern skies Gleam in December,

"Talents such as he possessed proved his aptitude and justified his ambition for public service, and now the field of the great achievements of his life awaited him, a field of future trial and conflict, where no man might dare to enter and hope to survive without the courage of conviction; nor could one expect to be sustained by party name or party prestige, for in the great moral issue then impending the bonds of political organization were to be dissolved and fused in the fires that consumed all but the elemental principle upon which the Nation was divided, however the fact might be concealed by specious assurance, conciliatory statute, or party platform.

"At the outset of his career he resolutely determined upon that line of conduct which he declared had controlled his every public act, when in answer to interrogatories put to him when candidate for Speaker of the National House, he said:

"In my brief period of public life, not altogether a quiet one, I have relied upon myself alone, and I have done that under all circumstances which my convictions taught me to be right.

"He first appeared as party advocate in support of the candidacy of Van Buren, thus allying himself with the Democracy, which in Massachusetts was tending toward a temporary affilia-tion with the Free Soil Party, which ultimately formed the coalition by which the old Whigs were driven from a power so long restraining, by its prestige and the mighty name of Webster, the irresistible sentiment of the people of Massachusetts against any extension of the curse of slavery to new States and Territories or any further recognition of an institution now become detestable and abhorred, especially through the enactment of the

fugitive-slave law.

In 1848, in his thirty-third year, after repeated campaigns, he was elected to the State legislature, and was returned almost without contest for three further terms. Through the coalition in 1851 Henry Wilson as a Free Soiler was chosen president of the senate, and Banks, as a Democrat, speaker of the house, and reelected in 1852. This coalition and transitory alliance of expediency, in large part consisting of men of little other prominence or station, incongruous in its past, and with no hope of the future, had rendered an important and essential service to the country in the election of Sumner to the Senate. It was looked upon, nevertheless, without confidence or respect by all who knew its true constituents. Banks himself, with shrewd humor, said to Gov. Boutwell:

"It is almighty queer that the people of this Commonwealth have put their government into the hands of men who have no last and usual place of abode.

"As speaker of the house he gained new prestige and respect; impartial, courteous, and firm, he displayed an exact and exhaustive knowledge of parliamentary law, and his administration was universally conceded to be that of an ideal presiding

"Another political organization gained quick and extraordinary ascendency in the State, adding further embarrassment to the disintegrating political parties of the times. So insidious was the power of this secret organization, known in name as the Know-Nothing Party, that the Free Sollers dared not openly oppose it; indeed, many, from motives of policy, surreptitiously, sometimes avowedly, joined its ranks. It can not be doubted that Banks and Henry Wilson, forced by the exigency of the times and in the hope of ultimately aiding the free-soil cause, became members of the organization or permitted themselves to be so considered. They certainly realized that an organization founded upon intolerant religious proscription was so false and hostile to the spirit of our American Government that it could not survive; its disintegration was inevitable, and after a brief supremacy it passed from all participation in the Government, and scarce an apologist for its existence can now be found. Gen. Banks himself, by his own leadership, finally redeemed the State from a reign of bigotry unworthy of our annals and now happily forgotten.

"His choice as president of the constitutional convention of 1853, when 37 years of age, he rightly esteemed to be the most gratifying incident of his life, replete as it was with evidences of public confidence rarely in a full lifetime accorded to any one man. Constitutional conventions of Massachusetts have always assembled her most learned and most eminent citizens; the cunning politician has found there no fruitful field for his small. ambition, no opportunity for those rewards which are the object of his self-seeking efforts; and so the determination, or modification in form or tenor, of the or anic law of the State has been left to those who have recognized the necessity of preserving its wise restraints, and have not suffered them to be relaxed because of ill-considered or injudicious popular desire.

"In this convention, which has been designated as the ablest body of men that ever met in Massachusetts, there sat, among the many of great learning and scholarship, Richard H. Dana, jr., George S. Hillard, Marcus Morton, father and son, Simon Greenleaf, Rufus Choate, Charles Sumner, Caleb Cushing, and the elder Robert Rantoul. To be given preferment over them, and by their choice, was a signal honor and a gracious recognition of character and ability peculiarly gratifying to this self-taught man, who, in spite of his success, felt the want of that general education which had been denied him. With perfect dignity, with a manner befitting the grave proceedings, he mar-shaled the brilliant and powerful arguments of the ablest and most learned lawyers and laymen of the State in such a manner that each had the fullest and fairest display and consideration, 'The college of the mill wheel' found her graduate sitting as equal among equals with the doctors of law and philosophy, who

wore the gowns of our most ancient university.

"The extension of slavery in the West, the arrogant demand of the slaveholder of the South, open threats of secession, fitful flashes of the fires of war, flamed across the dark clouds of sectional and party controversy, as long before the storm one may note its approach in the heavens. Webster, by force of his overwhelming exposition of constitutional rights and obligations, had reassured the South and restrained the North. Now, the Missouri compromise was repudiated; its provisions spurned and cast aside; the Supreme Court had held it to be a void compact by which neither party was bound. Massachusetts saw the wretched slave seek sanctuary under the shadow of Bunker Hill, only to be dragged from his refuge, and with fetters upon his limbs delivered over to his vengeful and merciless master to be returned to a hopeless captivity. The sentiment of Massa-chusetts could not longer be repressed. Whittier sang to her of the pathos and horror of slavery, and appealed to her mercy, her love of liberty, and her courage. Lowell, with exquisite irony, in prose and verse laid bare the fatal fallacy of the original constitutional evasion of the truth, and the later political subterfuges and compromises which perpetuated a crime which outraged the law of man and God.

"In her inmost heart Massachusetts knew that the Nation itself must perish if the infection which corrupted the very bonds of the Union was not utterly cast out by legislation or by war. Sumner, who had dared to utter the dread truth, was stricken down by the shameful blow of a coward, who had thought that the dawning of the day might be stayed if only

he might stifle the voice that proclaimed its coming.

"Bravely, with a purpose now irrevocable, but without its open avowal, Massachusetts looked forward, anxious, depressed, but without fear, to the inevitable conflict. Emerson had said: 'The fugitive-slave law did much to unglue the eyes of men, and now the Nebraska bill leaves us staring.' forethought she selected her champions, hoping against hope that her battles might be fought to victory in the peaceful halls of legislation, but determined that there or on bloody fields the battle must be fought.

"Champion such as she sought she found in her own son, Nathaniel P. Banks. True to every duty she had cast upon him, she called him to that of graver moment than he had yet ssayed; and, confident, she sent him her Representative to the Thirty-third Congress, there, in the words of one of his later utterances, to maintain that 'for a State inflexibly determined to submit to nothing wrong there is no safer rule of action than

to ask nothing that is not right.

"In such spirit he went forth from Massachusetts to gain that ascendency in the Federal councils that he had won among associates and rivals in his own State. Conflicting sentiments and opinions had wrought utter confusion in party polley; party names had lost influence, even significance; in such a chaos only individual conscience, courage, and capacity could survive. He was elected on a Know-Nothing ticket, but made no pretense of his own sympathy or affiliation with that party; on the contrary, in the campaign of 1855 he presided over the Massachusetts Republican convention.

"In the contest for Speaker in the Thirty-fourth Congress, Banks, of Massachusetts, tried and proved by his first termthe most notable incident of which was his opposition, though elected a Democrat, to the Kansas-Nebraska bill-was offered as a candidate, not by a party caucus, but because of recognized courage without arrogance, and a spirit that demanded and

conceded only what was right.

"Breathless interest attended the election; upon its declaration was to be determined whether antislavery sentiment was to find aggressive expression in Congress, or whether laws dictated by sectional policies were further to enslave the very conscience of the Nation. In the intensity of the excitement, prolonged through months of balloting, and requiring no less than 133 roll calls, Banks never for a moment lost his self-poise, courage, and candor. Frankly and fearlessly answering interrogatories as to his conduct if elected, he answered that no party dictation should control his action; that his duty as he saw it should be his only guide. Of Kansas and Nebraska he declared, with thrilling emphasis, that there must 'be made good to the people of the United States the prohibition for which the Southern States contracted and received a consideration. I am,' he said, for the substantial restoration of the prohibition as it has existed since 1820.'

"New adherents gathered to his support as other candidates failed and fell under the fierce struggle of faction, prejudice, passion, wrath, and fear. At the end the advocates of slavery and their associates, who hated the system but feared secession or war, had united upon Aiken, of South Carolina, known as

the greatest slaveholder of the South. Truly it was an impres sive spectacle. With bated breath the country looked upon this final conflict between Banks on the one side, who had dignified labor by the service of his own hand, had glorified it by the inspiration of intellect and eloquence, and on the other hand Aiken, born to a condition and sentiment that made the sweat and blood of human beings the capital and substance of his

personal and political fortune.

"North and South and West the tidings sped that this man of northern sentiment and of northern courage, the 'iron man of Massachusetts, had been chosen to direct the policies of the people's tribunal in the House of Congress, where the wildest outbursts of resistless enthusiasm were manifest in spite of bitter denunciation, sullen murmurs, even hisses of the mortified and defeated autocrats of the South. But let no American forget to hold in honor and respect the magnanimous conscience of Aiken himself. Victim of a curse to which he had been born, the soul of a patriot broke from the bondage which held him as he rose and stilled the shameful tumult about him by declaring that the will of the people's representatives was supreme, that the election commanded the obedience of all, and that he first demanded the honor and right to lead the chosen ruler of the House to the chair of his rightful authority.

"Under such auspices, under auguries of such reassuring promise—the first real victory of Republican antislavery sentiment-the new Speaker assumed the duties of an office in responsibility and power under our system of congressional government second only to those of the President himself.

"A great victory had been won, and the students of that stormy period of our history unite in the avowal that by no other hand could the standard of the great cause have been borne to its With just and equal recognition of leaders of each policy of public opinion he made appointments to his committee; with that tact which always characterized him he consulted Senator Benton, of Missouri, then in Washington, and advised him that he should appoint Gen. Quitman, of Mississippi, upon the Committee on Military Affairs; to which the rugged old politician, pleased by the confidence of this young man, said of Quitman:

"He is a fire eater; put him on, put him on; but see that he is mighty well guarded.

"The Speaker blandly replied that he had already taken that

necessary precaution.

"As Speaker he presided with such courtesy, dignity, incomparable knowledge of the laws of deliberative assemblies, with such inflexible courage and perfect fairness, that never was a ruling reversed by the House; he ruled not by any 'magic of the gavel,' but by virtue of force and fairness, which commanded respectful assent; and when he resigned his authority to the power that gave it, he departed from among his associates with their universal affection, admiration, and confidence.

"His administration marked the first incident of that momentous period described by Breckinridge of Kentucky, high-souled, generous patriot of the Southland, in his feeling eulogy of Gen.

Banks when in the Capitol at Washington, he said:

Banks when in the Capitol at Washington, he said:

"When Massachusetts stepped to the front, and, as the beginning of the leadership in the tremendous struggle, Nathaniel Prentiss Banks became Speaker of the House of Representatives—practically from 1855 to 1875—the House of Representatives—practically from 1855 to 1875, whether it was for weal or wee, whether it was for weal or wee, whether it was wisely or unwisely done—men differ and historians may dispute—but as a matter of fact Massachusetts led America, and led her with an audacity, an aggressiveness, with a skill and eloquence, with a power and force which have never been surpassed, in all the tide of time, in the leadership of a great people.

"In this supreme apostrophe there is nothing of the exaggeration of rhetoric; it is historically true that Banks, of Massachusetts, had stayed the tide, and that around him there crystallized positive hope of the triumph of the new party of freedom, whose elemental principle of faith was the repression of slavery, if not its extermination.

"The seceders from the convention that had nominated Fill-

"The seceders from the convention that had nominated Fillmore, calling themselves the North Americans, declared Banks their nominee for the Presidency. This he declined, and then they nominated Fremont. An acute and profoundly learned American historian has said:

"Never in our history, and probably never in the history of the world, has a more pure, a more disinterested, a more intelligent body of men banded together for a noble political object than these who now enrolled themselves under the Republican banner.

"From the cloisters of study and college, Felton and Silliman, Emerson, Longfellow, Bryant, Curtis, Irving, and Willis, upon platform and in the market place, exherted their fellow citizens to join the cause of Frémont and freedom. The religious press adjured the people to 'vote as you pray and pray as you vote' in a holy cause. In the fervor of such exalted enthusiasm the Republican Party entered upon its first national campaign. Banks, sagacious leader, perfectly in touch with the popular

sentiment, looking to the ultimate victory, which he knew must now be postponed, récalled from Congress, became a candidate for governor against the invincible Gardner in his last battle for his dead cause. Banks realized that nomination under the Republican name would arouse too many hostilities, excite too much apprehension, alienate too many associates to bring success. In purpose and in ardent faith an antislavery Republican, and fighting for their cause, his nomination carried only the prestige and power of his own popularity and his own national and State renown. His election silenced the last whisper of the Know-Nothing councils, and, in fact, established the Republican Party triumphantly in the State. Again him the hope of the people of the North found realization.

"And now the second epoch of his memorable public service began. Chief executive of the State which was preeminently the leader of the new cause, he had need to be wise in counsel, discreet in conduct, fearless in thought, inflexible of purpose, else the great destiny of the State might be subverted. administration in this troublous time was conducted with a calmness and stability of judgment that proved him a true statesman. He foresaw, and beyond all other men prepared for, that armed rebellion of desperate and wrathful Southern States which finally broke in all its awful terrors upon a nation for

the most part ill prepared to sustain its shock.

"His first inaugural address, in words of prophecy, courage,

and patriotism, declared that-

"The preservation of the Union is among the highest of political duties; the vitality of the Union is in the recognition of the rights of the States; the affirmation of their existence may become the surest means of perpetuating the Union itself. These are privileges that are worth a contest; such, at least, has been the immortal example of immortal men.

"His message announcing the removal of Judge Loring from his office as judge of probate, while it stated a sufficiently sound technical ground, was nevertheless due to popular condemnation of a positive official duty in his rendition, as a Federal magistrate, of the fugitive slave Burns. But Gov. Banks was far from being the mere creature of the popular will; he knew well how to lead it, but he did not fear to oppose it in the discharge of his public duty. In his message he forcibly reminded the legis-lature of the exclusive jurisdiction of the Federal law within its constitutional province, and pointed out the error and evil consequences of futile or unjust State legislation in conflict

with national authority.

"He urged, with unanswerable justice and logic, that the illconsidered proscription of the act of May, 1855, intended to prevent the execution of the fugitive-slave law, should be moditied so that they should recognize the Federal law and yield a necessary obedience to it. The Massachusetts statute providing that any person who shall 'act as counsel or attorney for any claimant of any alleged fugitive from service or labor shall be deemed to have resigned any commission from the Commonwealth that he may possess, and he shall thereafter be incapacitated from appearing as counsel or attorney in the courts of this Commonwealth'—this the governor declared to be 'inconsistent with the dignity, as it is with the professional traditions, of the State, with which, in this connection, the illustrious

names of Adams and Quincy are inseparably associated."
"The statute further provided that any member of the volunteer militia who should in any manner act or aid in the seizure, detention, or rendition of a person claimed as a fugitive from service or labor should be punished as a felon. The obvious conflict of duty thus confronting a Massachusetts soldier was pointed out in emphatic terms of condemnation, the governor declaring that every order issued from this department of the government to the military force of the State must be obeyed.' "He defined the dignity and character of judicial service in a

message rising in sentiment to the lofty judicial ideals of Choate, which had inspired the constitutional convention:

Choate, which had inspired the constitutional convention:

"Fixed compensation for public service is one of the important features which distinguish the republican from despotic forms of government; to no class of public service does it apply with so much force as to judicial officers; the just determination of judicial causes requires the union of rare ability and the highest integrity, great intellectual capacity, and extended and varied mental culture. They are invested with life tenures of office and are expected chiefly to abstain from active participation in business transactions. It is not possible nor expedient to pay the most competent men as much for such service as would be received by them in successful professional life, but they have a right to demand, accepting judicial positions, that such compensation shall be made for their services as will enable them to maintain, with economy, the dignity of their position and the honor of the State. I make this recommendation not so much for the judges as for the people, in order that they may select for their serviants the best men, whether with or without fortune, and who when thus selected and strengthened by experience and study for the discharge of their duties may be able, without injury to themselves, to continue in service and in the enjoyment of official honors with which they have been invested with their own consent and the choice of the people.

"Other subjects with which he dealt in inaugurals and messages were those of the constitutional restrictions upon executive pardon, presenting a commentary which displayed wide legal learning and a masterly discussion of the administration of the criminal law. He considered at great length the restoration of the Lyman Reformatory School and outlined and forecast all the humane and protective features of the probation laws now enacted and in operation with universal He was ardently interested in the advancement of the public schools and of the higher education and gave intimate and constant influence to every such cause, by force of his own enthusiasm procuring a just appropriation from the State that established the Agassiz Museum of Comparative Zoology at Harvard and the creation of a fund to aid the Massachusetts Institute of Technology. He advocated the maintenance of a State training ship, saying, 'There is no surer avenue to individual and national prosperity than that which lies in the direction of an extension of commerce.

"The internal interests of the State were in his constant thought and care, and none escaped his consideration or suggestion, but his ears were not deaf to the angry murmurs, to the challenges that were cast back in anger. He knew too well the temper of the times and the effect almost certain to follow if a Republican President should be elected in succession to Buchanan. With prudence, but without exciting alarm or encouraging a spirit of war, he provided an equipment for the militia unapproached in perfection by that of any other loyal State. As commander in chief he reviewed the greatest muster of the troops of the State then held, near the field of the Concord fight, believing that unconsciously the citizen soldiers would there breathe a spirit of which the State might stand in need again. The first blood shed on that new 19th of April justified both his apprehension and his faith. Andrew, first to sustain the armed authority of the Government, with an energy and patriotism beyond the measure of our praise, sent from Massachusetts troop upon troop of our militia, equipped with every necessary weapon or munition of war; but for the wise forethought of Gov. Banks this efficient body of soldiers had not been the first to give assurance to President Lincoln of that loyalty which was to endure to the end.

"Retiring from the office of governor, he delivered a valedictory address of singular dignity, wisdom, and just comment on the trend of public affairs; something of melancholy apprehension tinged its phrase, but a confidence in his State and the preservation of the Union was manifest in its every sentence. He warned his fellow citizens of the dangers that threatened the Republic, but no fear was in his heart, full of love and veneration for the State he had served so faithfully

and so well. In tender farewell he said:

"To whatever part of the country I may go, I shall stand within the circle of her influence; the enduring monuments of her far-reaching sagacity, her enterprise, and capital will everywhere surround me, to remind me of my origin and her fame and power.

"Retiring from office he assumed important duties with the Illinois Central Railroad, whose franchise rights had been the subject of litigation in that State, where Abraham Lincoln had appeared as counsel for local interests and Robert Rantoul for the corporation, whose son relates that upon his first visit to the White House President Lincoln recalled, with respect and admiration, his first acquaintance with a Massachusetts lawyer.

"Last of all men would Gov. Banks have permitted private interest, or opportunity for pecuniary benefit now open to him, to withhold his offering a patriot's life to his country's cause. The flag of Sumter had been hauled down by its defenders with the ominous beat of war drums, that was never to cease until that flag rose again, triumphant emblem of a reunited Nation.

"Almost with the first call to arms there came from the hand of the President a commission as major general of Volunteers. It is certain that Gov. Banks, realizing his want of military training or experience would have declined the tendered honor, but the President insisted, for he well knew that no name in Massachusetts would rally so many of her citizens to her battle flags. Whatever were the misfortunes or successes that attended Gen. Banks, there was no hour so dark, no discouragement so overwhelming, that his stirring voice and unfaltering courage failed to arouse a new hope, or to restore shaken confidence. On battle field, as in forum, his inspiring voice reanimated the broken ranks, urged forward the charge, and none were laggards where he led.

"His first command was upon the upper Potomac and in the Shenandoah Valley, fated to be the debatable ground of the war, swept by the varying fortunes of battle, desolated by fire and sword.

"In 1862 he held command of the Fifth Corps of the Army of Virginia, where he met the swift and sudden attack of Jacksonmost resourceful, most audacious of captains-and here he sustained the shock of unequal battle at Cedar Mountain. Later he was assigned to the command of the Second Army Corps and in charge of the defenses of Washington, and in these anxious days the glamor of his name availed more to restore popular confidence in the North than parks of artillery or regiments The President himself, sorely tried by anxieties, the like of which no man ever bore, sought constant conference with this man of Massachusetts, and the midnight hours were witness of the trust and reliance of Lincoln, whose judgment of men never erred.

"He was sent with the expedition to New Orleans, relieving Gen. Butler. In April, 1863, his army invested Port Hudson, memorable scene of determined defense, its plains and heights hallowed by the blood of bravest men, made glorious by gallantry unsurpassed in the dread recitals of war. Vicksburg yfelded to inexorable and relentless siege and assault. The surrender of Port Hudson followed, and the soldiers of Gen. Banks, as victors, first saw the waves of the 'Father of Waters flow unvexed to the sea.' The President, in a personal letter,

"The final stroke in opening the Mississippi never should and never will be forgotten.

"The calamitous Red River expedition was undertaken without Gen. Banks's approval. As a soldier, unwavering, he obeyed the orders he received; without fear or hesitation, he marched to what he himself deemed inevitable defeat. Grant, in his final authoritative analysis of the war, has said:

"It is but just to Banks, however, to say that his expedition was ordered from Washington, and he was in no way responsible, except for the conduct of it. I make no criticism on this point. He opposed

"Upon his return from this ill-starred campaign he continued in command of the Department of the Guif. Armed rebellion in Louisiana had been overthrown; scarce a desultory shot of skulking guerrilla could be heard within its borders, but grave problems confronted him in the inextricable difficulties, almost impossibilities, of the restoration of a State government within the Union; a confusion of civil and military authority without parallel in history, conditions without precedent of constitutional guidance, were about him. No human sagacity could then have evolved a plan that would insure representation of true public sentiment, or could at that time have established and secured a just civil government. At last he sought release from duties that calmer judgment and time alone could discharge.

He returned to his own Commonwealth, which, in triumph and in misfortune, had followed and sustained him with a confidence and love that never abated. At times when his people were in doubt, verging upon despair, his return to Massachusetts had been welcomed by eager thousands of his fellow citizens. His voice lifted up the faint-hearted, the multitudes who assembled to hear of repulse sustained, of hope long deferred, went from his presence with tumultuous cheers, confident of ultimate victory, howsoever long it might be stayed

in its coming.

"Again at home, the repose of private life was not to be his. Doubtless he would not then have wished it. He was presented as candidate for Congress, and, without serious opposition, reelected until 1877, excepting the canvass of 1872, when even his loyal and admiring constituency faltered and would not follow in his support of Greeley's dangerous and mischievous opposition to Grant.

"Again, in 1888, he was elected against Col. Higginson, under conditions of very great and peculiar political interest. With

came to its close.
"During these later periods he was constantly recognized as one of the Members of greatest distinction. From the galleries his figure was among the first to be sought out; were he to speak, again the throngs that knew the spell of his eloquence crowded chamber and corridor and hung breathless upon his

words. In debate he yielded place to no man.

"He lived and acted in the mighty onrush of events that had threatened to sweep a nation to its destruction, but instead had borne it upward to an inviolable Union, an impregnable security and power; in the times when the bonds of common patriotism were reuniting, he strove earnestly with thought and effort to establish that perfect concord of heart, faith, and hope, closer than constitution or treaty can bind or compel, wrought out by an awful trial, that had taught once warring brothers that the conscience, virtue, and valor, that had animated them all were the very essence of their kinship.

"As chairman of the Committee on Foreign Affairs he advocated the extension of our territory into the icy waters of the Pacific, where the vast immeasurable resources of Alaska have become tributary to the wealth of our people. He reported from his committee that aggressively American bill which declared the right of every citizen to renounce all foreign allegiance, and, in case of its denial, authorized the President to suspend commercial relations with and to arrest and detain any citizen of such Government in reprisal.

"His energies, his talent, and his service had been given to his country; without fortune of his own he accepted, not without consideration of the livelihood it afforded, the honorable and responsible office of United States marshal, willingly and gratefully conferred upon him by Presidents Hayes and Arthur.

"He was elected to the Massachusetts Senate of 1874, and there ardently supported the repeal of the vote of censure upon Sumner for his just and magnanimous resolution that led to the restoration of the captured Confederate battle flags, which had declared that 'national unity and good will among fellow citizens can be assured only through oblivion of past differences'; and Massachusetts in contrition renounced an act as unjust to her illustrious son as it was unworthy of her better impulses and repugnant to her generous fame.

Thus the last sentiment of his public life was that of its beginning—the maintenance of a great Nation of freemen, bound together by a common love of country and justice, without taint of bitter memory, without thought of enmity or distrust.

"His advancing years were blessed by the universal affection and respect of his people; his loved presence was the pride and joy of his townsmen; their regard was reflected in reverent devotion of little children. His footsteps, when they grew enfeebled, were guided with tenderest attention to his home, which was in the hearts of the people of the place of his birth-the sanctuary of his perfect and constant happiness

"His power to sway the minds of men, to lead them wheresoever his voice might call, was almost without example in New England, and might have raised him to dizziest heights of personal ambition and aggrandizement; but he sought no renown, he craved no reward, save that which might be part of the fame and glory of his State and Nation, and there his memory is secure, immortal in the lofty ideals which Massachusetts has conceived, and to which her future days are committed.

"Lowell has told us that-

"The hero, the wise man, the artist, all build their own monuments, broad based as continents, lasting as love and reverence. Columbus has a hemisphere for commemoration. The obedient planets write forever in the sky the epitaphs of Copernicus and Newton.

"As our flag shall lift on the winds that proudly bear it, its stars shall flash from sea to sea through the still watches of the night, and each returning day shall forever renew the lustrous memory of its defenders."

Child Labor.

EXTENSION OF REMARKS

HON. WILLIAM H. CARTER, OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES, Wednesday, January 26, 1916.

Mr. CARTER of Massachusetts. Mr. Speaker, I am heartily in favor of the Keating-Owen child-labor law. As a Representative from the State of Massachusetts it is very easy for me to understand this measure, as we have child-labor laws in Massachusetts prohibiting child labor in factories, and it is to our best interests to prohibit child labor in States which compete against us.

I think that this bill is for the best interests of this Nation. The question is whether we want to make a strong race of men and women in this country. We can not change nature. The place for the young child is in the school and after school it should be out doors, getting as much of God's pure air and sun-shine as possible. If we want to make this a race of strong men and women we must protect our children, and it is our duty here in Congress to protect them from those men whose only interest is to pile up dollars as the result of their work.

I shall never vote against the poor laboring people of this country. I believe that it is my duty as a Congressman to vote to give every boy and girl in this country a chance to make

I maintain that no young boy or girl should be allowed to work in the mines or factories of this country. The children can not protect themselves, and it is the duty of the lawmakers of this Government to make it impossible for the children to work in such places.

The very future of the Nation depends upon the children to-day. It depends upon the health and education of these

children.

What do statistics show regarding the health of these small children who are compelled to work in the mills? They show that, as the result of having to work long hours where the air is impure, their health becomes greatly impared, and thousands of them are subjected to that greatest disease in this country to-day, tuberculosis.

I believe that there are three great motives which inspire the abolition of child labor. They are, first, the economic; second, the educational; and third, the patriotic.

The economic result of the abolition of child labor will be the raising of the wages of the adult. It is the competition of the little child that drags down the wage standard of the adult. The abolition of child labor will mean the enhancement of the standard of living for the working classes, without in the least necessarily implying an increase in the cost of pro-

Secondly, there is the educational motive. With the abolition of child labor our schools will become what they are not yet, true instrumentalities of vocational training, with a view

to promoting genuine efficiency for the business of life.

Thirdly, the patriotic motive. The abolition of child labor will mean the building up of a citizenship more competent to deal with the great problems that still await the American people, and to solve them in the interest of a new and brighter

The percentage of illiteracy in States where child-labor laws are very lax is very much higher than in States where child-

labor laws are enforced.

In Massachusetts there is seven-tenths of 1 per cent of nativeborn white illiterate people. In North Carolina (native-born white) there is 12.3 per cent illiterate. In South Carolina (native-born white) there is 10.3 per cent illiterate.

The reason why so many of the Congressmen's constituents in

these States want child labor is because they have children working in the mill supporting them in idleness.

If those men could not have their children to work in the mill they themselves would be forced to work to maintain their families, and that is the reason why the gentlemen from those two States are so anxious that we should not pass laws governing the product of child labor.

The South does not gain anything for herself by requiring children to work in the mills. Had these Southern States made proper child-labor laws and lived up to them it would not have been necessary to have a national child-labor law. But so long as these States neglected to do their duty toward their children

it becomes necessary for this body to act.

It seems to me that the southern people have been trying to live on cheap labor ever since the existence of their States. Yet the conditions in the South are such that they need to spend far less money for necessaries of life than any other part of the United States, because of climatic conditions.

I believe that when this child-labor bill becomes a law the

South will grow much faster than she has in the past.

The gentleman from North Carolina explained very carefully what an easy time the children have working in the mills. want to say that he certainly does not know what he is talking about, for I, personally, have worked in the mills from a boy and know the hardships and what it means to those children to work in a mill, and I also know that the men in this Congress are not working one-tenth as hard as the children have to work for the small amount of pay which they receive.

Homesteading Public Lands.

EXTENSION OF REMARKS

HON. WILLIAM H. MURRAY. OF OKLAHOMA,

> IN THE HOUSE OF REPRESENTATIVES, Monday, January 17, 1916.

Mr. MURRAY. Mr. Speaker, an English statesman once said that the ultimate purpose of every law in the British realm had for its object getting 12 honest men in the jury box. In my

opinion the ultimate object of every law, both State and National, should be the building and the protection of American homes by the American citizen. I am, therefore, in favor of this bill, which has for its object the homesteading of all the remaining public domain of the United States in tracts of 640 acres each. True, most of this land is not first-class agricultural land, but 't is nearly all good grazing land, and in a section of nearly any of it a farmer can find a sufficient amount of tillable land out of which to make a farm, and using the remainder for stock will enable him to make a homestead, whereas he could not make a homestead out of 160 acres. There are in the United States an aggregate of 330,000,000 acres of public domain not yet homestead out. of public domain not yet homesteaded.

The States having a large amount are Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, North Dakota, South Dakota, Utah, Washington, Wyoming, and Oregon.

The States having a small amount are Alabama, Arkansas, Florida, Kansas, Louisiana, Michigan, Minnesota, Mississippi, Missouri, Wisconsin, and Oklahoma.

Oklahoma has 42,177 acres.

This would make nearly 570,000 homesteads of 640 acres each,

while in Alaska there are 370,000,000 acres, which would make some 579,000 homesteads more. The latest census shows the total number of tenant farmers in the United States to be 2,354,676. Hence this breaking up of the big pastures and permitting them to be homesteaded in 640-acre blocks would provide homes for practically one-fourth of the tenants of the United states. Of this number of tenants there are a total of 104,137 in the State of Oklahoma, and an analysis of the fourth congressional district, which I have the honor to represent, shows a total of 18,227, by counties as follows: Coal, 922; Creek, 1,525; Hughes, 2,422; Johnston, 1,638; Lincoln, 2,642; Okfuskee, 2,071; Pontotoc, 2,137; Pottawatomie, 2,494; Seminole, 2,376.

I am therefore heartily in favor of breaking up these ranches and making it possible for as many men as so desire to go upon these public lands and make of them a home. No better piece of legislation could be enacted by this Congress than arranging for the remaining public domain to be homesteaded by the tenant farmers of the country. I shall therefore vote "aye" upon this bill, and then I shall hope that this Congress will provide for a system of rural credits whereby the remaining tenant farmers may be enabled to get cheap money on long-time loans

in order to buy homes

The home is the unit of the State. In all ages, in every government, whenever the citizen loses the family as the unit of State its civilization is over. The happiness of the citizen more often depends upon these things than upon the form of the government.

Child Labor.

EXTENSION OF REMARKS

HON. EDWIN D. RICKETTS, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 27, 1916.

Mr. RICKETTS. Mr. Speaker and gentlemen of the House,

am in favor of this bill.

The time has come in our civilization when the children of this Nation must be given the opportunity to take advantage of educational facilities. To permit great combinations of capital to utilize the services and labor of girls and boys under 14 and 16 years of age, respectively, without regard to their educa-tional rights, or without regard to the development of their mental faculties, is a gross injustice to the citizenship of our Nation.

Besides, child labor and pauper labor are practically put on a parity, and capital and combinations of capital are able to reap a great harvest of large profits from the slave toil of children. I am one American who is against slavery in any form; and, to me, child labor is, in the manner in which it is being used, in the different classes of the great manufacturing industries and establishments, a form of slavery. It is really worse than the slavery of the South, for so many years a national disgrace. In those days it was believed that capital should own labor, and the colored people of the South were driven about by force and required to perform such labor as their masters might require, without regard to price, physical and mental protection, or sanitary conditions; and, to my mind, Mr. Speaker, the present system of child labor in the South at the present time is nothing more nor less than a substitute for the original slav-

cry in that section of the country.

It is true that it is being maintained now under the guise of a contract, and under the further guise of just compensation, for the services rendered; but, in truth and in fact, the compensation is only nominal, and does not measure up to the value of the services rendered. Besides, the sanitary conditions of the various places in which the children are required to work are conducive to contagion, and have a tendency, in many instances, to blight the young lives of the children who are thus employed.

We are living in a progressive age, an age when educational facilities and advantages are everywhere prevalent, and it is the policy of the intelligent people of this Nation to educate the children and give them every opportunity to acquire knowledge.

In my State-Ohio-the boys and girls are required to attend school until they become 16 years of age; and the law prohibits or forbids any person, agent, corporation, or firm from employing children under this age, unless such child has a certificate of having taken all the branches up to and including a certain

For many years past, to my very deep regret, capital has em-ployed child labor in this Nation, and, in many instances, boys and girls have been abused. Their health has been ruined; their morals have been corrupted and their brains dwarfed; and this sort of treatment has gone on so long that child labor has become a national evil and a blot upon the fair name of our Republic. This evil should be stamped out by proper legislation. That is one reason why I am in favor of this legislation and shall vote for this bill.

Where the child is wronged, the Nation is wronged and the Nation's industries are tainted with the shocking and horrifying facts that cast a stigma on the fair name of this Nation, and, for the sake of a paltry gain to-day, the children are denied the right to-morrow to have their ranks filled by those who have been given a reasonable opportunity to fit themselves for the

bitter struggle of industrial life.

The true facts of the situation and the cruel inconsistencies with which as a Nation we are confronted can not be more intelligently summarized than in a sentence or two from a statement made by one of the most distinguished women of the country, a pioneer in the fight for the protection of children and the daughter of a Congressman from the State of Pennsylvania, whose services are still remembered. This statement was made by Mrs. Florence Kelly, and I quote her in part:

was made by Mrs. Florence Kelly, and I quote her in part:

It is over 30 years since I enlisted in the effort to get better legislation for the protection of the children. I believe there are more children under 16 years oll working to-day in dangerous occupations than there were when I began, because our manufacturing industries have increased stupendously and our State legislation has halted. There has been no unity in our progress. The 48 States suggest the legs of a centipede, some going forward and some paralyzed, the total progress lamentably slow. This Republic is one, and we can not go on forever with a favored class of children in the Northwestern States, where there is a requirement that the children shall not work until they are 15 years of age, and are kept in school throughout the eighth grade, while in some cotton-manufacturing States there is no compulsory education, and either entire lack of legislation by the State or a collection of nugatory laws. South Carolina at one time restricted the work of children to 10 hours a day, but afterwards decided that life was too casy for them and prolonged the hours to 66 hours a week and permitted 11 hours a day for young children.

It has been said on the floor of this House by a gentleman

It has been said on the floor of this House by a gentleman from Georgia, who has the honor of representing a district in his State, that children 11 years old, both white and black, are being worked 13 hours per day in the cotton and knitting factories of North Carolina; that in some instances white children going to work pass colored children going to school; that the conditions surrounding the children who are thus required to toil day after day are anything but favorable. And in this State of North Carolina there is no such a thing as factory

The question of whether or not the factory is sanitary, of whether or not the children have a decent place in which to work, or whether or not the work they are required to do is injurious to them in a physical or mental way, or whether or not it has a tendency to demoralize and degrade them is left to the conscience of the employer, who somehow seems to be cold and indifferent to the interest of the children, and gives his best intellect to the progress of his business and the profits to be obtained from the prosecution thereof.

This sort of thing has gone on until the whole Nation is aroused, and to-day this is no longer a State, but a national,

problem.

I am the friend of men, women, and children who are required to toil and whose rights, in many instances, are trampled upon by heartless capital. The greed of capital, in many instances, is so great as to foist upon labor almost unbearable oppression.

The Farmers' Educational Cooperative Union, representing all the States of the South, in national convention assembled, unanimously adopted the following resolution:

Whereas the National Farmers' Union believes in properly protecting the physical, mental, and moral welfare of the children, in order that their younger years may be devoted to the securing of that degree of education which belits American citizens and enables the child to be properly prepared for life and its duties:

Resolved, That we indorse this bill and demand its passage by the present Congress, and that copies of this resolution be sent to the Clerks of the House and Senate, the chairman of the Committee on abor, and to the President of the United States.

Unanimously adopted and recommended by the committee on resolutions and unanimously adopted by the Farmers' National Congress at Fort Worth Convention on September 2, 1914.

The American Federation of Labor is another organization which has indorsed this measure, and the organizations favor-ing it contain a great number of State child-labor committees, women's clubs, and humane organizations of all kinds.

Now, who are opposing this legislation on the floor of this House? It is the Representatives from North and South Carolina, from Alabama, Mississippi, and Louisiana, and some parts of Georgia. The people of these States somehow can not get away from the old theory of slavery, and the truth is that since slavery was stamped out by the proclamation of Abraham Lincoln and the adoption of subsequent amendments to the Constitution the people of the South, being inclined to follow out some sort of slavery, have drifted into the iniquitous habit of sapping the vitality from the lives of its boys and girls under 16 years of age by forcing them to work long and hard in their cotton and knitting factories in these States. They have lost sight of the fact that these same boys and girls are to be the citizens of the future of these States and that they will have to assume the duties and responsibilities resting and devolving upon them as citizens which, of necessity, means that the business interests will not be protected and the standard of citizenship will be lowered and educational advantages discouraged until, finally, by this sort of procedure they will have reinstated a form of slavery in the South, far more serious to the Nation as a whole than the old-time black slavery.

Why not protect these young boys and girls who have been and are to be the subjects of inhuman treatment? I feel that this House will pass this bill by a very large majority, and I reach that conclusion from the fact that all the northern Republicans and Democrats, with very few exceptions, as well as many of the splendid Democrats representing Southern States, have openly declared upon the floor of this House that they favor such a law as this and that they will vote for this bill, and I am glad to know that the American people have awakened to the fact that this national evil should be stamped out now and for all

time to come.

The European War and Industrial Democracy.

EXTENSION OF REMARKS

HON. WILLIAM S. HOWARD,

OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 27, 1916.

Mr. HOWARD. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a speech delivered by Hon. Joseph E. Davies, chairman of the Federal Trade Commission, before the American Manufacturers Export Association, in New York City, on the European war and industrial democracy.

The speech is as follows:

THE EUROPEAN WAR AND INDUSTRIAL DEMOCRACY.

[Address of Joseph E. Davies, chairman Federal Trade Commission, before the American Manufacturers Export Association, New York City, Dec. 21, 1915.]

Gentlemen, the economic map of the world is being remade. The nations are to-day studying it keenly. This is so, whether it be in Australia, South Africa, Central America, the Orient, or in the warring countries themselves. The best thought of or in the warring countries themselves. The best thought of the world is seeking to forecast conditions and to so readjust affairs as to procure the greatest possible national advantage in future development. The industrial, commercial, and finan-cial intercourse of the world is in the process of being recast. The next few years contain possibilities of as fur-reaching and enduring consequence to our industry, commerce, and finance as perhaps any years in the history of our country.

POSSIBILITIES OF INDUSTRIAL AMERICA.

What are we doing under these circumstances? To be sure, in the immediate shock of change our business community met conditions with splendid adaptability. Yankee ingenuity and American enterprise display its genius to no greater advantage than in remaking its industry to conform to the changing conditions of the last 14 months.

But that is not enough. How are we building? What are we going to do with this vast volume of gold coin, constituting ene-fourth of-the total of the world's supply, which is pouring into this country and bringing with it unprecedented expansion and prosperity? Shall it be dissipated by an era of wild speculation that will bring inevitable reaction, or shall it be utilized for the broad and extensive building of a firm structure which the constructive vision, sagacity, and daring of American industry can translate into enduring benefit for the American people?

What of foreign trade? Are we to be content with immediate and large profits? Or shall we recognize a great opportunity through which we may establish the character, quality, and value of American goods, and thereby establish a firm grip upon international markets, in anticipation of the keen competition that is to come, so that thereby a body of substantial foreign trade may be developed which shall serve as a backlog and as a stabilizer of American industrial conditions for the long and great future?

AMERICAN STATECRAFT REQUIRED.

The character of your membership, and the fact that there exist organizations of this kind; the extension of banking facilities in South America, with splendid vision, and without regard to immediate profit; the projection of an American investment corporation to engage in the financing of projects in neutral countries that have been crippled by war conditions; these and other facts which might be named are indications that in the present situation there is a commercial and financial statecraft in this country to-day that is the equal of our best traditions, and that gives promise of enduring advantage for our people.

THE GOVERNMENT AND ITS FUNCTIONS.

But men engaging in business enterprise may well reverse the shield, and ask, "What has government done, and what is it doing in this situation to perform its functions of serving the people of the United States?" The manner in which the forces of the Federal Government were marshaled to avert the economic and financial catastrophe in the first fateful weeks of the war is now history. The millions in gold from the Federal Treasury which came to the support of the tottering financial structure, not only of this Nation but of the world, were dispatched to the financial centers with a speed and a promptitude that was regarded as physically impossible. Executive order, legislative authorization, and Executive action were projected into the situation with promptness and wisdom that will stand out as worthy of the finest achievements of American capacity to meet emergency.

Since that time and through the long period of 14 months of

Since that time and through the long period of 14 months of delicate and hazardous international relations the big, substantial fact remains that this country has been kept out of war and has been held upon the paths of peace. That is the signal service that your President of the United States has rendered in this situation, not only to the Nation but also to humanity.

In lesser degree every agency of the Federal Government has been bending its efforts to the aiding and sustaining of American interests in this war crisis. Of these various activities I can not speak with definiteness, except as to those of the Federal Trade Commission affecting our foreign and our domestic industry under those conditions.

With foreign trade we have come into contact through the provisions of the organic act creating the commission.

Being charged by Congress with the obligation of ascertaining and reporting from time to time as to competitive conditions that exist in foreign countries of the world which affect adversely the interests of American industry, the Federal Trade Commission concluded that the present was a time than which there could be none more opportune or valuable for the exercise of that power. Information has been gathered from all published sources as to the existence of foreign combinations of an international character that existed prior to this war, and which were operating in the markets of the world; investigators have procured first-hand information as to conditions in foreign markets; hearings have been held in the principal centers of foreign trade in this country to obtain first-hand information from the business men engaged in foreign commercial enterprises; 30,000

letters have been sent out to business men containing searching questionaires upon the facts connected with foreign trade upon this subject. One of the most significant facts in this connection lies in this: That within the last six weeks we have received 20,000 replies out of those 30,000 requests to the business men of this country. From them we have received with promptness and generosity a vast volume of fact and detailed information, to be addressed to the solution of this problem of what steps, if any, are necessary that American manufacturers and merchants shall stand on an equality with their rivals in international competi-Time we have regarded as the essence in this situation. Within the next few weeks we hope to have assembled and digested a record of facts and opinions gathered from business sources, from publicists, from economists, and from first-hand knowledge of conditions in foreign countries, which will afford a substantial basis of accurate information for such legislative action as Congress may deem necessary and wise.

CUSTOMS REGULATIONS IN PAN AMERICA.

somewhat similar investigation arose out of conditions which exist as between the United States and Pan American countries, which operate to artificially and unreasonably restrict the commercial relations between the countries of this continent. It is generally known to those conversant with conditions that customs tariff regulations and tariffs of these countries operate as hardships upon America, where no reason obtains for their existence, as the conditions which they were designed to meet have long since passed away, and which, indeed, now serve to defeat the purposes for which they were imposed. Invoices and harbor regulations that are vexatious and useless and other conditions have been permitted to obtain largely through inertia. Only an intelligent appreciation of their significance is required to bring about advantageous change. time is peculiarly opportune for their consideration. The countries of South and Central America are studying conditions and are on the verge of simultaneously making changes in their legislation and their regulations, and not again in a decade will come so favorable an opportunity to bring about desired changes. Upon the request of the President of the United States and the Secretary of the Treasury, the Federal Trade Commission is making an intensive, scientific study of these conditions. Investigators are now in South America gathering information of this kind, not only for the benefit of the United States but for the benefit and advantage of all the countries involved. A report upon these conditions we hope will be ready and available for the meeting of the International Joint High Commission which will be held in Buenos Aires in April next, and which will address itself to these matters. It is designed to be an impartial, reasonably complete, and accurate statement of conditions which ought to be changed and remedied for the mutual advantage of all the countries and peoples concerned.

DUMPING.

The possibilities of dumping by foreign manufacturers of their product subsequent to the war, to the detriment and disadvantage of American industry, has also been an object of investigation and study in conjunction with the Secretary of Commerce. The Federal Trade Commission, with the Secretary of Commerce, will be prepared to make recommendations to Congress as to the methods by which any such anticipated situation may be best prevented.

These, in a general way, are the functions which the Federal Trade Commission has been seeking to perform in the interest of American industries in the foreign field.

What have been the activities and the benefit of the commission as to domestic industry you may well inquire.

SURVEY OF INDUSTRIES.

The Federal Trade Commission has been in existence nine months. During that time the energies of the commission have been largely devoted to a survey of the industries of the country. The sound basis for action comes only from an accurate and thorough appreciation of conditions. The processes of industry, the constituent parts thereof, and the interrelations that exist between different kinds and classes of industrial activities are matters of intricate and extensive importance. Information of this kind had been compiled and is now available.

During that time the commission has come into personal contact with practically two-thirds of the industries of the country, measured in value of investment, not only to know the men engaged in the businesses, respectively, but to see first hand some of the problems that confront them. There is at hand, and will be immediately available for the commission on preparedness—which, it is reported, the President of the United States is considering the appointment of for the consideration of the mobilization of the industrial resources of this country—a record not only of the industries available, but their respective capacities,

actual and potential, the degree of their integration, physical and financial. This is the first survey of these factors assembled

through governmental agency.

The investigations of specific subjects, formerly conducted by the Bureau of Corporations, has been continued. Under the directorship of Vice Chairman Hurley the facilities of the accounting branch of the organization have been extended to such businesses as desire assistance in matters of cost accounting and efficiency methods in manufacture or commerce. This costaccounting service has not been imposed upon anyone, but exists for those who might wish to avail themselves of it. It has been met with great favor by all classes of business.

UNFAIR METHODS OF COMPETITION.

The principal function for which the Federal Trade Commission was created was undoubtedly to prevent practices of unfair competition in industry. The object was to destroy monopoly in the seed, and to protect the great majority of business units in industry, whose chief menace comes from practices of unfair competition which might be employed by not a more efficient but by a more powerful rival. Complaints covering many varieties of unfair methods have been filed with the commission, such as false advertising, bogus independents, price discrimination, bribery of employees, boycotts, misbranding of goods, rebates, and the like. These complaints have come from all classes of industry, covering the fields of mining, agri-culture, manufacture, and distribution. Of these complaints and their disposition the public has not heard much. This is so because of two conditions which the Federal Trade Commission has imposed upon its procedure for the public interest. No in-formation is given out or is obtainable upon any application for a complaint which is made to the Federal Trade Commission until the case has been investigated and until it has been determined that a formal complaint is to be served by the commission against the parties complained of. The reasons for this are, first, to protect those who in good faith make the complaint from reprisals by those against whom the charges are made; and, second, to protect legitimate business from the injury which the publication of malicious or improper applications or complaints might subject them to. The other policy which has been adopted is that of advising the party complained against of the nature and character of the charges made before formal complaint is made and filed by the commission, to the end that either the party complained of may establish the lack of public interest, or be given an opportunity, if the situation is clear, to agree that neither as to the complainant nor as to the general public will there be a continuance of such illegal practice. These policies tend to obscure the amount of work done by the commission so far as the publicity of its work is concerned; but it has been felt that a larger service was being performed by the proper protection of legitimate interests of business and by the speedy accomplishment of the relief to the general public and to the parties complained of.

The Federal Trade Commission was created out of a desire to bring into the relations between Government and business and society a constructive agency. It was designed by those who created it not as a punitive but as a corrective force. It was hoped that it would serve to bring about a more simple, direct, and informal agency for adjustment of matters than would be afforded through a strictly judicial or a strictly administrative agency. The fact that there may be comparatively few complaints brought by this body is therefore not an indication that relief is not being accorded; but may be in fact an indication that the effectiveness of this agency is being demonstrated along the lines contemplated by those who sought its enactment. A few illustrations of the manner in which this

operates will illustrate the situation.

A corporation engaged in the business of selling typewriters circulated among dealers in many cities a letter falsely stating that a competitor had moved its factory from Chicago, and that the customers of such factory would be compelled to make new arrangements for obtaining typewriters, which need the advertising corporation was prepared to fill. A letter directed to the corporation complained of resulted in a retraction, and in the circulation of such retraction extensively, and the applicant for a complaint thereupon requested the dismissal of the matter.

In still another case, a corporation engaged in the manufacture of an article published advertisements in which were statements disparaging the goods of a competitor in an im-The practice was called to the attention of the proper way. commission, with the result that it was immediately discon-

tinued.

Recently complaint was made by one of the large so-called independents against an alleged price-discrimination practice indulged in by a larger competitive rival. Upon complaint be-

ing made by the commission with the larger competitor, the assurance was voluntarily given that the practice would be discontinued not only as to the party complaining but also as a general practice, and as to all persons in the trade. Thus it happens that the relief which the commission could give, to wit, the procurement of the stopping of the practice, is secured with immediate relief to those injured, instead of going through a long process of litigation and procedure that might involve months or possibly years for its final determination.

It is contemplated that, by the publication of a ruling upon each case as it is disposed of, ultimately a body of cases will be built up which will operate as a code of what establishes fairness and unfairness in trade to the benefit of industry in this situation where formal complaints do not come to trial.

The powers of the Federal Trade Commission are limited by the law of its creation. They are not as extensive as many proponents might have desired; but its responsibilities are greater than its power. To the extent that in its power lay, it is bent and animated by a desire and purpose to aid in every possible manner that is consistent with democratic institutions, in the development of the power and greatness of this Nation as an industrial, commercial, and financial Nation in the world.

It is one of the agencies of government that must seek, in small part, to aid in the solution of the great problem of the future.

EFFICIENCY IN INDUSTRIAL COMPETITION.

While the significance of Germany's efficiency may perhaps have been exaggerated, nevertheless it is true that an industrial as well as a military organization has been quietly developed in Europe that has eclipsed anything of the kind that we have Economies have been induced in production; scientific methods effected in marketing and distribution; exploitation through combinations of an international character have been developed and are the complement of a military machine that has commanded the admiration of the world. Within the months last past these facts have not been apparent to us alone. England, France, and Italy have, under the pressure of overpowering necessity, endeavored to specialize industry for greater economy and effectiveness, and to a degree that it is difficult for us to understand. These influences will obtain after peace has come. To speculate as to the future conditions following the war is idle. But it is still greater folly to assume that in the long future these lessons derived from these conditions will not be translated with military effectiveness and discipline into efficiencies and economies of production and distribution, when the energies pent up in the struggle shall be released for industrial The reorganization of industry, when finally established in Europe, will in all probability be invested with a degree of efficiency that will command the respect of all rivals in international competition in the markets of the world. The stimulus of necessity will speed these processes with the resumption of peace, for international bills will have to be paid through reversing balances of trade, if that be possible, people will have to be employed, and every effort will be made by governments involved to sustain themselves from destruction.

When these conditions will obtain in international industry, it will require all of our vision and discipline, enterprise and conservatism, sagacity and daring, to meet them. It will require that our industries shall be integrated and stabilized so that not only will the economies of sustained production be available but it will require that the social well-being of the workers shall also be sustained upon a proper level to the same end. It will require a large-minded intelligence and vision in the division of the fruits of industry between capital and labor. Socialized autocracy did this before this epochal war in a manner that challenged the admiration of the world. It is our task to demonstrate that representative democracy can be equally efficient and serviceable. For a monarchy this task is relatively simple; the task for democracy is far more difficult, for in democracy we cleave to certain essential, fundamental principles as the covenant of our faith, whereas in autocracy there are no such principles that impede translation of theory into effect. We believe in democracy in America. We believe that it is our first mission in civilization to preserve and sustain it and demonstrate it as the enduring form of government for benefit of mankind. It is the very essence of our aspiration and the spirit of democracy that there shall be fair opportunity for all, not only in political rights but in the exercise of industrial and commercial vocations. Autocracy and monopoly are not abhorrent; they are the same thing—one in political life, the other in industry. Democracy and monopoly are incompatible, because monopoly consists of a denial of the principle of liberty in a sphere of action that touches most intimately and vitally the life of the people. But this does not mean that we should set our face against the advance of progress in in-

dustry. The economies of large-scale production to the extent that they exist, the advantages of integration of industry, the sustaining force of stabilization in industry, the prevention of feast and famine, the prevention of cutthroat competition, can all be encompassed in a democratic State without yielding to monopoly in principle or in effect. The problem of democracy is to conserve the efficiencies of industry to the highest degree that is compatible with the fundamental conception of liberty and freedom in industry. The problem of government is not only not to thwart efficiencies but to stimulate them, to aid them, to develop them to the highest degree that is compatible with the general welfare. That is the problem for democracy; that is the great challenge that comes in the history of civilization to this great Republic, with renewed insistence, out of this

It requires that we shall coordinate and marshal all of the best forces that are in our industrial, business, and political life for its solution. The critical function is easy; the con-

structive function is hard.

We seek to build up and not to destroy. We desire to aid

and not to harass.

To preserve for the benefit of posterity the real essence of liberty and freedom in opportunity, which America has always prided herself in, is the fundamental source of our effort in democracy.

Good Roads.

EXTENSION OF REMARKS

HON. EDWIN D. RICKETTS. OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 25, 1916.

Mr. RICKETTS. Mr. Speaker, I move to strike out the last word. I have listened very attentively to the able arguments both for this bill and against it, and I am quite certain that but yery little could be added to what has already been so very well said. However, I am anxious to express my intention to support this bill. It is not as entirely satisfactory to me as it might be, but with the amendment offered yesterday by the gentleman from Missouri [Mr. Shackleford], and the adoption thereof, I am better satisfied with the bill.

The public highways of this Nation generally have been neglected for a great many years. This Government seemed to turn its attention directly to the construction of railroads and the enlargement of the railroad facilities and systems throughout the country, overlooking the very important fact that it was almost, if not quite, as essential to build, construct, and maintain its highways in a like manner throughout the country.

In my own State, Ohio, the people for the last few years have taken a great interest in the construction of roads. In the last year my State has appropriated \$1,550,000, approximately, for building roads and for repairing roads. Under our law the State and counties cooperate in the construction of county and intercounty roads. We have a highway commissioner, who superintends the construction of highways and public roads.

Now, a great many objections have been offered to this bill, but in the main I think the bill is all right. I am anxious that the Federal Government aid the States in building and constructing highways. It is true that the Representatives from the great cities of the country are not in favor of this bill. This fact is through a misapprehension or a misconception of the taxation question. They imagine that the wealth of the country is garnered in the cities and that the \$25,000,000 to be distributed through the different States in the Union will be collected largely from the wealth of the cities, and that the cities will not reap any benefit therefrom, because of the fact that they are incorporated and have the control over; and the duty of building and maintaining, their own streets and thoroughfares. It seems that they do not understand the mutual dependence of the city and the country upon each other. The city depends on the country for a great many products necessary to life and essential in a commercial way, and, on the

is printed in the city, carrying the advertising matter that is issued and published in the city and distributed among the country people, advertising the goods of the various merchants of the city, which is of vital interest and importance to the city people. On the other hand, the farmer reads the newspaper, acquaints himself with the markets, reads the advertisements of bargain sales, and decides upon the price of the articles that he has to sell and upon those which he desires to buy.

Now, were it not for the good road that leads from the city to the country, over which the rural mail is carried this great benefit, both to the city and to the country, could not be en-

joyed, and why not encourage this?

There are about 2,150,000 miles of road in the United States, as shown by the census taken by the Office of Public Roads. Of this number of miles of road, there are 190,000 improved, and during the year 1915 there was expended for the purpose of building and constructing and maintaining public roads and highways in the United States the sum of \$200,000,000.

I do not care to extend my remarks further, except to say that I am heartly in favor of this bill as a step toward better things in store for the country people and for the city people as

I may add that the people of the townships of the county pay taxes for local, county, and State purposes; the people of the county pay taxes for local and State purposes; and the people of the State pay taxes for township, county, State, and national purposes. And, under the present system of taxation, the people of the township, of the county, and of the State pay Federal taxes into the Treasury of the United States, and thereby increase its revenue. Why, then, is it not fair that the Federal Government should aid the State in constructing its roads through its counties and townships, and in this way encourage and increase the commercial relations and commercial facilities of the country? Yes, I am for Federal aid to the States for good-road purposes, and I shall vote for this bill.

Resolution Adopted by the Legislature of Florida June 1, 1915.

EXTENSION OF REMARKS

HON. EMMETT WILSON.

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 27, 1916.

Mr. WILSON of Florida. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include a resolution adopted by the Legislature of Florida June 1, 1915. The resolution is as follows:

Concurrent resolution relating to holding of an exposition in the city of Pensacola to celebrate the cession of Florida by Spain to the of Pensacola United States.

United States.

Whereas the territory comprising the State of Florida was purchased by the United States in the year 1819; and

Whereas said purchase was ratified in the year 1821; and

Whereas the blessings, prosperity, and happiness accruing to said

Territory, its inhabitants, their descendants, and to the many people now inhabiting the State of Florida, are cause for the most profound gratitude and thanksgiving; and

Whereas the immeasurable value, capitivating beauty, the extraordinary healthfulness, and the exquisite climate of Florida are unknown and unappreciated by the millions who have never enjoyed its hospitality;

nary heathrimmess, and the exquisite climate of Florida are unknown and unappreciated by the millions who have never enjoyed its hospitality;
Whereas the city of Pensacola and its vicinity was the scene of the greatest events which led to the cession of Florida by Spain to the United States;
Whereas the first American government in Florida was established at Pensacola by the heroism and partiotism of the great soldier and Democratic statesman, Andrew Jackson;
Whereas the first legislative council for the Territory of Florida was held at Pensacola and the first statutory laws of Florida were enacted at Pensacola in 1822;
Whereas the city of Pensacola affords the best and most interesting evidence of the historic past and of the superiority and beneficence of American Government in Florida, and whereas the people of Pensacola, and of west Florida, are desirous of holding an exposition at Pensacola for the purpose of celebrating the one hundredth anniversary of the cession of Florida by Spain to the United States: Now, therefore be it

*Resolved by the Legislature of the State of Florida, That the gov-

sary to life and essential in a commercial way, and, on the other hand, the country people purchase a great many of their goods and necessities from the large department stores in the cities.

So the good roads leading from the large cities to the country districts are of mutual interest to the country people and the city people alike.

The great rural routes running out from the county seats and various inland towns to the country, carry the newspaper that

National Defense.

EXTENSION OF REMARKS

HON. WILLIAM J. SEARS, OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 28, 1916.

Mr. SEARS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following:

Whereas Article IV. section 4, of the Federal Constitution, provides "that the United States shall guarantee to every State in the Union a republican form of government and shall protect each of them from three on "the order".

a republican form of government and shan protect tach invasion"; and Whereas statements in the annual reports of the Secretary of War, Secretary of the Navy, and in the reports of the military and naval heads of departments appended thereto prove that the defenses of this country are inadequate and would be ineffective in the event of foreign invasion; and Whereas an attack waged against any part of the United States would be felt with equal hardship by all citizens of the United States on account of the distributed holdings of securities, etc., and the need for requiring men for any army of defense from each State in the Union: Therefore be it

Resolved by the Jacksonville Branch of the National Security League

Resolved by the Jacksonville Branch of the National Security League in conference, as follows, to wit:

First. We favor such an increase in our Navy that it will be second to none in the world and one that will demand the respect of all nations for our commerce and trade on the high seas and efficient to maintain the first line of defense on both of the coasts of these United

maintain the first line of defense on both of the coasts of these United States.

Second. We favor a substantial increase of our Regular Army.

"Third. We favor sufficient appropriations to place our National Guard on a proportional pay basis and provide for ample instruction for these volunteer forces, as it is our belief that only through the National Guard is it possible to train a citzen army in times of peace.

"Fourth, We favor the organization of cadet companies, as contemplated in the War Department bill now under consideration, and a corps of citizen officers who can supply the needs of a volunteer army in time of need.

"Fifth. We also favor the holding of student camps as conducted by the War Department last year; and be it further

"Resolved, That a copy of these resolutions be forwarded to each Senator and Representative in the Congress of the United States from Fiorida, and they respectively be requested by the chairman of this branch of the National Security League to favor and support the increased appropriations of Congress to establish an efficient Navy and Army and a National Guard and officer corps along the lines and views herein expressed."

I certify that the foregoing is a true copy of the original resolutions adopted December 20, 1916.

CROMWELL GIBBONS,

(Thairmen Jacksonwille (Elle)) Pressed.

CROMWELL GIBBONS, Chairman Jacksonville (Fla.) Branch National Security League.

Attest:

ERNEST METCALFE, Secretary.

Waterpower Development on Public Lands.

SPEECH

HON. GEORGE R. SMITH, OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 5, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 408) to provide for the development of water power and the use of public lands in relation thereto, and

Mr. SMITH of Minnesota. Mr. Chairman, before we can intelligently frame a law that will be suitable to effect a certain purpose we must have clearly in mind the object which we are trying to reach. While there is no law defining what should be contained in the title of a bill, custom and good practice require that it should cover the subject to be treated in such a way as to clearly express the purpose of the law; when it does not meet this requirement its tendency is to obscure rather than define the object of the legislation.

While the title of the pending measure, "A bill to provide for the development of water power and the use of public lands in relation thereto," is technically correct, it is misleading in that it attracts attention to the most insignificant part of the subject under consideration and leaves the impression that this part is all there is to the proposition. If the "development of water power and the use of public lands in relation thereto" were all there is to this question it would be a very simple matter to frame a measure that would adequately meet such pur-All that is necessary would be to redraft the existing law with one slight amendment.

It is apparent from the provisions of this bill and the title of the same that its authors have failed to recognize the fact that the principal feature of any scheme of legislation adequate to meet the necessities of water-power legislation should be the regulation and control of the agencies through which electric current is distributed to the users and not the "development of power and the use of public lands in relation thereto." These matters are amply provided for under the present laws.

If I am correct in my contention that the regulation of the agencies through which electric current is distributed is the proposition that demands our attention, then the title should read: "A bill to provide for the development and 'use' of power and 'electric current' generated by water power." By adopting such a title our attention at once is directed to the use" of electric current and not to the "erection" of dams and other developing agencies, as does the title to the pending measure.

Not only is the title misleading but the statements and arguments made in support of the bill are confusing and not relevant to the real issue involved. Their effect is to obscure and keep in the background the essential feature of this legislation. In the debate all sorts of questions have been discussed, each of which has tended to close our eyes to the real purpose of the measure; vagueness and confusion have been the result. Several gentlemen from the Western States have contended that their respective States should control the use of the energy developed at water-power sites on public lands; others have argued at length on the matter of rentals, declaring that such rentals should go to the States in which these power sites are situated.

Each and all of these gentlemen seem to have lost sight of the fact that unless these power sites are kept under effective control and regulation neither the States in which these water powers are situated nor the citizens thereof will derive the benefits accruing from such water power, but such benefits will inure to the advantage of the hydroelectric monopoly.

The extent to which this subject is misunderstood is fairly illustrated in a substitute bill offered by the distinguished gentleman from Wyoming [Mr. Mondell], section 5 of which puts in concrete form what he considers the essential features of water-power legislation, and is as follows:

That such right of way, occupation, and use as is in this act authorized is granted upon the condition that the grantee, its successors or assigns, shall pay to the United States Government * * * for all lands included within such areas, or rights of way, or reservoir sites, not less than \$1.25 per acre nor more than \$20 per acre, to be fixed by the Secretary of the Interior and padd at the time the map or maps provided in section 2 hereof are filed.

Under the scheme proposed by the gentleman from Wyoming the developer, who minety-nine times out of one hundred is the water-power trust, would secure from the Government at a nominal cost a valuable right; and, by capitalizing this right, a free gift from the Government, and using such capitalization in fixing rates, the entire benefits would redound solely to the hydroelectric combine.

The following concrete cases are instances of the policy pursued by the hydroelectric interests in reference to water-power sites obtained, free from restrictions, at a nominal cost, by this monopoly from the Government:

The California Public Utilities Commission, in an endeavor to regulate and fix reasonable rates, called on the Northern Power Co. of that State for a statement of its assets. The statement furnished by the company showed assets totaling \$20.000.000, which included an item of \$9.000,000, the value that the company had placed upon the water-power site, which had cost the com-pany practically nothing. The company sought to fix rates on

pany practically nothing. The company sought to fix rates of figures including this item of \$9,000,000.

And, again, the Portland Railway, Light & Power Co., of Portland, Oreg., in valuation proceedings before the Oregon Public Service Commission, in November, 1915, claimed that it should be allowed \$10,620,000 for its water powers and land over and above what these water powers and land cost it, and that in fixing rates this unearned increment should be included as an item in its total valuation.

It is clearly apparent that if the substitute offered by the gentleman from Wyoming were adopted the water-power monopoly would be able to pursue their policy of capitalizing for exorbitant amounts the land and water rights which they secure from the Government at a nominal consideration and to fix their rates and charges on this capitalization. How is the public to be benefited by the continuation of such a policy?

For many years the Government pursued the policy of making absolute grants of power sites to individuals, and under such a grant we must expect the grantee to do with his property as he sees fit. However, during the last 15 years we have witnessed a great development in the use of hydroelectric power

and also the opportunities attending this development to exact an unjust and unfair tribute from the public. With this knowledge at hand, is it the part of wisdom to place in the hands of the hydroelectric interests additional opportunities to oppress the public? If so, then we should enact a law similar to that proposed by the distinguished Member from Wyoming. His proposition and arguments; based on theories of State rights, show beyond a question of a doubt that these gentlemen have failed to grasp the true significance of the present water-power situation and its attendant problems; they have lost the correct perspective. Such propositions and such arguments in no way assist in the construction of a law that will meet the present and future needs and necessities.

ATTITUDE OF WATER-POWER INTERESTS.

The water-power interests, it will be noted, are remaining absolutely silent as to all features of water-power legislation except such as tend to remove the restrictions from the grant, well knowing from what has taken place in this discussion and from what has occurred in the last seven years, both in and out of Congress, that there has been so much said and so many conflicting theories have been advanced that the public is weighed down with a vast pile of immaterial and uninstructive matter. Naturally they have no desire to see the public emerge from under this mass until they have had sufficient time to secure what they want, namely, a complete monopoly of the water-power sites and the "markets" for electric energy. The longer the The longer the public and its servants remain in their present Rip Van Winkle trance, the better it pleases the water-power monopoly.

The owners of hydroelectric utilities are quite content with the monopoly they have created. It affords them ample protection against each other and secures harmonious control of the waterpower resources of the country. They profited by the experience of the men who developed our great competitive railway systems. Cutthroat competition between these systems had become so prevalent as to endanger their solvency. Self-preservation prompted the owners of these roads to turn the subject of regulation of rates and service over to the Federal Government. The Interstate Commerce Commission was created at the request of the railroads, and not in response to a public demand, which is contrary to the common understanding. The developers of hydro-electric power eliminated competition from the beginning, therefore no demand for Federal regulation of rates and service will come from them as in the case of the railroads.

EXISTING LAW DOES NOT RETARD THE DEVELOPMENT OF WATER POWER. There has been a persistent effort on the part of the waterpower interests and those who do not thoroughly understand the situation to create the impression that water-power development has been at a standstill on account of the inadequacy of existing law. The fact is that there is scarcely a market of any consequence in the Western States to-day that is not over-supplied with hydroelectric power. Private companies or indi-viduals have secured a total of 282 permits, involving approxi-mately 881,521 horsepower, since the act of 1901 became operative. In 1901 the total water power developed in the United States was less than 2,000,000 horsepower, and only about onestates was less than 2,000,000 horsepower, and only about one-tenth of that was developed in the Western or public-land States. To-day the Western States have over one-third of the total, which is in excess of 7,000,000 horsepower. In rapidity of development the Western States lead all other sections of the country; the amount of water-power development is four and one-half times as much per capita as in the remainder of the United States. In the light of these facts, what becomes of the contention of the water-power interests that power development is stagnant? Why, then, this persistent effort to create a false impression? It is the Federal Government that has been inactive in its failure to enact legislation that will prevent the water-power wealth of this country from falling into the hands of unregulated and uncontrolled monopoly.

A DISTINCTION SHOULD BE MADE BETWEEN THE PRIVILEGE TO DEVELOP HYDROELECTRIC POWER AND THE USE OF SUCH PRIVILEGE.

An adequate plan as to the "use" of electric current should be formulated and adopted before we liberalize our laws as to the development of hydroelectric power. Blinded by the word "development," the necessity for adopting an adequate plan as to the "use" of electric current has been practically ignored in the consideration of this subject by Congress. Even so eminent a Member as the distinguished gentleman from Illinois, the Hon. James R. Mann, in the discussion of this subject on January 5, made the following statement in reference to the pending bill:

Wherever the land can be used for the development of power, it is monopoly necessarily. Whoever has the use of it to that extent has monopoly. That is the very essence of the thing.

The question has arisen whether the Government should simply give away the use of the land, or whether, either by lease

or otherwise, it should in some way and to some extent control the use of this monopoly. The bill here draws this distinction. Instead of giving the land away, it proposes that the Federal Government shall lease the land under terms to be fixed by the Secretary of the Interior, in compliance with the law; but which at any time, as to future leases at least, could be changed by Congress. And these leases are to be for a period not to exceed 50 years. After all, while our friends from the West complain, this bill is in their interest, because out of this bill, when enacted into law, the people of those States will receive a portion of the benefits which the public gets, instead of some individual in those, or more likely, in Massachusetts, getting all of the benefits and the profits out of the use of this monopoly because it is a monopoly essentially.

The gentleman from Illinois, who grasps the true significance of legislation more readily than any other person I have ever known, in the foregoing statement has likewise not only failed to call attention to the primary features of necessary legislation on this subject, but has relegated the vital features of such a law to total obscurity by the use, in a very restricted sense, of words having in their ordinary meaning a broad application.

He said:

When land is used for the development of power it is a "monopoly" necessarily.

The same could be said of land used for agricultural purposes, The occupation of land to the exclusion of others constitutes a monopoly as to that particular piece of land. Monopoly as here applied is used in its most restricted sense and means only a monopoly of the land used for the development of power. Using the word "monopoly" in this limited sense as a premise. the speaker is enabled to arrive at a conclusion which is logical but a conclusion which is erroneous when the word is used in its ordinary sense.

The term "monopoly" whenever used by the gentleman from Illinois in this debate applies only to the exclusive use of a certain piece of land for the development of power and has merely a local significance. Though its use in this manner is correct, it is highly misleading and tends greatly to obscure and withdraw from consideration the fundamental principle that must be embodied in any scheme of legislation that will solve the hydroelectric problem. The present law guards against a monopoly of the land, for under it the Federal Government retains the ownership of the land and, as such owner, exercises a proprietary control over it.

If preventing a monopoly of the land is the principal feature of the pending bill, why not simply amend the existing law by striking out the words "at the discretion of the Secretary," so as to make the tenure certain, and let it go at that? To that there is no objection by anyone. It would be a much more direct and simple way of accomplishing practically all that is claimed for the pending measure by its friends, and would in no wise aid, as this bill does, as I will show you hereafter, in further extending over the water-power resources of this country the power and dominion of the great hydroelectric monopoly that exists in this country to-day uncontrolled and unregulated by any effective legislation.

The application of the words "monopoly" and "development" in the narrow and restricted sense in which they were used in this debate by the distinguished gentleman from Illinois and others tended to obscure the real problem which is the formulaothers tended to obscure the real problem which is the formula-tion of a plan as to the use of the privileges granted under the existing law and not the granting of more privileges. More-over, the use of the word "monopoly" in this restricted sense tends to withdraw from the consideration of Congress the necessity for enacting legislation that will effectively control the gigantic hydroelectric aggregation which has combined not only the electric plants of this country, both hydroelectric and steam, but which has actually secured control of the "market" for

electric current.

In 1901, when the present law was passed, most of the water power developed was used in manufacturing, only about one-fourth being used by public-service corporations. the conditions are reversed. There has been a growing and constant tendency toward concentration of power development. and that concentration has fallen almost entirely into the hands of public-service corporations that secured control not only of the water powers, but have also secured control of all sources of primary power, as well as the public utilities of the country using such power. At the present time the public-utilities corporations control 24 per cent of the primary power from all sources and for all uses, while in 1912 slightly over 50 per cent of the total primary power of the Western States alone was controlled by public-service corporations. That percentage has risen to 90 per cent within the last three years

Furthermore, the wording of the proposed bill and the re-stricted use of the word "monopoly" by its advocates has

given the impression that there is only a future possibility of monopoly and that this bill provides sufficient regulation to prevent not only any future monopoly of water-power sites but also "a monopoly of the future use" of electric energy. Legislation providing against future monopoly is necessary and What is far more imperative and urgent is commendable. legislation providing for the control of the existing monopoly, which is more complete and extensive in its operations than any future monopoly may ever become. The provision of the pending measure providing for the control of the use of electric current is so limited in its scope as to make it ineffectual for this purpose.

The attempted regulation is found in section 3, which is as

That in case of the development, transmission, generation, and use of power or energy under "such a lease" in a territory, or in two or more States, the regulation and control of services and charges to consumers and of the issuance of stocks and bonds by the lesses is bereby conferred upon the Secretary of the Interior or committed to such a body as may be provided by Federal statute: Provided, That the "physical combination of plants or lines" for the generation, distribution, and use of power or energy under this act or under leases given hereunder "may be permitted" in the discretion of the Secretary of the Interior. Interior.

The only regulation or control that section 3 advocates is the control of power or electricity developed under such lease as may be granted under this particular act. Therefore it is evident that such public regulation must be very limited in its scope when it is remembered that a large portion of the water-power sites of the country are now in the hands of the Waterpower Trust. Furthermore, such regulation as is provided is nullified by the proviso which permits "the physical combination of plants or lines for the distribution, generation, and use of electric energy." As long as plants crected under this bill remain separate and distinct, the regulation herein provided may be adequate, but as soon as these plants tie in with any plant or system other than those erected under this measure they will become a part of the existing electrical monopoly, and regulation under this bill becomes ineffective because it is not designed-and can not be from the very nature of thingsto reach out and control the immense existing monopoly of which the grant under this act has become a part.

THE GROWTH OF THE HYDROELECTRIC INDUSTRY.

The tremendous physical combination of hydroelectric plants has grown up through the discovery of electrical transmission, which has permitted great economy of operation and has resulted in the development of extensive zones, having a radius of several hundred miles, for the generation and distribution of electric power, and has effectively eliminated competition within these zones. By this method of transmission the current from a number of plants-hydroelectric and steam-is conveyed through the combined system to the place where and at the time when it is needed most. The ease of such combination and its practicability are evidenced by the growth of extensive systems in various parts of the United States. The Pacific Electric Co., of California, now has 1,600 miles of overhead circuits supplied from different plants, all connected to form one immense high-tension system.

A similar situation exists in the South, where the Southern Power Co., with its 1,300 miles of high-tension transmission lines, forms a network extending over the States of North Carolina, South Carolina, Georgia, Alabama, and Tennessee, and when complete will reach from the Mississippi River to the Atlantic Ocean, Likewise, the States of Idaho, Washington, Montana, Utah, and Nevada are rapidly being tied together into one high-tension system, while similar systems, on a somewhat smaller scale, due, no doubt, to the intensity of manufacture within the zones, exist in the Central West and in the East,

in and about New York and Boston.

These conditions, brought about through the agency of physical combination of plants and lines, have made electric current interstate and have developed its interstate tendencies to such

an extent that it is practically beyond State control.

The company furnishing electric current to the city of Minneapolis, Minn.—the General Electric Co.—offers a fair example of the interstate activities of public-service corporations which, as heretofore mentioned, control a large share of all primary power from all sources, and also shows the varied activities of such corporations in securing control of public-service utilities, The Minneapolis General Electric Co. receives the bulk of its current from the St. Croix Falls-Wisconsin Improvement Co., which it owns. The Minneapolis General Electric Co. is in turn owned by the Consumers' Power Co., located at St. Paul. The Consumers' Power Co. owns and operates street railways, gas plants, steam plants, and hydroelectric plants in a number of the cities of Minnesota and also in parts of Wisconsin, North

Dakota, and Illinois. These companies, serving four States, are combined physically and corporately. There is no way of telling whether the power furnished in Minneapolis comes from St. Croix Falls or from Coon Creek, on the Mississippi, or whether the power furnished in Galena, Ill., which is served by this company, has been developed in Minnesota or Wisconsin.

The Consumers' Power Co. is controlled by the Northern States Power Co., a Delaware corporation, and, according to the prospectus issued for the sale of their stock, this company con-

trols property summarized as follows:

Hydroelectric plants, combined rating 48.025 horsepower	10
	13
Steam electric power houses, combined rating 47,990 horsepower_	
Miles of high-transmission lines	457
Miles electric distributing systems	1, 030
Steam heating plants in connection with steam electric plants	9
Miles steam heating mains	9
	. 5
Gas works, daliy capacity 1,200,000 cubic feet	
Miles gas mains	178
Street and interurban railway	1
Street and migraroan ranway	

The Northern States Power Co. is controlled in turn in part by the Standard Electric & Gas Co., of Delaware, and several of the directors of the company are also directors or closely associated with the General Electric interests and the Stone & Webster group.

These extensive operations by a single company—the case cited is only one group—emphasizes the need for Federal control. A State public utilities commission would be powerless to regulate the issuance of stocks and bonds and the fixing of rates and services under these circumstances unless supplemented by the Federal Government.

The result of the monopolistic tendency of electric power, aided by ingenious promoters, is the growth of these complicated and extensive combinations. Such combinations are the result of the processes of evolution, which it may not be wise to stop, and if adequate control of rates and service and the issuance of stocks and bonds are secured there is no need for any attempt

to stop them.

In Water Supply Paper 238, prepared under the direction of the Geological Survey, the Public Utility of Water Powers and their Government Regulation, Mr. M. O. Leighton forcibly explains the existing conditions and their causes. He said:

plains the existing conditions and their causes. He said:

Consolidation is inevitable. Water power is a natural monopoly by reason of natural laws of stream flow. Man can not change these laws, and his only course is wisely to adapt himself to them so that they may not operate to his disadvantage. The electrical transmission of power developed on water wheels has changed the entire industrial aspect of the matter. When a water power was used at the site and its industrial development was limited to its capacity there, no reason existed for consolidation; now the site of the water-power plant is not likely to be its field of operation; its power is distributed over a large area. In this large area there is a common demand for power and the market constitutes an administrative unit.

In the final analysis, therefore, all sources of power available for a particular field of demand "must be brought under a common administration," so that at any time the energy can be turned hither and yon to meet the requirements of each hour. It follows that regulation prohibiting power monopoly must not prevent power consolidation, lest it injuriously affect industrial development. There is no virtue in preventing consolidation if economies in maintenance and operation are thereby prevented. No one will deny that water-power consolidation secures distinct and unusual economies, and if the consumer receives the benefit therefrom he is better off under a consolidation. These are oft-stated truths, "therefore the proper solution of the problem must lie in the legislative regulation of water-power development and maintenance," to the end that the consumer shall pay a fair and reasonable prive for power consistent with the production of fair and reasonable earnings on the capital invested.

If the business of the development, transmission, distribution,

If the business of the development, transmission, distribution, and sale of electric power did not constitute a natural monopoly there might be little occasion for special legislation with respect to the business. However, the tremendous growth and centralization of control of the public-service corporations and the widening sphere of their activities, the elimination of competition, the frequent inflation of values and excessive capitalization-stock watering-and the continuing tendency to further centralization and control of this important industry has left no alternative to the Government but to adopt a thoroughgoing system of Federal regulation and control.

The ease with which electrical plants can be tied in into one system and the economy resulting from such combination by providing a large market with a consequent diversity in time and character of demand for the power furnished an incentive for the combination. The impelling motive, however, in the last few years has not been public service, but private profit. In the furtherance of this object the electrical interests have not relied wholly upon the "natural monopolistic tendencies of electricity," but have created various artificial combinations and-bond control.

The corporate control of nearly all of the commercial power in this country has been secured through an intricate system of stock control in "holding companies." A fair example of the methods adopted, which also shows the ramifications and inter-

state complications of the corporate control, is had in the Utah Securities Co., which controls the commercial power in the States or Idaho, Utah, and Colorado. It is purely a stock-holding company, devised solely for the purpose of securing the

control of the management of the operating and distributing companies. The following diagram gives the list of operating companies under its control and illustrates how the corporate control is exercised and centralized:

DURANGO POWER CO.

IAGHT &= THE STANDARD LIGHT,= THE DURANGO GAS &= POWER & WATER ELECTRIC CO. Co. Incorp. Colo. 1906, Taken over by Du-rango G. & E. Co. in 1909.

Installed 6,000 h. p. water
power and 820 h. p. steam.
Amunal output 1911 9,000,000
kwh. Connected load 4,000

kw.
Capital stock: Auth. & out-standing, \$1,000,000; bonds, \$1,349,000 first gold 5s.
Absorbed by the Western C. P. C., Sept. (?), 1912.

THE TELLURIDE POWER CO. =

Plants in Colorado & lease
of the Ouray Electric Power
& Light Co.
Total installation—all hydro—3,650 h. p.
Absorbed by the W. C. P.
Co. Sept. (?), 1912.

THE TELLURIDE POWER=
Co.
Plants in Utah & Ida.
Total installations—all hydro—35,000 h. p.
Absorbed by the Utah
Power & Light Co. in Sept.
(?), 1912.

HYDRO-ELECTRIC PLANT OF
DAVIS AND WEBER COUNTIES CANAL CO.
Installed about 4,300 h.p.,
MERCHANYS' LIGHT & POWEE CO.
HYDRO-ELECTRIC PLANT OF
LIGHT AND ON COLUMN OF

Hydro-Electric Plant of
Utah-Idano Sugar Co.
Inc. July 19, 1907.
Owns 6 beet sugar factories, a hydro plant of 4,000
h. p. installed, 42½ miles of
transmission line, and an irrigation system. Hydro plant
sold to U. P. & L. Co. in 1912.
Idaho Power & Transfortation Co.
2 hydro plants in Ida.
Installed about 3,000 h. p.
Gem State Light & Power
Co.

Installed about 3,000 h. p. Gem State Light & Power Co.

Steam Flant of Saltlare & Ower Co.

Inc. Mar. 17, 1898, Ulah. Operated by electricity, 35 miles of railroad, from Saltlake City to Ogden. Steam plant sold to Utah Power & Light Co., 1912. Installed about 1,600 h. p. Eureka Electric Co. Solde to U. P. & L. Co., 1912. Camp Floyd Electric Co. Sold to U. P. & L. Co., 1912. Instrict Electric Co. Sold to U. P. & L. Co., 1912. Instrict Electric Co. Sold to U. P. & L. Co., 1912. Instrict Electric Co. Sold to U. P. & L. Co., 1912. Instrict Electric Co. Sold to U. P. & L. Co., 1912. Electric District Co. Sold to U. P. & L. Co., 1912. Electric District Co. Sold to U. P. & L. Co., 1912. Steam Plant of U. P. & L. Co., 1912. Steam Plant of U. P. & L. Co., 1912. Steam Plant of U. P. & L. Co., 1912. Steam Plant of U. P. & L. Co., 1912. Steam Plant of U. P. & L. Co., 1912. Steam plant leased to Utah P. & L. Co., 1912.

Franchises of subsidiary companies have no burdensome conditions and almost without exception extend for 40 years or longer.

UTAH POWER & LIGHT Co.

Inc. Sept. 6, 1912, Me. Operating Cox in Utah and Idaho for Utah Securities Corp. Controlled by stock ownership by Utah Securities Corp.

Capital stock: Authorized—\$30,000,000 common, \$5,000,000 7% cum. pfd., \$10,000,000 second cum. pfd. Outstanding—\$25,000,000 common, \$3,000,000 7% pfd., \$7,837,000 second cum. pfd., 7% pfd. stock cum. from Nov. 1, 1913, has preference for assets and is subject to call at 115 second fd. 6% cum. from Jan. 1, 1914, and is subject to call at par. Entire issues of stock owned by Utah S. Corp. and deposited under that Co. 's 10-year 6% notes. Proceeds from sale of stock to be used in retiring 10-year notes of the U. S. Corp. Bonds, none.

Total installed power, about 77,200 h. p., of which about 65,200 is owned and 12,000 h. p. is from water and 13,600 h. p. from steam.

UTAH SECURITIES COR-

PORATION.

Inc. Sept. 10, 1912, Va.
Controls by stock ownership all rights owned or controlled by Utah P. & L. Co. and West Colo.
Pwr. Co.
Installed power about 93,000 h. p. of which 79,400 is from water. Of this total of 93,000, 12,700 h. p. is leased (12,000 steam & 700 hydro.).

Transmission lines, 877 miles under construction 67,000 h. p. and 300 miles high-tension transmission lines.

67,000 h. p. and 300 miles high-tension transmission lines.

Serving 65 communities in Utah, Ida. & Colo. Sells now 8,000 h. p. to Utah Copper Co., this to be increased to 31,000 h. p. under 25-year contract. Also furnishes power to mining districts of Utah for R. R. Salt Lake to Ogden, and also for irrigation purposes. Through Western Colo. Pwr. Co. power supplied to mining districts in San Mignel & Ouray Counties, Colo. Co. owns all securities of U. P. & L. Co. These deposited under 10-year collateral trust notes securities of under 10-year collateral trust notes securities of subsidiary companies to be exchanged for bonds & stocks of Utah P. & L. Co., which will be the large operating co.

Capital stock: Auth. \$30,000,000. Auth. 10-year 6% gold notes, \$30,000,000. Auth. 10-year 6% gold notes, \$27,500,000. of which subscribed and \$15,154,701 outstanding. Subject to call at 101 and interest. Secured by deposit of issued securities of Utah P. & L. Co.

Bonds and pfd, stock of U. P. & L. Co. to be sold from time to time and proceeds used for retiring notes.

The Utah Securities Co. in turn is a subsidiary of the larger holding company, the General Electric, which, through stock and directorates, controls 60 per cent of the power developed in the Western States of Nevada, Arizona, Idaho, Montana, California, Washington, Oregon, Colorado, and Utah. Where this company does not have direct control there are strong traces of powerful General Electric influence, which is no doubt sufficient to ward off competition by dividing the field of operation and the market.

The scheme of corporate control has been so highly developed that control is acquired through only a small investment on the part of the promoters. The stocks held by the holding company are deposited with the banks as security for bond issues. The stocks so pledged are still within the control of the holding company to the extent that it may vote the stock and thus control the operating companies. By this method it is possible for the stockholders of the holding company to retain control of the subordinate companies with a relatively small-investment, perhaps not over 10 or 15 per cent of the capitalization of the operating companies. The common stock of the holding company usually represents little or no investment. The General Electric group controls not only the water-power but also the public-service companies, which are the largest users of power. It controls street railways in 16 cities, gas plants in 19 cities, electric companies in 78 cities. The officers and directors are likewise officers or directors of upward of 50 banks and trust companies, including 5 financial houses in Philadelphia, 6 in Boston, and 24 banks and trust companies in New York City, there being three General Electric directors in the house of J. P. Morgan & Co., the leading underwriting company in America.

THE VARIOUS COMBINATIONS THAT HAVE GROWN UP IN ALL PARTS OF THE COUNTRY ARE MORE OR LESS UNDER THE CONTROL OF A BODY COMPOSED OF A VERY FEW MEN.

A small unit of government, a municipality or State, can not deal with this highly organized national institution of combined hydroelectric utilities. In order to grapple with this immense combination there must be some agency created that has more power behind it than this private monopoly. The Federal Government is the only agency that can measure up to this requirement. It is none too large or too powerful to deal with an institution intrenched and fortified as this is; hence, the duty devolves upon Congress to provide suitable regulation and control for this subject. However, it is safe to predict that Congress will never perform this duty in a satisfactory way until it recognizes openly, frankly, and candidly the existence of this gigantic electric combination and power trust.

The vital defect of the proposed legislation is that it utterly fails to provide a sufficiently extensive plan to meet existing conditions. Regulative legislation that only partially regulates, as this measure, will operate only in the interests of further monopoly.

A constructive policy of regulation must take into consideration all phases of water-power development and the use of electrical energy in the light of known existing conditions focused through past experience. Under existing laws the matter of water-power development is placed under three separate departments of the Government, to wit: The Department of Agriculture, the Department of the Interior, and the Department of War; the first two deriving their authority and jurisdiction from the act of 1901, supplemented by the act of 1905; the War Department derives its jurisdiction from the general dam acts of 1906–1910. In the administration of these laws each department acts independently of the other.

WATER POWER OF PUBLIC DOMAIN.

Under the act of 1901 the Secretary of Agriculture controls water powers in the national forests. The law is general in its term and gives to the Secretary authority to issue revocable permits for the use and occupancy of lands for the building of dams, conduits, transmission lines, and other structures used in connection with the development of power, besides a wide discretion in formulating a policy of water-power development. It has been the aim of this department, working through its Bureau of Forestry, which has given extensive time and study to the proposition, to encourage the development of water-power resources on national forests to the fullest degree possible, under conditions that would properly protect the public's interest in so far as it is possible under existing laws.

. The subject of water-power development is intimately allied with the primary purpose of the department, namely, the conservation of the national forests and watersheds, the initial source of flowing water. No department has more complete knowledge or data on the subject or is better able to handle the question of water-power development than this department. Under the same act of 1901 the Secretary of the Interior has

jurisdiction over water powers on public lands, and is clothed with the same authority in dealing with these powers that the Secretary of Agriculture has in dealing with water powers in the national forests. In the Interior Department two separate bureaus—Public Lands and Reclamation—have charge of the administration of the department's policy in reference to water power.

The policy of water-power development is sure to be tinctured in its administration by the departmental viewpoint of the department having jurisdiction over it. While the policies of these two departments may be similar, their perspective is quite different; that of the Department of Agriculture is to conserve and perpetuate; its attitude, though progressive, is to provide for the future as well as the present; that of the Department of the Interior is to dispose of the public lands as quickly as there is a demand for them. No bureau of the Interior Department is giving its whole attention to water-power development. It is a mere side issue in the departmental work, yet it is proposed under the pending bill to place the entire subject of hydroelectric development and control on both forest reserves and public lands under the Secretary of the Interior. The committee having charge of this bill does not attempt to explain why the Secretary of Agriculture and his able corps of hydroelectric experts have been dropped and the whole subject of waterpower, in so far as it relates to national forests and public lands, turned over to the Interior Department, which from the very nature of its work, and therefore its natural point of view, has no great interest in water-power development. There is no apparent reason why such a change should be made. partment of Agriculture has been the most successful of all our departments in its administration of water-power development in the interest of the public, as well as for the protection of capital.

WATER POWER ON NAVIGABLE STREAMS.

Hydroelectric development on navigable streams, outside of the public domain, are controlled by the War Department under the acts of 1906-1910. However, a special act of Congress granting consent is necessary in each case before development of a particular project can be started. The terms of the acts of 1906-1910 become a part of the consent granted by Con-Under this act the term of the grant can not be for more than 50 years, and the War Department may impose conditions as part of the permit to be issued by it under previous consent granted by Congress. However, the department is not under this act authorized to control rates, services, and the issuance of stocks and bonds; the terms and conditions that the department may exact have to do solely with the term of the permit and certain requirements demanded of the grantee in the construction and use of the dam to be erected under the It is vociferously proclaimed by certain public officials and distinguished gentlemen representing the water-power monopoly that the act of 1906-1910 is "prohibitive of private investment" in water-power projects; "that investors have refused to apply and accept any permits under this law." Any-one who has given the subject the slightest consideration knows that such a claim has no foundation in fact and is advanced for the apparent purpose of obscuring the real issue and thus keeping out of water-power legislation provisions imperatively necessary for the protection of the public. Within a very short time after the enactment of this law more than four times as many applications for permits to erect hydroelectric dams were granted by special acts of Congress as in all the preceding 116 years of the existence of our Government.

It was not the lack of applications for permits on the part of hydroelectric interests that brought to a standstill the granting of these permits; but, on the contrary, it was the refusal of President Roosevelt as early as 1908 to approve any more special acts of Congress granting such consent until Congress passed a law providing for the regulation and control of hydroelectric utilities and the "use" of electric power. Mr. Roosevelt clearly foresaw the impending danger to the public welfare in giving to this "threatening natural monopoly" these valuable rights in perpetuity free from regulation and control, and he effectively stopped this wholesale grabbing of waterpower sites by vetoing, in 1908, the James River bill and specifically informing Congress that he would approve no more water-power grants until Congress had enacted a law that would preserve for the benefit of the public the vast waterpower wealth of the country. President Roosevelt's statement as to this point is so explicit that I quote an excerpt from his James River bill veto message:

A single generation will see the exhaustion of our natural resources of oil and gas and such a rise in the price of coal as will make the price of electrically transmitted water power a controlling factor in

the transportation, industrial, municipal, and domestic needs. We are now at the beginning of great development in water power. Its use through electrical transmission is entering more and more largely mto every element of daily life. Already the evils of monopoly are becoming manifest. Already the experience of the past shows the necessity of caution in making unrestricted grants of this power. The present policy pursued in making these grants is unwise in giving away the property in the flowing waters to individuals or organizations and granting in perpetuity these valuable privileges in advance of the formulation of a definite plan as to their use.

Likewise, President Taft declared that the Government should not give away any more unrestricted water-power grants and added:

I deem it highly important that the Nation should adopt a consistent and harmonious policy of treatment of these water-power projects which will preserve for this purpose their value to the Government whose right it is to grant the permit.

In the face of these facts, why do gentlemen who are in the public service as well as those who are in the service of the water-power monopoly, continually and repeatedly state that the lack of development under the existing law is due to the evils of the law? Such statements, coming from men who are presumed to know the facts relative to this subject, greatly tend to not only mislead Congress but the public as well, as to the kind of water-power legislation that is needed, and why it is needed.

POLICY OF THE GOVERNMENT.

The present policy of the Government, if you can call it a policy in dealing with the water-power situation, must be discarded if we expect to provide a system of regulation and control for the use of electrical power. Permits for the erection of dams on public lands and dams on navigable rivers may be properly treated under separate departments of the Government; however, the question of the control and regulation of the electric current generated at these dams, in its relation to the commerce, industry, and domestic affairs of the country, is indivisible and must be treated as a unit. The water-power interests have built up an electrical monopoly, with water power as a nucleus, by combining, through the use of electrical transmission, primary power from all sources whether developed on public lands, forest reserves, navigable rivers, or steam. This monopoly does not distinguish between the sources nor the methods of development.

For the purpose of eliminating competition and securing to itself the economic advantages to be derived from connecting separate plants into a single system it aims to concentrate electrical energy, however and wherever developed, in the hands of a central body. Its success in this direction has been marvelous. The Sherman antitrust law has been defied, ignored, and held in contempt. We should not marvel that this mammoth combination is not now asking Congress for legislation that will curtail its power; neither should we be surprised at the fact that it is using every concealed weapon known to its skilled diplomats now in Washington to annihilate any legislation that would in any way prevent it from acquiring the remaining unappropriated water powers free from legislative restrictions.

WATER-POWER COMMISSION.

No legislation now pending attempts to coordinate and unify the work of the departments. Neither has any legislation been proposed in the Sixty-fourth Congress that provides for a uniform system of regulation and control for the whole subject of hydroelectric development and "use" of electrical power. Such piecemeal attempts at regulation as have been offered are wholly ineffective.

The more legislation that we attempt along the lines that we are pursuing the more involved the proposition becomes and the more difficult it will be to secure effective legislation in the future. The present policy, like Topsy, "just grew," but in the light of past experience, and in view of our present knowledge, why continue this policy further when its apparent effect is to place still farther beyond the reach of the Government the control of this monopoly of all monopolies?

If we wish to perform a real service to the country, why not pass a law that will place the entire subject under the jurisdiction of a separate department or bureau of the Government? We have followed such a policy in dealing with our railroads, by placing them under the control of the Interstate Commerce Commission; with our banks, now centralized under the Federal Reserve Board; with our commercial industries, regulated by the Federal Trade Commission; and it is now proposed to place the whole subject of rural credits under a Federal farm loan board. A commission, composed of the Secretary of the Interior, the Secretary of Agriculture, the Secretary of War, with two non-Cabinet members, would make an ideal commission representing all phases of the subject. Such a commission could coordinate and unify the work of the departments and cut out duplication now necessarily existing, could control and regulate

interstate current, could cooperate with State public utilities commissions in regulating rates and service and the issuance of stocks and bonds, could prevent the capitalization of free water-power grants, and would assure an inexpensive, continuous, and uniform policy of administration both to investing capital and to the public, and could provide effective and adequate regulation and control of the whole subject of commercial electrical power. Since in order to fix an equitable rate you must first ascertain the value of the plant and the cost of operation as a whole, and since the only jurisdiction coextensive with a group of united or tied-in plants located in two or more States, is that of the Federal Government, therefore it is manifestly necessary that the Federal Government should exercise control over interstate current in some form or other.

The regulation provided for in the pending bill permits the physical combination of plants and lines, and as electric current can be produced more economically by the union of power plants, it is certain that plants will unite if permitted, hence by far the larger portion of power will be interstate, and unless some such plan as I have suggested is adopted State utilities commissions will have but little voice in the regulation of rates and service. The exigencies of the case make it impracticable for State commissions, unaided by the Federal Government, to fix rates and services and control the issuance of stocks and bonds, The Federal Government should assist the State commissions to fix such rates and service. Moreover, under a joint and interlocking system of regulation, such as I have suggested, there could be no "twilight zone" in which the hydroelectric monopolles could live in security, and play hide-and-seek with the Federal and State Governments. First its current would be interstate and then local, whichever best served the purpose of the trust. If, perchance, the bill under consideration becomes a law in its present form its mischievous and objectionable feature will be the opportunity it affords hydroelectric monopolies to escape effective regulation.

If the mysterious forces of electric energy are placed within the easy reach of all the people by the agency of the Government, their burdens will be immeasurably lightened and their comforts greatly increased. Moreover, if the Government fails and neglects to control this well-nigh "universal future source of industrial power," and permits it, unregulated and uncontrolled, to remain in selfish and unsympathetic private hands, it is certain to become the controlling force of the most despotic combination ever created to control the commercial, industrial, and domestic affairs of a people. Even the very Government itself, if not already under the influence of this combination, will sooner or later be corrupted by the evil influences bound to emanate from so vast an unrestrained twentieth century organization of natural and artificial forces,

Too long have these great resources of the people been left to the tag end of governmental departments. They are worthy of an administration of their own under the auspices of men especially trained in the development of commerce, industry, and navigation and the conservation of our public domain. Such an efficient and adequate administration Congress may develop under the commission that I suggest. Under this plan the Secretary of War and his able corps of engineers will be retained on all engineering phases of water-power development and navigation; likewise the services of the Secretary of Agriculture and the Secretary of the Interior, and the various bureaus under their direction having to do with this subject, will be retained and coordinated into cooperative working forces for the development and perpetuation of a harmonious and efficient plan of regulation of this all-important problem.

To these three departments now associated with water-power control, under different acts of Congress, with more or less conflict of jurisdiction and duplication of work, I propose to add two non-Cabinet members, making a commission of five. is done mainly for two purposes. First, to give continuity to the commission, and second, to enable at least a part of the commission to give its entire attention to the work of the commission. The commission thus fortified by the detailed examination and judgment of trained experts in every branch of the duties to be performed, with a strong and thoroughgoing waterpower law, in which Congress sets forth their powers and duties, has the opportunity and equipment which this country heretofore has ever lacked to give the people an up-to-date progressive and efficient administration of water-power resources, establish industry where now there is wholesale waste, protect alike the consuming public and the legitimate producer of power, develop commerce and navigation, and conserve the great natural water resources of the United States, and that on a true and eminently practical basis of successful and sound business, founded on just rates and adequate service to the consuming public which requires light, heat, and power.

When Canada, Germany, France, Norway, Sweden, Switzerland, Italy, Russian, Austria-Hungary, and even Africa and India are placing their water powers under the regulation of expert commissions versed in the development of industry and commerce, with special reference to hydroelectric operation and control, what a farce for the greatest industrial Nation on the earth to consider the proposition in National Congress assembled of placing its vast water-power resources under the disjointed administraton of 48 States and three distinct and separate departments of the Government.

Mr. MONDELL. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman from Minnesota yield

to the gentleman from Wyoming?

Mr. SMITH of Minnesota. Yes; I yield.

Mr. MONDELL. Why could not the State utilities commission control? Could they not fix the rates? Could they not

provide practices?

Mr. SMITH of Minnesota. Of course, a State utilities commission could and should regulate every plant wholly located within a State, but the moment a plant in the State of Minnesota is tied up with a plant in the State of Wyoming the current from this combination becomes interstate; likewise, if a plant in the State of Minnesota furnishes current to the citizens of Wyoming it becomes interstate current as soon as it crosses the border of Minnesota.

Mr. MONDELL. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman yield?

Mr. SMITH of Minnesota. Yes.

Mr. MONDELL. The State utilities commission would fix the rates, the company furnishing current at that rate or not doing business in the State; and if, in fixing the rate—I do not think it would be in a majority of cases—it should find it advisable to inquire as to the cost of the generation of that power in Minnesota, I think the State utilities commission could do it quite as well as the Secretary of the Interior or the Secretary of War. I think the State commission could make that inquiry

as well as the Secretary, if it were necessary.

Mr. SMITH of Minnesota. I will say to my colleague that the best answer I can give to his proposition is this: Our Interstate Commerce Commission has broken down under the amount of work it has to do; it is unable to perform the duties and fulfill the purposes for which it was created, because the legislation under which it is operating is inefficient in that it fails to provide for cooperation between the work of the commission and that of the respective State commissions. A large share of railway rates are being regulated by State utilities commissions, and not by the Interstate Commerce Commission. Effort is being made to force competition by having several commissions engaged in regulation.

Mr. MONDELL. Now, will the gentleman yield?
The CHAIRMAN. Does the gentleman from Minnesota again yield to the gentleman from Wyoming?

Mr. SMITH of Minnesota. Yes.

Mr. MONDELL. I want to make this suggestion to the gentleman, that the Interstate Commerce Commission in the midst of all its labors did find time to raise all the rates in my part of the country, so that we are now paying more than we have paid before in 20 years. They have found time to do that. That is one of the benefits of Federal control.

Mr. SMITH of Minnesota. While I exceedingly regret that the commission saw fit to increase the freight rates in the gentleman's section of the country, for at best freight rates are oppressive, I am in no position to pass judgment upon their act, because I am not familiar with the facts that were before the commission. The mere fact that the commission increased rates is no argument against the advisability of having an

Interstate Commerce Commission.

I believe that the imperative duty of a regulatory commission is to increase a rate whenever the facts of the case under consideration warrant it, as well as it is its duty to decrease the rate when it finds a rate excessive. If a Federal commission should become corrupt, a thing that might happen, and the forces and benefits of its efforts are lost so far as the public good is concerned, Congress can dispose of the matter in one of two ways, either by impeachment or a repeal of the act creating the commission.

Mr. MADDEN. Will the gentleman yield for a question?
Mr. SMITH of Minnesota. Yes.
Mr. MADDEN. Does the gentleman argue in favor of the criticism made of this bill by the Secretary of War, or is he opposed to the attitude of the Secretary of War and in favor

of giving Congress jurisdiction over the question?

Mr. SMITH of Minnesota. Congress should always retain jurisdiction. It has jurisdiction by its power to repeal the act.

Mr. MADDEN. It has that anyway.

Mr. SMITH of Minnesota. Yes; but I say you should give these water-power resources of our country as much latitude and freedom as possible,

Mr. MADDEN. In what way?

Mr. SMITH of Minnesota. In the way of inducing capital to invest in them; and if you can not do that, then let the Government take over the business of developing and distributing hydroelectrical current.

Mr. MADDEN. Does the gentleman assume that capital will

not invest under the present conditions?

Mr. SMITH of Minnesota. Capitalists will invest if we let them, but we are not going to let them until we enact a system of regulation that will control their activities.

Mr. MADDEN. Why not let them?

Mr. SMITH of Minnesota. Because if we let them have any more permits, we will be simply adding to a power which is dangerous-that they now have.

Mr. Paul Warburg, of the Federal Reserve Board, Defending Our Financial System.

EXTENSION OF REMARKS

HON. J. THOMAS HEFLIN. OF ALABAMA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 28, 1916.

Mr. HEFLIN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a speech made by Mr. Paul Warburg, of the Federal Reserve Board, defending our financial system.

The speech is as follows:

REMARKS OF HON, PAUL M. WARBURG BEFORE NEW YORK CREDIT MEN'S ASSOCIATION, HOTEL ASTOR, JANUARY 25, 1916. SOME ECONOMIC PROBLEMS OF THE DAY.

It is about a year and a half ago that the old "Bid" who cleaned my son's room at Harvard asked him whether it was his father whom the President had nominated for "that there new bank commission at Washington"-being the Federal Reserve Board. When my son acknowledged the fact, she exclaimed, "My, but you are lucky—such a big salary!" Well, gentlemen, I thought at that time that the salary was fair and adequate and that I was about to receive all that I was worth, but if I had known then that the price was to include speeches I think I would have insisted on a raise.

This is the first time since I have taken office that it has been possible for me to accept an invitation to address a public gathering in New York, and I assure you that it is a genuine pleasure for me to be back amongst my old friends and to enjoy their hospitality. I am very grateful to you for permitting me to speak to you to-night-not that I enjoy making speeches. deed, I dislike inflicting them upon you as much as I dislike inflicting them upon myself. But ever since I became interested in monetary reform it has been my good fortune to meet from time to time with officers and members of your association, and I welcome the privilege of being able to-night publicly to acknowledge the debt of gratitude that the country owes the Association of Credit Men for the intelligent interest shown in this great work of banking reform and for the valuable assistance rendered in paving the way for its accomplishment.

The Federal reserve act could never have been passed had not the entire country gradually been educated to it, and in this campaign of spreading sound thought the share of the work done by your association has been of inestimable value. But, gentlemen, I have come to-night "Not to praise you," like Mark Antony, nor indeed, "to bury Cæsar" under a mass of dry statistics, but to discuss with you our problems and the ways and means by which together we can best develop the

work so auspiciously begun.

Our country is passing at present through a period of economic development the scope and rapidity of which have never been paralleled. Originally opened and developed by foreign enterprise, and, until the fall of 1914, still dependent upon Europe for the financing of its foreign trade, its crops, and to a certain extent its industrial undertakings, this great continent in less than two years, has not only asserted its complete financial emancipation but has become, for the present at least, the world's banker.

Two factors have cooperated in bringing about this result: The European conflagration and the opening of the Federal

reserve banking system. It may, therefore, be interesting and timely to consider to-night some of the phases of the interplay of these two forces and the policy and methods best to be pursued in meeting and directing their influence at this momentous juncture, marking, as it does, the turning point in our economic history.

The far-reaching effects of the war, as they have worked in favor of the United States and to the disadvantage of Europe, are apparent to all. The effects of the opening of the Federal reserve banks are not quite as easily discernible to the casual

observer.

The Federal Reserve System has created a condition of health and strength which is accepted by many as a process of nature, without thinking of the men whose thought and energies brought into life, at almost a providential moment, this remarkable piece of banking machinery. It is true, none the less, that without the steadying influence of this system, without the new machinery that it provided for the financing of our foreign trade, we should have sunk lower and should not have risen so far and so fast. Had it not been for this feeling of safety this country would not and could not at one and the same time have absorbed its own securities and granted foreign loans estimated to aggregate together the staggering amount of one billion and a half to two billion dollars. And while these imposing transactions were being carried through, crops were moved at the lowest rates ever known. Without the usual seasonal fluctuations in interest rates and without a ripple of financial difficulty we passed through political situations which in years gone by might have caused violent financial disturbances. Panics which we have become accustomed to expect as a thing inevitable have become phenomena of the past. At the same time, some hundreds of millions of dollars were provided to pay off the long bills our bankers formerly drew on Europe for the moving of our imports and exports, and for other credit operations, while simultaneously our own American bankers' acceptances sprang into existence. They are being drawn to-day from South America, the Far East, and from Europe for the purpose of financing not only our own trade, but also that of foreign nations.

It has been suggested, however, that these results have been achieved as an indirect incident of the existence of, rather than as the direct effect of, the operations of the Federal Reserve System. We do not deny this fact, but we might well ask these critics whether they would measure the degree of efficiency of a municipal administration by the large number of murderers sent to the electric chair, or, rather, by the small number of

crimes committed?

After all, what is the real object of the Federal Reserve System? Stripping the problem of many important side issues, is it not, in substance, to increase the safety of our banking structure and to bring about stability and, as far as possible, equalization of interest rates in the various sections of the

country?

The service rendered by the Federal Reserve System must never be measured by the volume of its own business or by the amount of its earnings, but by the degree of success with which it obtains its aims. Can you see in your mind's eye the curve representing the fluctuations of our past interest rates? You will find it to be a wild, zigzag line rapidly moving up and down between more than 100 per cent and zero. Teach the country to watch that curve in the future; the straighter the line, the gentler its fluctuations, the greater will be the beneficent effect of our system.

There appears to be a great deal of confusion of thought about the proper functions of Federal reserve banks and the policy to be pursued by them in attaining the ends for which they have been organized, particularly about the question whether or not Federal reserve banks should or should not avoid competition with the National and State banks and trust

companies.

The policy of Federal reserve banks must be guided by one single consideration, which is the public interest. Federal reserve banks must neither fail to engage in transactions—which would redound to the benefit of the country—for the reason that these might entail expense or loss, nor must they, on the other hand, enter on transactions on account of the earnings to be derived, should those transactions or functions run counter to the public interest or should they lessen the ultimate ability of the Federal reserve banks to render the largest service for the general benefit of the country.

ice for the general benefit of the country.

In carrying out their policy they must neither compete for the sake of competition nor omit competing for the sake of avoiding competition. In performing functions with which they

are charged by the law they must compete or not compete as the public interest requires.

The present maximum lending power of the entire Federal Reserve System on a gold-reserve basis of 40 per cent is about \$600,000,000. The total loans and investments by national banks amount at present to about \$9,000,000,000; those of State banks and trust companies are estimated at about \$13,000,000,000. It is obvious that it can not possibly be the object of the Federal Reserve System, by competition, to substitute a lending and investing power of \$600,000,000 for that of all the banks of the country, amounting to about \$22,000,000,000. The aim of the system must rather be to keep this gigantic structure of loans and investments, which is largely carried by bank deposits, both from overcontracting and, as well, from overexpanding, so that, as the natural and inevitable result, it may not be forced to overcontract.

Effectively to deal with the fluctuations of so gigantic a total is a vast undertaking. If the task is to be accomplished successfully, it can not be by operatics which are continuous and of equal force at all times, but only by carrying out a very definite policy which will not only employ funds with vigor at certain times but, with equal determination, will refuse to employ funds at others. That during periods of actual employment the Federal reserve banks will make large earnings, and that during periods when a restriction in the activity of Federal reserve banks is indicated by general conditions their earnings will or should be smaller, are incidents which have no bearing upon the measure of their usefulness. Federal reserve banks, when accumulating and keeping idle their funds, are exercising as useful a function as when they are employing them.

If safety and the stabilization of rates form the soundest foundation for general prosperity, everything that the Federal reserve banks do in avoiding excessive rates-whether these be too high or too low-will result to the benefit of the Nation. If the potential or actual employment of \$600,000,000 can have this effect upon loans and investments of \$22,000,000,000 (of which \$16,000,000,000 are loans and discounts) the usefulness of the Federal Reserve System is proven. That does not mean that we shall ever have to contemplate conditions such that the entire funds of the Federal reserve banks will lie idle. A certain proportion will and must always remain in active service as a regulatory force. As their field of operations increases and as the circulation issued by the national banks is reduced, doubt about their ability to earn their running expenses will disappear. Ultimately, Federal reserve banks will have no difficulty in earning their dividends, too, when once they occupy their proper position and when they have had the opportunity of averaging their operations over a reasonable period. But a fair time must be given them for reaching this condition.

We must not forget that it took the European large central banks many years, often generations, to secure their to-day's dominating strategic position. And we must furthermore be mindful of the fact that the Federal Reserve System at present is operating in a period when the curve showing our interest rates must be considered as strongly subnormal, thus clearly indicating for Federal reserve banks a policy of conservatism.

The lending power of the Federal reserve banks, though very large, and though, in emergencies, it can be vastly increased by the board's power to reduce or suspend reserve requirements, is, after all, definitely limited. Moreover, constituting, as it does, the reserve power of the country, it can not be drawn upon

beyond a certain point without creating alarm.

The regulative influence of the increase or decrease in interest rates must, therefore, be applied from time to time, and the more readily bankers and business men cooperate in the policy thus indicated by the Federal reserve banks the smaller will be the variations to be expected, excepting, of course, periods of extraordinary disturbances at home or abroad, when more drastic measures may be needful.

Successfully to bring about the stability of interest rates two things are necessary: First, judicious withholding and, in turn, judicious employment by Federal reserve banks of their lending power; and, second, recognition by banker and business man that the measure of success to be achieved by the Federal Reserve System will, to a certain extent, depend upon the degree of their own cooperation with the policy of the Federal reserve banks

And this leads me to a phase of the problem concerning which I am particularly anxious to speak to you to-night; that is, the cooperation of the business community in bringing to the fullest fruition the service to be rendered by the Federal reserve banks.

Until now we have been laying the foundation and installing the machinery for future operations. I believe we have fairly finished this first part of our task, and further development will from now on depend to a large degree upon the banks and

In order to remain liquid and deserving of the unqualified confidence they require, reserve banks must employ their funds in investments of the most liquid character only. The larger the amount of such paper that is available the larger will be the field of operation open to these banks and the better can they perform the function of either employing their funds freely or, with equal freedom, collecting their maturing paper and keeping their funds idle when that course is indicated.

In order effectively to develop their operations Federal reserve banks can not depend upon the borrowing requirements of their member banks alone, since that, in many districts, would be a wholly inadequate field for their activities. The first year's experience has already shown that they must look largely to open-market operations, such as purchases of bankers' acceptances, bills of exchange, warrants, United States bonds, and so forth, in order to secure their share of business and influence.

Their most important field in this respect is the bankers' acceptance, the use of which, it is confidently hoped, will from now on steadily increase. Unfortunately, the development of this method of financing importations and exportations has thus far been comparatively slow. Either the merchant or the banks, or both, lack the full appreciation of their opportunities—we might say of their national duties—in this respect. While great headway has already been made, and while it is realized that real progress must be gradual, and that some of the foreign banks now occupying the field are blocking our way as far as they can, we ought, nevertheless, to be further advanced in this direction than we are to-day. With our acceptance discount rate at about 2 per cent, against the British discount rate of about 5 per cent; with our exchange for dollars high and secure, while European exchanges are low and unstable, we ought to-day to be doing a larger acceptance business. A few of our banks have been very energetic; others have been wholly inactive, partly because of ignorance of the methods to be employed, partly because of their inability or unwillingness to secure men who are expert in this business. Some banks, I suspect, prefer at this time to make cash advances rather than to grant acceptance credits, because they wish to employ their own funds. That, however, is shortsighted policy.

Every effort ought to be bent at this time, both at home and all over the world, to introduce the use of our bankers' accept-It is inevitable that at the end of this unfortunate war we shall be the one nation to which logically the world will look for credit facilities. To grant these acceptance credits will be one of the functions which, from now on, we shall be called upon to perform in a constantly growing measure. Not only is it wise for the accepting firms to take up with energy this branch of banking, but, for the future of the Federal Reserve System, it is of the utmost importance that our banks should hold as an asset hundreds of millions of this most liquid paper, which at any time they can dispose of to the Federal reserve banks. This will not only widen the field of operation open to our Federal reserve banks, but will prove a source of safety for us in our interna-tional financial relations. Incidentally I am looking forward to the time when even country banks will carry these bankers' acceptances as quick assets rather than demand balances with

other banks.

The Federal Reserve Board hopes that we may succeed in securing a broadening of the powers of national banks so as to permit them to accept, not only against transactions involving the importation or exportation of goods, but also against domestic transactions secured by the pledge of readily marketable staples, by goods actually sold or by shipping documents covering goods in course of transportation. It is easy to see the great influence that such an amendment to the present law would have in equalizing rates. If cotton, properly warehoused in Texas, can be pledged to an accepting bank in Texas, Chicago, or New York, the proceeds of the acceptance at the discount rate of, let us say, 2 per cent would flow from whatever would be the lowest discount market into Texas and relieve the banks in that district.

And here we touch upon a point that I would wish to impress upon your minds, namely, equalization of discount rates is dependent upon standardization of credit, and it can not be brought about by legislative enactment or Government ma-chinery, but only by the action of the banks and business men themselves. Farmer Jones may be able to secure money from his bahk on his own note only at 6, 7, or 8 per cent, but if he can store his grain or cotton with a properly organized ware-house and secure the acceptance of a good bank the bill will sell at the lowest rate, provided the accepting bank is sound.

It does not matter whether money at that time be higher at New Orleans or Minneapolis than at Chicago or New York; if the New Orleans or Minneapolis bank's acceptances are good, they will sell substantially at the same low rate as those of the banks in Chicago and New York. Raise the standard of banking and warehousing-use modern banking methods-and equalization of interest rates must follow automatically. law will ever remove the difference between good and bad. There are different grades in cotton and grains, and, similarly, there are different grades in credit. We can not equalize credits, but we can bring about equalization of interest rates

for similar grades of credit all over the country.

I have read with And now a word about trade acceptances. the keenest interest the very intelligent articles that you have published in the Bulletin of the National Association of Credit en and the speeches made by your officers concerning this topic, and I congratulate you upon the excellent work that you are doing in the matter. You have clearly jointed out that the trade acceptance offers the great advantage of converting a nonnegotiable book account into a live liquid asset, and you are doing a most valuable work of education when you teach the merchant or manufacturer that, under the present system, having sold his goods, he has to borrow on his own promissory note, using his own credit, while, if he adopted the system of trade acceptances, securing the obligation of the customer purchasing the goods, he would be selling an asset instead of incurring a debt. You have so forcibly pressed home all the arguments con-cerning this problem that I should not know how to add to them. I can only express my great satisfaction at finding myself in

such complete accord with you.

When it comes to the question of the eligibility of singlename paper for rediscount with Federal reserve banks I always have a kind of David Harum feeling-" Yes an' no; mebbe an' Because of this doubt, we have felt that we had mebbe not." to ask for evidence in order to be certain that a bill complied with the law as to the use of its proceeds. The trade acceptance, on the other hand-unless it be fraudulent paper-carries on its face the assurance of its legitimacy; it evidences a definite debt of the purchaser to the seller, to be liquidated on a The board has, therefore, encouraged reserve banks and their customers to offer for this kind of paper a rate of discount lower than that for single-name promissory notes. It is greatly to be hoped that its free use will grow. National banks may indorse these trade acceptances without limit, while the indorsement of single-name paper to banks or individuals other than Federal reserve banks would, under the nationalbank act, count as a liability which, as you know, is limited for national banks to 100 per cent of capital. As our system further develops good trade acceptances will, therefore, become an investment preferred by member banks and selling at a rate lower than enjoyed by single-name paper. The more good paper of this kind is developed the more will it be used by the banks as a secondary reserve and the more general will become the habit of rediscounting this paper-particularly for short maturities-with the Federal reserve banks.

It is the first duty of Federal reserve banks to be liquid. Therefore they must invest only in the better grades of paper offering through their acceptances or indorsements satisfactory guaranty as to prompt payment upon maturity. freely these trade acceptances are indorsed and standardized the wider, therefore, will become the field of operation of Federal reserve banks. Under the law Federal reserve banks are permitted to buy this double-name paper even without the indorsement of a member bank. Personally, I should not be surprised to see a gradual establishment of rates favoring trade acceptances as against promissory notes even to a further degree than in the past.

You may therefore feel certain that the work you are doing in encouraging the use of trade acceptances is of great value to the growth of the Federal Reserve System and of sound credit

and banking.

In actual operation the problem of the Federal Reserve System is, like your own, largely one of analysis. Success or failure in banking and business are largely dependent upon careful analysis both of the individual statement and the conditions of the entire Nation; indeed, of all the world.

The Federal Reserve System is a structure essentially based on gold and confidence—that is, credit—and, in order to be safe and sound, it must be possessed of an effective machinery for judging credits from the smallest to the largest units. can therefore readily see how important for us is the work of credit analysis done by the members of your association. Your efforts and those of our banks, in many respects, run in the

same direction. The Federal Reserve System, like you, believes in and insists upon frankness. Our member banks are required by law to make full statements. We think that an ounce of prevention is better than a pound of cure. If our Federal reserve banks carefully study the statements made by their member banks, we shall, as we go forward, avoid serious trouble by detecting and correcting it in its early inception. This same principle we strive to have applied by our member banks in dealing with their own customers, and our insistence on their receiving statements will render it easier for them to overcome resistance in this respect on the part of their customers. is safety not only in numbers but also in frankness. On the whole, I suppose, it is your experience, as it has been mine, that if a man says that he is too proud to show his statement, the statement generally is not one to be proud of. Your call for frank and intelligent credit statements and your ability to dissect them and to draw proper conclusions therefrom will prove of the very greatest importance for the safety of our

banking system. When from the individual statement we turn our attention to the credit statement of our country and to that of the entire world, we must confess to great perplexity. It is the duty of every conscientious captain of banking or industry to look ahead and ascertain as nearly as possible the future course of the two great forces of demand and supply. But the standards of past experience can not be applied to the present unprecedented situation and our economic future will depend on many factors which we must still consider as hopelessly unknown. One of the most important items in the equation will be the degree in which the unfortunate nations now involved in a death struggle shall become exhausted; and this in turn will depend upon the time over which the contest shall be prolonged. We can, therefore, safely speak only of the broadest aspects of the subject. What we may say with confidence is that if our creditor position be not weakened, the end of the war, no matter when it may come, will find us so greatly strengthened as compared with the leading European powers, that we shall almost inevitably take our place as the world's banker. It will probably fall to us to finance these nations, at least to a certain extent, and for a time; on the other hand, there is the danger that this new business that has come to us owing to extraordinary conditions may mislead us into building an expanded credit structure upon an unstable foundation of shifting gold-some of which we may not be able to hold permanently-and a heavy industrial structure upon a basis of ephemeral demands. This danger is real, and so we find at present two schools of thought, one looking into the future with unbounded confidence and the other anticipating drastic reaction and collapse. But, if this danger exists, and no doubt it does, do we, like the old Greeks, believe in an inexorable fate, and must we bend our necks and patiently await the blow? Or is it not worth our while to deal with the problem of our economic future as science has dealt with the yellow fever and with cholera? In other words, can not we, by scientific analysis, recognize the elements of the problem and find the means of warding off the danger?

Turning first, then, to an analysis of our banking problem, we should bear in mind that added lending power, be it by decreased reserve requirements or by an influx of gold, does not automatically bring about the increased opportunity for making safe local loans. Only gradually and only as we shall recognize it for the support of our permanent and solid growth of business not the mushroom kind-shall we be able to use it. The danger of a rapidly and abnormally increased lending power is that it makes for plethora of money, for too easy rates, exasperating alike to the banker and the investor, and that consequently it brings forth the tendency of encouraging unhealthy expansion and of making poor investments at home and abroad. Such conditions have always been the breeders of economic disasters.

We must furthermore bear in mind the old rule that between

countries of fairly equal credits low interest rates will have the tendency of driving gold to that center where it can earn the higher interest return. While abnormal conditions have for the present destroyed the power of interest rates to direct the flow of gold, sooner or later normal laws of economics will again assert themselves, and we must then expect that, owing to the inflation of currency created in almost every country involved in the war, the demand for our gold will be very keen and determined. We may then have to part with very large sums of gold, but we must so direct our course as to be able to control this outflow and let it take place without creating disturbances in our own economic life.

In order to avoid unfortunate developments we must then first of all "keep our powder dry"; that is, hold in reserve the

essential strength of the Federal reserve banks, not only to be prepared for possible drain or emergency but also, so far as practicable, to offer a check to inflation.

Impatience by the public or by the Federal reserve banks themselves to quickly show results by large profits must not be permitted to lure us from a safe course. Strange as it may seem, the old words of Milton, when he said, "They also serve who only stand and wait," may be aptly applied to so modern an organization as the Federal Reserve System. To stand and wait is often the hardest of all duties, requiring more courage than to follow one's impulses in "letting go."

Second. We must greatly increase the degree of our control over our current gold supply by assembling, so far as practicable, the gold now wastefully carried in the pockets of the public, substituting for it our new elastic reserve notes.

Third. We must take the utmost care not to destroy at this time the basis of our future lending power. Whatever foreign loans we may make during the war ought to be of reasonably short maturity, so that we may keep control of our gold in case we should later wish to have it at our call. That will give us a strategic position at the end of the war so strong that we shall be able effectively to face the various duties that will confront us, not only toward our own country, but also toward the world at large.

Fourth. While short loans are advisable in dealing with foreign countries, this is the time for us to set our own house in order and arrange for the financing of our healthy home enterprises on a permanent basis.

Fifth. Our banks have so far acted wisely. They have not considered the reserve now prescribed by the Federal reserve act as the actual limit of their reserve condition. They have, generally speaking, held reserves in excess of that limit. It is, however, true that with some this is not due solely to prudence, but partly to the fact that the great ease of money made it practically impossible for them to invest a large percentage of their available means.

Increased activity might bring about a change in this respect. But I believe that it should be impressed upon all the banks that, rain or shine, they should, under present conditions, continue to keep their reserves far in excess of the present legal requirements and that they should not forget that, on balance, this year they will have to pay into the Federal Reserve System roughly \$110,000,000, and that, if the old standard of reserve requirements were in force to-day, the reserves now shown would be reduced by about \$500,000,000.

If a policy of general conservatism, such as I have outlined, can be systematically followed, thereby maintaining the strength of our banking position, we shall in due course reap our re-

I do not by any means intend to suggest undue restriction upon legitimate industries. I recommend, however, a careful discrimination between that portion of business and industry which is solid and permanent and that which is of a purely ephemeral or speculative character. The former should be advanced and fostered by every means in our power; and it is the duty of our bankers and of the Federal Reserve System to supply it with its due share of credit. There is no reason why the regular business of this country should view the future with alarm. While, as I have stated, it is to be expected that at the conclusion of the war Europe will make great efforts to reestablish her industries and to reopen her markets, it is equally true that Europe is short of raw materials, and that before the full force of her industries can be brought to bear upon our markets she must buy many of these raw products largely from Moreover, it will take time to reorganize her industries, which now to a large extent have been turned into factories producing those articles that are required by a nation at war. is therefore not to be feared that the reaction will come immediately upon the conclusion of peace; and therein lies a protection which is an important consideration to be borne in mind by our business mea when dealing with the problems of our home consumption.

American prosperity is of a self-igniting character—one branch of business reacts upon the other, and the increase in activity reacts again on the very forces that first acted as the moving influence. The present wave of prosperity in the United States appears too powerful to be easily rolled back or resisted, and there would seem to be no reason why business, so far as relates to our own normal demand and consumption, should not continue to be brisk. I believe that we may say with reasonable assurance to the business men and manufacturers dealing with our own local requirements, "Be not afraid, and go ahead."

The case is quite different with those industries that are tem-

porarily overstimulated by passing conditions and are using

their resources to extend their plants in order to cope with these extraordinary demands. Very possibly such plants in many instances are built from profits, and their owners may be well able to afford to "scrap" them upon the arrival of peace. They will not, however, adopt so heroic a course, and we must therefore recognize in these investments, containing, as they do, possibilities of overproduction, the seeds of grave danger. who are engaged in such industries the banking and business community might well utter a word of warning. Let them use their profits, not in expanding beyond the limits of prudence but rather in developing their existing facilities to the highest possible pitch of efficiency.

Has not last year's experience shown us the excellent results that concerted effort can produce in dealing with problems of this kind? The educational campaign for a diversification of the crops which resulted in a largely reduced output of cotton in the fall of 1915 brought prosperity to the South, while another large cotton crop on top of that of 1914 might have proved fatal. May we not hope that we may be able to deal scientifically with questions of manufacture as well as those of agriculture? The country will need its highest degree of efficiency most urgently when, after the war is over, we must meet the competition of European manufacturers forced by necessity to strain every nerve in producing at the lowest possible figure and under the heavy handicap of weakened exchange standards, strained or exhausted credits, and high taxes

If we are prudent and avoid both banking and industrial inflation, if we use this period of affluence and unexpected pro-tection to increase our efficiency and complete our organization, I do not see why we should not calmly trust our ability and in-telligence in meeting any emergency the future may have in store for us. It is with this point in view that I so strongly urge our bankers not to lose this opportunity of perfecting our banking machinery for the purpose of developing relations with for-eign countries. The only distinct effort in this direction has been made in New York, and, to a certain extent, in Boston and Philadelphia, for the rest of the country appears to be so busy making money that apparently it has not found the time to provide for the future.

Our opportunity for successful foreign trade has been vastly increased because foreign business is carried on largely with credit, and, in granting credit, the United States will, after this war, be stronger than any other country. There is a close interrelation between loans to foreign nations and business transactions in those foreign countries. It is true that foreign loans stimulate foreign trade, but it is equally true that it is impossible to place large loans unless there exists in the creditor country an intimate knowledge of the conditions of the debtor nation. thousands of our merchants know South America or the Far East, and spread their knowledge in our country, they will create that atmosphere of intimacy and confidence without which it is absolutely impossible to create an extensive investment market for foreign securities. In the past we have not conquered foreign markets to a greater extent largely because we have been too prosperous at home, and because we did not think it worth while to accommodate ourselves to foreign methods or to grant credits in far-away countries.

The enormous lending power that we shall enjoy will give us a tremendous advantage in the future. It will be for the American business man and investor to decide to what degree the United States shall become a nation of world bankers. great prosperity should not make us forget those opportunities, almost beyond measure, lying at our door, and which, on account of our present prosperity, we should not be guilty of neglecting.

I am very grateful to you, gentlemen, for having permitted me to discuss with you to-night some of the problems as they touch your own individual work, that of the Federal Reserve System, and the larger aspects of these questions as they affect the entire Nation.

The ultimate outcome of the most gigantic of all struggles ever fought is still shrouded in mystery. But out of the mist our future looms large, resplendent with opportunities yet burdened with serious obligations. Simply to wax prosperous through the misfortunes of others can not be the destiny of this great country. Some time and somehow the future must bring us an opportunity of giving back to the world in service what fate is now lavishly throwing into our laps. Whatever our tasks and duties then may be, I know that you, business men of the United States, will meet them in the same broad and helpful spirit that has guided you in the past in struggling with the problems of our country.

Joseph A. Goulden, Late a Representative from New York.

MEMORIAL ADDRESS

HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, January 23, 1916,

On House resolution (H. Res. 101) paying tribute to the memory of Hom. JOSEPH A. GOULDEN, late a Representative from the State of New York.

Mr. BENNET. Mr. Speaker, under leave to print, I insert the following biographical sketch of the life of the late Joseph A. GOULDEN, prepared by Michael J. Corcoran, his secretary continuously for 25 years:

BIOGRAPHICAL SKETCH OF JOSEPH A. CONLDEN.

JOSEPH A. GOULDEN was descended from that famous and sturdy "Pennsylvania Dutch" stock, which has been the backbone of several American Commonwealths for over two centuries. He was of the sixth generation on his father's side, from Samuel Goulden or Gulden, who came from the German Palatinate prior to 1710 and settled in New Holland, Lancaster County, Pa. On his mother's side he was of the fifth generation from Valentine Wivell or Weybel, also from the Palatinate, who settled at Goshenhoppen, Berks County, Pa., about 1750. Some of Joseph A. Goulden's ancestors, and many of his relatives in the five and six generations before him, took part in the Revolutionary and other American wars; they were mainly farmers, owned and tilled their own lands, lived long, reared large families, walked in the fear of God and the love of their country, and proved themselves ideal citizens,

JOSEPH A. GOULDEN combined every splendid trait of his race and forefathers, and ably acquitted himself of his noble inheritance. He was born near Littlestown, Adams County, Pa., on August 1, 1844, the oldest of the four children of William Goulden and Mary Ann Wivell. His date of birth is in the baptismal record of St. Aloysius's Church, of Littlestown. In March, 1855, when in his eleventh year, he removed with his parents to the farm near Taneytown, Carroll County, Md., which

thereafter was the home town of the family.

He led the usual life of a farmer's son, and his early educa-tional opportunities were limited to the usual four months of district school in the winters, which he attended faithfully until he was 15 years old. In 1860 Prof. Andrew McKinney, a strong and sterling character, organized in Taneytown, Md., the select school known as Eagleton Institute; and in September, 1860, at the age of 16 Joseph A. Goulden entered this institute and remained until October, 1862, under the instruction of the efficient and zealous McKinney, who made such an impression on his student that for the rest of his life the latter always held his teacher in the highest esteem and most affectionate regard.

In October, 1862, at age 18, Joseph A. Goulden began teaching in Ashbrook Academy, Littlestown, Pa., where he taught for two winters, until the early part of May, 1864, taking some special instructions himself in the summer of 1863. In November of 1863 he heard President Lincoln deliver his famous address on the battle field of Gettysburg, standing within a few feet of the orator and always retaining a vivid recollection of the wonderful event. That speech so crystallized his thoughts about the war that his school-teaching lost most of its charm that winter, and in May of 1864 he went to Philadelphia and enlisted as a private in the United States Marine Corps

He served on various ships of the North Atlantic, Potomac River, and James River Squadrons, took part in the hot fight at Drewrys Bluff and in various engagements with the Confederate batteries on the southern shore of the Potomac and in various fights and skirmishes. He was made a noncommissioned officer, and when mustered out with an honorable discharge on March 1, 1866, in his twenty-second year, he declined

an appointment as a second lieutenant in the Regular Army.

He went home to Taneytown, and entered the school of his old and beloved teacher McKinney in order to pursue special studies in which he was deeply interested. In September of that year, 1866, he went to teach in Toms Creek Academy, near Emmitsburg, Pa.; a year later, in November, 1867, at the request of many of the prominent citizens and families of Emmitsburg, a town of 2,000 people, he opened a select school and continued it with marked success for two years.

In March, 1869, he went to Mill Creek (Bunker Hill), Berke-

ley County, W. Va., taking with him his young wife Isabelle

Allwein, distantly related to him through descent from old Pennsylvania families intermarried with the earlier generations of Gouldens and Wivells. He was married on December 26, 1866, in St. Mary's Church, Lebanon, Pa., by the Rev. J. H. Boetzkes

At Mill Creek he was again teaching, and reverting to his old love of farming during spare time. In November, 1870, he removed to Martinsburg, county seat of Berkeley County, W. Va., to become the principal of St. Joseph's Parochial School, under the rectorship of Rev. John J. Kain, afterwards bishop of Wheeling, W. Va., and archbishop of St. Louis, Mo. While in Martinsburg the spare time he formerly devoted to farming he now gave to real estate and insurance, trying his hand at these for the first time, and as evidence of his untiring energy and ambition he also studied law, working and studying day

As the insurance business seemed to furnish the best opportunities for his natural talents, he decided to devote himself to it exclusively, and removed to Lebanon, Pa., in May, 1872, where he spent three years actively engaged in his new business. In March, 1875, still engaged in the life insurance business, he moved to the seventeenth ward of Pittsburgh, Pa.; he was then in his thirty-first year, thoroughly equipped and experienced,

and a new and broader phase of his life began.

His ability as an insurance man was so marked that on November 1, 1879, he was appointed superintendent of eastern agencies for the Penn Mutual Life Insurance Co., and for the remainder of his life, some 351 years, he remained in the service of that company as superintendent of agents, general agent and manager, and member of the board of trustees. In his new position he traveled extensively in the Eastern, Middle, and Southern Atlantic States, appointed agents, aided them to secure business, filled them with his own overpowering enthusiasm and energy, and left unforgettable impressions of his cheerful disposition and remarkable personality.

He became interested in the Emerald Beneficial Association, a fraternal, insurance, social, and beneficial organization then spreading rapidly in western Pennsylvania, Maryland, Ohio, and New York; he soon became State president of it, national president; of its semimonthly publication, The Vindicator, he became editor and publisher. He traveled extensively cator, he became editor and publisher. He traveled extensively also in the interest of the "E. B. A.," organized branches, addressed meetings, and filled the whole organization with the fire

of his energy.

The politics of his time had also strong appeals for him, and he had acquired, in his first few years in Pittsburgh, the reputation of being a very effective public speaker, ready at a mo-ment's notice to discuss the issues of a campaign, with an unfailing flow of language, and in a happy and convincing way.

His various activities as a life insurance man, as head of a

widely known beneficial and fraternal society, as a newspaper editor, as a Democratic orator of undoubted ability; the constantly spreading circle of his friends made on extensive travels: his genius at organizing agency forces, branches of fraternal orders, and political mass meetings, soon brought him into great prominence as one of Pittsburgh's leading citizens.

In 1882 he was appointed one of the managers of the State Reform School at Morganza, Pa., by Robert E. Pattison, the Democratic governor of Pennsylvania. Gov. Pattison had received warm, active, and unselfish support in a number of stirring meetings organized and addressed by his Pittsburgh admirer; the two men, so like in their great popularity and in their devotion to public causes, were ever after warm personal friends. On this board of managers Joseph A. Goulden served

for four years.

In 1886 he was unanimously selected by the Democrats of Pittsburgh's seventeenth ward, and other parts of the forty-fourth Pennsylvania senatorial district, as candidate for State senator. The district was Republican by about 12,000, but he came so near to upsetting this margin by a remarkably active campaign, cutting the 12,000 down to 1,500, that he gave the successful Republican candidate, Ex-State Senator John C. Newmeyer, an old political "war horse," the scare of his politi-

But the call of a wider field was stirring him, and he was already pruning his wings for a larger flight. In 1888 he announced his intention of leaving Pittsburgh and going to New York, and he secured the appointment as general agent in that city for his company, the Penn Mutual Life. Pittsburgh considered his going as a public loss, and a public banquet was tendered to him at the old Seventh Avenue Hotel, attended by the mayor, postmaster, a host of city officials, and prominent The speeches voiced the regret of the citizens, yet wished their fellow townsman Godspeed. A suitably in-

scribed and gem-studded gold watch and chain were presented, now the heirlooms of one of his grandsons.

In October, 1889, when 45 years old, he came to New York and settled in the old Fordham section, the old college town of Poe fame, then a part of the annexed district of "North Side" of New York City. He lived in Fordham for the remainder of his life, over 25 years. As the general agent of the Penn Mutual Life Insurance Co. he was successful from the start; but almost immediately his passion to be doing things for his neighbors and friends led him again into public prominence. He joined the Fordham Club and was selected chairman of its public improvement committee; he organized meetings to advocate needed improvements and inaugurated the plan of taking committees away down town to appear before the city officials and heads of departments to personally present the facts as to improvements, and to keep at it until the improvements were actually obtained.

He then started organizing taxpayers' associations in the other sections of the annexed district, arranging mass meetings for sorely needed civic improvements and taking committees on visits to the city officials to bring into actual being the needed improvements. In a few years he had organized these tax-payers' associations in nearly every section of the twenty-third and twenty-fourth wards, and the next forward step was the combination of all of these local associations into a general one, known as the Taxpayers' Alliance, of which he was the organizer and first president, presiding over it for four years. As it represented practically the entire north side and had behind it the approval of every inhabitant and the propaganda of a very large membership in the local societies, this alliance became a powerful factor in public improvements and the record of its achievements a remarkable one. There was not a single one of these in which he was not almost directly instrumental.

He also joined the Democratic club of his district and was promptly appointed chairman of the speakers' committee; in the course of a few campaigns it could be said that there was not a single Democratic political meeting in any part of the district that he did not address or preside over, and most of them he organized, gathering together the audiences and arrang-

ing for the speakers

Another consuming passion of his life found free play almost from the moment of his advent in Fordham; that was his interest in education and the schools. He visited the public school in Fordham, impelled by his old love of teaching, and delivered to the pupils one of those short and brilliant talks that made such indelible impressions on their minds. He visited other schools, and his visits at each became more frequent; it soon became his daily habit to visit some school at the assembly hour and to urge some civic virtue for the adoption of the pupils; he appeared in every graduation exercise that he could possibly arrange to attend, and the principals in time began to so arrange the hours and days for these exercises that he could take in every one of them in succession all over the two wards of the annexed district. He grew to know every teacher and school official, and almost every child in every school; in the course of years he followed their careers from class to class, from lower to higher grades, from grammar to high school and college. The pupils themselves, as well as the teachers, came to consider him almost a permanent part of the school system, always present to aid and encourage and enthuse them, to stir up pride in their studies and ambition to succeed in life.

He carried on all of these activities, and many others that came to his hand, simultaneously; his enormous activity and energy enabled him to crowd into each day the events which ordinarily would not fit into six days. And he did not neglect his insurance business nor his home garden at Fordham, which he planted and cultivated as though he had no other interest in life, and from which he produced a fine crop of vegetables and flowers each year, thus giving rein to another of his life's pas-

sions-farming.

He became so well known as a friend of the schools and as chief advocate of public improvements, and acquired such fame among city officials as the leader of incessant committees demanding and obtaining improvements, that he had only been in Fordham three years when Mayor Hugh J. Grant, in November, 1892, appointed him a school commissioner, or a member of the city's board of education. During his four years' service as commissioner he was a very active member of four subcommittees of the board, did an immense amount of school work, and made an incredibly large number of visits to schools all over the city, attending the morning assemblies, graduation exercises, and those arranged to celebrate the National and State holidays. He obtained the approval of the board for the first pension plan in favor of superannuated teachers; and started patriotic

instruction or military training in the schools.

With the aid of several of the more sympathetic principals he organized uniformed companies of boys, and had officers of the Army and National Guard instruct them in military tactics after school hours on certain days and on Saturdays; where this could not be done, he had color guards of boys organized to take charge of the school flag, to be displayed at morning assembly and solemnly saluted by the entire school, boys and girls. Meanwhile he had joined Winfield Scott Hancock Post of the Grand Army of the Republic; and he soon had the Grand Army of the Republic posts purchase and officially present to the school American flags. These presentation ceremonies, in which a squad of old veterans, in their Army uniforms, handed over to the proud color guard of the school the glorious emblem of patriotism and love of country, were solemn spectacles and object lessons that the pupils never forgot. Commissioner Goulden was always the motive power from beginning to end, and he never rested until practically every post had presented one or more flags, and until every school had such a flag, with its ceremony of presentation and acceptance, and the custom inaugurated of saluting it daily.

The idea of patriotic instruction and military training did not grow so rapidly, for want of instructors and press of other studies on the children's time, but he managed to have a number of schools organize and equip uniformed companies of boys, who took part in the parades on Memorial Day and on other occasions, especially when the Grand Army of the Republic would also parade. And to this day no public celebration or parade is complete in New York without its section of children.

His Grand Army of the Republic comrades soon elected him post commander, and in 1896, just as his term as school commissioner was expiring, he was elected chairman of the memorial committee, the central body, composed of all the Grand Army of the Republic posts of the whole city of New York. Finding that as chairman of the memorial committee he was also a member of the commission designated by law to erect a memorial monument to the city's toll of heroes in the Civil War, and as the commission, with an appropriation of \$300,000, had practically done nothing for want of the man with time to devote to it, he promptly assumed the task, had the commission organized, was elected its secretary, and never ceased in his efforts, practically alone and single handed, until the Soldiers Sailors' Monument on Riverside Drive was a beautiful reality. The monument was dedicated and formally presented to the city in 1902, and the ceremonies were almost a personal tribute to the secretary of the commission.

In 1897, when his increasing public duties made it appear that his life insurance business might suffer through lack of attention, he took into partnership his son, Maurice E. Goulden, already successful as manager of another company. His son from that time forward assumed most of the burdens and office duties of the business of J. A. Goulden & Son as general agents of the Penn Mutual Life, and this devotion and loyalty enabled the father to give an ever larger amount of time and attention

to civic and public matters.

These now included, among all the others previously referred to, his chairmanship of the local school board of the twenty-fifth city district, for almost two years; and his membership in the board of trustees of the New York State Soldiers and Sailors' Home, at Bath, N. Y. On the latter board he was appointed in 1902, and served continuously to his death, at which time he was the president of the board and its member oldest in service. He was vice president of the Penn Mutual Agency Association, composed of the managers and general agents of the company throughout the entire country; he presided at many of its meetings and at the meetings of its executive committee, and took an active part in all the projects for the good of the company and the business, and later became the president of the association. He was a vice president of the North Side Board of Trade, composed of the leading business men of the twenty-third and twenty-fourth wards. He was a trustee of the Church of Our Lady of Mercy, in Fordham, from 1893 until his death.

At the time he came to New York, and on various later occasions when suggestions were made as to possible political offices to which he might be called, he said to his son, and to others as the occasion served, that he had but one political ambition, and that was to serve the people as their Representative in Congress. He said that if the people would elect him a Member of Congress the dream of his life would be realized. He was so widely known in 1902, yet had so persistently refused to be considered for the usual political offices, that it was felt he had no ambition to be elected to public office; but always he had the ambition,

without a thought that it might ever be fulfilled, of serving the

people in Congress.

When, as a result of the census of 1900 and the subsequent reapportionment of the State, The Bronx became a congressional district by itself, instead of being torn between Westchester County and New York City, and the entire Democracy, as though one man, turned to him as the party candidate for Member of Congress from the new eighteenth district, suddenly the dreams of his whole life seemed to crystallize into reality. He went into the campaign with his heart on fire with enthusiasm, with all the exaltation of a prophet. Some of his armies of friends, chiefly Republicans, wavered for a moment, unable to grasp the idea that the unselfish friend of every public movement, their leader in every inch of the way to civic improvement in The Bronx regardless of parties or interests, could be just a Democrat; but the wavering was only for a moment, and he was elected by a handsome majority of votes in a district with a larger population than any other congressional district in the United States.

He was reelected in 1904, 1906, and 1908, always with handsome majorities. In 1910 he positively refused to be a candidate for reelection, stating in a public speech that it was time to give others a chance to serve the people in exalted places

But in 1912, after another reapportionment of the State based on the 1910 census, when The Bronx was to be the major portion of two congressional districts, the Democrats of the more northerly district, in which he lived, so prevailed upon him that he consented to be a candidate for Member of Congress in the new twenty-third district. His triumph in the primaries was only a prelude to a greater triumph in the election.

In 1913, when the growing size and importance of The Bronx compelled the parties to take account of Bronx men in the selection of the greater city's three chief officers—mayor, comptroller, and president of the board of aldermen—the Democrats had the distinction of being the first party to make the recognition. In spite of his most strenuous efforts to avoid it, he very reluctantly acceded to the practically unanimous demand of the party and of the people, and became the candidate for president of the board of aldermen; he made the campaign with all of his old-time energy and enthusiasm, but went down to defeat with his party, his personality having nothing whatever to do with the matter and being powerless to save the party.

But in 1914 he was again elected a Member of Congress for the sixth time; he had served two months of this sixth term when he died suddenly in Philadelphia on May 3, 1915.

Many new honors had come to him. He was elected a trustee of the Penn Mutual Life Insurance Co., then an institution with assets of \$140,000,000 to be administered; he was a trustee of the New York Catholic Protectory, and took a deep interest in the education and industrial training of its army of boys and girls; he was vice president of the Atlantic Deeper Waterways Association, and labored hard to complete The Bronx link of that commercial waterway which was to protect and develop American trade and commerce.

He was loaded with many honors, and yet with a multitude of cares for the people, when death visited him. He never flinched or failed toward the end, never faltered in the face of duty, could not be persuaded that age or other conditions could hamper his energy or lessen his activity; he died in the full tide of pulsing life, while living strenuously, while on his way blithely and joyfully to attend a meeting of the trustees of his beloved insurance company, after 35½ years of ministrations to

its widows and orphans.

He cared little for fame, as such, or for the opinion of pos-terity; but the wonderful outpouring of tributes occasioned by his death would have gladdened his heart could he have but known. Most touching of all were the processions of school children who could not understand that there was an end of the friend who seemed to be with them unceasingly; and of the old soldiers who seemed to feel that their last prop was gone; and of thousands of men and women who looked upon him as the solver of all their problems, the friend in all emergencies, the cheerful helper in every extremity. In his old home town— Taneytown, Md.—when his body was brought there with all the pomp and panoply of a congressional funeral service, where he knew personally every man, woman, and child, the mourning was profound and intense; all business was suspended for the whole day, and absolutely the whole town turned out to publicly mourn for their great dead. On May 6, 1915, he was buried in the family plot, among seven generations of his family, in soil seven times sacred to him.

The one great outstanding fact of his life, the great principle which underlay his every activity, the key to his achievements, was his unselfish devotion to other people and the people's interests. The life insurance business appealed keenly to him, because it meant protection to widows and orphans; it meant thrift and old-age funds for everyone; teaching meant the preparation of the rising generation for their part in life, for their carrying on of the duties of civilization; his war experience was prompted by a like impulse to be of service to others. He was always impelled unconsciously to be up and doing for others; and, while there were times when it seemed as though this would overwhelm him and his own beloved ones with disaster, his great faith in ultimate good overcame all perils and troubles, and the great tide of his life would again run on for the public good. He never had a selfish thought for himself nor for his own future; his heart beat itself out for others.

Naval Defense on the Pacific Coast.

EXTENSION OF REMARKS OF

HON. WILLIAM D. STEPHENS. OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 28, 1916.

Mr. STEPHENS of California. Mr. Speaker, in the hearings before the Naval Affairs Committee of the House of Representatives one year ago you will find my questions and the answers thereto by the Secretary of the Navy and others, all clearly and definitely demonstrating that the United States is practically without any naval defense on the Pacific coast, is only moderately fortified, and has comparatively few soldiers there to use

Mr. Speaker, ever since I came to Congress, and before, I have favored adequate national defense. Everywhere in the district which I represent I spoke during this last summer in favor of a larger defense-such a defense as may keep us out of war and will without question protect and preserve us if

Adequate and proper preparation for the defense of our beloved country will preserve the young men of this Nation to the Nation and to their mothers, wives, and children.

Mr. Speaker, we need an increased Army, more fortifications, and more air craft of every kind; and, perhaps more than anything else, we need a wonderfully increased Navy, for it will be the duty of the Navy not only to protect our harbors and our cities but to go far out from our shores to meet and vanquish the enemy fleets.

If we ought to have a larger Navy, we ought to have it now. We should authorize and commence construction of it now. I do not favor the expenditure of one penny for aggression, but I do favor the expenditure of \$500,000,000, and more if necessary, for a Navy complete in detail and large enough to protect us not only on the Atlantic coast but also along the Pacific coast.

Mr. Speaker, I have just received from the Chamber of Com-merce of Los Angeles, Cal., the following resolutions and memorial to Congress, urging national and Pacific coast defense:

Los Angeles Chamber of Commerce, Los Angeles, Cal.

RESOLUTION ERGING NATIONAL AND PACIFIC COAST DEFENSE.

Whereas the United States is at present practically unprepared to defend itself against an attack by foreign force; and Whereas the need for such defense may arise following the termination of the present hostilities now being waged among several of the great

nations; and
hereas the cost and consequences of an attack would be inconceivably greater than the cost of even the most elaborate preparedness for

defense; and
Whereas the United States Government now has in the organizations
known as the General Board of the Navy and the General Staff of the
Army, a highly trained and experienced body of military and naval
experts whose opinion on these matters should be the best obtainable;

experts whose opinion on these matters should be the best obtainable, and
Whereas it is our understanding that the plans and suggestions of these
boards concerning immediate preparation have not been adopted:
Now, therefore, be it

Resolved by the Board of Directors of the Los Angeles Chamber of
Commerce, first, that the United States Government take immediate
steps to insure the prompt and successful defense of all of its territory;
second, that the measures adopted to attain the above end should include
complete and specific plans providing adequately for the defense of the
Pacific coast, which should be formulated without delay by the General
Board of the Navy and the General Staff of the Army of the United
States, and which should give full consideration and weight to the facts
and recommendations embodied in the attached memorial to Congress
which sets forth the conditions on the Pacific coast from which arises
the urgent and imperative necessity for the establishment and permanent maintenance on that coast of a land force adequate for its defense;
third, that the principle of universal military service by the entire man-

hood of the country, which is a true democratic system, should be adopted as the foundation for our ultimate system of national defense. Such service should be with the colors on the part of those physically fit, as provided for in the Federal Constitution, or else by financial contributions from those unable to serve in person, to be applicable solely to the military and naval services of the country.

I hereby certify that the above is a true and correct copy of resolution passed by the board of directors of the Los Angeles Chamber of Commerce at the regular meeting held Wednesday, January 19, 1916.

ROBT. N. BULLA, President.

FRANK WIGGINS, Secretary.

MEMORIAL TO CONGRESS.

To the Senate and House of Representatives of the United States of America in Congress assembled:

The facts and recommendations hereinafter set forth are respectfully ibmitted for your consideration in behalf of the people of the Pacific

The facts and recommendations hereinafter set forth are respectfully submitted for your consideration in behalf of the people of the Pacific coast.

I must be conceded that no dependence can be placed on bringing naval reinforcements from the Atlantic to the Pacific coast in the event of war. The Panama canal is uncertain. It easily could be blocked or its locks were ward to the properties of the pacific coast and is uncertain. It easily could be blocked or its locks were ward to the pacific coast and is placed and the pacific coast and is planting power to the combined navies of Asia, it would fail as an adequate defense measure. It would fail as an adequate defense measure. It would face destruction unless it was provided with fortified naval bases or Germany in the present war.

2. However desirable it would be for the United States to have a fleet of superior fighting power on the Pacific Coean, its construction would require many years. By no possibility could an adequate Navy for the Pacific be built in time to meet immediate necessity for an impregnable defense. It appears obvious that the need for such defense will arrise, if ever, before the needed fieet could be constructed. For the Pacific coast should be not offensive but detensive in character, including naval bases, harbors of refuge, coaling stations with large reserve coal supplies, transports, swift cruisers, torpedo boats, submarines, torpedoes, mines, mine layers, and large fleets of aeroplanes, with ample ammunition and supplies at all bases.

3. Naval bases should be established immediately and strongly fortified at all vantage points on the Pacific coast in the United States and at Sitka, Cooks Inlet, Unalaska, Samoa, and Pearl Harbor. Unless both can, proceed simultaneously, the established in mediately and strongly fortified at all vantage points on the Pacific coast in the States and at Sitka, Cooks Inlet, Unalaska, Samoa, and Pearl Harbor. Unless both can, proceed of a land force in Alaska large enough to insure the safety of this Terr

reserve. A separate force should be enisted for colonial and isthmian service.

8. A national construction reserve should be established and permanently maintained to embrace all men employed in construction work by the National Government, including the building of highways and waterways. flood prevention and protection, river regulation, forestry and land reclamation. All such work should be done by a regularly enlisted and organized reserve, under civil control in time of peace, and instantly ready for military service in the event of war. The German forestry system might well be the model after which such a national construction reserve should be patterned.

9. A national rural reserve, with an eventual strength of 5,000,000 men, should be created and maintained at proper strategic points in the United States under a system embodying the features of the Australian and New Zealand land settlement systems. Each rural reservist should be settled upon a small tract of land, no larger than he can cutivate with his own labor with the help of his family. This entire rural reserve should be officered, trained, equipped, and organized so that in the event of war they would be as good soldiers as the reserves of Switzerland, who are at all times ready for instant military service.

the reserves of Switzerland, who are at all times ready for Instant military service.

10. All the national reserves of the United States should be continuously under the exclusive jurisdiction and control of the War Department in all matters relating to military training, equipment, organization, and service, and should always be prepared to join the colors without delay. That instant readiness of the national reserves for service in defense of the country would be our best safeguard against the breaking out of war. We might then rest assured that no nation ever would attack the United States or attempt to Invade or occupy any of its territory or possessions.

11. The most imperative need to insure the instant preparedness of the United States for national defense would be a full complement of officers for all the reserves, always in active command. All the national reserves should therefore be under command. All the national reserves should therefore be under command of officers promoted from the ranks or trained in military schools under the direction of the War Department. All such officers should be classed and

ranked the same as officers of the Regular Army. Military schools should be established and maintained in different parts of the United Wide all the officers necessary for the national reservers. Many of the military posts are improperly located for their present use and should not be required to the control of the cont

coast. A cavalry force adequate for all needs on the Pacific coast should be established on 10-acre farms in Nevada, under a plan modeled after the Swiss cavalry reserve system, on Government lands reclaimed and settled by the National Government, under a plan similar to the land reclamation and settlement system of Australia. Such a cavalry force could be made available not only for the defense of the Pacific littoral, but also, if needed at any time, for defense on either the northern or southern border of the United States, and should be large enough to fully meet those possible needs.

Respectfully submitted.

Los Angeles Chamber of Commerce.

LOS ANGELES CHAMBER OF COMMERCE. ROBERT N. BULLA, President.

LOS ANGELES, CAL., January 19, 1916.

Rural Post Roads.

EXTENSION OF REMARKS

HON. JOHN R. K. SCOTT,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES, Tuesday, January 25, 1916.

Mr. SCOTT of Pennsylvania. Mr. Speaker and gentlemen of the House, in the report of the Committee on Roads, considering bill H. R. 7617, introduced by the gentleman from Missouri, the statement is made that "primarily roads are local concerns." I do not wish to dispute that statement, but I do want to say that if the roads of this country have in the past been considered of "local concern" only, then it were well that some steps be taken immediately to make the roads of our country of tional concern.'

Students of history, both of past history and present history, have agreed that the prosperity of a country can be safely gauged by the condition of its roads. I am no student of history, but my slight knowledge of that subject convinces me that this statement is correct. If we look back into the history of former world powers, or even if we glance over the map of Europe to-day, we find that wherever commercial supremacy on land existed or exists there the roads of that nation excel.

The widespread demand for national aid in road building and in the maintenance of our roads has become so insistent throughout the country that I do not believe that this Congress should. as a representative body, ignore the demands of the people,

whom we are placed here to represent.

A number of the Members of this House have opposed the passage of this bill on the ground that it favors the farm and rural communities at the expense of the cities. To my mind this is a very narrow-minded and shortsighted attitude. not believe that the development of any road can benefit the farmer at the expense of his city brother. That which benefits the farmer and permits him ready access to the city benefits the city in direct proportion to the benefits conferred upon the farmer. Our cities to-day, both small and large, are dependent upon the farm for the greatest necessaries of life. If it is expensive for the farmer to haul his produce to the city, who bears the burden? The extra cost is paid by the city man, not by the farmer. The margin of profit to the farmer will be regulated and maintained to the usual standard by competition and by the law of supply and demand. The farmer will take care that he receives his fair margin of profit on all of produce he sells. If it is expensive for him to haul his produce to a certain town, then the residents of that town will have to pay that expense if they wish to acquire the farmer's goods. If the farmer is able to haul his produce at a small cost, then competition will compel him to so regulate the selling price of his produce as to leave him a fair margin of profit only. Therefore I maintain that good roads do not benefit the farmer any more than they benefit the city. The benefit to one is in direct proportion to the benefit conferred upon the other.

In addition, I submit that it is only fair that the Federal Government should contribute to the maintenance of the roads over which it carries its mail. The Federal Government has all of its post offices and buildings exempt from taxation, and I feel that no reason exists why it should not contribute its support to the upkeep and maintenance of the roads, which it makes use of as part of the machinery of its postal work.

Our parcel post has a great future ahead of it, and in order to develop it to its greatest possible form of efficiency we need good roads. There can be no question or doubt but that in the very near future the Parcel Post Service will bring to this Government a tremendous revenue. Therefore as a business proposition, pure and simple, the hastening of this future of our Parcel Post Service by the development of proper roads can not be regarded other than as good business judgment.

It is true that \$25,000,000 will not accomplish very much in the way of aiding the development of the roads of this country, but it is a beginning, and in the end will undoubtedly encourage the promotion of good-road building throughout the United States.

I shall support this bill, and in doing so I feel that I am well representing the interests and welfare of each community in

the State which I have the honor to represent.

Child-Labor Bill.

EXTENSION OF REMARKS

HON. JOHN G. COOPER, OF OHIO.

IN THE HOUSE OF REPRESENTATIVES.

Friday, January 28, 1916.

Mr. COOPER of Ohio. Mr. Speaker, I shall support this measure because I am now and always have been opposed to child labor. This bill provides that when any State in the Union desires to permit innocent little children of tender age to work in the mines, quarries, canneries, mills, workshops, or factories of such State, then it shall be unlawful for employers of child labor in these States to ship products of such labor into another State. In other words, this bill prevents employers of child labor in 4 or 5 States in the South, where children are employed in the cotton mills, from disposing of their childmade products in 42 other States in the Union which have laws prohibiting child labor.

Mr. Speaker, for many years we have heard much in our legislative halls about conservation of our forests, water-power sites, our mineral resources, and public lands. Many good laws have been enacted to conserve our natural resources for the people. This has all been well and good, but I wish that we as a Nation would become a little more interested in the conservation of our

manhood and womanhood, our boys and girls.

After all, it is not our fine farms and beautiful homes, it is not our large cities with paved streets and avenues over which we drive high-powered automobiles, it is not our large manufacturing industries, it is not a large Army or a powerful Navy that makes a Nation great. Our Nation is measured by the standard of manhood and womanhood, by the character, education, and efficiency of the men and woman who are our citizens. No nation is great unless its citizenship attains the highest possible standard of religion, morality, and education.

This bill provides for the conservation of our boys and girls. It protects them from those who would commercialize their little bodies and take away from them that great inheritance of education which rightfully belongs to every American child. I say it is the duty of every State and every nation to enact legislation providing for the education of its people, for education is the firm foundation upon which every free government must

stand.

Mr. Speaker, it seems to me that whenever there is any legislation recommended on the floor of Congress that has for its ultimate purpose the uplifting of humanity along the moral or educational lines there are always those who oppose such proposals on the ground of personal liberty. State rights, or else they say such laws would be unconstitutional.

I am not a lawyer, therefore I am not qualified to pass on the constitutionality of this measure. But I do believe that Congress should have the power to pass laws which will protect the children of our country from any condition that may arise to retard their development-physically, mentally, or morally.

I do not believe there is a Member of this Congress that would permit his boy or girl to go to work between the tender ages of 10 and 14 years, yet we are told by people from the South, who represent the mill owners of the States in that part of the country, that there are hundreds of boys and girls of this age employed in their mills from 10 to 12 hours a day. Furthermore, the product of this child labor is now shipped into the Northern and Western States, which have laws to protect their children from the sweatshops and the factories.

Mr. Speaker, as I said in the beginning, I am opposed to child labor, and it seems to me that it would be commendable, indeed, for this Congress to pass this bill. By so doing we will protect the health and promote the education of those who are the real asset of our country. Let us build higher the standard of civilization and citizenship by conserving our boys and girls, who will some day take our places in the government of the greatest

and grandest Nation in the world.

"Why Does the Democratic Party Deserve the Continued Confidence of the Country?'

EXTENSION OF REMARKS

HON. CLEMENT C. DICKINSON. OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 28, 1916.

Mr. DICKINSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD. I include a memorandum by Hon. Franklin K. Lane, Secretary of the Interior, answering the question "Why does the Democratic Party deserve the continued confidence of the country?" and showing that the Democratic Party has made good under the administration of President Wilson.

The memorandum is as follows:

MEMORANDUM.

You ask, Why does the Democratic Party deserve the continued confidence of the country? The answer is, Because it has made good; and I believe that there can be no fuller answer to your question.

No one could have foreseen three years ago that the life of this Nation would have been so intense as it has been during this administration, and few would have prophesied, I believe, that so much would have been accomplished so wisely and so many situations of an unprecedented character dealt with so

satisfactorily.

This country is growing more nonpartisan every day. It is asking for an efficient and an honest government, and is becoming more indifferent as to the labels which for purposes of coordinated action men bear. And somehow it matters very little what any of us may say regarding the merits or the demerits of a party, for minds are seldom brought to a conclusion by political speeches or political articles. The newspaper, which daily tells the story of what is done, gives to the citizen the basis for a judgment which he makes independent of partisan appeal.

In a word, I think it makes little difference what criticism is launched against the administration or what any of us may have to say in its praise. The American people have judged it already very decisively by the things which it has done; and one of the greatest things which it has done has been to seriously disappoint its lugubrious opponents. For, as I look back over the past three years, I recollect very distinctly the sad tones of those who prophesied calamity if such misfortune should happen to the country as to place the Democratic Party in possession of its governmental machinery, and one of the greatest of these calamities would be a financial derangement in which credits would be destroyed, our banking system imperiled,

and inflation follow demagogic legislation.

The answer of the Democratic Congress was the Federal reserve act, which sound men of finance and generous-minded opponents-have characterized as the greatest single constructive bit of legislation enacted by Congress in the past 50 years, and one which in its first year tided the country over the most threatening financial emergency in its history. Why was it necessary for the Democratic Party to do this great service to the commerce and the industries of the United States? The truth is that things can be done wisely and well only by those who are independent of political obligations; and in this, I think, lies the keynote of Democratic achievement. The party has had no other master than its own desire to serve well the country; it did not have to legislate for any interest; all of its avenues of approach were public and open; it could live its own life, and express the will of the people as it understood that will.

Think of this fact for one moment, and see if it has not some real significance: The present administration has dealt with the tariff question, the banking question, and the regulation of interstate trade—the three most delicate questions which con-cern business. The Democratic Party has been able to deal with these matters of the most profound national importance, because it could look at them boldly and model its policy not by what a group of men might wish but by what the country's needs were. I believe that the Democratic Party is preeminently entitled to a return to power, because it has had the character to be at once both independent and sagacious, a combination of qualities not too common; for independence too often means rashness, and sagacity too often means cowardice.

The Underwood-Simmons tariff bill had no adequate trial. It was in effect barely a year when the European war came on,

which shut off imports from nearly one-half of industrial Europe. Yet in that year of trial it produced as great revenue as was produced the first year either under the McKinley bill or the Payne-Aldrich bill. Its aim was to make imports pay revenue; not to use import duties to promote excessive profits for favored industries. It is a misfortune to our industries and commerce that the tariff has become the football of politics, and those who are wise wish a respite from agitation and legislation. Surely there can be no great demand for a new kind of tariff so long as labor conditions remain as they are now, with fewer men out of work in this country than there have ever been within a lifetime.

The history of a year has turned the mind of this Nation toward the necessity for a more adequate national police force. The demand that we shall not remain without adequate protection against foreign aggression has called for the extension of our Army and Navy. We have no enemies, but we have rights which we can not yield. The man who has anything which anyone else wants must protect himself or it will be taken from him. If this is not so the policeman and the courts are not needed. Even in a church pickpockets have been found. A good watchdog is not a bad institution on a country farm. This world is not good enough yet to abolish the use of the safe. But can we have a strong Army and the use of the safe. But can we have a strong Army and Navy without the menace of militarism—the upbuilding of the war spirit and the subordination of our social and industrial life to military and naval policies and authorities? Australia and Switzerland and Holland and the Argentine Re-public seem to have answered that question in the affirmative, and yet all have gone further in preparedness than it is proposed we shall go. To think constantly of war is to bring about war. But to think constantly of the value of peace will not insure peace when others are on the hunt, not unless the hunted is craven.

As to our foreign affairs it is not yet time to speak fully, for the history of a foreign policy can not be written until its results are revealed. Broadly the question has been pre-sented from the first day of the administration, Shall we go to war because foreign nations do things which are opposed to the pledges they have given to us and to the world?

We inherited a situation in Mexico that was horrible in its

facts and apparently impossible of peaceful solution. Madero, who seems to have been an unpractical idealist, had been murdered. Huerta, his commander in chief, had taken the ruler-ship and announced that the constitution and the courts were to be disregarded. The friends of Madero and of the constitution had risen in revolt and held most of the land along our border. Huerta had not been recognized by President Taft. Should we recognize him?

The moral sentiment of the country would not stand for it, though the cientificos in the United States as in Mexico pressed for such recognition. What, then, was to be done? Either restore order in Mexico by force or treat Mexico as a land in which two parties were at civil war. Force had its advocates and has still. Some see the possibility of adding a new strip to our southern border; some are always for the strong hand, because it gives the Army something to do; some believe in a policy of aggression as the only way to establish firmly our own position and insure against foreign injustice. It would have been easy to have called on the Army to go in and settle things, but when would we have come out? We went into Cuba and came out; but in Cuba we found a people fighting an unending rebellion against a foreign monarchy in whose harbor the Maine had been destroyed. We said that Huerta would not receive recognition, and his government came to an end. The revolutionists divided, and when things came to a pass where one element clearly had the ascendancy and conditions of poverty made necessary outside aid, we recognized Carranza, after he had pledged himself to his fellow Latin Americans and to us that religious and civil liberty would be reestablished and persons and property protected.

How many men do you think there are in the United States who believe that it is the holy duty of this country to rush into a neighboring country whenever an American citizen is killed within its borders by ruffians calling themselves an army? If there are many, they will yet have abundant opportunity, I regret to prophesy, to spread a sense of fear, for the time never was when some part of Mexico was not in a turmoil and Americans were safe. The American people who have the making of war would not have stood for war either to seat Huerta, which was our first alternative, or to take the country out of the hands of Carranza and Villa and clean up the Mexican house. And that decision became firmer as they saw what war meant in

that the Wilson administration followed a policy that has even now brought to us the good will of all our neighbors in the south as far as the cape.

The policy of this country as to the European nations at war is to abide by settled international law, and by persistent iteration and reiteration assert and maintain the rights of neutrals. There is no nation that is not at war which does not approve of this position. There is no nation that is in the war that approves this position. It is our purpose to preserve this country for the opportunity that it offers to prove the value of a democracy to the world. It is our purpose also to preserve this hemisphere against the aggression of foreign Governments. The long view is the one we must take, not the nearer view of

immediate impulse.

With less sanity we might have gone to war with Germany over the Lusitania, but when Germany at last declared her intention to wage war underseas in accordance with the rules that had governed as to naval warfare, that danger faded. And Chief Justice White said that in securing this declaration the United States had achieved the greatest diplomatic victory of the past generation. We have sought through diplomatic means to gain the recognition of those rights which we might have secured by war. This is the function of diplomacy; but, of course, it is not picturesque. It always requires time and and patience. You can not dramatize negotiations by letter. And, after all, we like the drama. We want scenery and a well-set stage. Personalities enchain our minds. We want to see "our man going up against their man." To ask for facts and endure the red tape of the mysterious foreign office is not half so appealing as to "call out the guard" and "go to it." That is to say, it is not half so appealing if you want the guard called out and if you are anxious to be one of the guard yourself and to pay the bill yourself in your own dollars and in your own blood.

The good lawyer settles his case out of court, if he can. And in dealing with foreign powers the President is the attorney for the people of the United States. He is not a patient man by nature. His own affairs he handles in a very direct and forthright manner. But in handling the affairs of his country the President dare not be rash or do the attractive, dramatic, impulsive thing when the burden of his act must fall on others. Washington was excoriated by his own friends for not casting his influence for France in her day of struggle. And Lincoln was as bitterly denounced for surrendering Mason and Slidell to England. The long view, however, has justified them both.

We can have war any day we wish it, with either Germany or England, or both. All that is needed is to magnify the significance of some breach of international law and refuse to regard the case made by the other side. The President, however,

will not let war come about that way.

This Nation is not willing to sacrifice self-respect rather than fight. But a courageous and virile people with such a war record as ours, and resources of men, money, and minerals such as we have, is not looking for a fight just to establish its position in the world, or out of an insane, egoistic notion that it is its duty to police a world that is the victim of national egoism.

We are enjoying peace and prosperity. We are to be pre-pared to protect ourselves as a people. These, then, are three words which will characterize the life of this administration peace, prosperity, preparedness. Peace with honor, prosperity without favoritism, preparedness without militarism.

FRANKLIN K. LANE.

JANUARY 1, 1916.

The Child-Labor Bill.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND. OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. BORLAND. Mr. Speaker, this is a bill to prohibit, as far as lies within the jurisdiction of the Federal Government, the great and growing evil of child labor. It is drawn under the interstate-commerce clause of the Federal Constitution and forbids the shipment in interstate commerce of any commodity the product of mines, quarries, canneries, factories, or other industrial establishment which is made either in whole or in part If Carranza has the strength to maintain himself and Mexico by the labor of children under the prescribed ages, which are reestablishes itself, there is no American who will not rejoice 16 for mines and 14 for other establishments, or which is the product of the labor of children between those ages and 18 who are required to work after 7 o'clock in the evening or before 7 o'clock in the morning. It is further provided that proof of the employment of children within the prohibited age in such a factory or establishment within 60 days prior to the shipment of the goods shall be prima facie evidence of the violation of the law.

This bill is being bitterly contested by some of the industries affected. Being unable to resist successfully the aroused public sentiment in favor of child-labor legislation, these special interests who have been exploiting child labor are masking behind the jealous regard for the Federal Constitution. They claim that such legislation is wholly within the province of the States and not within the power of Congress, and that it would be a shocking violation of the Constitution to attempt to extend the Federal power to matters of purely police regulation within the States. This is not the first time that special interests have sought to use that great instrument for the protection of vested I notice that very little excitement is created by attempted violations of the Constitution unless some great evil affecting the freedom and safety of the people and resulting in sordid gain for the privileged few is sought to be remedied. Behind the mask of a zeal for the Constitution may be fre-

quently found the leering features of greed.

It is a sufficient answer to such contention in this case to say that the pending bill does not attempt to control any State in its power to permit the manufacture within its own limits of goods, whether made by child labor or by any other form of violation of human rights, provided the goods are used and consumed within the sovereign State which permits the abuse. The power of Congress under the Federal Constitution over the subject of interstate commerce is full and complete. It is as ample and unrestricted as the power of the State over commerce within its own limits. An argument that the States have power to prohibit child labor within their own borders is a direct confession that Congress has the same power where the commodities are destined for interstate commerce, for one power is as complete and unlimited as the other. It has been expressly held in the celebrated Lottery cases that Congress had the power to prohibit the shipment in interstate commerce of lottery tickets or contracts, although issued wholly within one State and destined to be paid and redeemed at the point of issue, and this on the ground that the demoralizing influence of lotteries escaped the borders of the State when the tickets were attempted to be transmitted through the channels of interstate commerce. The same principle applies to goods made by child labor. In fact, if we take the decision in the Lottery cases as rendered by that great jurist, Justice Harlan, and strike out the words "lottery and insert, wherever it occurred, in lieu thereof the words "goods produced by child labor," every point of the decision would apply.

No State can, under the terms of the Federal Constitution, prohibit the admission within its borders of goods carried in interstate commerce. That power is expressly taken away from the States and vested in Congress, hence no State can prohibit by its own action the admission of goods made by child labor. If some of the States of the Union in response to aroused and enlightened public opinion, have passed wholesome and effective child-labor laws to control the industries within their own borders, they must be made by virtue of such action the unwilling victims of unfair, unjust, and demoralizing competition from the same class of goods coming from other States. sentiment is outraged; their honest and law-abiding manufacturers are discriminated against and they in fact encourage, by providing a convenient market, a form of base and sordid exploitation of child labor in other States. For my own part I am so strongly opposed to the exploitation of children for the purposes of commercial greed that I am willing to see both the States and the Nation exercise the full measure of power and responsibility committed to each to restrain and prohibit the evil. An appeal to States rights under such circumstances is not an appeal for justice and equality among the States, but a demand that certain States may be permitted to violate with impunity the rights and sentiments of the people of other States. It would be much better and nobler for States rights to be occasionally appealed to as a power to suppress wrong than as a power to secure immunity and protection for the wrongdoer.

In the growing conception of the power of Congress over interstate commerce, which is in response to the intelligent demand of American public opinion, the chief merits are certainty and uniformity of operation. I am willing, nay anxious, to see the States exercise all of their power, and my whole political training makes me jealous of State rights. But State rights mean State duties. In this connection I am re-

minded of the story of the small boy who had bothered his mother with a multitude of questions. Finally he said that he wanted to ask just one more question. Thinking that the easiest way to get rid of him was to answer the question, she said, "What is it." He said, "I want to know whether my ears belong to my neck or to my face." "Well," she said, "I do not know, and it does not make any difference." "Yes," he insisted, "It does make a difference. Every time you tell nurse to wash my neck she washes my ears and every time you tell her to wash my face she washes my ears. I have a right to know whether my ears belong to my neck or to my

Child labor is wrong, unjust, and demoralizing from every andpoint. It tends to destroy the health and moral stamina standpoint. and to blight the opportunities of the rising generation of citi-It throws the child into environments which can not possibly be useful and which may lead to moral and physical There is no such thing as the sacred right of degeneracy. contract involving the labor of a child. The child is, in a broad sense, a ward of the State and the Nation, and neither the child nor the employer can have a property right in the labor of the child, hence no rights of property are affected by such legislation, either under the fifth or the fourteenth amendment to the Federal Constitution.

The child can not compel the observance of proper conditions of employment, and the law recognizes that it has not the discretion to know either this or the proper terms of compensation. In other words, the child is the most helpless of industrial workers. But the moral and economic wrong does not stop with A great injury is done to society and to the community in blighting the early opportunities for physical and intellectual development of the child. There is a gross wrong done also to adult industrial workers in subjecting them to competition disastrous and unfortunate in its nature. Child labor, especially in purely mechanical pursuits, cuts down the average scale of wages of adults. The adult worker is supposed in most cases out of his wages to support not only himself but to discharge the duties and responsibilities of family life and citizenship. He finds his wages reduced by the disastrous competition of the exploited class of child workers, and of course his chances for employment decrease. occurs within the State which permits the exploitation of child labor. If such goods are shipped beyond the borders of the State the same evil of unfortunate and demoralized competition affects the industrial workers throughout the Nation and operates unjustly toward honest and law-abiding employers who conform to the child-labor legislation of other States. relentless laws of competition in trade would soon reduce all manufacturers to the same mean and sordid standard or drive them out of business, and yet this is the condition in the United States to-day which it is sought to be shielded and defended under the sacred name of the Constitution, and of State rights.

Many of the States of the Union have passed wise, humane, and stringent laws on the subject of child labor which have effectually attacked that evil. There are, however, seven States of the Union which have more than 1,000 child workers between the ages of 10 and 13 years. These States are Alabama, 2,489; Georgia, 2,819; North Carolina, 6,359; Pennsylvania, 1,801; South Carolina, 4,154; Tennessee, 1,217; and Virginia,

1,489.

I am glad to say that Missouri has but 403. It is a matter of regret that most of these States are south of the Mason and Dixon line, where the recent growth of cotton mills and the textile industry is drawing the agricultural child into the fac-In fact, all, or nearly all, of the children employed in the southern cotton mills are white children of American lineage. It is frequently said that in the small industrial communities of the South the white child who works at night in the mills on his way home in the morning passes the negro child on his way to school. No sudden development of industrial enterprises, however new and encouraging it may be to the South, should be based upon any such shocking condition, and it is a matter of regret that this most truly American section of our people are in danger of the blight of this evil.

Let child labor be abolished in our country by giving to the Federal Government power to supplement the action of the individual States. There are enough adult workers who need employment to man all of our great industries and bring our Nation to the highest point of economical efficiency. The factory is not the place for the child. Five hours in the schoolhouse is better than 15 hours in the factory. The humane sentiments of the American people will not tolerate this evil, even if localized in a single State, for socially and nationally we are one people, one Nation, with a common destiny and a common national duty.

Good Roads.

EXTENSION OF REMARKS

HON. JAMES H. MAYS. OF UTAH,

IN THE HOUSE OF REPRESENTATIVES.

Tuesday, January 25, 1916.

Mr. MAYS. Mr. Speaker, the gentleman from Illinois [Mr. Mann] is very sure that he votes against this bill, not because his district will receive no direct benefit from it and not because his district will pay, perhaps, a greater share of the revenue required for the construction of good roads than the country districts more directly benefited. The gentleman from Ohio [Mr. Gordon] is also very sure that he does not vote against the bill because his city of Cleveland will receive no direct benefit, in his opinion, from its operation.

The Ohio gentleman [Mr. Gordon] has been the most active opponent the bill has had on the floor of this House. It is to be noted that at the last session of Congress, when he had three rural counties in his district, he voted for the good-roads bill similar in terms to the one now under consideration,

As I gather from the remarks of the gentleman from Illinois [Mr. Mann], he takes the broad and statesmanlike view that the city will be benefited by this act as much as the country. He says the cities are prosperous when the farmers are prosperous. In this he takes the proper view, in my judgment, and I commend his argument to the gentleman from Ohio [Mr. Gordon] and the two gentlemen from Massachusetts [Mr. WALSH and Mr. ROGERS].

The Illinois statesman, however, opposes the bill because he is not willing that the General Government should levy special taxes in order to provide roads for the people. I am not so sure that the building of good roads would be an improper purpose to which to apply special taxes. I would not say that a farmer who travels over a road built by special taxes is not fully compensated for the 10 cents he pays in special taxes upon his note of \$500. But, Mr. Chairman, it is not a proper argument to single out the road-making requirement of \$25,000,000 from the total appropriation of more than \$1.000,000,000 and say that the special taxes are levied for the sole purpose of building good roads. It would be as fair to say that any other requirement of similar amount among the hundreds of items making up the grand total appropriation was the direct and sole cause of the special-tax legislation.

It would be my opinion that the special stamp tax should be abolished at the earliest possible moment; that the revenues produced by such odious legislation should be provided through sources such as incomes and inheritances. But for the purpose of making a start toward the ultimate system of national roads over which it would be possible to transport the products of the farm at a cost similar to that which prevails in European countries, at a cost which permits the farmer to realize at least a small profit from his investment and his labors, the appropriation of the amount required by this bill might be justified even though it were necessary to resort to some special taxation temporarily

From statistics produced by various gentlemen in this discussion I am convinced that the construction and improvement of the roads of our country have been too long neglected; that the annual loss directly resulting from the existing condition of our highways amounts to many times the sum involved in this bill. These losses can not be escaped so long as present conditions continue. They must be borne by the citizens of the city as as the country as expressed in the additional cost of living.

The gentleman from Kentucky [Mr. Kincheloe] gave us some very instructive figures. Among other things, he stated that on 26,000 miles of navigable rivers the country-has expended \$475,000,000, and scarcely anything worthy of mention on more than two and one-quarter million miles of public road, over which the real substantial traffic of our country is moving.

The gentleman from Wisconsin [Mr. FREAR] the other day showed us the Government expenditures upon navigable rivers had amounted to the grand total of \$80 per ton for every ton of freight moved over these rivers. His argument was convincing to me' that we can well afford to more equitably divide the appropriations between the navigable rivers and the public highways of our country.

It has been shown by the examples of older civilizations than our own that a system of highways, well constructed and settled, they stand in dire need of roads as an inducement to faithfully maintained, not only redound to the glory of the people as homeseekers. These roads are no longer local or

nation, not only facilitate the movement of their defenses in time of war, not only serve as a convenience and a pleasure in time of peace, but in fact is the most profitable investment from a material standpoint that a nation's lawmakers in their wisdom can provide.

It costs 10 cents per ton per mile to move a ton of freight over the roads of France. It costs 23 cents per ton per mile to move a ton of freight over the roads of the United States. Think of its costing in excess of 100 per cent more to move a ton of freight in our country 1 mile than in other respectable European nations.

If this includes the boasted highways of Massachusetts, New York, and Indiana and other States whose Representatives so vigorously oppose this measure, what must be the per-ton cost of transporting products or mail over the roads of other portions of our country not so favored with population and wealth?

The gentleman from Massachusetts [Mr. Walsh] took a sur-prisingly narrow view of his duty toward public improvements. He questioned the interest of Massachusetts in the roads of the Dakotas. Mr. Speaker, just 86 years ago to-day there was oc-curring at the other end of this Capitol one of the decisive and far-reaching events of our national history. I refer to the epoch-making debate between another gentleman from Massachusetts and a Senator from South Carolina.

Hayne, in the course of that debate, had asked, "What interest has South Carolina in a road or canal in Ohio?" Webster's words in reply to that question are worthy of reproduction here and in the RECORD. He said:

and in the Record. He said:

Sir, we narrow-minded people of New England do not reason thus. Our notion of things is entirely different. We look upon the States not as separated, but as united. We love to dwell on that union and on the mutual happiness which it has so much promoted and the common renown which it has so greatly contributed to acquire. In our contemplation Carolina and Ohio are parts of the same country, States united under the same General Government, having interest, common, associated, intermingled. In whatever is within the proper sphere of the constitutional power of this Government we look upon the States as one. We do not impose geographical limits to our patriotic feeling or regard; we do not follow rivers and mountains and lines of latitude to find boundaries beyond which public improvements do not benefit us. We who come here as agents and representatives of these narrow-minded and selfish men of New England consider ourselves as bound to regard with an equal eye the good of the whole in whatever is within our powers of legislation. Sir, if a railroad or canal beginning in South Carolina and ending in South Carolina appeared to me to be of national importance and national magnitude, believing as I do that the power of government extends to the encouragement of works of that description, if I were to stand up here and ask, What interest has Massachusetts in a railroad in South Carolina? I should not be willing to face my constituents. These same narrow-minded men would tell me that they sent me here to act for the whole country, and that one who possessed too little comprehension, either of intellect or feeling, one who was not large enough, both in mind and in heart, to embrace the whole, was not fit to be intrusted with the interest of any part.

Mr. Speaker, I commend the national sweep of intellect, the

Mr. Speaker, I commend the national sweep of intellect, the broad-minded view of patriotic duty, exhibited by Massachubroad-minded view of parriotic dates, cannot be setts's foremost son and the Nation's profoundest orator, the Constitution's sublimest defender, to the gentleman from Mas-

sachusetts and to his colleague, Mr. Rocers.

Objections are made to this bill on constitutional grounds. Our fundamental law expressly grants authority "to establish post offices and post roads." To me that is sufficient. It is stated that the whole subject is new and without precedent. Nearly a century ago a bill was before Congress entitled "An act to procure the necessary surveys, plats, and estimates upon the subject of roads and canals." Webster in his debate referred to this act and stated that it authorized the President to cause surveys and estimates to be made of the routes of such roads and canals as he might deem of national importance from a commercial or military point of view and for the transportation of mail, and appropriated \$30,000 out of the Treasury to defray the expenses of the surveys. The proviso was defeated in the Senate, which sought to disaffirm the right to make roads or canals within a State. The bill passed both Houses and became a law; but, nevertheless, national attention to road making has been sally lacking. The proviso in the act seeking to apply the expenditures for roads within a State in proportion to the contribution of that State was also defeated.

In those days they had no rural mail delivery, and yet they took the broad, rational view that the Constitution was designed to permit the Nation to keep step with the other nations in the forward march toward civilization.

This bill imposes no hardships upon the centers of wealth. It is equitable and fair in its distribution. It first provides a fund of \$65,000, to be paid only after at least twice that amount of approved road making has been accomplished. This amount was arbitrarily fixed, as members of the committee explain, to insure a minimum fund worthy of consideration.

Some States are so sparsely populated that they would receive an insignificant sum on a basis of population. Though sparsely

even State institutions. They are interstate and national in their scope. Wayfarers from these same Eastern States whose Representatives take such narrow and selfish views in this debate are constantly traveling over these roads and pouring out imprecations upon the heads of settlers who are unable to provide better highways for the enjoyment of their wealthy countrymen, though taxing themselves to the limit of endurance for such purposes

Populous sections of the country receive a distribution of this fund based upon miles of public road, which will be much greater than in the Western States, and upon population, which

is still greater in comparison.

Mr. Speaker, these same statesmen from along our eastern coast who grow frantic in their objections to a portion of their taxes being devoted toward improvements beyond their borders urge with great persistency the appropriation from the National Treasury of hundreds of millions toward the protection of those same coast States. They then become national in the comprehensive scope of their statesmanship. They realize that the bulk of the millions for preparedness would serve to still further enrich their cities and the manufacturing inhabitants thereof, and the principal purpose of these fabulous expenditures would be to defend these same cities after they had become still richer after the appropriation of the country's money.

Mr. Speaker, I consider these great cities as a part of our common country. If they should be invaded, our country would be invaded. State lines would be eliminated and all the citizens would rush to their defense with their money and their The citizens of every State, east and west, north and south, would stand together as Americans and would refuse to calculate the cost or consider the proportionate contribution in money and the resulting benefits which they stood to ulti-

mately receive.

The Good-Roads Bill.

EXTENSION OF REMARKS

HON. MICHAEL K. REILLY,

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 24, 1916.

Mr. REILLY. Mr. Speaker, I am a friend of the good-roads movement. I believe in good roads, not only from the standpoint of the farmer but also from the standpoint of those who have to live upon what the farmer produce

voted for the Shackleford good-roads bill in the first session of the Sixty-third Congress. That bill was similar in its provisions to the measure now under consideration. But conditions have changed since the Shackleford good-roads bill was passed by this House. A great war has broken out in Europe, the commerce of the world has been disarranged, and the United States Government has suffered a serious loss of revenue from customs duties and other sources as a result of that war.

This measure carries an appropriation of \$25,000,000, to be appropriated among the different States for the purpose of constructing roads. Each State, under the terms of this bill, will be required to appropriate a sum equal to the amount received from the Government in order to participate in the benefits of

This bill is in no way a partisan measure; it has advocates on both sides of this Chamber. In fact, the measure comes to the House with the almost unanimous indorsement of the Democratic and Republican members of the Committee on Good Roads—only one Republican member of that committee having

raised his voice in protest.

If there were plenty of funds in the United States Treasury nothing would please me better than to record my vote in favor

It is true there is in the Treasury to-day a balance of about \$40,000,000, and it is also true that there is in prospect the making of large appropriations by Congress for Army and Navy purposes that will require more funds than can be provided unless some special methods of taxation are resorted to.

It would be much easier for me to vote in favor of this bill than to vote against it, but I feel that we have reached the time when matters of this character should be treated from a practical standpoint.

I represent one of the best and most progressive farming communities in the whole country, an agricultural community

that appreciates the benefit of good roads, a community that has spent millions of dollars in making good roads, and I have no doubt but that my district would profit by this bill as much as the district of any other Representative in this body.

But this is not the time to allow such influences and con-

siderations to control in shaping legislation. It is not a question of what I should like to do in voting on this measure, but what I ought to do, considering the question from a practical

business standpoint.

It would seem that the time has come to call a halt in Government appropriations. Government appropriations have been mounting up and upward with leaps and bounds until the total sum appropriated by each Congress has gone beyond all limits. I, for one, believe that this Congress should limit its appropriations to the funds necessary to carry on existing governmental projects and to the defraying of the ordinary expenses of the Government.

Viewing the situation in this light, I can not see my way clear to vote for this bill.

I hope that the present Congress will so control its appropriations that it will be possible to raise all the revenue needed to take care of all the appropriations of this Congress without resorting to new special taxes or stamp taxes of any kind, and that this Congress will be able to repeal the emergency-revenue law recently continued for another year.

I believe the revenue necessary to provide for increased expenditures for Army and Navy should be raised by increasing the rate of tax on large incomes, by an inheritance tax, and by an excise tax on munitions of war. The war-munition industry is reaping abnormal profits, and it is no more than right that these individuals should pay something toward making up the loss in revenues that the Government has suffered as a result of the war.

The present condition of the United States Treasury is not due, as some of the gentlemen on the other side of this Chamber would have the country believe, to the enactment of the Under-700d tariff bill by the Democratic Party. The Underwood tariff bill and its accompanying income-tax feature produced \$10,000,-000 more revenue during the fiscal year of 1914, the fiscal year before the war, than the Payne-Aldrich tariff bill with its corporation-tax feature did during the fiscal year 1913. The fact of the matter is, had the Payne-Aldrich tariff bill remained on the statute books the revenue of the Government as a result of the war would have suffered a greater loss than they did under the Underwood tariff bill.

The income-tax feature of the Underwood tariff bill, which was not a part of the Payne-Aldrich tariff bill, made it possible for the Underwood tariff bill to produce more revenue during the war period than the Payne-Aldrich tariff bill would have produced

The United States Treasury has suffered as a result of the war through a loss in customs duties, through shrinkage in internal-revenue taxes, and through a loss in postal receipts to the

amount of about \$100,000,000 a year.

It is estimated that by July 1, 1916, the United States Government will have lost revenues as a result of the war to the amount of more than \$200,000,000; that is considering the revenues raised in the fiscal year 1914 as the basis of computation. There has been a shrinkage in customs duties and internalrevenue taxes and in postal receipts as a result of the war, although it is quite true that some of the shrinkage in the internal-revenue receipts can be attributed to the increase of dry territory

Not only has the Treasury suffered a shortage as a result of the war, but if the war had not occurred and conditions had remained normal there not only would have been no shrinkage in the customs duties, in the postal receipts, and so forth, but there would have been, on the contrary, a normal increase in revenue from these sources.

The receipts of the Post Office Department for several years prior to the outbreak of the war mounted upward at the rate of \$20,000,000 a year, and customs receipts also increased from year to year, so it is safe to say that by July 1, 1916, as a result of the war, the United States Treasury will have been deprived of approximately \$250,000,000 of revenue.

The emergency revenue taxes levied by the Sixty-third Congress to meet the exigencies growing out of the war will have yielded about \$135,000,000 by July 1, 1916. So it is manifest that if the war had not occurred, instead of having forty mil-lions surplus in the United States Treasury to-day there would be nearer \$150,000,000 there, if conditions had remained normal, and that surplus would have been accumulated without the assistance of an emergency revenue act.

An effort has been made in this debate to attribute the present condition of the Treasury to the extravagant appropriations made by the Democratic Congress.

We hear continually from the other side of the House the charge that the Democratic Party has been grossly extravagant in its administration of governmental affairs and that it has violated its pledge of economy made to the people.

While I do not claim that the Democratic Party has done all that can be done in the way of reducing and curtailing national expenditures, I do claim that the records show that the party has made substantial progress along the line of economy in governmental affairs.

It is true that the appropriations for the last Congress reached the highest mark ever reached by the appropriation of any Congress in the history of this Government, and it is not strange that the appropriations for each succeeding Congress should be higher than the ones preceding, for the country is growing and our Government is continuously taking on new projects and entering into new lines of work.

But let it be understood that each and every appropriation made by the Sixty-third Congress was supported almost unanimously by the gentlemen on the other side of the House. There were no dissenting reports from committees made and signed by the Republican minority members of those committees; and, in fact, whatever appropriations the Sixty-third Congress saw fit to make they were made practically with the unanimous vote of the Republican Members of this House.

The test as to whether or not the Democratic Party has been more extravagant than the Republican Party is not the size of the appropriations made by different Congresses, but in the relation that said appropriations bear to appropriations made by past Congresses.

The Democratic Party has been in complete control of this Government and responsible for the appropriations of practically but one Congress to date—the Sixty-third Congress—the present, Sixty-fourth Congress, having as yet made no appropriations.

The Sixty-second Congress was neither a Democratic Congress nor a Republican Congress—the Democrats had control of the House and the Republicans the Senate and the Presidency—and the most that can be said of it is that the Sixty-second Congress was two-thirds Republican and one-third Democratic. Consequently, in determining as to whether or not the Democratic Party has been more extravagant in its administration of the National Government than the Republican Party, it becomes necessary to eliminate from consideration entirely the Sixty-second Congress, which, as stated above, was neither Democratic nor Republican.

In making comparisons as to the appropriations of Republican and Democratic Congresses it will be convenient to compare the appropriations of Congress covering four-year periods.

The Sixty-third Congress (Democratic) increased the appropriation of the Government \$177,000,000 over the appropriations of the Sixty-first Congress (Republican).

of the Sixty-first Congress (Republican).

The Sixty-first Congress (Republican) appropriated \$265,000,000 more than the Fifty-ninth Congress (Republican); the
Sixtieth Congress (Republican) appropriated \$517,000,000 more

Sixtieth Congress (Republican) appropriated \$517,000,000 more than the Fifty-eighth Congress (Republican); the Fifty-ninth Congress (Republican) appropriated \$256,000,000 more than the Fifty-seventh Congress (Republican).

In other words, while the Democratic Party in the Sixty-third Congress was able to hold appropriations down so that the increase over the Sixty-first Congress was only \$177,000,000, the Republican Party during its complete control of the National Government was in the habit of increasing the appropriation every four years as high as \$517,000,000 for a period of four years. During the last three years of its complete control of the National Government the Republican Party increased the expenditures of the Government \$307,000,000, or more than \$100,000,000 a year, and during the last six years of its full control of the Government the Republican Party increased the expenditures of the Government on an average of \$210,000,000 a year.

The highest expenditures for a single year of the Sixty-third Congress was only \$18,000,000 over the amount expended in the last year of the Sixty-second Congress (Democratic and Republican body).

A large element in the increased appropriations of the Government is the appropriations necessary to carry on the Post Office Department.

The Sixty-third Congress (Democratic) found it necessary to appropriate \$125,000,000 more for the support of the Post Office Department than the Sixty-first Congress (Republican) appro-

priated. Thus it will be seen that a large part of the \$177,000,-000 increase in appropriations made by the Sixty-third Congress over the appropriations made by the Sixty-first Congress went to the support of the Post Office Department, and or reason for the increased expenditures of the Post Office Department has been the development of the parcel post; and, besides, the Post Office Department up to the time the war broke out, under Democratic rule, did not cost the people anything. In fact, it made a little for the people the first year under Democratic rule.

With such a record for increasing the appropriations of our Government as the Republican Party has, one would think that common modesty would prompt the gentlemen on the other side of this House to keep still and say nothing about Republican economy in the administration of National affairs; and well might the Progressive Republican gentleman from Pennsylvania, Mr. Hulings, state, as he did in the last Congress:
